Centers for Medicare & Medicaid Services

42 CFR Parts 405, 410, 411, 414, 415, 418, 422, 423, 424, 425, 455, 489, 491, 495, 498, and 600

[CMS-1784-P]

RIN 0938-AV07

Medicare and Medicaid Programs; CY 2024 Payment Policies under the Physician Fee Schedule and Other Changes to Part B Payment and Coverage Policies; Medicare Shared Savings Program Requirements; Medicare Advantage; Medicare and Medicaid Provider and Supplier Enrollment Policies; and Basic Health Program

AGENCY: Centers for Medicare & Medicaid Services (CMS), Health and Human Services (HHS).

ACTION: Proposed rule.

SUMMARY: This major proposed rule addresses: changes to the physician fee schedule (PFS); other changes to Medicare Part B payment policies to ensure that payment systems are updated to reflect changes in medical practice, relative value of services, and changes in the statute; payment for dental services inextricably linked to specific covered medical services; Medicare Shared Savings Program requirements; updates to the Quality Payment Program; Medicare coverage of opioid use disorder services furnished by opioid treatment programs; updates to certain Medicare and Medicaid provider and supplier enrollment policies, electronic prescribing for controlled substances for a covered Part D drug under a prescription drug plan or an MA-PD plan under the Substance Use-Disorder

Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT Act); updates to the Ambulance Fee Schedule regulations and the Medicare Ground Ambulance Data Collection System; codification of the Inflation Reduction Act and Consolidated Appropriations Act, 2023 provisions; expansion of the diabetes screening and diabetes definitions; pulmonary rehabilitation, cardiac rehabilitation and intensive cardiac rehabilitation expansion of supervising practitioners; appropriate use criteria for advanced diagnostic imaging; early release of Medicare Advantage risk adjustment data; a social determinants of health risk assessment in the annual wellness visit and Basic Health Program.

DATES: To be assured consideration, comments must be received at one of the addresses provided below, no later than 5 p.m. on September 11, 2023.

ADDRESSES: In commenting, please refer to file code CMS-1784-P.

Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. Electronically. You may submit electronic comments on this regulation to <http://www.regulations.gov>. Follow the “Submit a comment” instructions.

2. By regular mail. You may mail written comments to the following address

ONLY:

Centers for Medicare & Medicaid Services,

Department of Health and Human Services,

Attention: CMS-1784-P,

P.O. Box 8016,

Baltimore, MD 21244-8016.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. By express or overnight mail. You may send written comments to the following address ONLY:

Centers for Medicare & Medicaid Services,

Department of Health and Human Services,

Attention: CMS-1784-P,

Mail Stop C4-26-05,

7500 Security Boulevard,

Baltimore, MD 21244-1850.

FOR FURTHER INFORMATION CONTACT:

MedicarePhysicianFeeSchedule@cms.hhs.gov, for any issues not identified below. Please indicate the specific issue in the subject line of the email.

Michael Soracoe, (410) 786-6312, and Morgan Kitzmiller, (410) 786-1623, for issues related to practice expense, work RVUs, conversion factor, and PFS specialty-specific impacts.

Kris Corwin, (410) 786-8864, for issues related to the comment solicitation on strategies for updates to practice expense data collection and methodology.

MedicarePhysicianFeeSchedule@cms.hhs.gov, for issues related to caregiver training services, community health integration services, social determinants of health risk assessment, and principal illness navigation services.

Larry Chan, (410) 786-6864, for issues related to potentially misvalued services under the PFS.

Kris Corwin, (410) 786-8864, Patrick Sartini, (410) 786-9252, and Larry Chan, (410) 786-6864, for issues related to direct supervision using two-way audio/video communication technology, telehealth, and other services involving communications technology.

Tamika Brock, (312) 886-7904, for issues related to teaching physician services.

Lindsey Baldwin, (410) 786-1694, Regina Walker-Wren, (410) 786-9160, Erick Carrera, (410) 786-8949, or MedicarePhysicianFeeSchedule@cms.hhs.gov, for issues related to advancing access to behavioral health.

MedicarePhysicianFeeSchedule@cms.hhs.gov, for issues related to PFS payment for evaluation and management services.

Morgan Kitzmiller, (410) 786-1623, for issues related to geographic practice cost indices (GPCIs).

Zehra Hussain, (214) 767-4463, or MedicarePhysicianFeeSchedule@cms.hhs.gov, for issues related to payment of skin substitutes.

Pamela West, (410) 786-2302, for issues related to supervision of outpatient therapy services, KX modifier thresholds, diabetes self-management training (DSMT) services, and DSMT telehealth services.

Laura Ashbaugh, (410) 786-1113, and Erick Carrera, (410) 786-8949, Zehra Hussain, (214) 767-4463, or MedicarePhysicianFeeSchedule@cms.hhs.gov, for issues related to dental services inextricably linked to specific covered medical services.

Laura Kennedy, (410) 786-3377, Adam Brooks, (202) 205-0671, and Rachel Radzyner, (410) 786-8215, for issues related to Drugs and Biological Products Paid Under Medicare Part B

MedicarePhysicianFeeSchedule@cms.hhs.gov, for issues related to complex drug administration.

Laura Ashbaugh, (410) 786-1113, Ariana Pitcher, ariana.pitcher@cms.hhs.gov, Rasheeda Arthur, (410) 786-3434, or CLFS_Inquiries@cms.hhs.gov for issues related to Clinical Laboratory Fee Schedule.

Lisa Parker, (410) 786-4949, or FQHC-PPS@cms.hhs.gov, for issues related to FQHC payments.

Michele Franklin, (410) 786-9226, or RHC@cms.hhs.gov, for issues related to RHC and FQHC Conditions for Certification or Coverage.

Kianna Banks (410) 786-3498 and Cara Meyer (667) 290-9856, for issues related to RHCs and FQHCs definitions of staff.

Sarah Fulton, (410) 786-2749, for issues related to pulmonary rehabilitation, cardiac rehabilitation and intensive cardiac rehabilitation expansion of supervising practitioners.

Lindsey Baldwin, (410) 786-1694, Ariana Pitcher, ariana.pitcher@cms.hhs.gov, or OTP_Medicare@cms.hhs.gov, for issues related to Medicare coverage of opioid use disorder treatment services furnished by opioid treatment programs.

Sabrina Ahmed, (410) 786-7499, or SharedSavingsProgram@cms.hhs.gov, for issues related to the Medicare Shared Savings Program (Shared Savings Program) Quality performance standard and quality reporting requirements.

Janae James, (410) 786-0801, or Elizabeth November, (410) 786-4518, or SharedSavingsProgram@cms.hhs.gov, for issues related to Shared Savings Program beneficiary assignment and benchmarking methodology.

Lucy Bertocci, (667) 290-8833, or SharedSavingsProgram@cms.hhs.gov, for inquiries related to Shared Savings Program advance investment payments, and eligibility requirements.

Rachel Radzyner, (410) 786-8215, and Michelle Cruse, (443) 478-6390, for issues related to preventive vaccine administration services.

Mollie Howerton (410) 786-5395, for issues related to Medicare Diabetes Prevention Program.

Sarah Fulton (410) 786-2749, for issues related to appropriate use criteria for advanced diagnostic imaging.

Frank Whelan, (410) 786-1302, for issues related to Medicare and Medicaid provider and supplier enrollment regulation updates.

Daniel Feller (410) 786-6913 for issues related to expanding diabetes screening and definitions.

Daniel Feller (410) 786-6913 for issues related to a social determinants of health risk assessment in the annual wellness visit.

Mei Zhang, (410) 786-7837, and Kimberly Go, (410)786-4560, for issues related to requirement for electronic prescribing for controlled substances for a covered Part D drug under a prescription drug plan or an MA-PD plan (section 2003 of the SUPPORT Act).

Amy Gruber, (410) 786-1542, or AmbulanceDataCollection@cms.hhs.gov, for issues related to the Ambulance Fee Schedule (AFS) and the Medicare Ground Ambulance Data Collection System.

Mary Rossi-Coajou (410) 786-6051, for issues related to hospice Conditions of Participation.

Cameron Ingram (410) 409-8023 for issues related to Histopathology, Cytology, and Clinical Cytogenetics Regulations under CLIA of 1988.

Meg Barry (410)786-1536, for issues related to the Basic Health Program (BHP) provisions.

Renee O’Neill, (410) 786-8821, or Sophia Sugumar, (410) 786-1648, for inquiries related to Merit-based Incentive Payment System (MIPS).

Richard Jensen, (410) 786-6126, for inquiries related to Alternative Payment Models (APMs).

SUPPLEMENTARY INFORMATION:

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following website as soon as possible after they have been received: <http://www.regulations.gov>. Follow the search instructions on that website to view public comments. CMS will not post on Regulations.gov public comments that make threats to individuals or institutions or suggest that the commenter will take actions to harm an individual. CMS continues to encourage individuals not to submit duplicative comments. We will post acceptable

comments from multiple unique commenters even if the content is identical or nearly identical to other comments.

Addenda Available Only Through the Internet on the CMS Website: The PFS Addenda along with other supporting documents and tables referenced in this proposed rule are available on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>. Click on the link on the left side of the screen titled, “PFS Federal Regulations Notices” for a chronological list of PFS **Federal Register** and other related documents. For the CY 2024 PFS proposed rule, refer to item CMS-1784-P. Readers with questions related to accessing any of the Addenda or other supporting documents referenced in this proposed rule and posted on the CMS website identified above should contact MedicarePhysicianFeeSchedule@cms.hhs.gov.

We note that CPT codes and descriptions are copyright 2020 American Medical Association. All Rights Reserved. CPT is a registered trademark of the American Medical Association (AMA). Applicable Federal Acquisition Regulations (FAR) and Defense Federal Acquisition Regulations (DFAR) apply.

I. Executive Summary

This major annual rule proposes to revise payment policies under the Medicare PFS and makes other policy changes, including proposals to implement certain provisions of the Consolidated Appropriations Act, 2023 (Pub. L. 117-328, September 29, 2022), Inflation Reduction Act of 2022 (IRA) (Pub. L. 117-169, August 16, 2022), Consolidated

Appropriations Act, 2022 (Pub. L. 117-103, March 15, 2022), Consolidated Appropriations Act, 2021 (CAA, 2021) (Pub. L. 116-260, December 27, 2020), Bipartisan Budget Act of 2018 (BBA of 2018) (Pub. L. 115-123, February 9, 2018) and the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT Act) (Pub. L. 115-271, October 24, 2018), related to Medicare Part B payment. In addition, this major proposed rule includes proposals regarding other Medicare payment policies described in sections III. and IV. of this proposed rule.

This rulemaking proposes to update the Rural Health Clinic (RHC) and Federally Qualified Health Clinic (FQHC) Conditions for Certification and Conditions for Coverage (CfCs), respectively, to implement the provisions of the Consolidated Appropriations Act (CAA), 2023 (Pub. L. 117-328, December 29, 2022), now allowing payment under Medicare Part B for services furnished by a Marriage and Family Therapist (MFT) or Mental Health Counselor (MHC).

This rulemaking would also update the Hospice Conditions of Participation (CoPs) to implement division FF, section 4121 of the CAA 2023 regarding the addition of marriage and family therapists (MFTs) or mental health counselors (MHCs) as part of the hospice interdisciplinary team and would make changes to the hospice personnel requirements.

This rulemaking would also seek to further advance Medicare's overall value-based care strategy of growth, alignment, and equity through the Medicare Shared Savings Program (MSSP) and the Quality Payment Program (QPP). The structure of the programs enables us to develop a set of tools for measuring and encouraging

improvements in care, which may support a shift to clinician payment over time into Advanced Alternative Payment Models (APMs) and accountable care arrangements which reduce care fragmentation and unnecessary costs for patients and the health system.

This rulemaking would also update the Ambulance Fee Schedule regulations to implement division FF, section 4103 of the CAA 2023 regarding the ground ambulance extenders provisions and would also provide further changes and clarifications to the Medicare Ground Ambulance Data Collection System.

This rulemaking would also update Medicare and Medicaid provider and supplier enrollment regulations.

B. Summary of the Major Provisions

The statute requires us to establish payments under the PFS, based on national uniform relative value units (RVUs) that account for the relative resources used in furnishing a service. The statute requires that RVUs be established for three categories of resources: work, practice expense (PE), and malpractice (MP) expense. In addition, the statute requires that each year we establish, by regulation, the payment amounts for physicians' services paid under the PFS, including geographic adjustments to reflect the variations in the costs of furnishing services in different geographic areas.

The statute requires us to establish payments under the PFS, based on national uniform relative value units (RVUs) that account for the relative resources used in furnishing a service. The statute requires that RVUs be established for three categories of resources: work, practice expense (PE), and malpractice (MP) expense. In addition, the statute requires that we establish each year by regulation the payment amounts for

physicians' services paid under the PFS, including geographic adjustments to reflect the variations in the costs of furnishing services in different geographic areas.

In this major proposed rule, we are proposing to establish RVUs for CY 2024 for the PFS to ensure that our payment systems are updated to reflect changes in medical practice and the relative value of services, as well as changes in the statute. This proposed rule also includes discussions and provisions regarding several other Medicare Part B payment policies, Medicare and Medicaid provider and supplier enrollment policies, and other policies regarding programs administered by CMS.

Specifically, this proposed rule addresses:

- Background (section II.A.)
- Determination of PE RVUs (section II.B.)
- Potentially Misvalued Services Under the PFS (section II.C.)
- Payment for Medicare Telehealth Services Under Section 1834(m) of the Social Security Act (the Act) (section II.D.)
- Valuation of Specific Codes (section II.E.)
- Evaluation and Management (E/M) Visits (section II.F.)
- Geographic Practice Cost Indices (GPCI) (section II.G.)
- Payment for Skin Substitutes (section II.H.)
- Supervision of Outpatient Therapy Services, KX Modifier Thresholds, Diabetes Self-Management Training (DSMT) Services by Registered Dietitians and Nutrition Professional, and DSMT Telehealth Services (section II.I.)
- Advancing Access to Behavioral Health (section II.J.)

- Proposals on Medicare Parts A and B Payment for Dental Services Inextricably Linked to Specific Covered Medical Services (section II.K.)
- Drugs and Biological Products Paid Under Medicare Part B (section III.A.)
- Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs) (section III.B.)
- Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs) Conditions for Certification or Coverage (CfCs) (section III.C.)
- Clinical Laboratory Fee Schedule: Revised Data Reporting Period and Phase-in of Payment Reductions (section III.D.)
- Pulmonary Rehabilitation, Cardiac Rehabilitation and Intensive Cardiac Rehabilitation Expansion of Supervising Practitioners (section III.E.)
- Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs) (section III.F.)
- Medicare Shared Savings Program (section III.G.)
- Medicare Part B Payment for Preventive Vaccine Administration Services (section III.H.)
- Medicare Diabetes Prevention Program Expanded Model (section III.I.)
- Appropriate Use Criteria for Advanced Diagnostic Imaging (section III.J.)
- Medicare and Medicaid Provider and Supplier Enrollment (section III.K.)
- Expand Diabetes Screening and Diabetes Definitions (section III.L.)
- Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug under a Prescription Drug Plan or an MA-PD Plan (section 2003 of the SUPPORT Act) (section III.M.)

- Proposed Changes to the Regulations Associated with the Ambulance Fee Schedule and the Medicare Ground Ambulance Data Collection System (GADCS) (section III.N.)

- Hospice: Changes to the Hospice Conditions of Participation (section III.O.)
- RFI: Histopathology, Cytology, and Clinical Cytogenetics Regulations under the Clinical Laboratory Improvement Amendments (CLIA) of 1988 (section III.P.)

- Changes to the Basic Health Program Regulations (section III.Q.)
- Updates to the Definitions of Certified Electronic Health Record Technology (section III.R.)

- A Social Determinants of Health Risk Assessment in the Annual Wellness Visit (section III.S.)

- Updates to the Quality Payment Program (section IV.)
- Collection of Information Requirements (section V.)
- Response to Comments (section VI.)
- Regulatory Impact Analysis (section VII.)

3. Summary of Costs and Benefits

We have determined that this proposed rule is economically significant. For a detailed discussion of the economic impacts, see section VII., Regulatory Impact Analysis, of this proposed rule.

II. Provisions of the Proposed Rule for the PFS

A. Background

In accordance with section 1848 of the Act, CMS has paid for physicians' services under the Medicare physician fee schedule (PFS) since January 1, 1992. The

PFS relies on national relative values that are established for work, practice expense (PE), and malpractice (MP), which are adjusted for geographic cost variations. These values are multiplied by a conversion factor (CF) to convert the relative value units (RVUs) into payment rates. The concepts and methodology underlying the PFS were enacted as part of the Omnibus Budget Reconciliation Act of 1989 (OBRA '89) (Pub. L. 101-239, December 19, 1989), and the Omnibus Budget Reconciliation Act of 1990 (OBRA '90) (Pub. L. 101-508, November 5, 1990). The final rule published in the November 25, 1991 **Federal Register** (56 FR 59502) set forth the first fee schedule used for Medicare payment for physicians' services.

We note that throughout this proposed rule, unless otherwise noted, the term "practitioner" is used to describe both physicians and nonphysician practitioners (NPPs) who are permitted to bill Medicare under the PFS for the services they furnish to Medicare beneficiaries.

B. Determination of PE RVUs

1. Overview

Practice expense (PE) is the portion of the resources used in furnishing a service that reflects the general categories of physician and practitioner expenses, such as office rent and personnel wages, but excluding malpractice (MP) expenses, as specified in section 1848(c)(1)(B) of the Act. As required by section 1848(c)(2)(C)(ii) of the Act, we use a resource-based system for determining PE RVUs for each physicians' service. We develop PE RVUs by considering the direct and indirect practice resources involved in furnishing each service. Direct expense categories include clinical labor, medical supplies, and medical equipment. Indirect expenses include administrative labor, office

expense, and all other expenses. The sections that follow provide more detailed information about the methodology for translating the resources involved in furnishing each service into service specific PE RVUs. We refer readers to the CY 2010 Physician Fee Schedule (PFS) final rule with comment period (74 FR 61743 through 61748) for a more detailed explanation of the PE methodology.

2. Practice Expense Methodology

a. Direct Practice Expense

We determine the direct PE for a specific service by adding the costs of the direct resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing that service. The costs of the resources are calculated using the refined direct PE inputs assigned to each CPT code in our PE database, which are generally based on our review of recommendations received from the Relative Value Scale Update Committee (RUC) and those provided in response to public comment periods. For a detailed explanation of the direct PE methodology, including examples, we refer readers to the 5-year review of work RVUs under the PFS and proposed changes to the PE methodology in the CY 2007 PFS proposed rule (71 FR 37242) and the CY 2007 PFS final rule with comment period (71 FR 69629).

b. Indirect Practice Expense per Hour Data

We use survey data on indirect PEs incurred per hour worked, in developing the indirect portion of the PE RVUs. Prior to CY 2010, we primarily used the PE/HR by specialty that was obtained from the AMA's Socioeconomic Monitoring System (SMS). The AMA administered a new survey in CY 2007 and CY 2008, the Physician Practice Information Survey (PPIS). The PPIS is a multispecialty, nationally representative, PE

survey of both physicians and NPPs paid under the PFS using a survey instrument and methods highly consistent with those used for the SMS and the supplemental surveys. The PPIS gathered information from 3,656 respondents across 51 physician specialty and health care professional groups. We believe the PPIS is the most comprehensive source of PE survey information available. We used the PPIS data to update the PE/HR data for the CY 2010 PFS for almost all of the Medicare recognized specialties that participated in the survey.

When we began using the PPIS data in CY 2010, we did not change the PE RVU methodology itself or the manner in which the PE/HR data are used in that methodology. We only updated the PE/HR data based on the new survey. Furthermore, as we explained in the CY 2010 PFS final rule with comment period (74 FR 61751), because of the magnitude of payment reductions for some specialties resulting from the use of the PPIS data, we transitioned its use over a 4-year period from the previous PE RVUs to the PE RVUs developed using the new PPIS data. As provided in the CY 2010 PFS final rule with comment period (74 FR 61751), the transition to the PPIS data was complete for CY 2013. Therefore, PE RVUs from CY 2013 forward are developed based entirely on the PPIS data, except as noted in this section.

Section 1848(c)(2)(H)(i) of the Act requires us to use the medical oncology supplemental survey data submitted in 2003 for oncology drug administration services. Therefore, the PE/HR for medical oncology, hematology, and hematology/oncology reflects the continued use of these supplemental survey data.

Supplemental survey data on independent labs from the College of American Pathologists were implemented for payments beginning in CY 2005. Supplemental

survey data from the National Coalition of Quality Diagnostic Imaging Services (NCQDIS), representing independent diagnostic testing facilities (IDTFs), were blended with supplementary survey data from the American College of Radiology (ACR) and implemented for payments beginning in CY 2007. Neither IDTFs, nor independent labs, participated in the PPIS. Therefore, we continue to use the PE/HR that was developed from their supplemental survey data.

Consistent with our past practice, the previous indirect PE/HR values from the supplemental surveys for these specialties were updated to CY 2006 using the Medicare Economic Index (MEI) to put them on a comparable basis with the PPIS data.

We also do not use the PPIS data for reproductive endocrinology and spine surgery since these specialties currently are not separately recognized by Medicare, nor do we have a method to blend the PPIS data with Medicare recognized specialty data.

Previously, we established PE/HR values for various specialties without SMS or supplemental survey data by cross-walking them to other similar specialties to estimate a proxy PE/HR. For specialties that were part of the PPIS for which we previously used a cross-walked PE/HR, we instead used the PPIS based PE/HR. We use cross-walks for specialties that did not participate in the PPIS. These cross-walks have been generally established through notice and comment rulemaking and are available in the file titled “CY 2024 PFS proposed rule PE/HR” on the CMS website under downloads for the CY 2024 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

c. Allocation of PE to Services

To establish PE RVUs for specific services, it is necessary to establish the direct and indirect PE associated with each service.

(1) Direct Costs

The relative relationship between the direct cost portions of the PE RVUs for any two services is determined by the relative relationship between the sum of the direct cost resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing each of the services. The costs of these resources are calculated from the refined direct PE inputs in our PE database. For example, if one service has a direct cost sum of \$400 from our PE database and another service has a direct cost sum of \$200, the direct portion of the PE RVUs of the first service would be twice as much as the direct portion of the PE RVUs for the second service.

(2) Indirect Costs

We allocate the indirect costs at the code level based on the direct costs specifically associated with a code and the greater of either the clinical labor costs or the work RVUs. We also incorporate the survey data described earlier in the PE/HR discussion. The general approach to developing the indirect portion of the PE RVUs is as follows:

- For a given service, we use the direct portion of the PE RVUs calculated as previously described and the average percentage that direct costs represent of total costs (based on survey data) across the specialties that furnish the service to determine an initial indirect allocator. That is, the initial indirect allocator is calculated so that the direct costs equal the average percentage of direct costs of those specialties furnishing the service. For example, if the direct portion of the PE RVUs for a given service is 2.00 and

direct costs, on average, represent 25 percent of total costs for the specialties that furnish the service, the initial indirect allocator would be calculated so that it equals 75 percent of the total PE RVUs. Thus, in this example, the initial indirect allocator would equal 6.00, resulting in a total PE RVU of 8.00 (2.00 is 25 percent of 8.00 and 6.00 is 75 percent of 8.00).

- Next, we add the greater of the work RVUs or clinical labor portion of the direct portion of the PE RVUs to this initial indirect allocator. In our example, if this service had a work RVU of 4.00 and the clinical labor portion of the direct PE RVU was 1.50, we would add 4.00 (since the 4.00 work RVUs are greater than the 1.50 clinical labor portion) to the initial indirect allocator of 6.00 to get an indirect allocator of 10.00. In the absence of any further use of the survey data, the relative relationship between the indirect cost portions of the PE RVUs for any two services would be determined by the relative relationship between these indirect cost allocators. For example, if one service had an indirect cost allocator of 10.00 and another service had an indirect cost allocator of 5.00, the indirect portion of the PE RVUs of the first service would be twice as great as the indirect portion of the PE RVUs for the second service.

- Then, we incorporate the specialty specific indirect PE/HR data into the calculation. In our example, if, based on the survey data, the average indirect cost of the specialties furnishing the first service with an allocator of 10.00 was half of the average indirect cost of the specialties furnishing the second service with an indirect allocator of 5.00, the indirect portion of the PE RVUs of the first service would be equal to that of the second service.

(3) Facility and Nonfacility Costs

For procedures that can be furnished in a physician's office, as well as in a facility setting, where Medicare makes a separate payment to the facility for its costs in furnishing a service, we establish two PE RVUs: facility and nonfacility. The methodology for calculating PE RVUs is the same for both the facility and nonfacility RVUs, but is applied independently to yield two separate PE RVUs. In calculating the PE RVUs for services furnished in a facility, we do not include resources that would generally not be provided by physicians when furnishing the service. For this reason, the facility PE RVUs are generally lower than the nonfacility PE RVUs.

(4) Services with Technical Components and Professional Components

Diagnostic services are generally comprised of two components: a professional component (PC); and a technical component (TC). The PC and TC may be furnished independently or by different providers, or they may be furnished together as a global service. When services have separately billable PC and TC components, the payment for the global service equals the sum of the payment for the TC and PC. To achieve this, we use a weighted average of the ratio of indirect to direct costs across all the specialties that furnish the global service, TCs, and PCs; that is, we apply the same weighted average indirect percentage factor to allocate indirect expenses to the global service, PCs, and TCs for a service. (The direct PE RVUs for the TC and PC sum to the global.)

(5) PE RVU Methodology

For a more detailed description of the PE RVU methodology, we direct readers to the CY 2010 PFS final rule with comment period (74 FR 61745 through 61746). We also direct readers to the file titled "Calculation of PE RVUs under Methodology for Selected Codes" which is available on our website under downloads for the CY 2024 PFS

proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>. This file contains a table that illustrates the calculation of PE RVUs as described in this proposed rule for individual codes.

(a) Setup File

First, we create a setup file for the PE methodology. The setup file contains the direct cost inputs, the utilization for each procedure code at the specialty and facility/nonfacility place of service level, and the specialty specific PE/HR data calculated from the surveys.

(b) Calculate the Direct Cost PE RVUs

Sum the costs of each direct input.

Step 1: Sum the direct costs of the inputs for each service.

Step 2: Calculate the aggregate pool of direct PE costs for the current year. We set the aggregate pool of PE costs equal to the product of the ratio of the current aggregate PE RVUs to current aggregate work RVUs and the projected aggregate work RVUs.

Step 3: Calculate the aggregate pool of direct PE costs for use in ratesetting. This is the product of the aggregate direct costs for all services from Step 1 and the utilization data for that service.

Step 4: Using the results of Step 2 and Step 3, use the CF to calculate a direct PE scaling adjustment to ensure that the aggregate pool of direct PE costs calculated in Step 3 does not vary from the aggregate pool of direct PE costs for the current year. Apply the scaling adjustment to the direct costs for each service (as calculated in Step 1).

Step 5: Convert the results of Step 4 to an RVU scale for each service. To do this, divide the results of Step 4 by the CF. Note that the actual value of the CF used in this calculation does not influence the final direct cost PE RVUs as long as the same CF is used in Step 4 and Step 5. Different CFs would result in different direct PE scaling adjustments, but this has no effect on the final direct cost PE RVUs since changes in the CFs and changes in the associated direct scaling adjustments offset one another.

(c) Create the Indirect Cost PE RVUs

Create indirect allocators.

Step 6: Based on the survey data, calculate direct and indirect PE percentages for each physician specialty.

Step 7: Calculate direct and indirect PE percentages at the service level by taking a weighted average of the results of Step 6 for the specialties that furnish the service. Note that for services with TCs and PCs, the direct and indirect percentages for a given service do not vary by the PC, TC, and global service.

We generally use an average of the 3 most recent years of available Medicare claims data to determine the specialty mix assigned to each code. Codes with low Medicare service volume require special attention since billing or enrollment irregularities for a given year can result in significant changes in specialty mix assignment. We finalized a policy in the CY 2018 PFS final rule (82 FR 52982 through 59283) to use the most recent year of claims data to determine which codes are low volume for the coming year (those that have fewer than 100 allowed services in the Medicare claims data). For codes that fall into this category, instead of assigning specialty mix based on the specialties of the practitioners reporting the services in the

claims data, we use the expected specialty that we identify on a list developed based on medical review and input from expert interested parties. We display this list of expected specialty assignments as part of the annual set of data files we make available as part of notice and comment rulemaking and consider recommendations from the RUC and other interested parties on changes to this list on an annual basis. Services for which the specialty is automatically assigned based on previously finalized policies under our established methodology (for example, “always therapy” services) are unaffected by the list of expected specialty assignments. We also finalized in the CY 2018 PFS final rule (82 FR 52982 through 52983) a policy to apply these service-level overrides for both PE and MP, rather than one or the other category.

Step 8: Calculate the service level allocators for the indirect PEs based on the percentages calculated in Step 7. The indirect PEs are allocated based on the three components: the direct PE RVUs; the clinical labor PE RVUs; and the work RVUs.

For most services the indirect allocator is: indirect PE percentage * (direct PE RVUs/direct percentage) + work RVUs.

There are two situations where this formula is modified:

- If the service is a global service (that is, a service with global, professional, and technical components), then the indirect PE allocator is: indirect percentage (direct PE RVUs/direct percentage) + clinical labor PE RVUs + work RVUs.
- If the clinical labor PE RVUs exceed the work RVUs (and the service is not a global service), then the indirect allocator is: indirect PE percentage (direct PE RVUs/direct percentage) + clinical labor PE RVUs.

(Note: For global services, the indirect PE allocator is based on both the work RVUs and the clinical labor PE RVUs. We do this to recognize that, for the PC service, indirect PEs would be allocated using the work RVUs, and for the TC service, indirect PEs would be allocated using the direct PE RVUs and the clinical labor PE RVUs. This also allows the global component RVUs to equal the sum of the PC and TC RVUs.)

For presentation purposes, in the examples in the download file titled “Calculation of PE RVUs under Methodology for Selected Codes”, the formulas were divided into two parts for each service.

- The first part does not vary by service and is the indirect percentage (direct PE RVUs/direct percentage).
- The second part is either the work RVU, clinical labor PE RVU, or both depending on whether the service is a global service and whether the clinical PE RVUs exceed the work RVUs (as described earlier in this step).

Apply a scaling adjustment to the indirect allocators.

Step 9: Calculate the current aggregate pool of indirect PE RVUs by multiplying the result of step 8 by the average indirect PE percentage from the survey data.

Step 10: Calculate an aggregate pool of indirect PE RVUs for all PFS services by adding the product of the indirect PE allocators for a service from Step 8 and the utilization data for that service.

Step 11: Using the results of Step 9 and Step 10, calculate an indirect PE adjustment so that the aggregate indirect allocation does not exceed the available aggregate indirect PE RVUs and apply it to indirect allocators calculated in Step 8.

Calculate the indirect practice cost index.

Step 12: Using the results of Step 11, calculate aggregate pools of specialty specific adjusted indirect PE allocators for all PFS services for a specialty by adding the product of the adjusted indirect PE allocator for each service and the utilization data for that service.

Step 13: Using the specialty specific indirect PE/HR data, calculate specialty specific aggregate pools of indirect PE for all PFS services for that specialty by adding the product of the indirect PE/HR for the specialty, the work time for the service, and the specialty's utilization for the service across all services furnished by the specialty.

Step 14: Using the results of Step 12 and Step 13, calculate the specialty specific indirect PE scaling factors.

Step 15: Using the results of Step 14, calculate an indirect practice cost index at the specialty level by dividing each specialty specific indirect scaling factor by the average indirect scaling factor for the entire PFS.

Step 16: Calculate the indirect practice cost index at the service level to ensure the capture of all indirect costs. Calculate a weighted average of the practice cost index values for the specialties that furnish the service. (Note: For services with TCs and PCs, we calculate the indirect practice cost index across the global service, PCs, and TCs. Under this method, the indirect practice cost index for a given service (for example, echocardiogram) does not vary by the PC, TC, and global service.)

Step 17: Apply the service level indirect practice cost index calculated in Step 16 to the service level adjusted indirect allocators calculated in Step 11 to get the indirect PE RVUs.

(d) Calculate the Final PE RVUs

Step 18: Add the direct PE RVUs from Step 5 to the indirect PE RVUs from Step 17 and apply the final PE budget neutrality (BN) adjustment. The final PE BN adjustment is calculated by comparing the sum of steps 5 and 17 to the aggregate work RVUs scaled by the ratio of current aggregate PE and work RVUs. This adjustment ensures that all PE RVUs in the PFS account for the fact that certain specialties are excluded from the calculation of PE RVUs but included in maintaining overall PFS BN. (See “Specialties excluded from ratesetting calculation” later in this proposed rule.)

Step 19: Apply the phase-in of significant RVU reductions and its associated adjustment. Section 1848(c)(7) of the Act specifies that for services that are not new or revised codes, if the total RVUs for a service for a year would otherwise be decreased by an estimated 20 percent or more as compared to the total RVUs for the previous year, the applicable adjustments in work, PE, and MP RVUs shall be phased in over a 2-year period. In implementing the phase-in, we consider a 19 percent reduction as the maximum 1-year reduction for any service not described by a new or revised code. This approach limits the year one reduction for the service to the maximum allowed amount (that is, 19 percent), and then phases in the remainder of the reduction. To comply with section 1848(c)(7) of the Act, we adjust the PE RVUs to ensure that the total RVUs for all services that are not new or revised codes decrease by no more than 19 percent, and then apply a relativity adjustment to ensure that the total pool of aggregate PE RVUs remains relative to the pool of work and MP RVUs. For a more detailed description of the methodology for the phase-in of significant RVU changes, we refer readers to the CY 2016 PFS final rule with comment period (80 FR 70927 through 70931).

(e) Setup File Information

- Specialties excluded from ratesetting calculation: For the purposes of calculating the PE and MP RVUs, we exclude certain specialties, such as certain NPPs paid at a percentage of the PFS and low volume specialties, from the calculation. These specialties are included for the purposes of calculating the BN adjustment. They are displayed in Table 1.

TABLE 1: Specialties Excluded from Ratesetting Calculation

Specialty Code	Specialty Description
49	Ambulatory surgical center
50	Nurse practitioner
51	Medical supply company with certified orthotist
52	Medical supply company with certified prosthetist
53	Medical supply company with certified prosthetist-orthotist
54	Medical supply company not included in 51, 52, or 53.
55	Individual certified orthotist
56	Individual certified prosthetist
57	Individual certified prosthetist-orthotist
58	Medical supply company with registered pharmacist
59	Ambulance service supplier, e.g., private ambulance companies, funeral homes, etc.
60	Public health or welfare agencies
61	Voluntary health or charitable agencies
73	Mass immunization roster biller
74	Radiation therapy centers
87	All other suppliers (e.g., drug and department stores)
88	Unknown supplier/provider specialty
89	Certified clinical nurse specialist
96	Optician
97	Physician assistant
A0	Hospital
A1	SNF
A2	Intermediate care nursing facility
A3	Nursing facility, other
A4	HHA
A5	Pharmacy
A6	Medical supply company with respiratory therapist
A7	Department store
A8	Grocery store
B1	Supplier of oxygen and/or oxygen related equipment (eff. 10/2/2007)
B2	Pedorthic personnel
B3	Medical supply company with pedorthic personnel
B4	Rehabilitation Agency
B5	Ocularist
C1	Centralized Flu
C2	Indirect Payment Procedure
C5	Dentistry

- Cross-walk certain low volume physician specialties: Cross-walk the utilization of certain specialties with relatively low PFS utilization to the associated specialties.

- Physical therapy utilization: Cross-walk the utilization associated with all physical therapy services to the specialty of physical therapy.

- Identify professional and technical services not identified under the usual TC and 26 modifiers: Flag the services that are PC and TC services but do not use TC and 26 modifiers (for example, electrocardiograms). This flag associates the PC and TC with the associated global code for use in creating the indirect PE RVUs. For example, the professional service, CPT code 93010 (Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only), is associated with the global service, CPT code 93000 (Electrocardiogram, routine ECG with at least 12 leads; with interpretation and report).

- Payment modifiers: Payment modifiers are accounted for in the creation of the file consistent with current payment policy as implemented in claims processing. For example, services billed with the assistant at surgery modifier are paid 16 percent of the PFS amount for that service; therefore, the utilization file is modified to only account for 16 percent of any service that contains the assistant at surgery modifier. Similarly, for those services to which volume adjustments are made to account for the payment modifiers, time adjustments are applied as well. For time adjustments to surgical services, the intraoperative portion in the work time file is used; where it is not present, the intraoperative percentage from the payment files used by contractors to process Medicare claims is used instead. Where neither is available, we use the payment

adjustment ratio to adjust the time accordingly. Table 2 details the manner in which the modifiers are applied.

TABLE 2: Application of Payment Modifiers to Utilization Files

Modifier	Description	Volume Adjustment	Time Adjustment
80,81,82	Assistant at Surgery	16%	Intraoperative portion
AS	Assistant at Surgery – Physician Assistant	14% (85% * 16%)	Intraoperative portion
50 or LT and RT	Bilateral Surgery	150%	150% of work time
51	Multiple Procedure	50%	Intraoperative portion
52	Reduced Services	50%	50%
53	Discontinued Procedure	50%	50%
54	Intraoperative Care only	Preoperative + Intraoperative Percentages on the payment files used by Medicare contractors to process Medicare claims	Preoperative + Intraoperative portion
55	Postoperative Care only	Postoperative Percentage on the payment files used by Medicare contractors to process Medicare claims	Postoperative portion
62	Co-surgeons	62.5%	50%
66	Team Surgeons	33%	33%
CO, CQ	Physical and Occupational Therapy Assistant Services	88%	88%

We also adjust volume and time that correspond to other payment rules, including special multiple procedure endoscopy rules and multiple procedure payment reductions (MPPRs). We note that section 1848(c)(2)(B)(v) of the Act exempts certain reduced payments for multiple imaging procedures and multiple therapy services from the BN calculation under section 1848(c)(2)(B)(ii)(II) of the Act. These MPPRs are not included in the development of the RVUs.

Beginning in CY 2022, section 1834(v)(1) of the Act required that we apply a 15 percent payment reduction for outpatient occupational therapy services and outpatient physical therapy services that are provided, in whole or in part, by a physical therapist assistant (PTA) or occupational therapy assistant (OTA). Section 1834(v)(2)(A) of the Act required CMS to establish modifiers to identify these services, which we did in the

CY 2019 PFS final rule (83 FR 59654 through 59661), creating the CQ and CO payment modifiers for services provided in whole or in part by PTAs and OTAs, respectively. These payment modifiers are required to be used on claims for services with dates of service beginning January 1, 2020, as specified in the CY 2020 PFS final rule (84 FR 62702 through 62708). We applied the 15 percent payment reduction to therapy services provided by PTAs (using the CQ modifier) or OTAs (using the CO modifier), as required by statute. Under sections 1834(k) and 1848 of the Act, payment is made for outpatient therapy services at 80 percent of the lesser of the actual charge or applicable fee schedule amount (the allowed charge). The remaining 20 percent is the beneficiary copayment. For therapy services to which the new discount applies, payment will be made at 85 percent of the 80 percent of allowed charges. Therefore, the volume discount factor for therapy services to which the CQ and CO modifiers apply is: $(0.20 + (0.80 * 0.85))$, which equals 88 percent.

For anesthesia services, we do not apply adjustments to volume since we use the average allowed charge when simulating RVUs; therefore, the RVUs as calculated already reflect the payments as adjusted by modifiers, and no volume adjustments are necessary. However, a time adjustment of 33 percent is made only for medical direction of two to four cases since that is the only situation where a single practitioner is involved with multiple beneficiaries concurrently, so that counting each service without regard to the overlap with other services would overstate the amount of time spent by the practitioner furnishing these services.

- Work RVUs: The setup file contains the work RVUs from this proposed rule.

(6) Equipment Cost per Minute

The equipment cost per minute is calculated as:

$$\frac{1}{(\text{minutes per year} * \text{usage})} * \text{price} * \left(\frac{\text{interest rate}}{1 - \left(\frac{1}{(1 + \text{interest rate})^{\text{life of equipment}}} \right)} \right) + \text{maintenance}$$

Where:

minutes per year = maximum minutes per year if usage were continuous (that is, usage=1); generally, 150,000 minutes.

usage = variable, see discussion below in this proposed rule.

price = price of the particular piece of equipment.

life of equipment = useful life of the particular piece of equipment.

maintenance = factor for maintenance; 0.05.

interest rate = variable, see discussion below in this proposed rule.

Usage: We currently use an equipment utilization rate assumption of 50 percent for most equipment, with the exception of expensive diagnostic imaging equipment, for which we use a 90 percent assumption as required by section 1848(b)(4)(C) of the Act.

Useful Life: In the CY 2005 PFS final rule we stated that we updated the useful life for equipment items primarily based on the AHA's "Estimated Useful Lives of Depreciable Hospital Assets" guidelines (69 FR 66246). The most recent edition of these guidelines was published in 2018. This reference material provides an estimated useful life for hundreds of different types of equipment, the vast majority of which fall in the range of 5 to 10 years, and none of which are lower than 2 years in duration. We believe that the updated editions of this reference material remain the most accurate source for estimating the useful life of depreciable medical equipment.

In the CY 2021 PFS final rule, we finalized a proposal to treat equipment life durations of less than 1 year as having a duration of 1 year for the purpose of our equipment price per minute formula. In the rare cases where items are replaced every few months, we noted that we believe it is more accurate to treat these items as disposable supplies with a fractional supply quantity as opposed to equipment items with very short equipment life durations. For a more detailed discussion of the methodology associated with very short equipment life durations, we refer readers to the CY 2021 PFS final rule (85 FR 84482 through 84483).

- **Maintenance:** We finalized the 5 percent factor for annual maintenance in the CY 1998 PFS final rule with comment period (62 FR 33164). As we previously stated in the CY 2016 PFS final rule with comment period (80 FR 70897), we do not believe the annual maintenance factor for all equipment is precisely 5 percent, and we concur that the current rate likely understates the true cost of maintaining some equipment. We also noted that we believe it likely overstates the maintenance costs for other equipment. When we solicited comments regarding sources of data containing equipment maintenance rates, commenters were unable to identify an auditable, robust data source that could be used by CMS on a wide scale. We noted that we did not believe voluntary submissions regarding the maintenance costs of individual equipment items would be an appropriate methodology for determining costs. As a result, in the absence of publicly available datasets regarding equipment maintenance costs or another systematic data collection methodology for determining a different maintenance factor, we did not propose a variable maintenance factor for equipment cost per minute pricing as we did not believe that we have sufficient information at present. We noted that we would

continue to investigate potential avenues for determining equipment maintenance costs across a broad range of equipment items.

- **Interest Rate:** In the CY 2013 PFS final rule with comment period (77 FR 68902), we updated the interest rates used in developing an equipment cost per minute calculation (see 77 FR 68902 for a thorough discussion of this issue). The interest rate was based on the Small Business Administration (SBA) maximum interest rates for different categories of loan size (equipment cost) and maturity (useful life). The Interest rates are listed in Table 3.

TABLE 3: SBA Maximum Interest Rates

Price	Useful Life	Interest Rate
<\$25K	<7 Years	7.50%
\$25K to \$50K	<7 Years	6.50%
>\$50K	<7 Years	5.50%
<\$25K	7+ Years	8.00%
\$25K to \$50K	7+ Years	7.00%
>\$50K	7+ Years	6.00%

We are not proposing any changes to the equipment interest rates for CY 2024.

3. Adjusting RVUs To Match the PE Share of the Medicare Economic Index (MEI)

In the past, we have stated that we believe that the MEI is the best measure available of the relative weights of the three components in payments under the PFS—work, practice expense (PE), and malpractice (MP). Accordingly, we believe that to assure that the PFS payments reflect the relative resources in each of these PFS components as required by section 1848(c)(3) of the Act, the RVUs used in developing rates should reflect the same weights in each component as the Medicare Economic Index (MEI). In the past, we have proposed (and subsequently, finalized) to accomplish this by holding the work RVUs constant and adjusting the PE RVUs, MP RVUs, and CF to

produce the appropriate balance in RVUs among the three PFS components and payment rates for individual services, that is, that the total RVUs on the PFS are proportioned to approximately 51 percent work RVUs, 45 percent PE RVUs, and 4 percent MP RVUs. As the MEI cost shares are updated, we would typically propose to modify steps 3 and 10 to adjust the aggregate pools of PE costs (direct PE in step 3 and indirect PE in step 10) in proportion to the change in the PE share in the rebased and revised MEI cost share weights, and to recalibrate the relativity adjustment that we apply in step 18 as described “3. Adjusting RVUs To Match PE Share of the Medicare Economic Index (MEI)” of the CY 2023 PFS final rule (87 FR 69414 and 69415) and CY 2014 PFS final rule (78 FR 74236 and 74237). The most recent recalibration was done for the CY 2014 RVUs.

In the CY 2014 PFS proposed rule (78 FR 43287 through 43288) and final rule (78 FR 74236 through 74237), we detailed the steps necessary to accomplish this result (see steps 3, 10, and 18). The CY 2014 proposed and final adjustments were consistent with our longstanding practice to make adjustments to match the RVUs for the PFS components with the MEI cost share weights for the components, including the adjustments described in the CY 1999 PFS final rule (63 FR 58829), CY 2004 PFS final rule (68 FR 63246 and 63247), and CY 2011 PFS final rule (75 FR 73275).

In the CY 2023 PFS final rule (87 FR 69688 through 69711), we finalized to rebase and revise the Medicare Economic Index (MEI) to reflect more current market conditions faced by physicians in furnishing physicians' services. We also finalized a delay of the adjustments to the PE pools in steps 3 and 10 and the recalibration of the relativity adjustment in step 18 until the public had an opportunity to comment on the rebased and revised MEI (87 FR 69414 through 69416). Because we finalized significant

methodological and data source changes to the MEI in the CY 2023 PFS final rule and significant time has elapsed since the last rebasing and revision of the MEI in CY 2014, we believed that delaying the implementation of the finalized CY 2023 rebased and revised MEI was consistent with our efforts to balance payment stability and predictability with incorporating new data through more routine updates. We refer readers to the discussion of our comment solicitation in the CY 2023 PFS final rule (87 FR 69429 through 69432), where we reviewed our ongoing efforts to update data inputs for PE to aid stability, transparency, efficiency, and data adequacy. We also solicited comment in the CY 2023 PFS proposed rule on when and how to best incorporate the CY 2023 rebased and revised MEI into PFS ratesetting, and whether it would be appropriate to consider a transition to full implementation for potential future rulemaking. We presented the impacts of implementing the rebased and revised MEI in PFS ratesetting through a 4-year transition and through full immediate implementation, that is, with no transition period in the CY 2023 PFS proposed rule. We also solicited comment on other implementation strategies for potential future rulemaking in the CY 2023 PFS proposed rule. In the CY 2023 PFS final rule, we discussed that many commenters supported our proposed delayed implementation and many commenters expressed concerns with the redistributive impacts of the implementation of the rebased and revised MEI in PFS ratesetting. Many commenters also noted that the AMA has said it intends to collect practice cost data from physician practices in the near future which could be used to derive cost share weights for the MEI and RVU shares.

In light of the AMA's intended data collection efforts in the near future and because the methodological and data source changes to the MEI finalized in the CY 2023

PFS final rule would have significant impacts on PFS payments, we continue to believe that delaying the implementation of the finalized 2017-based MEI cost weights for the RVUs is consistent with our efforts to balance payment stability and predictability with incorporating new data through more routine updates. Therefore, we are not proposing to incorporate the 2017-based MEI in PFS ratesetting for CY 2024.

As discussed above, in the CY 2023 PFS rulemaking, we finalized to rebase and revise the MEI to reflect more current market conditions faced by physicians in furnishing physicians' services. The final 2017-based MEI relies on a methodology that uses publicly available data sources for input costs that represent all types of physician practice ownership, not limited to only self-employed physicians. The 2006-based MEI relied on the 2006 AMA PPIS survey data; as of this CY 2024 rulemaking, this survey had not been updated. Given the changes in the physician and supplier industry and the time since the last update to the base year, we finalized a methodology that would allow us to update the MEI on a consistent basis in the future. The 2017-based MEI cost weights are derived predominantly from the annual expense data from the U.S. Census Bureau's Services Annual Survey (SAS, <https://www.census.gov/programs-surveys/sas.html>). We supplement the 2017 SAS expense data by using several data sources to further disaggregate compensation costs and all other residual costs (87 FR 69688 through 69708).

We continue to review more recently available data from the Census Bureau Services Annual Survey, the main data source for the major components of the 2017-based MEI weights. Data is currently available through 2021. Given that the impact of the PHE may influence the 2020 and 2021 data, we continue to evaluate whether the

recent trends are reflective of sustained shifts in cost structures or were temporary as a result of the COVID-19 PHE. The 2022 data from the Services Annual Survey will be available later this year. We will monitor that data and any other data that may become available related to physician services' input expenses and will propose any changes to the MEI, if appropriate, in future rulemaking.

4. Changes to Direct PE Inputs for Specific Services

This section focuses on specific PE inputs. The direct PE inputs are included in the CY 2024 direct PE input public use files, which are available on the CMS website under downloads for the CY 2024 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

a. Standardization of Clinical Labor Tasks

As we noted in the CY 2015 PFS final rule with comment period (79 FR 67640 through 67641), we continue to make improvements to the direct PE input database to provide the number of clinical labor minutes assigned for each task for every code in the database instead of only including the number of clinical labor minutes for the preservice, service, and post service periods for each code. In addition to increasing the transparency of the information used to set PE RVUs, this level of detail would allow us to compare clinical labor times for activities associated with services across the PFS, which we believe is important to maintaining the relativity of the direct PE inputs. This information would facilitate the identification of the usual numbers of minutes for clinical labor tasks and the identification of exceptions to the usual values. It would also allow for greater transparency and consistency in the assignment of equipment minutes based

on clinical labor times. Finally, we believe that the detailed information can be useful in maintaining standard times for particular clinical labor tasks that can be applied consistently to many codes as they are valued over several years, similar in principle to the use of physician preservice time packages. We believe that setting and maintaining such standards would provide greater consistency among codes that share the same clinical labor tasks and could improve relativity of values among codes. For example, as medical practice and technologies change over time, changes in the standards could be updated simultaneously for all codes with the applicable clinical labor tasks, instead of waiting for individual codes to be reviewed.

In the CY 2016 PFS final rule with comment period (80 FR 70901), we solicited comments on the appropriate standard minutes for the clinical labor tasks associated with services that use digital technology. After consideration of comments received, we finalized standard times for clinical labor tasks associated with digital imaging at 2 minutes for “Availability of prior images confirmed”, 2 minutes for “Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocolled by radiologist”, 2 minutes for “Review examination with interpreting MD”, and 1 minute for “Exam documents scanned into PACS” and “Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue.” In the CY 2017 PFS final rule (81 FR 80184 through 80186), we finalized a policy to establish a range of appropriate standard minutes for the clinical labor activity, “Technologist QCs images in PACS, checking for all images, reformats, and dose page.” These standard minutes will be applied to new and revised codes that make use of this clinical labor activity when they are reviewed by us for valuation. We

finalized a policy to establish 2 minutes as the standard for the simple case, 3 minutes as the standard for the intermediate case, 4 minutes as the standard for the complex case, and 5 minutes as the standard for the highly complex case. These values were based upon a review of the existing minutes assigned for this clinical labor activity; we determined that 2 minutes is the duration for most services and a small number of codes with more complex forms of digital imaging have higher values. We also finalized standard times for a series of clinical labor tasks associated with pathology services in the CY 2016 PFS final rule with comment period (80 FR 70902). We do not believe these activities would be dependent on number of blocks or batch size, and we believe that the finalized standard values accurately reflect the typical time it takes to perform these clinical labor tasks.

In reviewing the RUC-recommended direct PE inputs for CY 2019, we noticed that the 3 minutes of clinical labor time traditionally assigned to the “Prepare room, equipment and supplies” (CA013) clinical labor activity were split into 2 minutes for the “Prepare room, equipment and supplies” activity and 1 minute for the “Confirm order, protocol exam” (CA014) activity. We proposed to maintain the 3 minutes of clinical labor time for the “Prepare room, equipment and supplies” activity and remove the clinical labor time for the “Confirm order, protocol exam” activity wherever we observed this pattern in the RUC-recommended direct PE inputs. Commenters explained in response that when the new version of the PE worksheet introduced the activity codes for clinical labor, there was a need to translate old clinical labor tasks into the new activity codes, and that a prior clinical labor task was split into two of the new clinical labor activity codes: CA007 (*Review patient clinical extant information and questionnaire*) in

the preservice period, and CA014 (*Confirm order, protocol exam*) in the service period. Commenters stated that the same clinical labor from the old PE worksheet was now divided into the CA007 and CA014 activity codes, with a standard of 1 minute for each activity. We agreed with commenters that we would finalize the RUC-recommended 2 minutes of clinical labor time for the CA007 activity code and 1 minute for the CA014 activity code in situations where this was the case. However, when reviewing the clinical labor for the reviewed codes affected by this issue, we found that several of the codes did not include this old clinical labor task, and we also noted that several of the reviewed codes that contained the CA014 clinical labor activity code did not contain any clinical labor for the CA007 activity. In these situations, we continue to believe that in these cases, the 3 total minutes of clinical staff time would be more accurately described by the CA013 “Prepare room, equipment and supplies” activity code, and we finalized these clinical labor refinements. For additional details, we direct readers to the discussion in the CY 2019 PFS final rule (83 FR 59463 and 59464).

Following the publication of the CY 2020 PFS proposed rule, one commenter expressed concern with the published list of common refinements to equipment time. The commenter stated that these refinements were the formulaic result of the applying refinements to the clinical labor time and did not constitute separate refinements; the commenter requested that CMS no longer include these refinements in the table published each year. In the CY 2020 PFS final rule, we agreed with the commenter that these equipment time refinements did not reflect errors in the equipment recommendations or policy discrepancies with the RUC’s equipment time recommendations. However, we believed that it was important to publish the specific

equipment times that we were proposing (or finalizing in the case of the final rule) when they differed from the recommended values due to the effect that these changes can have on the direct costs associated with equipment time. Therefore, we finalized the separation of the equipment time refinements associated with changes in clinical labor into a separate table of refinements. For additional details, we direct readers to the discussion in the CY 2020 PFS final rule (84 FR 62584).

Historically, the RUC has submitted a “PE worksheet” that details the recommended direct PE inputs for our use in developing PE RVUs. The format of the PE worksheet has varied over time and among the medical specialties developing the recommendations. These variations have made it difficult for both the RUC’s development and our review of code values for individual codes. Beginning with its recommendations for CY 2019, the RUC has mandated the use of a new PE worksheet for purposes of their recommendation development process that standardizes the clinical labor tasks and assigns them a clinical labor activity code. We believe the RUC’s use of the new PE worksheet in developing and submitting recommendations will help us to simplify and standardize the hundreds of different clinical labor tasks currently listed in our direct PE database. As we did in previous calendar years, to facilitate rulemaking for CY 2023, we are continuing to display two versions of the Labor Task Detail public use file: one version with the old listing of clinical labor tasks, and one with the same tasks cross-walked to the new listing of clinical labor activity codes. These lists are available on the CMS website under downloads for the CY 2024 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

b. Updates to Prices for Existing Direct PE Inputs

In the CY 2011 PFS final rule with comment period (75 FR 73205), we finalized a process to act on public requests to update equipment and supply price and equipment useful life inputs through annual rulemaking, beginning with the CY 2012 PFS proposed rule. Beginning in CY 2019 and continuing through CY 2022, we conducted a market-based supply and equipment pricing update, using information developed by our contractor, StrategyGen, which updated pricing recommendations for approximately 1300 supplies and 750 equipment items currently used as direct PE inputs. Given the potentially significant changes in payment that would occur, in the CY 2019 PFS final rule we finalized a policy to phase in our use of the new direct PE input pricing over a 4-year period using a 25/75 percent (CY 2019), 50/50 percent (CY 2020), 75/25 percent (CY 2021), and 100/0 percent (CY 2022) split between new and old pricing. We believed that implementing the proposed updated prices with a 4-year phase-in would improve payment accuracy, while maintaining stability and allowing interested parties the opportunity to address potential concerns about changes in payment for particular items. This 4-year transition period to update supply and equipment pricing concluded in CY 2022; for a more detailed discussion, we refer readers to the CY 2019 PFS final rule with comment period (83 FR 59473 through 59480).

For CY 2024, we are proposing to update the price of 16 supplies and two equipment items in response to the public submission of invoices following the publication of the CY 2023 PFS final rule. The 16 supply and equipment items with proposed updated prices are listed in the valuation of specific codes section of the preamble under Table 14, CY 2024 Invoices Received for Existing Direct PE Inputs.

We are not proposing to update the price of another eleven supplies which were the subject of public submission of invoices. Our rationale for not updating these prices is detailed below:

- Extended external ECG patch, medical magnetic tape recorder (SD339): We received additional invoices for the SD339 supply from an interested party. Upon review of the invoices, we determined that they contained the identical price point that we previously incorporated into last year's rule when we finalized a price of \$260.35 for the supply item (87 FR 69514 through 69516). Since these invoices did not contain any new information, we are maintaining the previously finalized price of \$260.35 for the SD339 supply.

- Permanent marking pen (SL477), Liquid coverslip (Ventana 650-010) (SL479), EZ Prep (10X) (Ventana 950-102) (SL481), Cell Conditioning 1 (Ventana 950-124) (SL482), and Hematoxylin II (Ventana 790-2208) (SL483): We received invoices from interested parties for use in updating the price of these laboratory supplies. In each case, however, we were able to find the same supply item available for sale online at the current price or cheaper. Therefore, we do not believe that the submitted invoices represent typical market pricing for these supplies and we are not proposing to update their prices.

- Mask, surgical (SB033), scalpel with blade, surgical (#10-20) (SF033), eye shield, non-fog (SG049), gauze, non-sterile 4in x 4in (SG051), and towel, paper (Bounty) (per sheet) (SK082): We received invoices from interested parties for use in updating the price of these common supply items. In each case, we received a single invoice and once again we were able to find the same supply items available for sale online at the current

price or cheaper. Generally speaking, we avoid updating the price for common supply items like the SB033 surgical mask (included in approximately 380 HCPCS codes) based on the submission of a single invoice, as an invoice unrepresentative of current market pricing will have far-reaching effects across the PFS. We did not find that the typical price for a surgical mask had increased by more than 60% since the supply and equipment pricing update concluded in CY 2022, and as such we are maintaining the current price for these supply items.

(1) Invoice Submission

We remind readers that we routinely accept public submission of invoices as part of our process for developing payment rates for new, revised, and potentially misvalued codes. Often these invoices are submitted in conjunction with the RUC-recommended values for the codes. To be included in a given year's proposed rule, we generally need to receive invoices by the same February 10th deadline we noted for consideration of RUC recommendations. However, we will consider invoices submitted as public comments during the comment period following the publication of the PFS proposed rule, and would consider any invoices received after February 10th or outside of the public comment process as part of our established annual process for requests to update supply and equipment prices. Interested parties are encouraged to submit invoices with their public comments or, if outside the notice and comment rulemaking process, via email at PE_Price_Input_Update@cms.hhs.gov.

c. Clinical Labor Pricing Update

Section 220(a) of the PAMA provides that the Secretary may collect or obtain information from any eligible professional or any other source on the resources directly

or indirectly related to furnishing services for which payment is made under the PFS, and that such information may be used in the determination of relative values for services under the PFS. Such information may include the time involved in furnishing services; the amounts, types and prices of PE inputs; overhead and accounting information for practices of physicians and other suppliers, and any other elements that would improve the valuation of services under the PFS.

Beginning in CY 2019, we updated the supply and equipment prices used for PE as part of a market-based pricing transition; CY 2022 was the final year of this 4-year transition. We initiated a market research contract with StrategyGen to conduct an in-depth and robust market research study to update the supply and equipment pricing for CY 2019, and we finalized a policy in CY 2019 to phase in the new pricing over a period of 4 years. However, we did not propose to update the clinical labor pricing, and the pricing for clinical labor has remained unchanged during this pricing transition. Clinical labor rates were last updated for CY 2002 using Bureau of Labor Statistics (BLS) data and other supplementary sources where BLS data were not available; we refer readers to the full discussion in the CY 2002 PFS final rule for additional details (66 FR 55257 through 55262).

Interested parties raised concerns that the long delay since clinical labor pricing was last updated created a significant disparity between CMS' clinical wage data and the market average for clinical labor. In recent years, a number of interested parties suggested that certain wage rates were inadequate because they did not reflect current labor rate information. Some interested parties also stated that updating the supply and equipment pricing without updating the clinical labor pricing could create distortions in

the allocation of direct PE. They argued that since the pool of aggregated direct PE inputs is budget neutral, if these rates are not routinely updated, clinical labor may become undervalued over time relative to equipment and supplies, especially since the supply and equipment prices are in the process of being updated. There was considerable interest among interested parties in updating the clinical labor rates, and when we solicited comment on this topic in past rules, such as in the CY 2019 PFS final rule (83 FR 59480), interested parties supported the idea.

Therefore, we proposed to update the clinical labor pricing for CY 2022, in conjunction with the final year of the supply and equipment pricing update (86 FR 39118 through 39123). We believed it was important to update the clinical labor pricing to maintain relativity with the recent supply and equipment pricing updates. We proposed to use the methodology outlined in the CY 2002 PFS final rule (66 FR 55257), which draws primarily from BLS wage data, to calculate updated clinical labor pricing. As we stated in the CY 2002 PFS final rule, the BLS' reputation for publishing valid estimates that are nationally representative led to the choice to use the BLS data as the main source. We believe that the BLS wage data continues to be the most accurate source to use as a basis for clinical labor pricing and this data will appropriately reflect changes in clinical labor resource inputs for purposes of setting PE RVUs under the PFS. We used the most current BLS survey data (2019) as the main source of wage data for our CY 2022 clinical labor proposal.

We recognized that the BLS survey of wage data does not cover all the staff types contained in our direct PE database. Therefore, we cross-walked or extrapolated the wages for several staff types using supplementary data sources for verification whenever

possible. In situations where the price wages of clinical labor types were not referenced in the BLS data, we used the national salary data from the Salary Expert, an online project of the Economic Research Institute that surveys national and local salary ranges and averages for thousands of job titles using mainly government sources. (A detailed explanation of the methodology used by Salary Expert to estimate specific job salaries can be found at www.salaryexpert.com). We previously used Salary Expert information as the primary backup source of wage data during the last update of clinical labor pricing in CY 2002. If we did not have direct BLS wage data available for a clinical labor type, we used the wage data from Salary Expert as a reference for pricing, then cross-walked these clinical labor types to a proxy BLS labor category rate that most closely matched the reference wage data, similar to the crosswalks used in our PE/HR allocation. For example, there is no direct BLS wage data for the Mammography Technologist (L043) clinical labor type; we used the wage data from Salary Expert as a reference and identified the BLS wage data for Respiratory Therapists as the best proxy category. We calculated rates for the “blend” clinical labor categories by combining the rates for each labor type in the blend and then dividing by the total number of labor types in the blend.

As in the CY 2002 clinical labor pricing update, the proposed cost per minute for each clinical staff type was derived by dividing the average hourly wage rate by 60 to arrive at the per minute cost. In cases where an hourly wage rate was not available for a clinical staff type, the proposed cost per minute for the clinical staff type was derived by dividing the annual salary (converted to 2021 dollars using the Medicare Economic Index) by 2080 (the number of hours in a typical work year) to arrive at the hourly wage rate and then again by 60 to arrive at the per minute cost. We ultimately finalized the use

of median BLS wage data, as opposed to mean BLS wage data, in response to comments in the CY 2022 PFS final rule. To account for the employers' cost of providing fringe benefits, such as sick leave, we finalized the use of a benefits multiplier of 1.296 based on a BLS release from June 17, 2021 (USDLE-21-1094). As an example of this process, for the Physical Therapy Aide (L023A) clinical labor type, the BLS data reflected a median hourly wage rate of \$12.98, which we multiplied by the 1.296 benefits modifier and then divided by 60 minutes to arrive at the finalized per-minute rate of \$0.28.

After considering the comments on our CY 2022 proposals, we agreed with commenters that the use of a multi-year transition would help smooth out the changes in payment resulting from the clinical labor pricing update, avoiding potentially disruptive changes in payment for affected interested parties, and promoting payment stability from year-to-year. We believed it would be appropriate to use a 4-year transition, as we have for several other broad-based updates or methodological changes. While we recognized that using a 4-year transition to implement the update means that we will continue to rely in part on outdated data for clinical labor pricing until the change is fully completed in CY 2025, we agreed with the commenters that these significant updates to PE valuation should be implemented in the same way, and for the same reasons, as for other major updates to pricing such as the recent supply and equipment update. Therefore, we finalized the implementation of the clinical labor pricing update over 4 years to transition from current prices to the final updated prices in CY 2025. We finalized the implementation of this pricing transition over 4 years, such that one quarter of the difference between the current price and the fully phased-in price is implemented for CY 2022, one third of the difference between the CY 2022 price and the final price is

implemented for CY 2023, and one half of the difference between the CY 2023 price and the final price is implemented for CY 2024, with the new direct PE prices fully implemented for CY 2025. (86 FR 65025) An example of the transition from the current to the fully-implemented new pricing that we finalized in the CY 2022 PFS final rule is provided in Table 4.

TABLE 4: Example of Clinical Labor Pricing Transition

Current Price	\$1.00	
Final Price	\$2.00	
Year 1 (CY 2022) Price	\$1.25	1/4 difference between \$1.00 and \$2.00
Year 2 (CY 2023) Price	\$1.50	1/3 difference between \$1.25 and \$2.00
Year 3 (CY 2024) Price	\$1.75	1/2 difference between \$1.50 and \$2.00
Final (CY 2025) Price	\$2.00	

(1) CY 2023 Clinical Labor Pricing Updates

For CY 2023, we received information from one interested party regarding the pricing of the Histotechnologist (L037B) clinical labor type. The interested party provided data from the 2019 Wage Survey of Medical Laboratories which supported an increase in the per-minute rate from the \$0.55 finalized in the CY 2022 PFS final rule to \$0.64. This rate of \$0.64 for the L037B clinical labor type is a close match to the online salary data that we had for the Histotechnologist and matches the \$0.64 rate that we initially proposed for L037B in the CY 2022 PFS proposed rule. Based on the wage data provided by the commenter, we proposed this \$0.64 rate for the L037B clinical labor type for CY 2023; we also proposed a slight increase in the pricing for the Lab Tech/Histotechnologist (L035A) clinical labor type from \$0.55 to \$0.60 as it is a blend of the wage rate for the Lab Technician (L033A) and Histotechnologist clinical labor types. We also proposed the same increase to \$0.60 for the Angio Technician (L041A) clinical labor type, as we previously established a policy in the CY 2022 PFS final rule that the

pricing for the L041A clinical labor type would match the rate for the L035A clinical labor type (86 FR 65032).

Based on comments received on the CY 2023 proposed rule, we finalized a change in the descriptive text of the L041A clinical labor type from “Angio Technician” to “Vascular Interventional Technologist”. We also finalized an update in the pricing of three clinical labor types: from \$0.60 to \$0.84 for the Vascular Interventional Technologist (L041A), from \$0.63 to \$0.79 for the Mammography Technologist (L043A), and from \$0.76 to \$0.78 for the CT Technologist (L046A) based on submitted wage data from the 2022 Radiologic Technologist Wage and Salary Survey (87 FR 69422 through 69425).

(2) CY 2024 Clinical Labor Pricing Update Proposals

We did not receive new wage data or other additional information for use in clinical labor pricing from interested parties prior to the publication of the CY 2024 PFS proposed rule. Therefore, our proposed clinical labor pricing for CY 2024 is based on the clinical labor pricing that we finalized in the CY 2023 PFS final rule, incremented an additional step for Year 3 of the update:

TABLE 5: Proposed CY 2024 Clinical Labor Pricing

Labor Code	Labor Description	Source	CY 2021 Rate Per Minute	Final Rate Per Minute	Y3 Phase-In Rate Per Minute	Total % Change
L023A	Physical Therapy Aide	BLS 31-2022	0.23	0.28	0.268	22%
L026A	Medical/Technical Assistant	BLS 31-9092	0.26	0.36	0.335	38%

As was the case for the market-based supply and equipment pricing update, the clinical labor rates will remain open for public comment over the course of the 4-year transition period. We updated the pricing of a number of clinical labor types in the CY 2022 and CY 2023 PFS final rules in response to information provided by commenters. For the full discussion of the clinical labor pricing update, we direct readers to the CY 2022 PFS final rule (86 FR 65020 through 65037).

d. Technical Corrections to Direct PE Input Database and Supporting Files

Following the publication of the CY 2023 PFS proposed rule, an interested party notified CMS that CPT code 86153 (*Cell enumeration using immunologic selection and identification in fluid specimen (eg, circulating tumor cells in blood); physician interpretation and report, when required*) appeared to be missing its work time in the Physician Work Time public use file. We reviewed the request from the interested party and determined that this was indeed an unintended technical error; we stated in the CY 2013 PFS final rule that we were finalizing 0 minutes pre-service time, 20 minutes intraservice time, and 0 minutes post-service time to CPT code 86153 (77 FR 69059), however work time was inadvertently completely missing for this code. Therefore, we are

proposing to add the correct 20 minutes of intraservice work time to CPT code 86153 for CY 2024.

5. Soliciting Public Comment on Strategies for Updates to Practice Expense Data Collection and Methodology

a. Background

The AMA PPIS was first introduced in 2007 as a means to collect comprehensive and reliable data on the direct and indirect PEs incurred by physicians (72 FR 66222). In considering the use of PPIS data, the goal was to improve the accuracy and consistency of PE RVUs used in the PFS. The data collection process included a stratified random sample of physicians across various specialties, and the survey was administered between August 2007 and March 2008. Data points from that period of time that are integrated into PFS calculations today. In the CY 2009 PFS proposed rule (73 FR 38507 through 3850), we discussed the indirect PE methodology that used data from the AMA's survey that predated the PPIS. In CY 2010 PFS rulemaking, we announced our intent to incorporate the AMA PPIS data into the PFS ratesetting process, which would first affect the PE RVU. In the CY 2010 PFS proposed rule, we outlined a 4-year transition period, during which we would phase in the AMA PPIS data, replacing the existing PE data sources (74 FR 33554). We also explained that our proposals intended to update survey data only (74 FR 33530 through 33531). In our CY 2010 final rule, we finalized our proposal, with minor adjustments based on public comments (74 FR 61749 through 61750). We responded to the comments we received about the transition to using the PPIS to inform indirect PE allocations (74 FR 61750). In the responses, we acknowledged concerns about potential gaps in the data, which could impact the

allocation of indirect PE for certain physician specialties and suppliers, which are issues that remain important today. The CY 2010 PFS final rule explains that section 212 of the Balanced Budget Refinement Act of 1999 (BBRA) (Pub. L. 106-113, November 29, 1999) directed the Secretary to establish a process under which we accept and use, to the maximum extent practicable and consistent with sound data practices, data collected or developed by entities and organizations to supplement the data we normally collect in determining the PE component. BBRA required us to establish criteria for accepting supplemental survey data. Since the supplemental surveys were specific to individual specialties and not part of a comprehensive multispecialty survey, we had required that certain precision levels be met in order to ensure that the supplemental data was sufficiently valid, and acceptable for use in the development of the PE RVUs. At the time, our rationale included the assumption that because the PPIS is a contemporaneous, consistently collected, and comprehensive multispecialty survey, we do not believe similar precision requirements are necessary, and we did not propose to establish them for the use of the PPIS data (74 FR 61742). We noted potential gaps in the data, which could impact the allocation of indirect PE for certain physician and suppliers. The CY 2010 final rule adopted the proposal, with minor adjustments based on public comments, and explained that these minor adjustments were in part due to non-response bias that results when the characteristics of survey respondents differ in meaningful ways, such as in the mix of practices sizes, from the general population (74 FR 61749 through 61750).

Throughout the 4-year transition period, from CY 2010 to CY 2013, we gradually incorporated the AMA PPIS data into the PFS rates, replacing the previous data sources. The process involved addressing concerns and making adjustments as necessary, such as

refining the PFS ratesetting methodology in consideration of interested party feedback. For background on the refinements that we considered after the transition began, we refer readers to discussions in the CY 2011-2014 final rules (75 FR 73178 through 73179; 76 FR 73033 through 73034; 77 FR 98892; 78 FR 74272 through 74276).

In the CY 2011 PFS proposed rule, we requested comments on the methodology for calculating indirect PE RVUs, explicitly seeking input on using survey data, allocation methods, and potential improvements (75 FR 40050). In our CY 2011 PFS final rule, we addressed comments regarding the methodology for indirect PE calculations, focusing on using survey data, allocation methods, and potential improvements (75 FR 73178 through 73179). We recognized some limitations of the current PFS ratesetting methodology but maintained that the approach was the most appropriate at the time. In the CY 2012 PFS final rule, we responded to comments related to indirect PE methodology, including concerns about allocating indirect PE to specific services and using the AMA PPIS data for certain specialties (76 FR 73033 through 73034). We indicated that CMS would continue to review and refine the methodology and work with interested parties to address their concerns. In the CY PFS 2014 final rule, we responded to comments about fully implementing the AMA PPIS data. By 2014, the AMA PPIS data had been fully integrated into the PFS, serving as the primary source for determining indirect PE inputs (78 FR 74235). We continued to review data and the PE methodology annually, considering interested party feedback and evaluating the need for updates or refinements to ensure the accuracy and relevance of PE RVUs (79 FR 67548). In the years following the full implementation of the AMA PPIS data, we further engaged with interested parties, thought leaders and subject matter experts to improve our PE

inputs' accuracy and reliability. For further background, we refer readers to our discussions in final rules for CY 2016-2022 (80 FR 70892; 81 FR 80175; 82 FR 52980 through 52981; 83 FR 59455 through 59456; 84 FR 62572; 85 FR 84476 through 84478; 86 FR 62572).

In our CY 2023 PFS final rule, we issued an RFI to solicit public comment on strategies to update PE data collection and methodology (87 FR 69429 to 69432). We solicited comments on current and evolving trends in health care business arrangements, the use of technology, or similar topics that might affect or factor into PE calculations. We remind readers that we have worked with interested parties and CMS contractors for years to study the landscape and identify possible strategies to reshape the PE portion of physician payments. The fundamental issues are clear, but thought leaders and subject matter experts have advocated for more than one tenable approach to updating our PE methodology.

As described in last year's rule, we have continued interest in developing a roadmap for updates to our PE methodology that account for changes in the health care landscape. Of various considerations necessary to form a roadmap for updates, we reiterate that allocations of indirect PE continue to present a wide range of challenges and opportunities. As discussed in multiple cycles of previous rulemaking, our PE methodology relies on AMA PPIS data, which may represent the best aggregated available source of information at this time. However, we acknowledge the limitations and challenges interested parties have raised about using the current data for indirect PE allocations, which we have also examined in related ongoing research. We noted in last year's rule that there are several competing concerns that CMS must take into account

when considering updated data sources, which also should support and enable ongoing refinements to our PE methodology.

Many commenters last year asked that CMS wait for the AMA to complete a refresh of AMA survey data. We responded to these comments by explaining the tension that waiting creates in light of concerns raised by other interested parties. Waiting for refreshed survey data would result in CMS using data nearly 20 years old to form indirect PE inputs to set rates for services on the PFS. We remind readers that many of the critical issues discussed in the background and history above are mainly unchanged and possibly would not be addressed by an updated survey alone but may also require revisions to the PFS ratesetting methodology.

b. Request for Information

We continue to encourage interested parties to provide feedback and suggestions to CMS that give an evidentiary basis to shape optimal PE data collection and methodological adjustments over time. Submissions should discuss the feasibility and burden of implementing any suggested adjustments and highlight opportunities to optimize the cadence, frequency, and phase-in of resulting adjustments. We continue to consider ways that we may engage in dialogue with interested parties to better understand how to address possible long-term policies and methods for PFS ratesetting. We believe some of those concerns may be alleviated by having ways to refresh data and make transparent how the information affects valuations for services payable under the PFS more accurately and precisely.

Considering our ratesetting methodology and prior experiences implementing new data, we are issuing a follow-up solicitation for general information. We seek comments

from interested parties on strategies to incorporate information that could address known challenges we experienced in implementing the initial AMA PPIS data. Our current methodology relies on the AMA PPIS data, legislatively mandated supplemental data sources (for, example, we use supplemental survey data collected in 2003, as required by section 1848(c)(2)(H)(i) of the Act to set rates for oncology and hematology specialties), and in some cases crosswalks to allocate indirect PE as necessary for certain specialties and provider types.

We also seek to understand whether, upon completion of the updated PPIS data collection effort by the AMA, contingencies or alternatives may be necessary and available to address lack of data availability or response rates for a given specialty, set of specialties, or specific service suppliers who are paid under the PFS.

In light of the considerations discussed above, we request feedback on the following:

(1) If CMS should consider aggregating data for certain physician specialties to generate indirect allocators so that PE/HR calculations based on PPIS data would be less likely to over-allocate (or under-allocate) indirect PE to a given set of services, specialties, or practice types. Further, what thresholds or methodological approaches could be employed to establish such aggregations?

(2) Whether aggregations of services, for purposes of assigning PE inputs, represent a fair, stable and accurate means to account for indirect PEs across various specialties or practice types?

(3) If and how CMS should balance factors that influence indirect PE inputs when these factors are likely driven by a difference in geographic location or setting of care,

specific to individual practitioners (or practitioner types) versus other specialty/practice-specific characteristics (for example, practice size, patient population served)?

(4) What possible unintended consequences may result if CMS were to act upon the respondents' recommendations for any of highlighted considerations above?

(5) Whether specific types of outliers or non-response bias may require different analytical approaches and methodological adjustments to integrate refreshed data?

C. Potentially Misvalued Services Under the PFS

1. Background

Section 1848(c)(2)(B) of the Act directs the Secretary to conduct a periodic review, not less often than every 5 years, of the relative value units (RVUs) established under the PFS. Section 1848(c)(2)(K) of the Act requires the Secretary to periodically identify potentially misvalued services using certain criteria and to review and make appropriate adjustments to the relative values for those services. Section 1848(c)(2)(L) of the Act also requires the Secretary to develop a process to validate the RVUs of certain potentially misvalued codes under the PFS, using the same criteria used to identify potentially misvalued codes, and to make appropriate adjustments.

As discussed in section II.E. of this proposed rule, under Valuation of Specific Codes, each year we develop appropriate adjustments to the RVUs taking into account recommendations provided by the American Medical Association (AMA) Resource-Based Relative Value Scale (RVS) Update Committee (RUC), MedPAC, and other interested parties. For many years, the RUC has provided us with recommendations on the appropriate relative values for new, revised, and potentially misvalued PFS services. We review these recommendations on a code-by-code basis and consider these

recommendations in conjunction with analyses of other data, such as claims data, to inform the decision-making process as authorized by statute. We may also consider analyses of work time, work RVUs, or direct PE inputs using other data sources, such as Department of Veteran Affairs (VA), National Surgical Quality Improvement Program (NSQIP), the Society for Thoracic Surgeons (STS), and the Merit-based Incentive Payment System (MIPS) data. In addition to considering the most recently available data, we assess the results of physician surveys and specialty recommendations submitted to us by the RUC for our review. We also considered information provided by other interested parties such as from the general medical-related community and the public. We conducted a review to assess the appropriate RVUs in the context of contemporary medical practice. We note that section 1848(c)(2)(A)(ii) of the Act authorizes the use of extrapolation and other techniques to determine the RVUs for physicians' services for which specific data are not available and requires us to take into account the results of consultations with organizations representing physicians who provide the services. In accordance with section 1848(c) of the Act, we determine and make appropriate adjustments to the RVUs.

In its March 2006 Report to the Congress (http://www.medpac.gov/docs/default-source/reports/Mar06_Ch03.pdf?sfvrsn=0), MedPAC discussed the importance of appropriately valuing physicians' services, noting that misvalued services can distort the market for physicians' services, as well as for other health care services that physicians order, such as hospital services. In that same report, MedPAC postulated that physicians' services under the PFS can become misvalued over time. MedPAC stated, "When a new service is added to the physician fee schedule, it may be assigned a relatively high value

because of the time, technical skill, and psychological stress that are often required to furnish that service. Over time, the work required for certain services would be expected to decline as physicians become more familiar with the service and more efficient in furnishing it.” We believe services can also become overvalued when PE costs decline. This can happen when the costs of equipment and supplies fall, or when equipment is used more frequently than is estimated in the PE methodology, reducing its cost per use. Likewise, services can become undervalued when physician work increases or PE costs rise.

As MedPAC noted in its March 2009 Report to Congress (<http://www.medpac.gov/docs/default-source/reports/march-2009-report-to-congress-medicare-payment-policy.pdf>), in the intervening years since MedPAC made the initial recommendations, CMS and the RUC have taken several steps to improve the review process. Also, section 1848(c)(2)(K)(ii) of the Act augments our efforts by directing the Secretary to specifically examine, as determined appropriate, potentially misvalued services in the following categories:

- Codes that have experienced the fastest growth.
- Codes that have experienced substantial changes in PE.
- Codes that describe new technologies or services within an appropriate time-period (such as 3 years) after the relative values are initially established for such codes.
- Codes which are multiple codes that are frequently billed in conjunction with furnishing a single service.
- Codes with low relative values, particularly those that are often billed multiple times for a single treatment.

- Codes that have not been subject to review since implementation of the fee schedule.
- Codes that account for the majority of spending under the PFS.
- Codes for services that have experienced a substantial change in the hospital length of stay or procedure time.
- Codes for which there may be a change in the typical site of service since the code was last valued.
- Codes for which there is a significant difference in payment for the same service between different sites of service.
- Codes for which there may be anomalies in relative values within a family of codes.
- Codes for services where there may be efficiencies when a service is furnished at the same time as other services.
- Codes with high intraservice work per unit of time.
- Codes with high PE RVUs.
- Codes with high cost supplies.
- Codes as determined appropriate by the Secretary.

Section 1848(c)(2)(K)(iii) of the Act also specifies that the Secretary may use existing processes to receive recommendations on the review and appropriate adjustment of potentially misvalued services. In addition, the Secretary may conduct surveys, other data collection activities, studies, or other analyses, as the Secretary determines to be appropriate, to facilitate the review and appropriate adjustment of potentially misvalued services. This section also authorizes the use of analytic contractors to identify and

analyze potentially misvalued codes, conduct surveys or collect data, and make recommendations on the review and appropriate adjustment of potentially misvalued services. Additionally, this section provides that the Secretary may coordinate the review and adjustment of any RVU with the periodic review described in section 1848(c)(2)(B) of the Act. Section 1848(c)(2)(K)(iii)(V) of the Act specifies that the Secretary may make appropriate coding revisions (including using existing processes for consideration of coding changes) that may include consolidation of individual services into bundled codes for payment under the PFS.

2. Progress in Identifying and Reviewing Potentially Misvalued Codes

To fulfill our statutory mandate, we have identified and reviewed numerous potentially misvalued codes as specified in section 1848(c)(2)(K)(ii) of the Act, and we intend to continue our work examining potentially misvalued codes in these areas over the upcoming years. As part of our current process, we identify potentially misvalued codes for review, and request recommendations from the RUC and other public commenters on revised work RVUs and direct PE inputs for those codes. The RUC, through its own processes, also identifies potentially misvalued codes for review.

Through our public nomination process for potentially misvalued codes established in the CY 2012 PFS final rule with comment period (76 FR 73026, 73058 through 73059), other individuals and groups submit nominations for review of potentially misvalued codes as well. Individuals and groups may submit codes for review under the potentially misvalued codes initiative to CMS in one of two ways. Nominations may be submitted to CMS via email or through postal mail. Email submissions should be sent to the CMS e-mailbox at *MedicarePhysicianFeeSchedule@cms.hhs.gov*, with the phrase “Potentially

Misvalued Codes” and the referencing CPT code number(s) and/or the CPT descriptor(s) in the subject line. Physical letters for nominations should be sent via the U.S. Postal Service to the Centers for Medicare & Medicaid Services, Mail Stop: C4-01-26, 7500 Security Blvd, Baltimore, Maryland 21244. Envelopes containing the nomination letters must be labeled “Attention: Division of Practitioner Services, Potentially Misvalued Codes.” Nominations for consideration in our next annual rule cycle should be received by our February 10th deadline. Since CY 2009, as a part of the annual potentially misvalued code review and Five-Year Review process, we have reviewed over 1,700 potentially misvalued codes to refine work RVUs and direct PE inputs. We have assigned appropriate work RVUs and direct PE inputs for these services as a result of these reviews. A more detailed discussion of the extensive prior reviews of potentially misvalued codes is included in the CY 2012 PFS final rule with comment period (76 FR 73052 through 73055). In the same CY 2012 PFS final rule with comment period, we finalized our policy to consolidate the review of physician work and PE at the same time, and established a process for the annual public nomination of potentially misvalued services.

In the CY 2013 PFS final rule with comment period (77 FR 68892, 68896 through 68897), we built upon the work we began in CY 2009 to review potentially misvalued codes that have not been reviewed since the implementation of the PFS (so-called “Harvard-valued codes”¹). In the CY 2019 PFS proposed rule (73 FR 38589), we

¹ The research team and panels of experts at the Harvard School of Public Health developed the original work RVUs for most CPT codes, in a cooperative agreement with the Department of Health and Human Services (HHS). Experts from both inside and outside the Federal Government obtained input from numerous physician specialty groups. This input was incorporated into the initial PFS, which was implemented on January 1, 1992.

requested recommendations from the RUC to aid in our review of Harvard-valued codes that had not yet been reviewed, focusing first on high-volume, low intensity codes. In the fourth Five-Year Review of Work RVUs proposed rule (76 FR 32410, 32419), we requested recommendations from the RUC to aid in our review of Harvard-valued codes with annual utilization of greater than 30,000 services. In the CY 2013 PFS final rule with comment period, we identified specific Harvard-valued services with annual allowed charges that total at least \$10,000,000 as potentially misvalued. In addition to the Harvard-valued codes, in the CY 2013 PFS final rule with comment period we finalized for review a list of potentially misvalued codes that have stand-alone PE (codes with physician work and no listed work time and codes with no physician work that have listed work time). We continue each year to consider and finalize a list of potentially misvalued codes that have or will be reviewed and revised as appropriate in future rulemaking.

3. CY 2024 Identification and Review of Potentially Misvalued Services

In the CY 2012 PFS final rule with comment period (76 FR 73058), we finalized a process for the public to nominate potentially misvalued codes. In the CY 2015 PFS final rule with comment period (79 FR 67548, 67606 through 67608), we modified this process whereby the public and interested parties may nominate potentially misvalued codes for review by submitting the code with supporting documentation by February 10th of each year. Supporting documentation for codes nominated for the annual review of potentially misvalued codes may include the following:

- Documentation in peer reviewed medical literature or other reliable data that demonstrate changes in physician work due to one or more of the following: technique,

knowledge and technology, patient population, site-of-service, length of hospital stay, and work time.

- An anomalous relationship between the code being proposed for review and other codes.
- Evidence that technology has changed physician work.
- Analysis of other data on time and effort measures, such as operating room logs or national and other representative databases.
- Evidence that incorrect assumptions were made in the previous valuation of the service, such as a misleading vignette, survey, or flawed crosswalk assumptions in a previous evaluation.
- Prices for certain high cost supplies or other direct PE inputs that are used to determine PE RVUs are inaccurate and do not reflect current information.
- Analyses of work time, work RVU, or direct PE inputs using other data sources (for example, VA, NSQIP, the STS National Database, and the MIPS data).
- National surveys of work time and intensity from professional and management societies and organizations, such as hospital associations.

We evaluate the supporting documentation submitted with the nominated codes and assess whether the nominated codes appear to be potentially misvalued codes appropriate for review under the annual process. In the following year's PFS proposed rule, we publish the list of nominated codes and indicate for each nominated code whether we agree with its inclusion as a potentially misvalued code. The public has the opportunity to comment on these and all other proposed potentially misvalued codes. In each year's final rule, we finalize our list of potentially misvalued codes.

a. Public Nominations

In each proposed rule, we seek nominations from the public and from interested parties of codes that they believe we should consider as potentially misvalued. We receive public nominations for potentially misvalued codes by February 10th and we display these nominations on our public website, where we include the submitter's name and their associated organization for full transparency. We sometimes receive submissions for specific, PE-related inputs for codes, and discuss these PE-related submissions, as necessary under the Determination of PE RVUs section of the rule. We summarize below this year's submissions under the potentially misvalued code initiative. For CY 2024, we received 10 nominations concerning various codes. The nominations are as follows:

1) CPT code 59200

In the CY 2022 PFS proposed rule, an interested party nominated CPT code 59200 (*Insertion cervical dilator (e.g., laminaria, prostaglandin)*) (000 zero day global code) as potentially misvalued, because the direct PE inputs for this code do not include the supply item, Dilapan-S. Previous parties had initially sought to establish a Level II HCPCS code for Dilapan-S, but CMS did not find sufficient evidence to support that request. The same interested party then submitted Dilapan-S to be considered as a practice expense (PE) supply input to a Level I CPT code 59200 (86 FR 65045). This year, a different interested party has nominated CPT code 59200 again, and provided the same reasoning as to why this code is potentially misvalued.

Specifically, the current nominee recommends adding 4 rods of Dilapan-S at \$80.00 per unit, for a total of \$320.00 to this one PE supply inputs, as a replacement for

the current PE supply item - laminaria tent (a small rod of dehydrated seaweed that rehydrates, absorbing the water from the surrounding tissue). The laminaria tent is currently listed at \$4.0683 per unit, with a total of 3 units, for a total of \$12.20. The current nominee stated that Dilapan-S is more consistent and reliable, and suggested that it had higher patient satisfaction than the laminaria tent, and that it was less likely to cause leukocytosis. CPT code 59200 is a relatively low volume code, with respect to Medicare claims and, as the nominator has stated, this service is more typically billed for the Medicaid population, as evidenced by 1.3 million Medicaid claims for this service. Medicaid programs are able to set their own payment policies, which can be different from Medicare payment policies. The current Medicare payment for CPT code 59200 in CY 2023 is about \$108.10 in the nonfacility/office setting, which is much less than the typical cost of the Dilapan-S supplies requested by the interested party. The requested 4 rods of Dilapan-S would increase the supply costs of CPT code 59200 by a factor of five and represent an enormous increase in the direct costs for the service.

We do not agree that CPT code 59200 is potentially misvalued, and we do not agree with interested parties that the use of the Dilapan-S supply would be typical for this service. By including the increased direct costs of the service (\$320.00, the typical cost of four units of this supply item, Dilapan-S) in the valuation for this code, the cost of this service will expand both Medicare spending and cost sharing for any beneficiary who receives this service. The cost of Dilapan-S is over 19 times higher than the cost of the current supply item (laminaria tent) for CPT code 59200. We do agree with the nominator that CPT code 59200 is much more frequently reported in the Medicaid

population, and therefore, we suggest that interested parties submit a request for new and separate Medicaid payments to Medicaid.

We are not proposing to consider this code as potentially misvalued for CY 2024, though we welcome comments on this nomination for further consideration. We are soliciting comments on CPT code 59200 and whether the absence of supply item Dilapan-S makes the nonfacility/office Medicare payment for this service potentially misvalued.

2) *CPT code 27279*

CPT code 27279 (*Arthrodesis, sacroiliac joint, percutaneous or minimally invasive (indirect visualization), with image guidance, includes obtaining bone graft when performed, and placement of transfixing device*) (090 day global code) has been nominated as misvalued due to the absence of separate direct PE inputs for this 090 day global code in the nonfacility office setting. Currently, the PFS only prices CPT code 27279 in the facility setting, at about \$826.85 for the physician's professional services, but the nominators are seeking separate direct PE inputs for this service to better account for valuation when performed in the nonfacility/office setting. These PE amounts for CPT code 27279 are expected to be approximately \$21,897.63 in total, which is the Medicare outpatient payment amount for CY 2023.

The nominator claims that CPT code 27279 can be safely and effectively furnished in the nonfacility setting, and that this procedure has a low risk profile, similar to kyphoplasty (CPT codes 22513, 22514, and 22515), which is currently furnished in the nonfacility setting. The nominator describes Kyphoplasty as "a percutaneous minimally invasive procedure depositing poly methyl methacrylate via canula into vertebral bodies

near neural structures.” The nominator states that permitting payment for direct PE inputs for CPT code 27279 in the nonfacility/office setting would increase access to this service for Medicare patients. One sample invoice for \$17,985.00 with three units of the itemized supply item IFuse-3D Implant 7.0 mm x 55mm, US (\$5,995.00 per unit) was submitted with this nomination to illustrate the high direct PE costs for CPT code 27279, should CMS value this code in the nonfacility/office setting.

We are concerned about whether this 090 day surgical service can be safely and effectively furnished in the non-facility/office setting (for example, in an office-based surgical suite). We welcome comments on the nomination of CPT code 27279 for consideration as potentially misvalued.

3) *CPT codes 99221, 99222, and 99223*

An interested party nominated the Hospital Inpatient and Observation Care visit CPT codes 99221 (*Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A detailed or comprehensive history; A detailed or comprehensive examination; and Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of low severity. Typically, 30 minutes are spent at the bedside and on the patient's hospital floor or unit.*), 99222 (*Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians,*

other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of moderate severity. Typically, 50 minutes are spent at the bedside and on the patient's hospital floor or unit.), and 99223 (Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of high severity. Typically, 70 minutes are spent at the bedside and on the patient's hospital floor or unit.) as potentially misvalued. CMS reviewed these codes in the CY 2023 final rule (87 FR 69588) and established new physician work times and new work RVU payments for these codes. The nominator disagrees with these values and asserts that these “facility-based codes are always inherently (or proportionately) more intense than E/M services provided in other settings [in particular],” with patients presenting with potentially infectious diseases, such as meningitis; pneumonia; tuberculosis; HIV/AIDS; Ebola virus; Zika virus; and, most recently, SARS-CoV-2 and mpox, and that the inpatient setting has a predominance of more seriously ill patients, who are sometimes immunocompromised and/or have multiple drug interaction issues and/or with comorbidities, making them extraordinarily more complex than those patients typically found in the office setting (with many of these infections being health care-associated infections and antibiotic-resistant bacterial

infections). It should be noted that these new requests did not offer appreciably new information relative to last year’s nomination/consideration.

The nominator seeks a new work RVU value of 1.92 for CPT code 99221, a new work RVU of 2.79 for CPT code 99222, and a new work value of 4.25 for CPT code 99223. Currently, CPT code 99221 has a work RVU of 1.63, a reduction of 15.1 percent from its 1.92 work RVU from CY 2022. CPT code 99222 had a work RVU of 2.61 in CY 2022 and is now at 2.60. CPT code 99223 had a work RVU of 3.86 in CY 2022. It now has a value of 3.50, which is a reduction of 9.3 percent. The nominator has requested that the work RVU for CPT code 99221 be restored back to 1.92, that the work RVU of CPT code 99222 be increased to 2.79, and that the work RVU of CPT code 99223 be increased to 4.25 (please see Table 6 for a comparison of work RVU values for CY 2022, CY 2023, and of those requested by the nominator).

TABLE 6: A Comparison of Work RVU values for CY 2022, CY 2023, and Those Requested by the Nominator

CPT Code	CY 2022 Work RVU	CY 2023 Work RVU	Requested Work RVU
99221 - 1st hosp ip/obs sf/low 40	1.92	1.63	1.92
99222 - 1st hosp ip/obs moderate 55	2.61	2.60	2.79
99223 - 1st hosp ip/obs high 75v	3.86	3.50	4.25

After consideration of this nomination and their requests for higher work RVUs for CPT codes 99221, 99222, and 99223, we are proposing to maintain the values that we finalized for these codes in the CY 2023 PFS final rule (87 FR 69588). Even so, we welcome comments on the nomination of these codes as potentially misvalued.

4) *CPT codes 36514, 36516, 36522*

An interested party nominated CPT codes 36514 (*Therapeutic apheresis; for plasma pheresis*), 36516 (*Therapeutic apheresis; with extracorporeal immunoadsorption,*

selective adsorption or selective filtration and plasma reinfusion), and 36522 (*Photopheresis, extracorporeal*) (all 000 zero day global codes) as potentially misvalued. The interested party stated that the direct PE of clinical labor L042A, “RN/LPN” (for labor rate of \$0.525 per minute) was incorrect and should be changed to a more specific entry of “a therapeutic apheresis nurse specialist (RN)” (for a labor rate of about \$1.06 to \$1.14 per minute), which would approximately double all three of these codes’ clinical labor PE entries. In addition, the nominator disagrees with the current direct PE of supply item SC085, “Tubing set, plasma exchange” at \$186.12 per item, and believes that this should be worth \$248.77 per item with CPT code 36514, using a quantity of one item. The nominator believes that supply item SC084, “Tubing set, blood warmer,” that we currently have listed at \$8.01 per item, should be worth \$14.71 per item with CPT code 36514, also using a quantity of one item. Sample invoices (not actual invoices) were submitted for illustration and support. We welcome comments on the nomination of these codes as potentially misvalued, or not.

5) *CPT codes 44205 and 44204*

An interested party nominated CPT code 44205 (*Laparoscopy, surgical; colectomy, partial, with removal of terminal ileum with ileocolostomy*), as potentially misvalued, requesting that payment for this code be made equivalent to the payment for CPT code 44204 (*Laparoscopy, surgical; colectomy, partial, with anastomosis*), which is a higher amount. Both codes are 090 day global codes, currently valued only in the facility setting. CPT code 44204 has a total RVU of 45.62 for CY 2023 and CPT code 44205 has a total RVU of 39.62 for CY 2023, with a difference of 6.00 RVUs. CPT code 44204 is associated with 5 to 6 percent more physician work time: 455.0 minutes in total,

as compared to 428.5 minutes in total for CPT code 44205. The work RVU for CPT code 44204 is also 15 percent higher than the work RVU for CPT code 44205. The direct PE entries for both codes are the same with regard to supplies, equipment, and clinical labor, except that in the clinical labor and equipment entries, the number of usage minutes is higher for CPT code 44204.

Though these two codes appear to be similar, they are still different in their purpose, physician work times, and direct PEs, with CPT code 44204 involving more time and resources (and having a higher payment, accordingly). For these reasons, we are not inclined to agree that CPT code 44205 is potentially misvalued when compared to CPT code 44204, or to modify this payment differential by paying a higher amount for CPT code 44205. We are soliciting feedback regarding the nomination of CPT code 44205 as potentially misvalued.

6) *CPT codes 93655 and 93657*

An interested party nominated CPT codes 93655 (*Intracardiac catheter ablation of a discrete mechanism of arrhythmia which is distinct from the primary ablated mechanism, including repeat diagnostic maneuvers, to treat a spontaneous or induced arrhythmia (List separately in addition to code for primary procedure)*) and 93657 (*Additional linear or focal intracardiac catheter ablation of the left or right atrium for treatment of atrial fibrillation remaining after completion of pulmonary vein isolation (List separately in addition to code for primary procedure)*), as potentially misvalued. These two add-on codes were part of our code review in the cardiac ablation code family in the CY 2022 (86 FR 65108) and CY 2023 (87 FR 69516) final rules.

The nominator reiterates that the primary procedures involve “high intensity clinical decision making, complexity in the intraoperative skills required for treatment, morbidity/mortality risks to the patient, and work intensity” and that the work RVUs for both of these add-on codes should reflect the AMA RUC recommended 7.00 work RVUs. We disagreed with this value in CY 2022, and we continue to believe that a work RVU of 5.50 is appropriate for the 60 minutes of physician service time for both codes. We see no reason to reconsider our valuation of CPT codes 93655 and 93657 for CY 2022 or CY 2023, and we do not consider these codes to be potentially misvalued now. We are not proposing to nominate these codes as potentially misvalued for CY 2024.

7) *CPT code 94762 and 95800*

An interested party nominated CPT code 94762 (*Noninvasive ear or pulse oximetry for oxygen saturation; by continuous overnight monitoring (separate procedure)*) as potentially misvalued due to the PE items listed for this code, which were last reviewed in 2009. There is no physician work/professional component associated with this code. The nominator states that the technology behind this code has changed considerably over the last 14 years, and that the listed equipment items for CPT code 94762, EQ212 “pulse oxymetry recording software (prolonged monitoring)” and EQ353 “Pulse oximeter 920 M Plus” are now typically found in a one-time use supply item: SD263 “WatchPAT pneumo-opt slp probes” (extended external overnight pulse oximeter device probe and battery with bluetooth, medical magnetic tape recorder) (WatchPAT One Device) costing \$99.00 each, derived from two sample invoices (not actual invoices) that were included with the nomination. According to our PE supply list, item SD263 costs \$73.32, which is \$25.68 less than the amounts found in the sample invoices

submitted by the nominators. The nominator retains equipment item EQ212 “pulse oxymetry recording software (prolonged monitoring)”, and replaces equipment item EQ353 with ED021, a “computer, desktop, w-monitor.” Payment for CPT code 94762 is currently \$25.75 in the nonfacility office setting. There were 122,207 allowed service claims for CPT code 94762 in CY 2021. The facility payment amount for CPT code 94762 under the Medicare Hospital Outpatient Prospective Payment System (OPPS) is currently \$145.43.

The same interested party who nominated CPT code 94762 also nominated CPT code 95800 (*Sleep study, unattended, simultaneous recording; heart rate, oxygen saturation, respiratory analysis (e.g., by airflow or peripheral arterial tone), and sleep time*) as potentially misvalued, requesting that CMS update PE items for this code, which were last reviewed in 2017. CPT code 95800 currently includes the entry of a one-time use supply item, SD263 “WatchPAT pneumo-opt slp probes” (extended external overnight pulse oximeter device probe and battery with bluetooth, medical magnetic tape recorder) (WatchPAT One Device), which costs \$73.32 per item, in contrast to the pricing in the sample invoice - \$99.00 each (case of 12 x \$99.00 = \$1,188.00). This is a \$25.68 difference in this supply item’s cost.

The nominator excludes the current equipment for this code (EQ335 “WatchPAT 200 Unit with strap, cables, charger, booklet and patient video” and EQ336 “Oximetry and Airflow Device”) and instead includes ED021 (“computer, desktop, w-monitor”) in the PE for this code. We note that we have not previously included ED021 as a specialized equipment item dedicated to this function (and EQ212 “pulse oxymetry recording software (prolonged monitoring)” is also not included in the PE for CPT code

95800, as it is with CPT code 94762). The nominator included the PE listings for CPT code 93245 (*Heart rhythm recording, analysis, interpretation and report of continuous external EKG over more than 1 week up to 1 weeks*) as an example of how PE supply items for CPT code 95800 should be structured, but this code includes a supply item, SD339 “extended external ECG patch, medical magnetic tape recorder” and equipment item ED021 “computer, desktop, w-monitor,” which is presumed to be used to record the data from the ECG patch and to be used to analyze this data. CMS currently pays a total of \$150.80 for CPT code 95800 in the non-facility office setting, and there were 53,793 allowed services for this code in CY 2021.

There is not clear evidence whether the WatchPAT One Device needs, or does not need, the specific monitoring and recording system (equipment item EQ212 “pulse oxymetry recording software (prolonged monitoring)”) for CPT code 95800 as opposed to any other system/process. The interested party has requested the practice expense changes discussed above as support for their argument that these CPT codes are potentially misvalued (See Table 7.)

TABLE 7: Listing of Nominator’s Practice Expense Items for Addition or Deletion to CPT codes 94762 and 95800

CPT code	Current Equipment Code	Equipment Description	Non-Facility/ Office Equipment PE Cost	Equipment Status	Current Supply Code	Supply Description	Non-Facility/ Office Supply PE Cost	Supply Status
94762	EQ212	pulse oxymetry recording software (prolonged monitoring) (480 min)	\$0.7360	Retain				
94762	EQ353	Pulse oximeter 920 M Plus (480 min)	\$7.1155	Delete	SD263	WatchPAT pneumo-opt slp probes” (extended external overnight pulse oximeter device probe and battery with bluetooth, medical magnetic tape recorder) (WatchPAT One Device)	\$73.32 Or \$99.00	Add
95800	EQ335	WatchPAT 200 Unit with strap, cables, charger, booklet and patient video	\$4.7071	Delete				
95800	EQ336	Oximetry and Airflow Device	\$4.5454	Delete				
95800	ED021	computer, desktop, w-monitor (assume 480 min)	\$2.5339	Add	SD263	WatchPAT pneumo-opt slp probes” (extended external overnight pulse oximeter device probe and battery with bluetooth, medical magnetic tape recorder) (WatchPAT One Device)	\$73.32 Or \$99.00	Retain

We welcome comments as to whether or not these codes are potentially misvalued.

8) *CPT codes 0596T and 0597T*

An interested party has nominated CPT codes 0596T (*Initial insertion of temporary valve-pump in female urethra*) and 0597T (*Replacement of temporary valve-pump in female urethra*) as potentially misvalued due to MAC pricing, which is

determined on a case-by-case basis. These temporary CPT category III codes are all procedure status “C” (contractor priced), and the interested party is seeking status “A” (for active payment status) to account for physician work, nonfacility PE, and professional liability costs. The nominator states that the MAC-determined payment amounts have been inappropriately low, and do not account for the time and the work that the physician expends for these services, or for all of the PE costs associated with the Vesiflo inFlow System. For CPT code 0596T, the nominator expects a physician to spend 60 minutes of work on installing this Vesiflo inFlow System. The nonfacility office PE items include a power table, a mayo stand, an examination light, clinical labor time of a RN/LPN/MTA totaling to 73 minutes, and a list of supplies summing to \$1,902.76, primarily from the inFlow Measuring Device of \$140.00, the inflow Device of \$495.00, and the inflow Activator Kit of \$1,250.00, making up about 99 percent of the total cost of supplies.

For CPT code 0597T, the nominator expects a physician to spend 25 minutes of work replacing this Vesiflo inFlow System. The nonfacility office PE items include a power table, a mayo stand, an examination light, clinical labor time of a RN/LPN/MTA totaling to 38 minutes, and a list of supplies summing to \$505.30, primarily from the inflow device of \$495.00, making up about 98 percent of the total cost of supplies. A sample invoice is included in this nomination (as opposed to an actual invoice).

We welcome comments as to whether or not these two temporary category II CPT codes, CPT codes 0596T and 0597T, are potentially misvalued, and whether these codes should remain contractor priced or not.

9) CPT code 93000

An interested party has nominated CPT code 93000 (*Electrocardiogram, routine ECG with at least 12 leads; with interpretation and report*) as potentially misvalued, arguing that we should increase Medicare payment for CPT code 93000 to \$35.64, when used in conjunction with other supplies and services, to adequately compensate practitioners for their PE item costs for: (1) \$6.10 for EKG leads; (2) \$21.19 for a nurse visit of typically 5 minutes time (as illustrated by CPT code 99211 (*Office or other outpatient visit for the evaluation and management of an established patient, that may not require the presence of a physician or other qualified health care professional. Usually, the presenting problem(s) are minimal. Typically, 5 minutes are spent performing or supervising these services.*)); and (3) \$7.64 for the interpretation and report for the EKG service (as illustrated by CPT code 93010 (*Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only*)). The interested party is asking for the grouping of these services to be valued at \$35.64 (the actual sum of these inputs is \$34.93). No invoices or other evidence were provided for consideration.

For CY 2023, the national payment amounts under the PFS for CPT codes 93000, 93010, and 99211 in the nonfacility office setting are as follows:

- CPT code 93000; total RVUs 0.43 x CF \$33.8872 = \$14.57.
- CPT code 93010; total RVUs 0.24 x CF \$33.8872 = \$8.13.
- CPT code 99211; total RVUs 0.69 x CF \$33.8872 = \$23.38.
- Sum total \$46.08.

After consideration, we are not proposing to nominate CPT code 93000 as potentially misvalued for CY 2024. The sum of a mix of services is not a persuasive indication that one code - in this case, CPT code 93000 - is potentially misvalued.

10) 19 therapy codes

An interested party has nominated 19 therapy codes as potentially misvalued. These 19 therapy codes were last reviewed by CMS in the CY 2018 PFS final rule (82 FR 53073 through 53074). The interested party stated that the direct PE clinical labor minutes as recommended by the AMA Relative Value Scale Update Committee (RUC) and Healthcare Professional Advisory Committee (HCPAC) Review Board might have had inappropriate multiple procedure payment reductions (MPPR) applied to their PE clinical labor time entries. The nominators are now seeking correction for those clinical labor time entries, which, if adjusted in accordance with the recommendations of the nominators, would likely result in slightly higher or nominally changed payments for the 19 therapy codes.

We have reviewed the clinical labor time entries for these 19 therapy codes, and we are now reconsidering the values established in the CY 2018 final rule. We do not believe that MPPR should be applied to these 19 nominated therapy codes' clinical labor time entries (listed in Table 8), and as a result, we would like the AMA RUC HCPAC recommendations from January 2017 to be re-reviewed. We recommend nomination of these 19 codes as potentially misvalued for CY 2024, and we welcome comments on this nomination.

TABLE 8: 19 “Always Therapy” Service Codes Nominated for Potential Misvaluation

HCPCS 2023	LONG DESCRIPTION	CY 2023 STATUS CODE
97012	Application of mechanical traction	A
97014	Application of electrical stimulation	I
97016	Application of blood vessel compression device	A
97018	Application of hot wax bath	A
97022	Application of whirlpool therapy	A
97032	Application of electrical stimulation with therapist present, each 15 minutes	A
97033	Application of medication using electrical current, each 15 minutes	A
97034	Application of hot and cold baths, each 15 minutes	A
97035	Application of ultrasound, each 15 minutes	A
97110	Therapy procedure using exercise to develop strength, endurance, range of motion, and flexibility, each 15 minutes	A
97112	Therapy procedure to re-educate brain-to-nerve-to-muscle function, each 15 minutes	A
97113	Therapy procedure using water pool to exercises, each 15 minutes	A
97116	Therapy procedure for walking training, each 15 minutes	A
97140	Therapy procedure using manual technique, each 15 minutes	A
97530	Therapy procedure using functional activities	A
97533	Therapy procedure using sensory experiences	A
97535	Training for self-care or home management, each 15 minutes	A
97537	Training for community or work reintegration, each 15 minutes	A
97542	Evaluation for wheelchair, each 15 minutes	A
G0283	Electrical stimulation (unattended), to one or more areas for indication(s) other than wound care, as part of a therapy plan of care	A

Note: Status code A = Active code – separately paid under the PFS. Status code I = Invalid code – not valid for Medicare purposes.

D. Payment for Medicare Telehealth Services Under Section 1834(m) of the Act

As discussed in prior rulemaking, several conditions must be met for Medicare to make payment for telehealth services under the PFS. See further details and full discussion of the scope of Medicare telehealth services in the CY 2018 PFS final rule (82 FR 53006) and CY 2021 PFS final rule (85 FR 84502) and in 42 CFR 410.78 and 414.65.

1. Payment for Medicare Telehealth Services Under Section 1834(m) of the Act

a. Changes to the Medicare Telehealth Services List

In the CY 2003 PFS final rule with comment period (67 FR 79988), we established a regulatory process for adding services to or deleting services from the Medicare Telehealth Services List in accordance with section 1834(m)(4)(F)(ii) of the

Act (42 CFR 410.78(f)). This process provides the public with an ongoing opportunity to submit requests for adding services, which are then reviewed by us and assigned to categories established through notice and comment rulemaking. Specifically, we assign any submitted request to add to the Medicare Telehealth Services List to one of the following two categories:

- Category 1: Services that are similar to professional consultations, office visits, and office psychiatry services that are currently on the Medicare Telehealth Services List. In reviewing these requests, we look for similarities between the requested and existing telehealth services for the roles of, and interactions among, the beneficiary, the physician (or other practitioner) at the distant site, and, if necessary, the telepresenter, a practitioner who is present with the beneficiary in the originating site. We also look for similarities in the telecommunications system used to deliver the service; for example, the use of interactive audio and video equipment.

- Category 2: Services that are not similar to those on the current Medicare Telehealth Services List. Our review of these requests includes an assessment of whether the service is accurately described by the corresponding code when furnished via telehealth and whether the use of a telecommunications system to furnish the service produces demonstrated clinical benefit to the patient. Submitted evidence should include both a description of relevant clinical studies that demonstrate the service furnished by telehealth to a Medicare beneficiary improves the diagnosis or treatment of an illness or injury or improves the functioning of a malformed body part, including dates and findings, and a list and copies of published peer reviewed articles relevant to the service when furnished via telehealth. Our evidentiary standard of clinical benefit does not

include minor or incidental benefits. Some examples of other clinical benefits that we consider include the following:

- Ability to diagnose a medical condition in a patient population without access to clinically appropriate in-person diagnostic services.

- Treatment option for a patient population without access to clinically appropriate in-person treatment options.

- Reduced rate of complications.

- Decreased rate of subsequent diagnostic or therapeutic interventions (for example, due to reduced rate of recurrence of the disease process).

- Decreased number of future hospitalizations or physician visits.

- More rapid beneficial resolution of the disease process treatment.

- Decreased pain, bleeding, or other quantifiable signs or symptoms.

- Reduced recovery time.

- Category 3: In the CY 2021 PFS final rule (85 FR 84507), we created a third category of criteria for adding services to the Medicare Telehealth Services List on a temporary basis following the end of the public health emergency (PHE) for the COVID-19 pandemic. This new category describes services that were added to the Medicare Telehealth Services List during the PHE, for which there is likely to be clinical benefit when furnished via telehealth, but there is not yet sufficient evidence available to consider the services for permanent addition under the Category 1 or Category 2 criteria. Services added on a temporary, Category 3 basis will ultimately need to meet the criteria under Category 1 or 2 in order to be permanently added to the Medicare Telehealth Services List. To add specific services on a Category 3 basis, we conducted a clinical

assessment to identify those services for which we could foresee a reasonable potential likelihood of clinical benefit when furnished via telehealth. We considered the following factors:

++ Whether, outside of the circumstances of the PHE for COVID-19, there are concerns for patient safety if the service is furnished as a telehealth service.

++ Whether, outside of the circumstances of the PHE for COVID-19, there are concerns about whether the provision of the service via telehealth is likely to jeopardize quality of care.

++ Whether all elements of the service could fully and effectively be performed by a remotely located clinician using two-way, audio/video telecommunications technology.

In the CY 2021 PFS final rule (85 FR 84507), we also temporarily added several services to the Medicare Telehealth Services List using the Category 3 criteria described above. In this proposed rule, we are considering additional requests to add services to the Medicare Telehealth Services List on a Category 3 basis using the previously described Category 3 criteria.

The Medicare Telehealth Services List, including the additions described later in this section, is available on the CMS website at <https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/index.html>.

Beginning in CY 2019, we stated that for CY 2019 and onward, we intend to accept requests through February 10, consistent with the deadline for our receipt of code valuation recommendations from the RUC (83 FR 59491). For CY 2024, requests to add services to the Medicare Telehealth Services List must have been submitted and received

by February 10, 2023. Each request to add a service to the Medicare Telehealth Services List must have included any supporting documentation the requester wishes us to consider as we review the request. Because we use the annual PFS rulemaking process as the vehicle to make changes to the Medicare Telehealth Services List, requesters are advised that any information submitted as part of a request is subject to public disclosure for this purpose. For more information on submitting a request in the future to add services to the Medicare Telehealth Services List, including where to mail these requests, see our website at <https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/index.html>.

b. Requests to Add Services to the Medicare Telehealth Services List for CY 2024

Under our current policy, we add services to the Medicare Telehealth Services List on a Category 1 basis when we determine that they are similar to services on the existing Medicare Telehealth Services List for the roles of, and interactions among, the beneficiary, physician (or other practitioner) at the distant site, and, if necessary, the telepresenter. As we stated in the CY 2012 PFS final rule with comment period (76 FR 73098), we believe that the Category 1 criteria not only streamline our review process for publicly requested services that fall into this category, but also expedite our ability to identify codes for the Medicare Telehealth Services List that resemble those services already on the Medicare Telehealth Services List.

We also note that section 4113 of Division FF, Title IV, Subtitle A of the Consolidated Appropriations Act, 2023 (CAA, 2023) (Pub. L. 117-328, December 29, 2022) extends the telehealth policies enacted in the Consolidated Appropriations Act,

2022 (CAA, 2022) (Pub. L. 117-103, March 15, 2022) through December 31, 2024, if the PHE ends prior to that date, as discussed in section II.D.c. of this proposed rule.

We received several requests to permanently add various services to the Medicare Telehealth Services List effective for CY 2024. We found that none of the requests we received by the February 10th submission deadline met our Category 1 or Category 2 criteria for permanent addition to the Medicare Telehealth Services List. The requested services are listed in Table 9.

TABLE 9: CY 2024 Requests for Permanent Addition – Services Not Proposed for Permanent Addition to the Medicare Telehealth Services List

Service Type	HCPCS	Long Descriptor
Cardiovascular Procedures	93793	Anticoagulant management for a patient taking warfarin, must include review and interpretation of a new home, office, or lab international normalized ratio (INR) test result, patient instructions, dosage adjustment (as needed), and scheduling of additional test(s), when performed
Cardiovascular and Pulmonary Rehabilitation	93797	Physician or other qualified health care professional services for outpatient cardiac rehabilitation; without continuous ECG monitoring (per session)
	94625	Physician or other qualified health care professional services for outpatient pulmonary rehabilitation; without continuous oximetry monitoring (per session)
Deep Brain Stimulation	95970	Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain, cranial nerve, spinal cord, peripheral nerve, or sacral nerve, neurostimulator pulse generator/transmitter, without programming
	95983	Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, first 15 minutes face-to-face time with physician or other qualified health care professional
	95984	Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, each additional 15 minutes face-to-face time with physician or other qualified health care professional (List separately in addition to code for primary procedure)
Therapy	90901	Biofeedback training by any modality
	97110	Therapeutic procedure, 1 or more areas, each 15 minutes; therapeutic exercises to develop strength and endurance, range of motion and flexibility
	97112	Therapeutic procedure, 1 or more areas, each 15 minutes; neuromuscular reeducation of movement, balance, coordination, kinesthetic sense, posture, and/or proprioception for sitting and/or standing activities
	97116	Therapeutic procedure, 1 or more areas, each 15 minutes; gait training (includes stair climbing)
	97161	Physical therapy evaluation: low complexity, requiring these components: A history with no personal factors and/or comorbidities that impact the plan of care; An examination of body system(s) using standardized tests and measures addressing 1-2 elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; A clinical presentation with stable and/or uncomplicated characteristics; and Clinical decision making of low complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 20 minutes are spent face-to-face with the patient and/or family.
	97162	Physical therapy evaluation: moderate complexity, requiring these components: A history of present problem with 1-2 personal factors and/or comorbidities that impact the plan of care; An examination of body systems using standardized tests and measures in addressing a total of 3 or more elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; An evolving clinical presentation with changing characteristics; and Clinical decision making of moderate complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 30 minutes are spent face-to-face with the patient and/or family.
	97163	Physical therapy evaluation: high complexity, requiring these components: A history of present problem with 3 or more personal factors and/or comorbidities that impact the plan of care; An examination of body systems using standardized tests and measures addressing a total of 4 or more

Service Type	HCPCS	Long Descriptor
		elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; A clinical presentation with unstable and unpredictable characteristics; and Clinical decision making of high complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 45 minutes are spent face-to-face with the patient and/or family.
Therapy	97164	Re-evaluation of physical therapy established plan of care, requiring these components: An examination including a review of history and use of standardized tests and measures is required; and Revised plan of care using a standardized patient assessment instrument and/or measurable assessment of functional outcome Typically, 20 minutes are spent face-to-face with the patient and/or family.
	97530	Therapeutic activities, direct (one-on-one) patient contact (use of dynamic activities to improve functional performance), each 15 minutes
	97750	Physical performance test or measurement (eg, musculoskeletal, functional capacity), with written report, each 15 minutes
	97763	Orthotic(s)/prosthetic(s) management and/or training, upper extremity(ies), lower extremity(ies), and/or trunk, subsequent orthotic(s)/prosthetic(s) encounter, each 15 minutes
Hospital Care, Emergency Department and Hospital	99221	Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded.
	99222	Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 55 minutes must be met or exceeded.
	99223	Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 75 minutes must be met or exceeded.
	99234	Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.
	99235	Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 70 minutes must be met or exceeded.
	99236	Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 85 minutes must be met or exceeded.
	99238	Hospital inpatient or observation discharge day management; 30 minutes or less on the date of the encounter
	99239	Hospital inpatient or observation discharge day management; more than 30 minutes on the date of the encounter
	99281	Emergency department visit for the evaluation and management of a patient that may not require the presence of a physician or other qualified health care professional
	99282	Emergency department visit for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward medical decision making
	99283	Emergency department visit for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and low level of medical decision making
Health and Well-Being Coaching	0591T	Health and well-being coaching face-to-face; individual, initial assessment
	0592T	Health and well-being coaching face-to-face; individual, follow-up session, at least 30 minutes
	0593T	Health and well-being coaching face-to-face; group (2 or more individuals), at least 30 minutes

We remind interested parties that the criterion for adding services to the Medicare telehealth list under Category 1 is that the requested services are similar to professional consultations, office visits, and office psychiatry services that are currently on the Medicare Telehealth Services List, and that the criterion for adding services under Category 2 is that there is evidence of clinical benefit if provided as telehealth. As explained below, we find that none of the requested services listed in Table 9 1 met the Category 1 criterion.

(1) Cardiovascular Procedures

We received a request to permanently add CPT code 93793 (*Anticoagulant management for a patient taking warfarin, must include review and interpretation of a new home, office, or lab international normalized ratio (INR) test result, patient instructions, dosage adjustment (as needed), and scheduling of additional test(s), when performed*) to the Medicare Telehealth Services List. We do not consider this service to be a Medicare telehealth service, because the service is not an inherently face-to-face service – a patient need not be present in order for the service to be furnished in its entirety. For example, in many instances, clinical staff will not change a patient’s warfarin dosage as a result of the lab INR test result, and they may or may not confirm the need for a follow-up test via phone; either way there is no need for a face-to-face encounter with a practitioner. As we have explained in previous rulemaking (83 FR 59483), certain kinds of services that are furnished remotely using communications technology are not considered Medicare telehealth services and are not subject to the restrictions articulated in section 1834(m) of the Act. This is true for services that were routinely paid separately prior to the enactment of section 1834(m) of the Act and do not

usually include patient interaction such as the remote interpretation of diagnostic tests.

We do not consider CPT code 93793 to be a telehealth service under section 1834(m) of the Act or our regulation at § 410.78. Therefore, we are not proposing to add this service to the Medicare Telehealth Services List on a Category 1 basis.

(2) Cardiovascular and Pulmonary Rehab

We received multiple requests to permanently add the following CPT codes to the Medicare Telehealth Services List:

- 93797 (*Physician or other qualified health care professional services for outpatient cardiac rehabilitation; without continuous ECG monitoring (per session)*); and
- 94624 (*Physician or other qualified health care professional services for outpatient pulmonary rehabilitation; without continuous oximetry monitoring (per session)*).

In the CY 2022 PFS final rule (86 FR 65048), we explained that some services were added temporarily to the Medicare Telehealth Services List on an emergency basis to allow practitioners and beneficiaries to have access to medically necessary care while avoiding both risk for infection and further burdening healthcare settings during the PHE for COVID-19. In the same rule, we considered available evidence and noted that as evidence evolves on this subject matter, we welcome further discussions with interested parties on the topic. In subsequent cycles of annual rulemaking, we have continued conversations with interested parties that furnish, support, and use Cardiovascular and Pulmonary Rehabilitation services. In our CY 2022 PFS final rule (86 FR 65055), we acknowledged that commenters provided a number of studies on the safety and efficacy

of these services when furnished via telehealth, and we added the codes to the list on a temporary, Category 3 basis.

We note that some evidence submissions and ongoing discussions with interested parties have focused on the clinical benefits of patients receiving these services in the home. We note that, while demonstrating the clinical benefits of services is important to our decision whether to add a service to the Medicare Telehealth Services List, there are other considerations when deciding whether to add codes to the list on a permanent basis. For example, while the CAA, 2023, does extend certain COVID-19 PHE flexibilities, including allowing the beneficiary's home to serve as an originating site, such flexibilities are only extended through the end of CY 2024. Under current law, beginning on January 1, 2025, the beneficiary's home can be an originating site only for Medicare telehealth services furnished for: (1) the diagnosis, evaluation, or treatment of a mental health disorder; or (2) a beneficiary with a diagnosed substance use disorder (SUD) for purposes of treatment of the SUD or a co-occurring mental health disorder; or (3) monthly ESRD-related clinical assessments furnished to a beneficiary who is receiving home dialysis, beginning January 1, 2025. Therefore, in the absence of further action by Congress, CPT codes 93797 and 94626 will not be able to be furnished via telehealth to a beneficiary in the home beginning January 1, 2025. As such, we are not proposing to include these services permanently on the Medicare Telehealth Services List on a Category 1 basis. We are instead proposing to continue to include these services on the Medicare Telehealth Services List through CY 2024. We would then remove CPT codes 93797 and 94626 from the Medicare Telehealth Services List for CY 2025.

(3) Deep Brain Stimulation

We received a request to permanently add the following CPT codes to the Medicare Telehealth Services List:

- 95970 (*Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain, cranial nerve, spinal cord, peripheral nerve, or sacral nerve, neurostimulator pulse generator/transmitter, without programming*);
- 95983 (*Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, first 15 minutes face-to-face time with physician or other qualified health care professional*); and
- 95984 (*Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, each additional 15*

minutes face-to-face time with physician or other qualified health care professional (List separately in addition to code for primary procedure)).

In our CY 2023 proposed rule (85 FR 45891), we explained that these services do not meet the Category 1 criterion for permanent addition to the Medicare Telehealth Services List. Additionally, we discussed concerns about whether the full scope of service elements could be furnished via two-way, audio-video communication technology, particularly since it is unclear whether the connection between the implanted device and the analysis/calibration equipment can be done remotely. Additionally, we are concerned about the immediate safety of the patient if the calibration of the neurostimulator were done incorrectly or if some other problem occurred. However, we did include these services on the Medicare Telehealth Services List on a temporary basis during the PHE to allow additional time for additional information to be gathered and presented. Based on this information, we believe there is some possible clinical benefit for these services when furnished via telehealth; however, there is not yet sufficient evidence available to consider the services for permanent addition under the Category 2 criterion. We are proposing to keep these services on the Medicare Telehealth Services List for CY 2024. We would consider additional evidence in future rulemaking to determine whether to add the services to the Medicare Telehealth Services List on a permanent basis.

(4) Therapy

We received requests to add Therapy Procedures: CPT codes 97110, 97112, 97116; Physical Therapy Evaluations: CPT codes 97161-97164; Therapy Personal Care services: CPT code 97530; and Therapy Tests and Measurements services: CPT codes

97750, 97763 and Biofeedback: 90901, to the Medicare Telehealth Services List on a Category 1 or 2 basis. We have considered these codes over several years, in multiple cycles of annual rulemaking. In the CY 2017 final rule (81 FR 80198), we first assessed a request to add CPT codes 97110, 97112, and 97116 (the therapy codes) to the Medicare Telehealth Services List. We did not add the codes to the Medicare Telehealth Services List at the time, because there was no emergency waiver providing an exception to the requirements under section 1834(m)(4)(E) of the Act, and physical therapists, occupational therapists, and speech-language pathologists were not eligible telehealth practitioners. In the CY 2018 final rule (82 FR 53008 and 53009), we reiterated our initial assessment that the codes were not appropriate to add to the Medicare Telehealth Services List, because the majority of the therapy codes listed above are furnished over 90 percent of the time by therapy professionals who are not included on the list of distant site practitioners who can furnish telehealth services at section 1834(m)(4)(E) of the Act. We stated that we believed that adding therapy services to the Medicare Telehealth Services List could result in confusion about who is authorized to furnish and bill for these services when furnished via telehealth (82 FR 53009).

Section 3703 of Division A, Title III, Subtitle D of the Coronavirus Aid, Relief, and Economic Security Act (CARES Act) (Pub. L. 116-136, enacted March 27, 2020) amended section 1135(b)(8) of the Act to give the Secretary emergency authorities to waive or modify Medicare telehealth payment requirements under section 1834(m) of the Act during the PHE for COVID-19. Using this authority, CMS issued a set of emergency waivers that included waiving the restrictions in section 1834(m)(4)(E) of the Act on the types of practitioners who may furnish telehealth services. This allowed for therapy

professionals to furnish telehealth services for the duration of the PHE. In the CY 2022 final rule (86 FR 65051), we reviewed another round of submissions requesting that CMS add therapy codes to the Medicare Telehealth Services List, and we again determined that these codes did not meet the Category 1 criterion for addition to the list. In the CY 2023 PFS final rule (87 FR 69451), through our review of evidence that was submitted by interested parties in support of adding these services to the Medicare Telehealth Services List on a Category 2 basis, we concluded that there was not sufficient information to determine whether all of the necessary elements of these services could be furnished remotely.

In reviewing this year's request, the evidence submission includes evidence similar to what was submitted last year, with a few new additions suggesting that some elements of the individual services may have clinical benefit when furnished via telehealth, but not resolving uncertainty about whether other elements of the services can be fully furnished remotely via telehealth. The evidence submitted also suggests that receiving therapy services via telehealth in the home may offer some practical benefits, such as use of actual stairs in therapy exercise instead of artificial stairs, or meal preparation instructions focused on available kitchen tools and equipment. However, the evidence submitted for review leaves open questions as to whether such differences in the setting of care translate to a clinical benefit that is more than minor or incidental, in typical circumstances for the typical population of beneficiaries who may receive therapy services via telehealth.

We note that for any submission, including submissions received for these therapy services, we consider all elements of a service as described by a particular HCPCS code

and apply our review criteria to the specific code. While some submitted information may focus on an individual service within one specific clinical scenario, and furnished within one specific individual model of care delivery, that information may not be generalizable to the varied settings and scenarios under which the service would be typically furnished via telehealth. We reiterate that available evidence should give a reasonable degree of certainty that all elements of the service could fully and effectively be furnished by a remotely-located clinician using two-way, audio/video telecommunications technology.

Based on the evidence we reviewed, we continue to question whether the findings from therapy studies that focused on a specific clinical issue for a narrow population (for example, joint replacement of a specific joint) translate to clinical benefit for some or many of the various other clinical issues that would typically be addressed when therapists furnish therapy services via telehealth to beneficiaries. Despite the evidence, we are still uncertain as to whether all of the elements of a therapy service could typically be furnished through use of only real-time, two-way audio/video communications technology. Because we continue to have these questions, we are not proposing to add these services to the Medicare Telehealth Services List on a Category 1 or 2 basis, for the same reasons described in our CY 2018 through CY 2023 rulemaking cycles. Also, we continue to believe that adding these therapy services to the Medicare Telehealth Services List permanently would potentially generate confusion. As discussed in last year's final rule, we note that we do not have authority to expand the list of eligible Medicare telehealth practitioners to include therapists (PTs, OTs, or SLPs) after CY 2024 (87 FR 69449 through 69451). We note that the CAA, 2023, did not permanently change the list of practitioners who can furnish and bill for telehealth services; rather, the CAA, 2023,

extended the current telehealth flexibilities through the end of CY 2024. That said, we are proposing to keep these therapy services on the Medicare Telehealth Services List until the end of CY 2024. We will consider any further action with regard to these codes in future rulemaking.

(5) Hospital Care, Emergency Department and Hospital

We received a request to permanently add the following CPT codes to the Medicare Telehealth Services List:

- 99221 (*Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded.*)

- 99222 (*Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 55 minutes must be met or exceeded.*)

- 99223 (*Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 55 minutes must be met or exceeded.*)

- 99234 (*Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.*)

- 99235 (*Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 70 minutes must be met or exceeded.*)

- 99236 (*Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 85 minutes must be met or exceeded.*)

- 99238 (*Hospital inpatient or observation discharge day management; 30 minutes or less on the date of the encounter*)

- 99239 (*Hospital inpatient or observation discharge day management; more than 30 minutes on the date of the encounter*)

- 99281 (*Emergency department visit for the evaluation and management of a patient that may not require the presence of a physician or other qualified health care professional*)

- 99282 (*Emergency department visit for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward medical decision making*)
- 99283 (*Emergency department visit for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and low level of medical decision making*)

In the March 31, 2020 interim final rule with comment period (IFC-1) (85 FR 19234), we added the above services to the Medicare Telehealth Services List on a Category 2 basis for the duration of the PHE for COVID-19, for telehealth services with dates of service beginning March 1, 2020 through the end of the PHE (including any renewals of the PHE). When we previously considered adding these services to the Medicare Telehealth Services List, either through a public request or through our own internal review, we considered whether these services met the Category 1 or Category 2 criteria. In many cases, we reviewed requests to add these services to the Medicare Telehealth Services List on a Category 1 basis, but did not receive or identify information that allowed us to determine whether these services should be added on a Category 2 basis (CY 2017 PFS final rule, at 81 FR 80194 to 80197). We reiterate that, while we do not believe the context of the PHE for COVID-19 changes the assessment of whether these services meet the Category 1 criterion, we reassessed all of these services to determine whether they meet the criteria for inclusion on the Medicare Telehealth Services List on a Category 2 basis, in the context of the widespread presence of COVID-19 in the community. Given the exposure risks for beneficiaries, the health care work force, and the community at large, in-person interaction between professionals and

patients posed an immediate potential risk that would not have been present when we previously reviewed these services in 2017. This risk created a unique circumstance where health care professionals needed to weigh the risks associated with disease exposure. For further background, in the CY 2021 final rule (FR 84506 through 84509), we explained the reasoning and considerations necessary for assigning a Category 3 status to certain codes that were added to the Medicare Telehealth Services List on a temporary basis during the PHE for COVID-19. We believe that some risk of COVID-19 remains, but also remain uncertain that available evidence gives clear support for continuing to include these services on a permanent basis under the Category 2 criterion.

As discussed in the CY 2023 PFS final rule (86 FR 69450), we believe these hospital and emergency department services may continue to be furnished safely via two-way, audio-video communication technology. We are not proposing to add these services to the list on a permanent basis at this time, but we are proposing that they would remain available on the Medicare Telehealth Services List through CY 2024.

(6) Health and Well-being Coaching

We received a request to permanently add the following three Health and Well-being Coaching services to the Medicare Telehealth Services List:

- CPT code 0591T (*Health and well-being coaching face-to-face; individual, initial assessment*);
- CPT code 0592T (*Health and well-being coaching face-to-face; individual, follow-up session, at least 30 minutes*); and
- CPT code 0593T (*Health and well-being coaching face-to-face; group (2 or more individuals), at least 30 minutes*).

We are not proposing to add these health and well-being coaching services to the Medicare Telehealth Services List on a permanent basis, but we are proposing to add them to the list on a temporary basis for CY 2024. The evidence included in the submitter's request notes that these codes are similar to others already available on the Medicare Telehealth Services List. Further, it appears that all elements of these services may be furnished when using two-way interactive communications technology to replace the face-to-face elements of the service. The submission, which contained two published meta-analyses of literature on the clinical topic and an additional pre-publication meta-analysis that focuses on outcomes and benefits of the delivery of virtual health and well-being coaching, leaves some open questions as to whether Medicare beneficiaries would receive meaningful clinical benefit from receiving virtual-only health and well-being coaching. While the evidence is clearly evolving, it does suggest that these services could possibly meet Category 2 criteria for inclusion on the Medicare Telehealth Services List as more evidence builds. We also note that the published meta-analyses in the submission make clear that further study is necessary for a broader range of medical professionals, because conceptual articles and research and existing practice articles focus on nurses, but are sparse or silent about other general categories of medical professionals. As a reminder, we would expect that any evidence in support of adding these codes on a permanent basis should also establish clinical benefit when delivered directly by or under the supervision of the types of professionals who are Medicare telehealth practitioners. The meta-analyses demonstrate that health coaching only requires a few hours of training, and few articles submitted to CMS discuss the intensity of health coach training at all. The pre-publication meta-analysis submitted for review draws less than definitive

conclusions about "potential benefits" of health and well-being coaching and hedges that authors, "did not find evidence of long-term benefit, possibly due to the paucity of studies examining longer-term outcomes. We caution that the certainty in the evidence for the majority of outcomes was either very low or low, primarily due to high risk of bias, heterogeneity, and impression." The submission and its content are sufficient to serve as a basis for adding the codes to the Medicare Telehealth Services List on a temporary basis, and we appreciate the thoughtful and transparent way the submission lays out gaps in available evidence. More time is needed to potentially close these gaps. We are not aware of any evidence to suggest that it would be inappropriate to assign a temporary status. Therefore, we are proposing to add the services to the Medicare Telehealth Services List on a temporary basis.

(7) CMS Proposal to Add New Codes to the List

In addition to the health and wellbeing coaching services submitted as requests, we are proposing to add HCPCS code GXXX5 (*Administration of a standardized, evidence-based Social Determinants of Health Risk Assessment tool, 5-15 minutes*) to the Medicare Telehealth Services List. Our proposal to add HCPCS code GXXX5 to the list is contingent upon finalizing the service code description that we propose in section II.E of this proposed rule. We refer readers to the proposal in section II.E for further background. We are proposing that HCPCS code GXXX5, if finalized as proposed, receive a permanent status on the Medicare Telehealth Services List. One element of the service describes a face-to-face encounter between the clinician and beneficiary. Practitioners use clinical judgement to determine whether to complete the SDOH screening with or without direct patient interaction. Because the service description, as

defined in section II.E. of this proposed rule, expects that a patient encounter may be necessary for accurate and complete screening, we believe that this element of the service describes an inherently face-to-face clinical activity. Further, the use of two-way interactive audio-video technology, as a substitute to in-person interaction, means an analogous level of care, in that using either modality would not affect the accuracy or validity of the results gathered via a standardized screening tool. As discussed in section II.E. of this proposed rule, we are proposing that this service must be furnished by the practitioner on the same date they furnish an E/M visit, as the SDOH assessment would be reasonable and necessary when used to inform the patient's diagnosis, and treatment plan established during the visit. Therefore, we believe it describes a service that is sufficiently similar to services currently on the Telehealth list, specifically E/M services, and that this service be added on a permanent basis.

c. Proposed Clarifications and Revisions to the Process for Considering Changes to the Medicare Telehealth Services List

1. Overview

In CY 2020, CMS issued an array of waivers and new flexibilities for Medicare telehealth services to respond to the serious public health threats posed by the spread of COVID-19 (85 FR 19230). Our goal was to give individuals and entities that provide services to Medicare beneficiaries needed flexibilities to respond effectively to the serious public health threats posed by the spread of COVID-19. Recognizing the urgency of this situation and understanding that some pre-existing Medicare payment rules (including the statutory restrictions on telehealth originating sites and telehealth practitioners) needed to be modified in order to allow patients and practitioners to have

access to necessary care while mitigating the risks from COVID-19, we used waiver and regulatory authorities to change certain Medicare payment rules during the PHE for COVID-19 so that physicians and other practitioners, home health and hospice providers, inpatient rehabilitation facilities, rural health clinics (RHCs), and federally qualified health centers (FQHCs) would be allowed broad flexibilities to furnish services using remote communications technology to avoid exposure risks to health care providers, patients, and the community.

In 2003, as required by section 1834(m)(4)(F)(ii), we established a process for adding or deleting services from the Medicare Telehealth Services List, which included consideration under two categories of criteria (Categories 1 and 2) (67 FR 79988). We finalized revisions to the Category 2 review criterion in the CY 2012 PFS final rule (76 FR 73102). Prior to CY 2020, CMS had not added any service to the Medicare Telehealth Services List on a temporary basis. In CY 2020, in response to the PHE for COVID-19, we revised the criteria for adding or removing services on the Medicare Telehealth Services List using a combination of emergency waiver authority and interim final rule making, so that some services would be available for the duration of the PHE on a "temporary Category 2 basis." (85 FR 19234). In the CY 2021 PFS final rule (85 FR 84507), we created a third, temporary category for services included on the Medicare Telehealth Services List on a temporary basis. This new Category 3 includes many, but not all of the services that we added temporarily to the Medicare Telehealth Services List during the COVID-19 PHE. Specifically, we reviewed the services we added temporarily in response to the COVID-19 PHE and identified those for which there is likely to be clinical benefit when furnished via telehealth, but there is not yet sufficient evidence

available to add the services as permanent additions to the list. Services added to the Medicare Telehealth Services List on a temporary, Category 3 basis will ultimately need to meet the Category 1 or 2 criteria in order to be added to the Medicare Telehealth Services List on a permanent basis.

Between CY 2020 and CY 2023, we added many services to the Medicare Telehealth List on a temporary basis during the PHE, and through rulemaking, we also added many of these services on a Category 3 basis. Subsequent requests and evidence submitted to CMS supported possible status changes for some of the services that are currently included on the Medicare Telehealth Services List on a Category 3 basis. However, submissions sometimes confused our use of waiver authority and regulatory flexibilities tied to the COVID-19 PHE which allow us to temporarily add services to the Medicare Telehealth Services List through the end of the PHE, with the generally applicable categories and criteria we use to consider changes to the Medicare Telehealth Services List outside the circumstances of the COVID-19 PHE. Now that the PHE for COVID-19 has ended, we intend to clarify and modify our process for making changes to the Medicare Telehealth Services List. We believe these clarifications will help address potential confusion among interested parties that submit requests for additions to the Medicare Telehealth List stemming from the distinction between services that were added to the telehealth list on the basis of COVID-19 PHE-related authorities versus services that were added temporarily on a Category 3 basis, which does not rely on any PHE-related authority. Specifically, we created the Category 3 basis for considering changes in the Medicare Telehealth Services List as part of the process we are required to establish under section 1834(m)(4)(F)(2) for considering changes to the list in part

because, with the significant expansion of remotely-furnished services in response to the COVID-19 PHE, we recognized the emergence of new data suggesting that there may be clinical benefit when certain services are delivered via telehealth, but more time is needed to develop additional evidence to support potential addition of the services on a permanent, Category 1 or Category 2 basis. Under Category 3, services are added to the list on a temporary basis to allow them to continue to be furnished via telehealth while additional evidence is developed.

In brief, throughout the COVID-19 PHE, we have reviewed all requests to add services to the Medicare Telehealth Services List and assessed whether the services in question should be added to the list, temporarily or permanently, under any of the criteria for Category 1, 2, or 3. Further, we did not reject any submissions from interested parties simply because they requested consideration under a specific category, and the submitted data did not support adding the service to the Medicare Telehealth Services List on that basis. Instead, we considered whether the service(s) should be added to the Medicare Telehealth Services List on any basis.

To avoid potential continuing confusion among those who submit requests to add services to the Medicare Telehealth Services List, and as we consider the expiration of the Medicare telehealth flexibilities extended by the CAA, 2023 through the end of CY 2024, we believe it would be beneficial to simplify our current taxonomy and multicategory approach to considering submitted requests. Further, we believe that simplification toward a binary classification approach could address the confusion we have noticed from interested parties submitting requests during the PHE. Our proposal would restore the simple binary that existed with Category 1 and 2, without displacing or

disregarding the flexibility of Category 3. We propose to simply classify and consider additions to the Medicare Telehealth Services List as either permanent, or provisional.

At bottom, to consider a request to add a service to the Medicare Telehealth Services List, we need evidence that supports how the telehealth service is either clinically equivalent to a telehealth service already permanently on the list, or evidence that presents studies where findings suggest a clinical benefit sufficient for the service to remain on the list to allow time for confirmative study. We reemphasize the need for clinical evidence because that evidence serves as the principal basis for our consideration of a request; and it is sometimes missing from submissions we receive.

For example, we have received some submissions requesting the addition of services to the Medicare Telehealth Services List that are essentially framed as position papers advocating for changes in statutory requirements of section 1834(m) of the Act. While we do give such requests due consideration, the omission of clinical evidence to support the addition of a service to the Medicare Telehealth Services List using our established criteria generally leads us to conclude that the service should not be proposed for addition to the list. A fair and consistent review process for any and all submissions relies on a standard application of uniform, repeatable procedures for any individual submission, just as sound evidence should describe repeatable methods and replicable findings. Submissions that rely on narrative arguments for changes in the substantive requirements do not fit within such a fair and consistent review process. Therefore, we believe the following restatement of requirements and our review process is appropriate. We also propose some procedural refinements to the review process, specifically incorporating additional considerations into our evaluation of services, that we believe

would serve to maintain scope and focus in a post-PHE context. We discuss these proposed changes in detail in the following section.

Section 1834(m)(4)(F)(ii) of the Act requires that the Secretary establish a process that provides, on an annual basis, for the addition or deletion of services (and HCPCS codes), to the definition of telehealth services for which payment can be made when furnished via telehealth under the conditions specified in section 1834(m). As specified at § 410.78(f), with the exception of a temporary policy that was limited to the PHE for COVID-19, we make changes to the list of Medicare telehealth services through the annual physician fee schedule rulemaking process. The proposed revisions to our current permanent policies, specifically our proposed assignment of a “permanent” or “provisional” status to a service and changes in status as described below, reflect the stepwise method by which we propose to consider future requests to add services to, remove services from, or change the status of, services on the Medicare Telehealth Services List, beginning for the CY 2025 Medicare Telehealth Services List, which will include submissions received no later than February 10, 2024.

2. Proposed Steps of Analysis for Services Under Consideration for Addition, or Removal, or a Change in Status, as Updates to the Medicare Telehealth Services List

Step 1. *Determine whether the service is separately payable under the PFS.*

When considering whether to add, remove, or change the status of a service on the Medicare Telehealth Services List, we are proposing to first determine whether the service, as described by the individual HCPCS code, is separately payable under the PFS. Under section 1834(m)(1) of the Act, Medicare telehealth services are limited to those for which payment can be made to the physician or practitioner when furnished using an

interactive telecommunications system notwithstanding that the practitioner furnishing the services is not in the same location as the beneficiary; and under section 1834(m)(2)(A) of the Act, Medicare pays the same amount for a telehealth service as if the service is furnished in person. As such, Medicare telehealth services are limited to those services for which separate Medicare payment can be made under the PFS.

Thus, through Step 1, we would answer the threshold question of whether a service is separately payable under the PFS. During the PHE, many submissions for addition to the Medicare Telehealth Services List advocated for CMS to change the definition of “Medicare telehealth service” for their specific service; some of those submissions were for services that were not separately payable under the PFS.² (87 FR 69449). We anticipate that Step 1, if finalized, will encourage submissions that focus on a separately payable PFS service, and that the evidence included with those submissions will show how use of interactive, two-way, audio/video telecommunications technology allows a practitioner to complete an entire, specific service, described by a HCPCS code, that is equivalent to an in-person service.

We recognize that certain codes that had non-payable or bundled (not separately payable) status under the PFS before the PHE for COVID-19 were temporarily included on the Medicare Telehealth Services List to facilitate access to health care services during the PHE. However, the PHE for COVID-19 has now expired.

We believe that proposed Step 1, if finalized, would lessen the administrative burden of our telehealth services review process for both CMS and the public. We note

² Services on the Medicare Telehealth List are used in the definition of Medicare telehealth. Some submissions may have conflated the distinction. Step 1 clarifies. Refer to the CMS website instructions for a Request for Addition at <https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/Addition>.

that before gathering evidence and preparing to submit a request to add a service to the Medicare Telehealth Services List, the submitter should first check the payment status for a given service and ensure that the service (as identified by a HCPCS code), is a covered and separately payable service under the PFS (as identified by payment status indicators A, C, T, or R on our public use files). For a full list of all PFS payment status indicators and descriptions, see the Medicare Claims Processing Manual (IOM Pub. 100-04, chapter 23, section 30.2.2) and the Addendum for the MPFSDB File Record Layout. Researchers and others preparing submissions should also refer to the data dictionaries available at <https://resdac.org/cms-data/files/carrier-ffs/data-documentation>, to review whether the methodology and conclusions contained in supporting evidence, or a submission itself, applies an appropriate methodology to study both individual services and individuals that are representative of the Medicare population.

We further propose that, if we find that a service identified in a submission is not separately payable under the PFS, we would not conduct any further review of that service. We would identify the code submitted for consideration and explain that we are not proposing it for addition. CMS sends confirmation from CMS_telehealthreview@cms.hhs.gov when we receive a submission requesting addition of a service to, removal of a service from, or a change in status for a service included on, the Medicare Telehealth Services List. We are proposing to inform each submitter in the confirmation whether the submission was complete, lacking required information, or outside the scope of issues we consider under the process for considering changes in the Medicare Telehealth Services List. We note that we also expect submissions to include copies of any source material used to support assertions, which has been the longstanding

direction included in our website instructions. For further background, refer to details available on our website at <https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/Addition>.

Step 2. *Determine whether the service is subject to the provisions of section 1834(m) of the Act.*

If we determine at Step 1 that a service is separately payable under the PFS, we propose to apply Step 2 under which we would determine whether the service at issue is subject to the provisions of section 1834(m) of the Act. A service is subject to the provisions of section 1834(m) of the Act when at least some elements of the service, when delivered via telehealth, are a substitute for an in-person, face-to-face encounter, and all of those face-to-face elements of the service are furnished using an interactive telecommunications system as defined in § 410.78(a)(3). The aim of this step is to determine whether the service is, in whole or in part, inherently a face-to-face service. As we discussed in the CY 2018 PFS final rule (83 FR 59483), it has long been the case that certain services that are furnished remotely using communications technology are not considered Medicare telehealth services and are not subject to the requirements of section 1834(m) of the Act. We are proposing Step 2 to emphasize the circumstances under which the criteria under section 1834(m) of the Act apply, and also highlight circumstances in which the criteria under section 1834(m) of the Act do not apply. As previously noted, section 1834(m) of the Act provides for payment to a physician or practitioner for a service furnished via an interactive telecommunications system notwithstanding that the furnishing practitioner and patient are not in the same location at the same amount that would have been paid if the service was furnished without the

telecommunications system. We read this to mean that the scope of section 1834(m) of the Act is limited to services that would ordinarily be furnished with the furnishing practitioner and patient in the same location.

Our application of Step 2 remains consistent with longstanding policy. We reiterate that there is a range of services delivered using certain telecommunications technology that do not fall within the scope of Medicare telehealth services, though they are separately payable under the PFS. Such services generally include services that do not require the presence of, or involve interaction with, the patient (for example, remote interpretation of diagnostic imaging tests, and certain care management services). Other examples include virtual check-ins, e-visits, and remote patient monitoring services which involve the use of telecommunications technology to facilitate interactions between the patient and practitioner, but do not serve as a substitute for an in-person encounter, for example, to assess whether an in-person or telehealth visit is needed or to transmit health information to the practitioner.

In determining whether a service is subject to the provisions of section 1834(m) of the Act, we will consider whether one or more of the elements of the service, as described by the particular HCPCS code at issue, ordinarily involve direct, face-to-face interaction between the patient and practitioner such that the use of an interactive telecommunications system to deliver the service would be a substitute for an in-person visit. For interested parties preparing a request to add a service to the Medicare Telehealth Services List, we believe this Step 2 clarifies that a service must be inherently a face-to-face service. We believe reframing this Step 2 has the practical advantage of refining and improving consistency. We do not believe it would be appropriate to add a

service to the Medicare Telehealth Services List if it is not subject to section 1834(m) of the Act. We would explain our finding in notice and comment rulemaking.

Step 3. Review the elements of the service as described by the HCPCS code and determine whether each of them is capable of being furnished using an interactive telecommunications system as defined in § 410.78(a)(3)

We believe that the proposed Step 3 is fundamental to our commitment to health equity, as this step could have a beneficial impact on access to care for vulnerable populations. Step 3 is corollary to Step 2, and used to determine whether one or more elements of a service are capable of being delivered via an interactive telecommunication system as defined in § 410.78(a)(3). In Step 3, we consider whether one or more face-to-face component(s) of the service, if furnished via audio-video communications technology, would be equivalent to the service being furnished in-person, and we seek information from submitters to demonstrate evidence of substantial clinical improvement in different beneficiary populations that may benefit from the requested service when furnished via telehealth, including, for example, in rural populations. The services are not equivalent when the clinical actions, or patient interaction, would not be of similar content as an in-person visit, or could not be completed. We note that completing each element of the defined service is a different question than whether a beneficiary receives any benefit at all from the telehealth-only form of a candidate service. The practical basis for Step 3 mirrors the practical basis for proposed Step 1 and 2, which is a consistent application of review criteria. Many submissions that CMS received during the PHE lacked evidence indicating that some or all elements of a service could be completed using an interactive telecommunications system without still requiring an in-person

interaction with a patient to furnish the complete service. We note that studies of patient satisfaction alone, and submissions with an excessive focus on patient satisfaction alone, present risks of bias in many ways, possibly complicating or obfuscating the question of whether it is possible, or potentially safe, to deliver an inherently face-to-face service via telehealth. Step 3 is integral to avoiding the possible unintended consequences of creating new gaps in care when telehealth is used as a substitute for in-person care.

Step 4. *Consider whether the service elements of the requested service map to the service elements of a service on the list that has a permanent status described in previous final rulemaking.*

The purpose of the proposed Step 4 of our analysis is to simplify and reduce the administrative burden of submission and review. For Step 4, we are proposing to consider whether the service elements of a code that we are considering for addition to, or removal from, the Medicare Telehealth Services List map to the service elements of a service that is already on the list and has a permanent status, because any code that satisfies this criterion would require no further analysis: if a code describes a service that maps to the service elements of a code that is included on the Medicare Telehealth Services List on a permanent basis, we would add the code to the Medicare Telehealth Services List on a permanent basis.

We note that section 1834(m)(4)(F)(i) of the Act defines telehealth services as professional consultations, office visits, and office psychiatry services (as identified as of July 1, 2000, by HCPCS codes 99241– 99275, 99201–99215, 90804–90809, and 90862 (and as subsequently modified by the Secretary)), and any additional service specified by the Secretary. Over the years, CMS has assigned Category 1 (permanent) status to

services that were either included in the list of codes specified in section 1834(m)(4)(F)(i) of the Act or added as successor codes to those enumerated by statute. Successor codes are updates to or replacements for the codes listed in section 1834(m)(4)(F)(i) of the Act. Therefore, this proposed step would ensure that CMS includes successor codes on the Medicare Telehealth Services List. We note that even if a code that we are considering for addition to the Medicare Telehealth Services List is not a successor code, we would consider whether the service described in the submission is similar to professional consultations, office visits, and office psychiatry services that are already on the Medicare Telehealth Services List on a permanent basis. While we have not previously found that the elements of service we are considering for addition to the list map to the elements of a service that was previously added to the list on a permanent basis using the Category 2 criteria, we believe that it would be appropriate to apply this step 4 analysis to compare the candidate service with *any permanent code that is on the list on a permanent basis*. As such, in step 4, we propose to maintain any previous analytical determinations from Steps 1 through 3 and directly map the successor code to a code on the list that has a permanent status described in previous final rulemaking. For example, if a code currently categorized as a finalized Category 2 permanent code was replaced or revised by a successor code in a future year, CMS would ensure that these revisions did not change the Step 1-3 results and add the successor code under Step 4. For example, in a future year, if a code that would otherwise exist under the current categories as a finalized Category 2 permanent code, and was subsequently replaced or revised by a successor code, CMS would ensure any revisions did not alter results under Steps 1-3, and add the successor code using this Step 4. We further propose that if we find that the service we

are considering satisfies Step 4, we would end our review and propose to add the service to the Medicare Telehealth Services List on a permanent basis in the next PFS proposed rule. When Step 4 is met, further evidence review is not necessary. If Step 4 is not met, then we propose to continue to Step 5.

Step 5. *Consider whether there is evidence of clinical benefit analogous to the clinical benefit of the in-person service when the patient, who is located at a telehealth originating site, receives a service furnished by a physician or practitioner located at a distant site using an interactive telecommunications system*

Similar to Steps 3, 4, and 5 above, the purpose of the proposed step 5 is to simplify and reduce the administrative burden. Under proposed Step 5, we would review the evidence provided with a submission to determine the clinical benefit of a service. We would then compare the clinical benefit of that service, when provided via telehealth, to the clinical benefit of the service if it were to be furnished in person. Proposed Step 5 would continue the existing standard that we have applied when considering whether to add a code to the Medicare Telehealth Services List on a Category 2 basis. We further propose that: if there is enough evidence to suggest that further study may demonstrate that the service, when provided via telehealth, is of clinical benefit, CMS would assign the code a "provisional" status on the Medicare Telehealth Services List. Where the clinical benefit of a service, when provided via telehealth, is clearly analogous to the clinical benefit of the service when provided in person, CMS would assign the code "permanent" status on the Medicare Telehealth Services List, even if the code's service elements do not map to the service elements of a service that already has permanent status.

We remind readers that our evidentiary standard of demonstrated clinical benefit does not include minor or incidental benefits (81 FR 80194), and if finalized, our proposal would not alter or displace this longstanding requirement. We will review the evidence submitted by interested parties, and other evidence that CMS has on hand. The evidence should indicate that the service can be safely delivered using two-way interactive audio-video communications technology. Clinical practice guidelines, peer-reviewed literature, and similar materials, should illustrate specifically how the methods and findings within the material establish a foundation of support that each element of the defined, individual service described by the existing face-to-face service code has been studied in the typical setting of care, typical population of beneficiaries, and typical clinical scenarios that practitioners would encounter when furnishing the service using only interactive, two-way audio-video communications technology to complete the visit or encounter with Medicare beneficiaries. This analysis is fundamental to either of the current Category 1 or Category 2 descriptions.

General evidence may also answer the question of whether a certain beneficiary population requiring care for a specific illness or injury may benefit from receiving a service via telehealth versus receiving no service at all, but must establish that the service is a substitute for an equivalent in-person service. Evidence should demonstrate how all elements described by the individual service code can be met when two-way, interactive audio-video communications technology is used as a complete substitute for any face-to-face interaction required between the patient and practitioner that are described in the individual code descriptor. We further remind readers that submissions reflecting practitioner services furnished to Medicare beneficiaries are helpful in our considerations.

Proposed Assignment of “permanent” or “provisional” Status to a Service and Changes in Status.

We are proposing to assign “permanent” or “provisional” status to any services for which the service elements map to the service elements of a service on the list that has a permanent status described in previous final rulemaking (see proposed step 4) or for which there is evidence of clinical benefit analogous to the clinical benefit of the in-person service when the service is furnished via telehealth by an eligible Medicare telehealth physician or practitioner (see proposed steps 5). These two designations (that is, “permanent” or “provisional”) are intended to replace the Category 1-3 taxonomy that CMS currently uses. This proposed change is intended to reduce confusion regarding the status of codes on the Medicare Telehealth Services List and to simplify the outcome of our analysis. After a code receives the “provisional” status, as evidence generation builds, we may assign “permanent” status in a future year or we may remove the service from the list in the interest of patient safety based on findings from ongoing monitoring of telehealth services within CMS and informed by publicly available information. We would revisit provisional status through our regular annual submissions and rulemaking processes where a submission provides new evidence, or our claims monitoring shows anomalous activity, or as indicated by patient safety considerations. CMS would handle changes in status by revisiting the same steps 1 through 5 above.

Summary and Request for Feedback on Proposals to Update the Process of Review for Adding, Removing, or Changing the Status of Services on the Medicare Telehealth List

We note that the timeline for our proposed process to analyze submissions would remain the same. CY 2025 submissions would be due by February 10, 2024.

Additionally, we would continue to address each submitted request for addition, deletion, or modification of services on the Medicare Telehealth Services List through annual notice and comment rulemaking.

As the end of the PHE for COVID-19 was uncertain at the time of last year's rule, many of the submissions for both CY 2023 and CY 2024 involved requests to change the status of services on the Medicare Telehealth Services List from temporary to permanent. In other words, many requestors asked CMS to consider changing the status of one or more services from Category 3 to Category 1 or 2. Based on the number of requests we received asking that CMS assign a different status to a given service, we believe a clarification is necessary to remind readers of the steps that we take when analyzing a given service for addition to, removal from, or a change in status on the Medicare Telehealth Services List. This proposal intends to refine our process and reduce confusion going forward.

To reiterate some of our discussion above, our proposals are consistent with the existing principles that CMS has applied to requests to add, remove, or change the status of a code during the COVID-19 PHE. When reviewing submissions during the PHE, in the absence of evidence supporting clinical benefit, but public comment expressing support for possible clinical benefit, CMS would generally accept a temporary addition to the Medicare Telehealth Services list, allowing more time for evidence generation. We anticipate that our approach would generally remain consistent with this particular point of flexibility if this proposal is finalized; a code could potentially receive provisional

status on the Medicare Telehealth Services List in such a situation, with the caveat that our proposed Steps 1, 2, and 3, are thresholds for inclusion on the Medicare Telehealth Services List. If CMS finds that a service is not separately payable under the PFS (see proposed step 1) or it is not subject to section 1834(m) of the Act (see proposed Step 2), that service would not be added to the Medicare Telehealth Services List on any basis (and notice of the rejection would be provided to the submitter, as noted above). We do not intend to reject a submission based solely on the fact that the requestor did not request the appropriate basis for consideration; we would still analyze the submission based on the proposed steps, and then we would propose to add, remove, or change the status of the service, or we would explain why we were not doing so.

We are soliciting comments on our proposed analysis procedures for additions to, removals from, or changes in status for services on the Medicare Telehealth Services List.

d. Consolidation of the Categories for Services Currently on the Medicare Telehealth Services List.

We are also proposing to consolidate Categories 1, 2, and 3, as proposed above, for all services that are currently on the Medicare Telehealth Services List. For CY 2024, we are proposing to redesignate any services that are currently on the Medicare Telehealth Services List on a Category 1 or 2 basis and would be on the list for CY 2024 to the proposed new “permanent,” category while any services currently added on a “temporary Category 2” or Category 3 basis would be assigned to the "provisional" category. We believe that redesignations in this calendar year would help ease confusion

in future years, including in the event that there is subsequent legislation regarding Medicare telehealth services.

Further, for a code that receives provisional status, as evidence generation builds, we may grant the code a permanent status in a future year or remove the service from the list in the interest of patient safety based on findings from ongoing monitoring of telehealth services within CMS and informed by publicly available information. We propose not to set any specific timing for reevaluation of services added to the Medicare Telehealth Services List on a provisional basis because evidence generation may not align with a specific timeframe. Our proposal not to establish any specific timing for considering changes from provisional to permanent status would avoid a potential situation in which we must remove provisional services from the Medicare Telehealth Services List because the set period tolls, only to later find evidence demonstrating that the removed service should receive permanent status. Under our proposal, we would assign a provisional status for codes that satisfy the proposed threshold steps (1, 2, and 3), and then the evidence available leaves a “close call” between permanent and provisional status. We do not assign provisional status when it is improbable that the code would ever achieve permanent status.

e. Implementation of Provisions of the CAA, 2023

(1) Overview and Background

The CAA, 2022 included several provisions that extend certain Medicare telehealth flexibilities adopted during the COVID-19 PHE for 151 days after the end of the PHE. Specifically, sections 301 through 305 of Division P, Title III, Subtitle A of the CAA, 2022 amended section 1834(m) of the Act to generally extend certain PHE-related

telehealth policies for services that were on the Medicare Telehealth Services List as of the date of enactment (March 15, 2021). The CAA, 2022, temporarily removed restrictions on telehealth originating sites for those services to allow telehealth services to patients located in any site in the United States at the time of the telehealth service, including an individual's home; expanded the definition of telehealth practitioners to include qualified occupational therapists, qualified physical therapists, qualified speech-language pathologists, and qualified audiologists; continued payment for telehealth services furnished by FQHCs and RHCs using the methodology established for those telehealth services during the PHE; delayed the requirement for an in-person visit with the physician or practitioner within 6 months prior to initiating mental health telehealth services to a beneficiary in their home, and again at subsequent intervals as the Secretary determines appropriate, as well as similar requirements for RHCs and FQHCs; and continued to provide for payment of telehealth services included on the Medicare Telehealth Services List as of the March 15, 2020, that are furnished via an audio-only telecommunications system. A full discussion of these policies available in the CY 2023 PFS final rule at 87 FR 69462.

In addition, section 309 of the CAA, 2022 authorized the Secretary to implement the amendments described above, made by sections 301 through 305, through program instruction or otherwise. In the CY 2023 PFS final rule (87 FR 69446), we finalized specific telehealth policies to conform to and align with amendments made by the CAA, 2022. In our CY 2023 PFS final rule (87 FR 69462-69464), we described how CMS would issue program instructions to implement specific requirements of the CAA, 2022. We also implemented the provisions enacted in the CAA, 2022 for a 151-day extension

period of certain telehealth flexibilities (discussed previously in this proposed rule). On December 29, 2022, the President signed the CAA, 2023 into law. Section 4113 of the CAA, 2023 further extends the previously-extended PHE-related telehealth policies; it requires CMS to extend the telehealth flexibilities that were previously extended (initially for 151 days after the end of the PHE) under the CAA, 2022, through December 31, 2024.

We seek to address various telehealth policies that we finalized in the CY 2023 final rule, in light of the CAA, 2023. For example, the 151-day extension period for certain flexibilities discussed in our CY 2023 final rule (and previously in this proposed rule) no longer applies, since section 4113 of the CAA, 2023 extends these flexibilities until December 31, 2024 (the extended flexibilities include: temporary expansion of the scope of telehealth originating sites for services furnished via telehealth to include any site in the United States where the beneficiary is located at the time of the telehealth service, including an individual's home; expansion of the definition of eligible telehealth practitioners to include qualified occupational therapists, qualified physical therapists, qualified speech-language pathologists, and qualified audiologists; continued payment for telehealth services furnished by FQHCs and RHCs using the methodology established for those telehealth services during the PHE; delaying the requirement for an in-person visit with the physician or practitioner within 6 months prior to initiating mental health telehealth services, and again at subsequent intervals as the Secretary determines appropriate, as well as similar requirements for RHCs and FQHCs; and continued coverage and payment of telehealth services included on the Medicare Telehealth Services List as of March 15, 2020) until December 31, 2024. Both the CAA, 2022 and

CAA, 2023 have the same operative effect on the scope of Medicare telehealth services; both the CAA, 2022 and CAA, 2023 give the Secretary the authority to implement the relevant telehealth provisions outside of notice and comment rulemaking through program instruction or otherwise. We intend to implement the provisions discussed above, as enacted by the CAA, 2023.

Similar to the goals of our telehealth policies addressed in last year's final rule, for CY 2024, we again seek to retain payment stability, reduce confusion and burden, and conform to all statutory requirements without unnecessary restrictions on beneficiaries' access to telehealth care. Our discussion here does not alter payment amounts or billing rules that are in effect as of January 1, 2023, and those policies will remain in effect through December 31, 2024. Instead, it is our intent in this proposed rule to clarify that certain telehealth flexibilities that were previously extended until 151 days after the end of the PHE, by the CAA, 2022, have been extended until December 31, 2024, in accordance with the amendments made by provisions of the CAA, 2023.

(2) In-person Requirements for Mental Health Telehealth

Section 4113(d)(1) of section FF, Title IV, Subtitle B of the CAA, 2023 amends section 1834(m)(7)(B)(i) of the Act to delay the requirement for an in-person visit with the physician or practitioner within 6 months prior to the initial mental health telehealth service, and again at subsequent intervals as the Secretary determines appropriate. In light of this amendment, the in-person requirements for telehealth services furnished for purposes of diagnosis, evaluation, or treatment of a mental health disorder will again be effective on January 1, 2025. In addition, 4113(d)(2) of Section FF, Title IV, Subtitle B of the CAA, 2023 modified sections 1834(y) and 1834(o)(4) of the Act, respectively, to

similarly delay in-person visit requirements for mental health visits furnished by Rural Health Clinics and Federally Qualified Health Centers via telecommunications technology. Therefore, we propose to revise the regulatory text at § 410.78(b)(3)(xiv) and (b)(4)(iv)(D) to recognize the delay of the in-person requirements for mental health visits furnished by RHCs and FQHCs through telecommunication technology under Medicare until January 1, 2025, rather than until the 152nd day after the end of the PHE, to conform with the CAA, 2023. See section III.B. of this proposed rule for our proposal to implement similar changes for RHC and FQHC mental health visits.

(3) Originating Site Requirements

Section 4113(a)(2) of the CAA, 2023 amends section 1834(m)(4)(C)(iii) of the Act to temporarily expand the telehealth originating sites for any service on the Medicare Telehealth Services List to include any site in the United States where the beneficiary is located at the time of the telehealth service, including an individual's home, beginning on the first day after the end of the PHE for COVID-19 through December 31, 2024. We would not issue any program instructions or proposals to limit or modify telehealth originating sites for CY 2023 or CY 2024. The list of telehealth originating sites remains as listed in our regulation at § 410.78(b)(3).

(4) Telehealth Practitioners

Section 4113(b) of the CAA, 2023 amends section 1834(m)(4)(E) of the Act to require that qualified occupational therapists, qualified physical therapists, qualified speech-language pathologists, and qualified audiologists continue to be included as telehealth practitioners beginning on the first day after the end of the PHE for COVID-19 through December 31, 2024. Therefore, the list of telehealth practitioners remains as

described in our CY 2023 final rule. We will also recognize marriage and family therapists (MFT) and mental health counselors (MHC) as telehealth practitioners, effective January 1, 2024, in accordance with amendments made by section 4121 of the CAA, 2023. That section of the CAA, 2023 amends section 1861(s)(2) of the Act by adding a new subparagraph (II) that establishes a new benefit category under Part B for marriage and family therapist services (as defined in section 1861(III)(1)) of the Act and mental health counselor services (as defined in section 1861(III)(3) of the Act). Further, section 4121(a)(5) of the CAA, 2023 amended section 1842(b)(18)(C) of the Act to add MFTs and MHCs to the list of practitioners to whom Medicare payment may be made for their services on a reasonable charge or fee schedule basis only on an assignment-related basis. Because the definition of practitioners in section 1834(m)(4)(E) of the Act for purposes of Medicare telehealth services includes the practitioners described in section 1842(b)(18)(C) of the Act, this provision also has the effect of adding MFTs and MHCs as practitioners who can furnish telehealth services.

We are proposing to amend § 410.78(b)(2) to add new paragraphs (xi) and (xii) to specify that a marriage and family therapist as described in proposed § 410.53 and a mental health counselor as described in proposed § 410.54 are included as distant site practitioners for purposes of furnishing telehealth services.

(5) Audio-Only Services

Section 4113(e) of Division FF, Title IV, Subtitle C of the CAA, 2023 amends section 1834(m)(9) of the Act to require that the Secretary shall continue to provide for coverage and payment of telehealth services via an audio-only communications system during the period beginning on the first day after the end of such emergency period and

ending on December 31, 2024. This provision applies only to telehealth services specified on the Medicare Telehealth Services List under section 1834(m)(4)(F)(i) of the Act that are permitted to be furnished via audio-only technology as of the date of enactment of the CAA, 2023 (that is, December 29, 2022).

e. Place of Service for Medicare Telehealth Services

When a physician or practitioner submits a claim for their professional services, including claims for telehealth services, they include a Place of Service (POS) code that is used to determine whether a service is paid using the facility or non-facility rate. Under the PFS, there are two payment rates for many physicians' services: the facility rate, which applies when the service is furnished in hospital or skilled nursing facility (SNF) setting, and the non-facility rate, which applies when the service is furnished in an office or other setting. The PFS non-facility rate is the single geographically adjusted fee schedule amount paid to a physician or other practitioner for services furnished in their office or other non-facility outpatient setting. The PFS facility rate is the single, geographically adjusted amount paid to a physician or other practitioner when a service is furnished in a hospital or SNF setting where Medicare is making a separate payment for the services to the facility in addition to the payment to the billing physician or practitioner for their professional services. This separate payment to the facility (hospital or SNF), often referred to as a "facility fee," is made under other payment systems and reflects the facility's costs associated with the service (clinical staff, supplies, equipment, overhead) and is paid in addition to what is paid to the professional under the PFS.

Prior to CY 2017, Medicare telehealth services were reported using the GT modifier. In the CY 2017 PFS final rule, we finalized creation of a new Place of Service

(POS) code to identify services furnished as Medicare telehealth services, POS “02” (81 FR 80199-80201). In the CY 2022 PFS final rule, we created a new POS code “10” to identify Medicare telehealth services for which the patient’s home is the originating site (87 FR 70110 and 70111).

In response to the PHE for COVID-19, we adopted temporary policies for POS codes and PFS payment rates applicable to Medicare telehealth services. As discussed in the March 31, 2020 IFC, (85 FR 19230), we stated that, as physician practices suddenly transitioned a potentially significant portion of their services from in-person to telehealth visits in the context of the PHE for COVID-19, the relative resource costs of furnishing these services via telehealth may not significantly differ from the resource costs involved when these services are furnished in-person. Therefore, we instructed physicians and practitioners who billed for Medicare telehealth services to report the POS code that they would have reported had the service been furnished in-person. This would allow our systems to make appropriate payment for services furnished via Medicare telehealth, which, if not for the PHE for COVID-19, would have been furnished in-person, at the same rate they would have been paid if the services were furnished in-person. In order to effectuate this change, we finalized on an interim basis (85 FR 19233) the use of the CPT telehealth modifier, modifier “95”, for the duration of the PHE for COVID-19, which is applied to claim lines that describe services furnished via telehealth; and that the practitioner should report the POS code where the service would have occurred had it not been furnished via telehealth. This allowed telehealth services to be paid at the PFS non-facility rate.

We further noted that we were maintaining the facility payment rate for services billed using the general telehealth POS code “02”, should practitioners choose to maintain their current billing practices for Medicare telehealth during the PHE for COVID-19. In the CY 2023 PFS final rule (87 FR 69467), we finalized that we would continue to maintain payment at the rate for a service had the service been furnished in person, and that this would allow payments to continue to be made at the non-facility based rate for Medicare telehealth services through the latter of the end of CY 2023 or the end of the calendar year in which the PHE ends.

In the CY 2023 PFS final rule (87 FR 69467), we finalized that, following the end of the end of the calendar year in which the PHE, practitioners will no longer bill claims with Modifier ‘95’ along with the POS code that would have applied had the service been furnished in person, and telehealth claims will instead be billed with the POS indicators:

- POS "02" - is redefined as Telehealth Provided Other than in Patient’s Home (Descriptor: The location where health services and health related services are provided or received, through telecommunication technology. Patient is not located in their home when receiving health services or health related services through telecommunication technology.); and

- POS “10” - Telehealth Provided in Patient’s Home (Descriptor: The location where health services and health related services are provided or received through telecommunication technology. Patient is located in their home (which is a location other than a hospital or other facility where the patient receives care in a private residence) when receiving health services or health related services through telecommunication technology.).

We recognize that, throughout the PHE for COVID-19, behavioral health services that otherwise would have been furnished in-person have been furnished via telehealth in the patient's home. With few exceptions, prior to the PHE for COVID-19, originating sites were limited to sites such as physician's offices and hospitals. Now that behavioral health telehealth services may be furnished in a patient's home, which would then serve as an originating site, we believe these behavioral health services are most accurately valued the way they would have been valued without the use of telecommunications technology, namely in an office setting. There was an increase in utilization of these mental health services during the PHE that has persisted throughout and after expiration of the PHE for COVID-19. It appears that practice patterns for many mental health practitioners have evolved, and they are now seeing patients in office settings, as well as via telehealth. As a result, these practitioners continue to maintain their office presence even as a significant proportion of their practice's utilization may be comprised of telehealth visits. As such, we believe their practice expenses (PEs) are more accurately reflected by the non-facility rate.

Therefore, we are proposing that, beginning in CY 2024, claims billed with POS 10 (Telehealth Provided in Patient's Home) be paid at the non-facility PFS rate. When considering certain practice situations (such as in behavioral health settings, where practitioners have been seeing greater numbers of patients via telehealth), practitioners will typically need to maintain both an in-person practice setting and a robust telehealth setting. We expect that these practitioners will be functionally maintaining all of their PEs, while furnishing services via telehealth. When valuing services, we believe that there are few differences in PE when behavioral health services are furnished to a patient

at home via telehealth as opposed to services furnished in-person (that is, behavioral health settings require few supplies relative to other healthcare services). Claims billed with POS 02 (Telehealth Provided Other than in Patient's Home) will continue to be paid at the PFS facility rate beginning on January 1, 2024, as we believe those services will be furnished in originating sites that were typical prior to the PHE for COVID-19, and we continue to believe that, as discussed in the CY 2017 PFS final rule (81 FR 80199 through 80201), the facility rate more accurately reflects the PE of these telehealth services; this applies to non-home originating sites such as physician's offices and hospitals. In this way, we believe we would be protecting access to mental health and other telehealth services by aligning with telehealth-related flexibilities that were extended via the CAA, 2023, as we will be more accurately recognizing the resource costs of behavioral health providers, given shifting practice models.

f. Frequency Limitations on Medicare Telehealth Subsequent Care Services in Inpatient and Nursing Facility Settings, and Critical Care Consultations

When adding some services to the Medicare Telehealth Services List in the past, we have included certain restrictions on how frequently a service may be furnished via Medicare telehealth. These limitations include a limit of once every 3 days for subsequent inpatient visits, added in in the CY 2011 PFS final rule (75 FR 73317 through 73318), and once every 14 days for subsequent nursing facility (NF) visits, added in the CY 2016 final rule (80 FR 71062) furnished via Medicare telehealth and a limit of once per day for critical care consultation services; in establishing these limits, we cited concerns regarding the potential acuity of these patients. End-stage renal disease (ESRD)-related clinical assessments may be furnished via telehealth, subject to the frequency limitations

in section 1881(b)(3)(B) of the Act, which provides that patients must receive a face-to-face visit, without the use of telehealth, at least monthly in the case of the initial 3 months of home dialysis and at least once every 3 consecutive months after the initial 3 months.

In the March 31, 2020 COVID-19 IFC (85 FR 19241), we stated that as it was our assessment that there was a patient population who would otherwise not have had access to clinically appropriate in-person treatment, and we did not believe these frequency limitations were appropriate or necessary under the circumstances of the PHE. Therefore, we removed the frequency restrictions for certain subsequent inpatient visits, subsequent NF visits, and for critical care consultations furnished via Medicare telehealth for the duration the PHE for COVID-19. The frequency limitations resumed effect beginning on May 12, 2023, (upon expiration of the PHE), in accordance with the March 31, 2020 IFC. However, we stated that, pursuant to waiver authority added under section 1135(b)(8) of the Act by the Coronavirus Preparedness and Response Supplemental Appropriations Act, 2020³, we were exercising enforcement discretion and will not consider these frequency limitations through December 31, 2023; and that we anticipated considering our policy further through our rulemaking process. As discussed below, we are proposing to once again remove these telehealth frequency limitations beginning CY 2024. We are proposing to remove the telehealth frequency limitations for the following codes:

1. Subsequent Inpatient Visit CPT Codes:

- 99231 (*Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history*)

³ <https://www.cms.gov/files/document/physicians-and-other-clinicians-cms-flexibilities-fight-covid-19.pdf>.

and/or examination and straightforward or low level of medical decision making. when using total time on the date of the encounter for code selection, 25 minutes must be met or exceeded.);

- *99232 (Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. when using total time on the date of the encounter for code selection, 35 minutes must be met or exceeded.); and*

- *99233 (Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. when using total time on the date of the encounter for code selection, 50 minutes must be met or exceeded.)*

2. Subsequent Nursing Facility Visit CPT Codes:

- *99307 (Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. when using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.);*

- *99308 (Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and low level of medical decision making. when using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.);*

- *99309 (Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or*

examination and moderate level of medical decision making. when using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.); and

- 99310 (*Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. when using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.*)

3. Critical Care Consultation Services: HCPCS Codes

- G0508 (*Telehealth consultation, critical care, initial, physicians typically spend 60 minutes communicating with the patient and providers via telehealth.*); and

- G0509 (*Telehealth consultation, critical care, subsequent, physicians typically spend 50 minutes communicating with the patient and providers via telehealth.*)

We are proposing to remove the frequency limitations for these codes for the duration of CY 2024, which will align with other telehealth-related flexibilities extended by the CAA, 2023. CMS is broadly assessing our telehealth regulations, in light of the way practice patterns may have changed in the roughly 3 years of the PHE for COVID-19 and, while we engage in this assessment, we believe it is reasonable to pause certain pre-pandemic restrictions, such as these frequency limitations, to allow us to gather more information. We are seeking information from interested parties on how practitioners have been ensuring that Medicare beneficiaries receive subsequent inpatient and nursing facility visits, as well as critical care consultation services since the expiration of the PHE.

2. Other Non-Face-to-Face Services Involving Communications Technology under the PFS

a. Direct Supervision via Use of Two-way Audio/Video Communications Technology

Under Medicare Part B, certain types of services, including diagnostic tests, services incident to physicians' or practitioners' professional services, and other services, are required to be furnished under specific minimum levels of supervision by a physician or practitioner. For most services furnished by auxiliary personnel incident to the services of the billing physician or practitioner (see § 410.26) and many diagnostic tests (see § 410.32), direct supervision is required. Additionally, for pulmonary rehabilitation services (see § 410.47) and for cardiac rehabilitation and intensive cardiac rehabilitation services (see § 410.49), direct supervision by a physician, PA, NP, or CNS is required (see also § 410.27(a)(1)(iv)(B)(I) for hospital outpatient services). Outside the circumstances of the PHE, direct supervision requires the immediate availability of the supervising physician or other practitioner, but the professional need not be present in the same room during the service. We have established this "immediate availability" requirement to mean in-person, physical, not virtual, availability (please see the April 6, 2020 IFC (85 FR 19245) and the CY 2022 PFS final rule (86 FR 65062)). Through the March 31, 2020 COVID-19 IFC, we changed the definition of "direct supervision" during the PHE for COVID-19 (85 FR 19245 through 19246) as it pertains to supervision of diagnostic tests, physicians' services, and some hospital outpatient services, to allow the supervising professional to be immediately available through virtual presence using two-way, real-time audio/video technology, instead of requiring their physical presence. In the CY 2021 PFS final rule (85 FR 84538 through 84540), we finalized continuation of this policy through the later of the end of the calendar year in which the PHE for COVID-19 ends or December 31, 2021. In the March 31, 2020 IFC (85 FR 19246) and in our CY

2022 PFS final rule (see 85 FR 65063), we also noted that the temporary exception to allow immediate availability for direct supervision through virtual presence facilitates the provision of Medicare telehealth services by clinical staff of physicians and other practitioners' incident to their own professional services. This is especially relevant for services such as physical therapy, occupational therapy, and speech language pathology services, since those practitioners were previously only able to bill Medicare for telehealth services under Medicare telehealth waivers that were effective during the PHE for COVID-19 (based on the emergency waiver authority established in section 1135(b)(8) of the Act), until the CAA, 2023 extended the time period during which these practitioners could bill for Medicare telehealth services through December 31, 2024. We noted that sections 1834(m)(4)(D) and (E) of the Act specify the types of clinicians who may furnish and bill for Medicare telehealth services. After December 31, 2024, the types of clinicians who may furnish and bill for Medicare telehealth services include only physicians as defined in section 1861(r) of the Act and practitioners described in section 1842(b)(18)(C) of the Act. We note that this will include mental health counselors (MHCs) and marriage and family therapists (MFTs) beginning January 1, 2024.

We noted in the CY 2021 PFS final rule (85 FR 84539) that, to the extent our policy allows direct supervision through virtual presence using audio/video real-time communications technology, the requirement could be met by the supervising physician (or other practitioner) being immediately available to engage via audio/video technology (excluding audio-only), and would not require real-time presence or observation of the service via interactive audio and video technology throughout the performance of the procedure; this was the case during the PHE, and will continue to be the case following

the PHE. Under current policy as described in the CY 2021 final rule (85 FR 84539 and 84540, after December 31, 2023, the pre-PHE rules for direct supervision at § 410.32(b)(3)(ii) would apply. As noted in the CY 2022 PFS final rule (86 FR 65062), this means the temporary exception allowing immediate availability for direct supervision through virtual presence, which facilitates the provision of telehealth services by clinical staff of physicians and other practitioners incident to their professional services, will no longer apply after CY 2023.

We are concerned about an abrupt transition to our pre-PHE policy that defines direct supervision under § 410.32(b)(3)(ii) to require the physical presence of the supervising practitioner beginning after December 31, 2023, given that practitioners have established new patterns of practice during the PHE for COVID-19. In the absence of evidence that patient safety is compromised by virtual direct supervision, we believe that an immediate reversion to the pre-PHE definition of direct supervision would prohibit virtual direct supervision, which may present a barrier to access to many services, such as those furnished incident-to a physician's service. We believe physicians and practitioners will need time to reorganize their practice patterns established during the PHE to reimplement the pre-PHE approach to direct supervision without the use of audio/video technology. Recognizing these concerns, we are proposing continue to define direct supervision to permit the presence and "immediate availability" of the supervising practitioner through real-time audio and visual interactive telecommunications through December 31, 2024. We believe that extending this definition of direct supervision through December 31, 2024, would align the timeframe of this policy with many of the previously discussed PHE-related telehealth policies that were extended under provisions

of the CAA, 2023. We are proposing to revise the regulatory text at § 410.32(b)(3)(ii) to state that, through December 31, 2024, the presence of the physician (or other practitioner) includes virtual presence through audio/video real-time communications technology (excluding audio-only).

We believe this additional time will allow us further opportunity to collect information through the coming year as we consider an appropriate more permanent approach to direct supervision policy following the PHE for COVID-19. We are soliciting comment on whether we should consider extending the definition of direct supervision to permit virtual presence beyond December 31, 2024. Specifically, we are interested in input from interested parties on potential patient safety or quality concerns when direct supervision occurs virtually; for instance, if virtual direct supervision of certain types of services is more or less likely to present patient safety concerns, or if this flexibility would be more appropriate for certain types of services, or when certain types of auxiliary personnel are performing the supervised service. We are also interested in potential program integrity concerns such as overutilization or fraud and abuse that interested parties may have in regard to this policy.

One potential approach to direct supervision which we could consider for future rulemaking, could be to extend or permanently establish this virtual presence flexibility for services that are valued under the PFS based on the presumption that they are nearly always performed in entirety by auxiliary personnel. Such services would include any service wholly furnished incident to a physician or practitioner's professional service, as well as the Level I office or other outpatient evaluation and management visit for established patients and the Level I Emergency Department visit. Allowing virtual

presence for direct supervision of these services may balance patient safety concerns with the interest of supporting access and preserving workforce capacity for medical professionals while considering potential quality and program integrity concerns. We are soliciting comment on this potential approach for CY 2025, as well as any other approaches by which direct supervision could occur virtually that would both protect patient access and safety, as well as quality of care and program integrity concerns following CY 2024.

(1) Supervision of Residents in Teaching Settings

In the CY 2021 PFS final rule (85 FR 84577 through 84584), we established a policy that, after the end of the PHE for COVID-19, teaching physicians may meet the requirements to be present for the key or critical portions of services when furnished involving residents through audio/video real-time communications technology (virtual presence), but only for services furnished in residency training sites that are located outside of an Office of Management and Budget (OMB)-defined metropolitan statistical area (MSA). We made this location distinction consistent with our longstanding interest to increase beneficiary access to Medicare-covered services in rural areas and noted the ability to expand training opportunities for residents in rural settings. For all other locations, we expressed concerns that continuing to permit teaching physicians to bill for services furnished involving residents when they are virtually present, outside the conditions of the PHE for COVID-19, may not allow the teaching physician to have personal oversight and involvement over the management of the portion of the case for which the payment is sought, in accordance with section 1842(b)(7)(A)(i)(I) of the Act. In addition, we stated concerns about patient populations that may require a teaching

physician's experience and skill to recognize specialized needs or testing, and whether it is possible for the teaching physician to meet these clinical needs while having a virtual presence for the key portion of the service. For a more detailed description of our specific concerns, we refer readers to the CY 2021 PFS final rule (85 FR 84577 through 84584). At the end of the PHE for COVID-19, and as finalized in the CY 2021 PFS final rule, we intended for the teaching physician to have a physical presence during the key portion of the service personally provided by residents in order to be paid for the service under the PFS, in locations that were within a MSA. This policy applies to all services, regardless of whether the patient was co-located with the resident or only present virtually (for example, the service was furnished as a 3-way telehealth visit, with the teaching physician, resident, and patient in different locations). However, interested parties have expressed concerns regarding the requirement that the teaching physician have a physical presence with the resident when a service is furnished virtually within a MSA (that is, as a Medicare telehealth service). Some interested parties have stated that during the PHE for COVID-19, when residents provided telehealth services and the teaching physician was virtually present, the same safe and high-quality oversight was provided as when the teaching physician and resident were physically co-located. In addition, these interested parties have stated that during telehealth visits, the teaching physician was virtually present during the key and critical portions of the telehealth service, available immediately in real-time, and had access to the electronic health record. As stated in section II.D.2.a. of this proposed rule, we are concerned that an abrupt transition to our pre-PHE policy may present a barrier to access to many services, and we understand that practitioners have gained clinical experience during the PHE for

COVID–19, and could identify circumstances for which the teaching physician can routinely render sufficient personal and identifiable services to the patient, with a virtual presence during the key portion of the telehealth service. Given these considerations and in alignment with the telehealth policies that were extended under the provisions of the CAA, 2023, we are proposing to allow the teaching physician to have a virtual presence in all teaching settings, only in clinical instances when the service is furnished virtually (for example, a 3-way telehealth visit, with all parties in separate locations). This would permit teaching physicians to have a virtual presence during the key portion of the Medicare telehealth service for which payment is sought, through audio/video real-time communications technology, for all residency training locations through December 31, 2024. The virtual presence policy would continue to require real-time observation (not mere availability) by the teaching physician, and excludes audio-only technology. The documentation in the medical record must continue to demonstrate whether the teaching physician was physically present or present through audio/video real-time communications technology at the time of the telehealth service, this includes documenting the specific portion of the service for which the teaching physician was present through audio/video real-time communications technology. This policy does not preclude teaching physicians from providing a greater degree of involvement in services furnished with residents, and teaching physicians should still use discretion to determine whether it is appropriate to have a virtual presence rather than in person, depending on the services being furnished and the experience of the particular residents involved.

We announced that we are exercising enforcement discretion to allow teaching physicians in all residency training sites, to be present through audio/video real-time

communications technology, for purposes of billing under the PFS for services they furnish involving residents. We are exercising this enforcement discretion through December 31, 2023, as we consider our virtual presence policies for services involving teaching physicians and residents further through our rulemaking process for CY 2024. For more background we refer readers to <https://www.cms.gov/files/document/frequently-asked-questions-cms-waivers-flexibilities-and-end-covid-19-public-health-emergency.pdf>.

We seek comment and information to help us consider how telehealth services can be furnished in all residency training locations beyond December 31, 2024, to include what other clinical treatment situations are appropriate to permit the virtual presence of the teaching physician. Specifically, we anticipate considering various types of teaching physician services, when it is appropriate for the teaching physician and resident to be co-located, and how virtual presence could support patient safety for all patients, particularly at-risk patients. We also invite commenters to provide data or other information on how the teaching physician's virtual presence could continue to support patient safety, while meeting the clinical needs for all patients, and ensure burden reduction without creating risks to patient care or increasing opportunities for fraud.

b. Clarifications for Remote Monitoring Services

(1) Background and Overview

In recent years, we have established payment for two code families that describe certain remote monitoring services: remote physiologic monitoring (RPM) and remote therapy monitoring (RTM).

Remote Physiologic Monitoring

- 99453 (*Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, pulse oximetry, respiratory flow rate), initial; set-up and patient education on use of equipment*);
- 99454 (*Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, pulse oximetry, respiratory flow rate), initial; device(s) supply with daily recording(s) or programmed alert(s) transmission, each 30 days*);
- 99457 (*Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; first 20 minutes*); and
- 99458 (*Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; each additional 20 minutes (List separately in addition to code for primary procedure)*).

Remote Therapeutic Monitoring

- 98975 (*Remote therapeutic monitoring (eg, therapy adherence, therapy response); initial set-up and patient education on use of equipment*);
- 98976 (*Remote therapeutic monitoring (eg, therapy adherence, therapy response); device(s) supply with scheduled (eg, daily) recording(s) and/or programmed alert(s) transmission to monitor respiratory system, each 30 days*);
- 98977 (*Remote therapeutic monitoring (eg, therapy adherence, therapy response); device(s) supply with scheduled (eg, daily) recording(s) and/or programmed alert(s) transmission to monitor musculoskeletal system, each 30 days*);

- 98978 (*Remote therapeutic monitoring (eg, therapy adherence, therapy response); device(s) supply with scheduled (eg, daily) recording(s) and/or programmed alert(s) transmission to monitor cognitive behavioral therapy, each 30 days*);
- 98980 (*Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient or caregiver during the calendar month; first 20 minutes*); and
- 98981 (*Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient or caregiver during the calendar month; each additional 20 minutes (List separately in addition to code for primary procedure)*)

In our CY 2018 PFS final rule, we summarized feedback solicited from a comment period aimed at informing new payment policies that would allow for separate payment for remote monitoring services (82 FR 53014). In our CY 2019 PFS final rule (83 FR 59574 to 59576), we established valuations and payment policy for the RPM code family. In our CY 2020 PFS final rule (84 FR 62697-8), we explained that the RPM code family describes chronic care RPM services that involve the collection, analysis, and interpretation of digitally collected physiologic data, followed by the development of a treatment plan and the managing of a patient under the treatment plan. (84 FR 62697). In our CY 2020 PFS final rule, we also discussed that remote monitoring codes would be designated as care management services, which means our rules for general supervision would apply (84 FR 62698). In our CY 2023 PFS final rule, in response to comments, we

clarified that RTM or RPM services could be billed concurrently with Chronic Care Management (CCM), Transitional Care Management TCM, Principal Care Management (PCM), Chronic Pain Management (CPM), or Behavioral Health Integration (BHI) (86 FR 69528-69539).

We have received many questions from interested parties about billing scenarios and requests for clarifications on the appropriate use of these codes in general. We believe it is important to share with all interested parties a restatement/clarification of certain policies. We refer readers to the CY 2021 PFS final rule (85 FR 84542 to 84546) for further discussion and explanation of the basis for interim policies that expired on the last day of the PHE for COVID-19.

(2) New vs. established patient requirements

In the CY 2021 PFS final rule (85 FR 84542-6), we established that, when the PHE for COVID-19 ends, we again will require that RPM services be furnished only to an established patient. Patients who received initial remote monitoring services during PHE are considered established patients for purposes of the new patient requirements that are effective after the last day of the PHE for COVID-19.

(3) Data collection requirements

We have received various comments and inquiries about our temporary exception to minimum data collection for remote monitoring. As discussed in our CY 2021 final rule, we are not extending beyond the end of the PHE the interim policy to permit billing for remote monitoring codes, which require data collection for at least 16 days in a 30-day period, when less than 16 of days data are collected within a given 30-day period. (85 FR 84542 through 84546). As of the end of the PHE, the 16-day monitoring requirement

was reinstated. Monitoring must occur over at least 16 days of a 30-day period. We are proposing to clarify that the data collection minimums apply to existing RPM and RTM code families for CY 2024.

The following remote monitoring codes currently depend on collection of no fewer than 16 days of data in a 30-day period, as defined and specified in the code descriptions:

- 98976 (*Remote therapeutic monitoring (eg, therapy adherence, therapy response); device(s) supply with scheduled (eg, daily) recording(s) and/or programmed alert(s) transmission to monitor respiratory system, each 30 days*);
- 98977 (*Remote therapeutic monitoring (eg, therapy adherence, therapy response); device(s) supply with scheduled (eg, daily) recording(s) and/or programmed alert(s) transmission to monitor musculoskeletal system, each 30 days*);
- 98978 (*Remote therapeutic monitoring (eg, therapy adherence, therapy response); device(s) supply with scheduled (eg, daily) recording(s) and/or programmed alert(s) transmission to monitor cognitive behavioral therapy, each 30 days*);
- 98980 (*Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient or caregiver during the calendar month; first 20 minutes*); and
- 98981 (*Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient or caregiver during the calendar month; each additional 20 minutes (List separately in addition to code for primary*

procedure))

We remind readers that our discussion in the CY 2021 PFS final rule addresses the interim policy on data collection minimums, and provides notice and the rationale for the data collection policy that is in effect now that the PHE for COVID-19 has ended. Remotely monitored monthly services should be reported only once during a 30-day period – and only when reasonable and necessary. As a clarification for either RPM or RTM, only one practitioner can bill CPT codes 99453 and 99454, or CPT codes 98976, 98977, 98980, and 98981, during a 30-day period, and only when at least 16 days of data have been collected on at least one medical device as defined in section 201(h) of the FDCA.

We reiterate our analysis described in the CY 2021 PFS final rule, in which we explained that CPT code descriptor language suggests that, even when multiple medical devices are provided to a patient, the services associated with all the medical devices can be billed only once per patient per 30-day period and only when at least 16 days of data have been collected (85 FR 84545). We refer readers to our CY 2021 PFS final rule (85 FR 84545) for additional background.

(4) Use of RPM, RTM, in conjunction with other services

Practitioners may bill RPM or RTM, but not both RPM and RTM, concurrently with the following care management services: CCM/TCM/BHI, PCM, and CPM. These various codes, which describe other care management services, may be billed with RPM or RTM, for the same patient, if the time or effort is not counted twice. As specified in the CY 2023 PFS final rule, if all requirements to report each service are met, without time or effort being counted more than once, RPM or RTM (not both RPM and RTM)

may be billed in conjunction with any one of CCM, TCM, BHI, PCM, or CPM codes. According to the 2023 CPT Codebook (pg. 849), CPT code 98980 (*RTM treatment management*) cannot be reported in conjunction with CPT codes 99457/99458 (*RPM treatment management*). Our intention is to allow the maximum flexibility for a given practitioner to select the appropriate mix of care management services, without creating significant issues of possible fraud, waste, and abuse associated with overbilling of these services. We continue to gain experience with each family of remote monitoring codes, and request feedback from commenters that would provide additional context that could inform us as we continue to develop and clarify our payment policies for these services.

We propose to clarify that RPM and RTM may not be billed together, so that no time is counted twice by billing for concurrent RPM and RTM services. In instances where the same patient receives RPM and RTM services, there may be multiple devices used for monitoring, and in these cases, we will to apply our existing rules, which we finalized when establishing the RPM code family, meaning that the services associated with all the medical devices can be billed by only one practitioner, only once per patient, per 30-day period, and only when at least 16 days of data have been collected; and that the services must be reasonable and necessary (85 FR 84544 through 84545).

(5) Other Clarifications for Appropriate Billing

We have received inquiries from interested parties during public forums regarding use of remote monitoring during global periods for surgery. We are proposing to clarify that, in circumstances where an individual beneficiary may receive a procedure or surgery, and related services, which are covered under a payment for a global period, RPM services or RTM services (but not both RPM and RTM services concurrently) may

be furnished separately to the beneficiary, and the practitioner would receive payment for the RTM or RPM services, separate from the global service payment, so long as other requirements for the global service and any other service during the global period are met. For an individual beneficiary who is currently receiving services during a global period, a practitioner may furnish RPM or RTM services (but not both RPM or RTM services) to the individual beneficiary, and the practitioner will receive separate payment, so long as the remote monitoring services are unrelated to the diagnosis for which the global procedure is performed, and as long as the purpose of the remote monitoring addresses an episode of care that is separate and distinct from the episode of care for the global procedure - meaning that the remote monitoring services address an underlying condition that is not linked to the global procedure or service.

We are soliciting comment on the above proposals and clarifications and request general feedback from the public that may be useful in further development of our payment policies for remote monitoring services that are separately payable under the current PFS.

c. Telephone Evaluation and Management Services

In the March 31st COVID-19 IFC (85 FR 19264 through 19265), we finalized separate payment for CPT codes 99441 through 99443 and 98966 through 98968, which describe E/M and assessment and management services furnished via telephone. CPT codes 99441 through 99443 are telehealth services and will remain actively priced through 2024. CPT codes 98966 – 98968, however, describe telephone assessment and management services provided by a qualified non-physician healthcare professional, and they are not telehealth services. We are proposing to continue to assign an active payment

status to CPT codes 98966 through 98968 for CY 2024 to align with telehealth-related flexibilities that were extended via the CAA, 2023, specifically section 4113(e), which permits the provision of telehealth services through audio-only telecommunications through the end of 2024.

3. Telehealth Originating Site Facility Fee Payment Amount Update

Section 1834(m)(2)(B) of the Act established the Medicare telehealth originating site facility fee for telehealth services furnished from October 1, 2001 through December 31, 2002 at \$20.00, and specifies that, for telehealth services furnished on or after January 1 of each subsequent calendar year, the telehealth originating site facility fee is increased by the percentage increase in the Medicare Economic Index (MEI) as defined in section 1842(i)(3) of the Act. The proposed MEI increase for CY 2024 is 4.5 percent and is based on the expected historical percentage increase of the 2017-based MEI. For the final rule, we propose to update the MEI increase for CY 2024 based on historical data through second quarter of 2023.

Therefore, for CY 2024, the proposed payment amount for HCPCS code Q3014 (*Telehealth originating site facility fee*) is \$29.92. Table 10 shows the Medicare telehealth originating site facility fee and the corresponding MEI percentage increase for each applicable time period.

TABLE 10: The Medicare Telehealth Originating Site Facility Fee

Time Period	MEI (%)	Facility Fee for Q3014
Oct. 1, 2001 to Dec. 31, 2002	NA	\$ 20.00
2003	3.0	\$ 20.60
2004	2.9	\$ 21.20
2005	3.1	\$ 21.86

4. Payment for Outpatient Therapy Services, Diabetes Self-Management Training, and Medical Nutrition Therapy when Furnished by Institutional Staff to Beneficiaries in Their Homes Through Communication Technology

a. Background on Outpatient Therapy Services, Diabetes Self-Management Training and Medical Nutrition Therapy

Section 1861(p) of the Act establishes the benefit category for outpatient PT, SLP and OT services, (expressly for PT services and, through section 1861(ll)(2) of the Act, for outpatient SLP services and, through section 1861(g) of the Act, for outpatient OT services). Section 1861(p) of the Act defines outpatient therapy services in the three disciplines as those furnished by a provider of services, a clinic, rehabilitation agency, or

a public health agency, or by others under an arrangement with, and under the supervision of, such provider, clinic, rehabilitation agency, or public health agency to an individual as an outpatient; and those furnished by a therapist not under arrangements with a provider of services, clinic, rehabilitation agency, or a public health agency. As such, section 1861(p) of the Act defines outpatient therapy services very broadly to include those furnished by providers and other institutional settings, as well as those furnished in office settings. Section 1834(k)(3) of the Act requires payment for outpatient therapy services to be made based on the PFS (via section 1848 of the Act), for all institutional providers listed at sections 1833(a)(8) and (9) of the Act. These providers include clinics, rehabilitation agencies, public health agencies, comprehensive outpatient rehabilitation agencies (CORFs), SNFs, home health agencies (HHAs) (to individuals who are not homebound), hospitals to outpatients or hospital inpatients who are entitled to benefits under part A but have exhausted benefits for inpatient hospital services during a spell of illness or is not so entitled to benefits under part A), and all other CORF services.

Section 1861(qq) of the Act defines Diabetes Self-Management Training (DSMT) services and authorizes CMS to regulate Medicare DSMT outpatient services. A “certified provider” of DSMT is further defined in section 1861(qq)(2)(A) of the Act as a physician or other individual or entity designated by the Secretary who meets certain quality requirements described in section 1861(qq)(2)(B) of the Act. In CY 2000, we finalized a standalone rule titled “Medicare Program; Expanded Coverage for Outpatient Diabetes Self-Management Training and Diabetes Outcome Measurements.” In that rule, we finalized that payment for outpatient DSMT would be made under the PFS (65 FR

83132). We further established that, in the case of payments made to other approved entities, such as hospital outpatient departments, ESRD facilities, and durable medical equipment suppliers, the payment would be equal to the amounts established under the PFS and made under the appropriate payment systems (65 FR 83142).

Section 1861(s)(2)(V) of the Act authorizes Medicare Part B coverage of medical nutrition therapy services (MNT) for certain beneficiaries who have diabetes or a renal disease. In the CY 2000 PFS final rule, we established that payment for MNT services furnished in the institutional setting, including hospital outpatient departments (HOPDs), would be made under the PFS, not under the hospital Outpatient Prospective Payment System (OPPS) (66 FR 55279).

During the PHE for COVID-19, outpatient therapy services, DSMT, and MNT could be furnished via a telecommunications system to beneficiaries in their homes, and bills for these services were submitted and paid either separately or as part of a bundled payment, when either personally provided by the billing practitioner or provided by institutional staff and billed for by institutions, such as HOPDs, SNFs, and HHAs. For professionals, CMS used waiver authority to expand the range of practitioners that can serve as distant site practitioners for Medicare telehealth services as described in section 1834(m)(4)(E) of the Act and §410.78 (b)(2), as well as to waive the originating site requirements for Medicare telehealth services described in section 1834(m)(4)(C) of the Act. This allowed for outpatient therapy services to be furnished and billed by therapists in private practice, as well as for outpatient therapy services, DSMT, and MNT to be furnished via Medicare telehealth to beneficiaries in urban, as well as rural, areas, including to beneficiaries located in their homes.

When therapists (PTs, OTs and SLPs) were added as distant site telehealth practitioners using waiver authority during the PHE for COVID-19, CMS generally took the position for services furnished in HOPDs that waiver authority was needed to allow hospitals to bill for services furnished by hospital staff through communication technology to beneficiaries in their homes. CMS implemented the Hospitals Without Walls (HWW) policy that relied on waiver authority, which allowed hospitals to reclassify patients' homes as part of the hospital. HWW allowed hospitals to bill two different kinds of fees for services furnished remotely to patients in their homes: (1) hospital facility payment in association with professional services billed under the PFS; and (2) single payment for a limited number of practitioner services, when statute or other applicable rules only allow the hospital to bill for services personally provided by their staff. These services are either billed by hospitals or by professionals, there would not be separate facility and professional billing. This latter category includes outpatient therapy services, DSMT, and MNT. However, while maintaining that waiver authority was needed to allow hospital billing for these services, CMS also issued guidance instructing HOPDs to bill using modifiers consistent with those used for Medicare telehealth services. For further background, we refer readers to <https://www.cms.gov/files/document/03092020-covid-19-faqs-508.pdf>. In the same referenced document, CMS also issued specific guidance for other institutional providers of therapy services to use modifier 95 (indicating a Medicare telehealth service), along with the specific bill types for outpatient therapy services furnished by their staff.

The CAA, 2023 extended many of the flexibilities that were available for Medicare telehealth services during the PHE for COVID-19 under emergency waiver

authorities, including adding physical and occupational therapists and speech-language pathologists as distant site practitioners through the end of CY 2024. In developing post-PHE guidance, CMS initially took the position that institutions billing for services furnished remotely by their employed practitioners (where the practitioners do not bill for their own services), would end with the PHE for COVID-19 along with the HWW waivers. However, after reviewing input from interested parties, as well as relevant guidance, including applicable billing instructions, we are considering whether certain institutions, as the furnishing providers, can bill for certain remotely furnished services personally performed by employed practitioners.

b. Proposal to Extend Billing Flexibilities for Certain Remotely Furnished Services Through the End of CY 2024 and Comment Solicitation

While we consider how we might address this ambiguity in future rulemaking, in the interests of maintaining access to outpatient therapy, DSMT, and MNT services furnished remotely by institutional staff to beneficiaries in their homes consistent with the accessibility of these services when furnished by professionals via Medicare telehealth, we are proposing to continue to allow institutional providers to bill for these services when furnished remotely in the same manner they have during the PHE for COVID-19 through the end of CY 2024. We are seeking comment on current practice for these services when billed, including how and to what degree they continue to be provided remotely to beneficiaries in their homes. We are seeking comment as to whether these services may fall within the scope of Medicare telehealth at section 1834(m) of the Act or if there are other relevant authorities CMS might consider in future rulemaking.

For DSMT specifically, the clinical staff personally delivering the service may be a type of practitioner authorized to furnish Medicare telehealth services under section 1834(m) of the Act; but we also understand that DSMT may be provided by other types of staff. Accordingly, we noted in sub-regulatory guidance that we are exercising enforcement discretion in reviewing the telehealth eligibility status of the practitioner personally providing any part of a remotely furnished DSMT service, so long as the persons were otherwise qualified to provide the service. For more background we refer readers to <https://www.cms.gov/files/document/frequently-asked-questions-cms-waivers-flexibilities-and-end-covid-19-public-health-emergency.pdf>.

As we review our telehealth policies following the end of the PHE for COVID-19, and consider care delivery and beneficiary access concerns raised by practitioners and beneficiary advocates, we are broadly considering billing and payment for telehealth services in institutional settings, including when these services are furnished by practitioners who have reassigned their rights to bill under and receive payment from the Medicare program (billing rights) to an institution. We acknowledge that one such setting where this billing arrangement exists includes Critical Access Hospitals (CAHs), where a practitioner has reassigned their billing rights to the CAH, and CMS makes payment for the practitioner's services under an optional payment method, referred to as CAH method II (Pub. 100-04, Chapter 4, Section 250.2). We note that in situations when a practitioner is furnishing a telehealth service and has reassigned their billing rights to a CAH under Method II, CMS makes payment for the telehealth service at the same rate generally paid for other in-person services (100 percent of the PFS payment amount) rather than the payment amount established under the optional method as discussed in Pub. 100-04,

Chapter 4, Section 250.2. We are interested in and are soliciting comment on how telehealth services furnished under CAH method II arrangements are furnished, and whether they would be most accurately characterized in the context of section 1834(m) of the Act or services of the CAH under Method II.

E. Valuation of Specific Codes

1. Background: Process for Valuing New, Revised, and Potentially Misvalued Codes

Establishing valuations for newly created and revised CPT codes is a routine part of maintaining the PFS. Since the inception of the PFS, it has also been a priority to revalue services regularly to make sure that the payment rates reflect the changing trends in the practice of medicine and current prices for inputs used in the PE calculations. Initially, this was accomplished primarily through the 5-year review process, which resulted in revised work RVUs for CY 1997, CY 2002, CY 2007, and CY 2012, and revised PE RVUs in CY 2001, CY 2006, and CY 2011, and revised MP RVUs in CY 2010, CY 2015, and CY 2020. Under the 5-year review process, revisions in RVUs were proposed and finalized via rulemaking. In addition to the 5-year reviews, beginning with CY 2009, CMS and the RUC identified a number of potentially misvalued codes each year using various identification screens, as discussed in section II.C. of this proposed rule, Potentially Misvalued Services under the PFS. Historically, when we received RUC recommendations, our process had been to establish interim final RVUs for the potentially misvalued codes, new codes, and any other codes for which there were coding changes in the final rule with comment period for a year. Then, during the 60-day period following the publication of the final rule with comment period, we accepted public comment about those valuations. For services furnished during the calendar year

following the publication of interim final rates, we paid for services based upon the interim final values established in the final rule. In the final rule with comment period for the subsequent year, we considered and responded to public comments received on the interim final values, and typically made any appropriate adjustments and finalized those values.

In the CY 2015 PFS final rule with comment period (79 FR 67547), we finalized a new process for establishing values for new, revised and potentially misvalued codes. Under the new process, we include proposed values for these services in the proposed rule, rather than establishing them as interim final in the final rule with comment period. Beginning with the CY 2017 PFS proposed rule (81 FR 46162), the new process was applicable to all codes, except for new codes that describe truly new services. For CY 2017, we proposed new values in the CY 2017 PFS proposed rule for the vast majority of new, revised, and potentially misvalued codes for which we received complete RUC recommendations by February 10, 2016. To complete the transition to this new process, for codes for which we established interim final values in the CY 2016 PFS final rule with comment period (81 FR 80170), we reviewed the comments received during the 60-day public comment period following release of the CY 2016 PFS final rule with comment period (80 FR 70886), and re-proposed values for those codes in the CY 2017 PFS proposed rule.

We considered public comments received during the 60-day public comment period for the proposed rule before establishing final values in the CY 2017 PFS final rule. As part of our established process, we will adopt interim final values only in the

case of wholly new services for which there are no predecessor codes or values and for which we do not receive recommendations in time to propose values.

As part of our obligation to establish RVUs for the PFS, we thoroughly review and consider available information including recommendations and supporting information from the RUC, the Health Care Professionals Advisory Committee (HCPAC), public commenters, medical literature, Medicare claims data, comparative databases, comparison with other codes within the PFS, as well as consultation with other physicians and healthcare professionals within CMS and the Federal Government as part of our process for establishing valuations. Where we concur that the RUC's recommendations, or recommendations from other commenters, are reasonable and appropriate and are consistent with the time and intensity paradigm of physician work, we proposed those values as recommended. Additionally, we continually engage with interested parties, including the RUC, with regard to our approach for accurately valuing codes, and as we prioritize our obligation to value new, revised, and potentially misvalued codes. We continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process.

2. Methodology for Establishing Work RVUs

For each code identified in this section, we conduct a review that includes the current work RVU (if any), RUC-recommended work RVU, intensity, time to furnish the preservice, intraservice, and postservice activities, as well as other components of the service that contribute to the value. Our reviews of recommended work RVUs and time inputs generally include, but have not been limited to, a review of information provided by the RUC, the HCPAC, and other public commenters, medical literature, and

comparative databases, as well as a comparison with other codes within the PFS, consultation with other physicians and health care professionals within CMS and the Federal Government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalks to key reference or similar codes, and magnitude estimation (see the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329) for more information). When referring to a survey, unless otherwise noted, we mean the surveys conducted by specialty societies as part of the formal RUC process.

Components that we use in the building block approach may include preservice, intraservice, or postservice time and post-procedure visits. When referring to a bundled CPT code, the building block components could include the CPT codes that make up the bundled code and the inputs associated with those codes. We use the building block methodology to construct, or deconstruct, the work RVU for a CPT code based on component pieces of the code. Magnitude estimation refers to a methodology for valuing work that determines the appropriate work RVU for a service by gauging the total amount of work for that service relative to the work for a similar service across the PFS without explicitly valuing the components of that work. In addition to these methodologies, we frequently utilize an incremental methodology in which we value a code based upon its incremental difference between another code and another family of codes. Section 1848(c)(1)(A) of the Act specifically defines the work component as the

resources that reflect time and intensity in furnishing the service. Also, the published literature on valuing work has recognized the key role of time in overall work. For particular codes, we refine the work RVUs in direct proportion to the changes in the best information regarding the time resources involved in furnishing particular services, either considering the total time or the intraservice time.

Several years ago, to aid in the development of preservice time recommendations for new and revised CPT codes, the RUC created standardized preservice time packages. The packages include preservice evaluation time, preservice positioning time, and preservice scrub, dress and wait time. Currently, there are preservice time packages for services typically furnished in the facility setting (for example, preservice time packages reflecting the different combinations of straightforward or difficult procedure, and straightforward or difficult patient). Currently, there are three preservice time packages for services typically furnished in the nonfacility setting.

We developed several standard building block methodologies to value services appropriately when they have common billing patterns. In cases where a service is typically furnished to a beneficiary on the same day as an E/M service, we believe that there is overlap between the two services in some of the activities furnished during the preservice evaluation and postservice time. Our longstanding adjustments have reflected a broad assumption that at least one-third of the work time in both the preservice evaluation and postservice period is duplicative of work furnished during the E/M visit.

Accordingly, in cases where we believe that the RUC has not adequately accounted for the overlapping activities in the recommended work RVU and/or times, we adjust the work RVU and/or times to account for the overlap. The work RVU for a

service is the product of the time involved in furnishing the service multiplied by the intensity of the work. Preservice evaluation time and postservice time both have a long-established intensity of work per unit of time (IWPUT) of 0.0224, which means that 1 minute of preservice evaluation or postservice time equates to 0.0224 of a work RVU.

Therefore, in many cases when we remove 2 minutes of preservice time and 2 minutes of postservice time from a procedure to account for the overlap with the same day E/M service, we also remove a work RVU of 0.09 (4 minutes \times 0.0224 IWPUT) if we do not believe the overlap in time had already been accounted for in the work RVU. The RUC has recognized this valuation policy and, in many cases, now addresses the overlap in time and work when a service is typically furnished on the same day as an E/M service.

The following paragraphs contain a general discussion of our approach to reviewing RUC recommendations and developing proposed values for specific codes. When they exist we also include a summary of interested party reactions to our approach. We note that many commenters and interested parties have expressed concerns over the years with our ongoing adjustment of work RVUs based on changes in the best information we had regarding the time resources involved in furnishing individual services. We have been particularly concerned with the RUC's and various specialty societies' objections to our approach given the significance of their recommendations to our process for valuing services and since much of the information we used to make the adjustments is derived from their survey process. We note that we are obligated under the statute to consider both time and intensity in establishing work RVUs for PFS services. As explained in the CY 2016 PFS final rule with comment period (80 FR

70933), we recognize that adjusting work RVUs for changes in time is not always a straightforward process, so we have applied various methodologies to identify several potential work values for individual codes.

We have observed that for many codes reviewed by the RUC, recommended work RVUs have appeared to be incongruous with recommended assumptions regarding the resource costs in time. This has been the case for a significant portion of codes for which we recently established or proposed work RVUs that are based on refinements to the RUC-recommended values. When we have adjusted work RVUs to account for significant changes in time, we have started by looking at the change in the time in the context of the RUC-recommended work RVU. When the recommended work RVUs do not appear to account for significant changes in time, we have employed the different approaches to identify potential values that reconcile the recommended work RVUs with the recommended time values. Many of these methodologies, such as survey data, building block, crosswalks to key reference or similar codes, and magnitude estimation have long been used in developing work RVUs under the PFS. In addition to these, we sometimes use the relationship between the old time values and the new time values for particular services to identify alternative work RVUs based on changes in time components.

In so doing, rather than ignoring the RUC-recommended value, we have used the recommended values as a starting reference and then applied one of these several methodologies to account for the reductions in time that we believe were not otherwise reflected in the RUC-recommended value. If we believe that such changes in time are already accounted for in the RUC's recommendation, then we do not make such

adjustments. Likewise, we do not arbitrarily apply time ratios to current work RVUs to calculate proposed work RVUs. We use the ratios to identify potential work RVUs and consider these work RVUs as potential options relative to the values developed through other options.

We do not imply that the decrease in time as reflected in survey values should always equate to a one-to-one or linear decrease in newly valued work RVUs. Instead, we believe that, since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs. If the RUC's recommendation has appeared to disregard or dismiss the changes in time, without a persuasive explanation of why such a change should not be accounted for in the overall work of the service, then we have generally used one of the aforementioned methodologies to identify potential work RVUs, including the methodologies intended to account for the changes in the resources involved in furnishing the procedure.

Several interested parties, including the RUC, have expressed general objections to our use of these methodologies and deemed our actions in adjusting the recommended work RVUs as inappropriate; other interested parties have also expressed general concerns with CMS refinements to RUC-recommended values in general. In the CY 2017 PFS final rule (81 FR 80272 through 80277), we responded in detail to several comments that we received regarding this issue. In the CY 2017 PFS proposed rule (81 FR 46162), we requested comments regarding potential alternatives to making adjustments that would recognize overall estimates of work in the context of changes in

the resource of time for particular services; however, we did not receive any specific potential alternatives. As described earlier in this section, crosswalks to key reference or similar codes are one of the many methodological approaches we have employed to identify potential values that reconcile the RUC-recommended work RVUs with the recommended time values when the RUC-recommended work RVUs did not appear to account for significant changes in time.

In response to comments, in the CY 2019 PFS final rule (83 FR 59515), we clarified that terms “reference services”, “key reference services”, and “crosswalks” as described by the commenters are part of the RUC’s process for code valuation. These are not terms that we created, and we do not agree that we necessarily must employ them in the identical fashion for the purposes of discussing our valuation of individual services that come up for review. However, in the interest of minimizing confusion and providing clear language to facilitate feedback from interested parties, we stated that we would seek to limit the use of the term, “crosswalk,” to those cases where we are making a comparison to a CPT code with the identical work RVU. (83 FR 59515) We note that we also occasionally make use of a “bracket” for code valuation. A “bracket” refers to when a work RVU falls between the values of two CPT codes, one at a higher work RVU and one at a lower work RVU.

We look forward to continuing to engage with interested parties and commenters, including the RUC, as we prioritize our obligation to value new, revised, and potentially misvalued codes; and we will continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process. We refer readers to the detailed discussion in this section of the valuation considered for

specific codes. Table 13 contains a list of codes and descriptors for which are proposing work RVUs for CY 2024; this includes all codes for which we received RUC recommendations by February 10, 2023. The proposed work RVUs, work time and other payment information for all CY 2024 payable codes are available on the CMS website under downloads for the CY 2024 PFS proposed rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>).

3. Methodology for the Direct PE Inputs to Develop PE RVUs

a. Background

On an annual basis, the RUC provides us with recommendations regarding PE inputs for new, revised, and potentially misvalued codes. We review the RUC-recommended direct PE inputs on a code by code basis. Like our review of recommended work RVUs, our review of recommended direct PE inputs generally includes, but is not limited to, a review of information provided by the RUC, HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, and consultation with physicians and health care professionals within CMS and the Federal Government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. When we determine that the RUC's recommendations appropriately estimate the direct PE inputs (clinical labor, disposable supplies, and medical equipment) required for the typical service, are consistent with the principles of relativity, and reflect our payment policies, we use those direct PE inputs to value a service. If not, we refine

the recommended PE inputs to better reflect our estimate of the PE resources required for the service. We also confirm whether CPT codes should have facility and/or nonfacility direct PE inputs and refine the inputs accordingly.

Our review and refinement of the RUC-recommended direct PE inputs includes many refinements that are common across codes, as well as refinements that are specific to particular services. Table 13 details our refinements of the RUC's direct PE recommendations at the code-specific level. In section II.B. of this proposed rule, Determination of Practice Expense Relative Value Units (PE RVUs), we address certain refinements that will be common across codes. Refinements to particular codes are addressed in the portions of that section that are dedicated to particular codes. We note that for each refinement, we indicate the impact on direct costs for that service. We note that, on average, in any case where the impact on the direct cost for a particular refinement is \$0.35 or less, the refinement has no impact on the PE RVUs. This calculation considers both the impact on the direct portion of the PE RVU, as well as the impact on the indirect allocator for the average service. In this proposed rule, we also note that many of the refinements listed in Table 12 of the proposed rule resulted in changes under the \$0.35 threshold and were unlikely to result in a change to the RVUs.

We note that the direct PE inputs for CY 2024 are displayed in the CY 2024 direct PE input files, available on the CMS website under the downloads for the CY 2024 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>. The inputs displayed there have been used in developing the CY 2024 PE RVUs as displayed in Addendum B.

b. Common Refinements

(1) Changes in Work Time

Some direct PE inputs are directly affected by revisions in work time. Specifically, changes in the intraservice portions of the work time and changes in the number or level of postoperative visits associated with the global periods result in corresponding changes to direct PE inputs. The direct PE input recommendations generally correspond to the work time values associated with services. We believe that inadvertent discrepancies between work time values and direct PE inputs should be refined or adjusted in the establishment of proposed direct PE inputs to resolve the discrepancies.

(2) Equipment Time

Prior to CY 2010, the RUC did not generally provide CMS with recommendations regarding equipment time inputs. In CY 2010, in the interest of ensuring the greatest possible degree of accuracy in allocating equipment minutes, we requested that the RUC provide equipment times along with the other direct PE recommendations, and we provided the RUC with general guidelines regarding appropriate equipment time inputs. We appreciate the RUC's willingness to provide us with these additional inputs as part of its PE recommendations.

In general, the equipment time inputs correspond to the service period portion of the clinical labor times. We clarified this principle over several years of rulemaking, indicating that we consider equipment time as the time within the intraservice period when a clinician is using the piece of equipment plus any additional time that the piece of equipment is not available for use for another patient due to its use during the designated

procedure. For those services for which we allocate cleaning time to portable equipment items, because the portable equipment does not need to be cleaned in the room where the service is furnished, we do not include that cleaning time for the remaining equipment items, as those items and the room are both available for use for other patients during that time. In addition, when a piece of equipment is typically used during follow-up postoperative visits included in the global period for a service, the equipment time will also reflect that use.

We believe that certain highly technical pieces of equipment and equipment rooms are less likely to be used during all of the preservice or postservice tasks performed by clinical labor staff on the day of the procedure (the clinical labor service period) and are typically available for other patients even when one member of the clinical staff may be occupied with a preservice or postservice task related to the procedure. We also noted that we believe these same assumptions will apply to inexpensive equipment items that are used in conjunction with and located in a room with non-portable highly technical equipment items since any items in the room in question will be available if the room is not being occupied by a particular patient. For additional information, we refer readers to our discussion of these issues in the CY 2012 PFS final rule with comment period (76 FR 73182) and the CY 2015 PFS final rule with comment period (79 FR 67639).

(3) Standard Tasks and Minutes for Clinical Labor Tasks

In general, the preservice, intraservice, and postservice clinical labor minutes associated with clinical labor inputs in the direct PE input database reflect the sum of particular tasks described in the information that accompanies the RUC-recommended

direct PE inputs, commonly called the “PE worksheets.” For most of these described tasks, there is a standardized number of minutes, depending on the type of procedure, its typical setting, its global period, and the other procedures with which it is typically reported. The RUC sometimes recommends a number of minutes either greater than or less than the time typically allotted for certain tasks. In those cases, we review the deviations from the standards and any rationale provided for the deviations. When we do not accept the RUC-recommended exceptions, we refine the proposed direct PE inputs to conform to the standard times for those tasks. In addition, in cases when a service is typically billed with an E/M service, we remove the preservice clinical labor tasks to avoid duplicative inputs and to reflect the resource costs of furnishing the typical service.

We refer readers to section II.B. of this proposed rule, Determination of Practice Expense Relative Value Units (PE RVUs), for more information regarding the collaborative work of CMS and the RUC in improvements in standardizing clinical labor tasks.

(4) Recommended Items that are not Direct PE Inputs

In some cases, the PE worksheets included with the RUC’s recommendations include items that are not clinical labor, disposable supplies, or medical equipment or that cannot be allocated to individual services or patients. We addressed these kinds of recommendations in previous rulemaking (78 FR 74242), and we do not use items included in these recommendations as direct PE inputs in the calculation of PE RVUs.

(5) New Supply and Equipment Items

The RUC generally recommends the use of supply and equipment items that already exist in the direct PE input database for new, revised, and potentially misvalued

codes. However, some recommendations include supply or equipment items that are not currently in the direct PE input database. In these cases, the RUC has historically recommended that a new item be created and has facilitated our pricing of that item by working with the specialty societies to provide us copies of sales invoices. For CY 2024 we received invoices for several new supply and equipment items. Tables 15 and 16 detail the invoices received for new and existing items in the direct PE database. As discussed in section II.B. of this proposed rule, Determination of Practice Expense Relative Value Units, we encourage interested parties to review the prices associated with these new and existing items to determine whether these prices appear to be accurate. Where prices appear inaccurate, we encourage interested parties to submit invoices or other information to improve the accuracy of pricing for these items in the direct PE database by February 10th of the following year for consideration in future rulemaking, similar to our process for consideration of RUC recommendations.

We remind interested parties that due to the relativity inherent in the development of RVUs, reductions in existing prices for any items in the direct PE database increase the pool of direct PE RVUs available to all other PFS services. Tables 15 and 16 also include the number of invoices received and the number of nonfacility allowed services for procedures that use these equipment items. We provide the nonfacility allowed services so that interested parties will note the impact the particular price might have on PE relativity, as well as to identify items that are used frequently, since we believe that interested parties are more likely to have better pricing information for items used more frequently. A single invoice may not be reflective of typical costs and we encourage

interested parties to provide additional invoices so that we might identify and use accurate prices in the development of PE RVUs.

In some cases, we do not use the price listed on the invoice that accompanies the recommendation because we identify publicly available alternative prices or information that suggests a different price is more accurate. In these cases, we include this in the discussion of these codes. In other cases, we cannot adequately price a newly recommended item due to inadequate information. Sometimes, no supporting information regarding the price of the item has been included in the recommendation. In other cases, the supporting information does not demonstrate that the item has been purchased at the listed price (for example, vendor price quotes instead of paid invoices). In cases where the information provided on the item allows us to identify clinically appropriate proxy items, we might use existing items as proxies for the newly recommended items. In other cases, we include the item in the direct PE input database without any associated price. Although including the item without an associated price means that the item does not contribute to the calculation of the final PE RVU for particular services, it facilitates our ability to incorporate a price once we obtain information and are able to do so.

(6) Service Period Clinical Labor Time in the Facility Setting

Generally speaking, our direct PE inputs do not include clinical labor minutes assigned to the service period because the cost of clinical labor during the service period for a procedure in the facility setting is not considered a resource cost to the practitioner since Medicare makes separate payment to the facility for these costs. We address code-specific refinements to clinical labor in the individual code sections.

(7) Procedures Subject to the Multiple Procedure Payment Reduction (MPPR) and the OPSS Cap

We note that the list of services for the upcoming calendar year that are subject to the MPPR on diagnostic cardiovascular services, diagnostic imaging services, diagnostic ophthalmology services, and therapy services; and the list of procedures that meet the definition of imaging under section 1848(b)(4)(B) of the Act, and therefore, are subject to the OPSS cap; are displayed in the public use files for the PFS proposed and final rules for each year. The public use files for CY 2024 are available on the CMS website under downloads for the CY 2024 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>. For more information regarding the history of the MPPR policy, we refer readers to the CY 2014 PFS final rule with comment period (78 FR 74261 through 74263).

Effective January 1, 2007, section 5102(b)(1) of the Deficit Reduction Act of 2005 (Pub. L. 109–171) (DRA) amended section 1848(b)(4) of the Act to require that, for imaging services, if— (i) The TC (including the TC portion of a global fee) of the service established for a year under the fee schedule without application of the geographic adjustment factor, exceeds (ii) The Medicare OPD fee schedule amount established under the prospective payment system (PPS) for HOPD services under section 1833(t)(3)(D) of the Act for such service for such year, determined without regard to geographic adjustment under paragraph (t)(2)(D) of such section, the Secretary shall substitute the amount described in clause (ii), adjusted by the geographic adjustment factor [under the PFS], for the fee schedule amount for such TC for such year. As required by the section

1848(b)(4)(A) of the Act, for imaging services furnished on or after January 1, 2007, we cap the TC of the PFS payment amount for the year (prior to geographic adjustment) by the Outpatient Prospective Payment System (OPPS) payment amount for the service (prior to geographic adjustment). We then apply the PFS geographic adjustment to the capped payment amount. Section 1848(b)(4)(B) of the Act defines imaging services as “imaging and computer-assisted imaging services, including X-ray, ultrasound (including echocardiography), nuclear medicine (including PET), magnetic resonance imaging (MRI), computed tomography (CT), and fluoroscopy, but excluding diagnostic and screening mammography.” For more information regarding the history of the cap on the TC of the PFS payment amount under the DRA (the “OPPS cap”), we refer readers to the CY 2007 PFS final rule with comment period (71 FR 69659 through 69662).

For CY 2024, we identified new and revised codes to determine which services meet the definition of “imaging services” as defined previously in this proposed rule for purposes of this cap. Beginning for CY 2024, we are proposing to include the following services on the list of codes to which the OPPS cap applies: CPT codes 76883 (*Ultrasound, nerve(s) and accompanying structures throughout their entire anatomic course in one extremity, comprehensive, including real-time cine imaging with image documentation, per extremity*), 7X000 (*Ultrasound, intraoperative thoracic aorta (eg, epiaortic), diagnostic*), 7X001 (*Intraoperative epicardial cardiac (eg, echocardiography) ultrasound for congenital heart disease, diagnostic; including placement and manipulation of transducer*), 7X002 (*Intraoperative epicardial cardiac (eg, echocardiography) ultrasound for congenital heart disease, diagnostic; placement, manipulation of transducer, and image acquisition only*), 7X003 (*Intraoperative*

epicardial cardiac (eg,)echocardiography) ultrasound for congenital heart disease, diagnostic; interpretation and report only), 9X000 (Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; anomalous or persistent superior vena cava when it exists as a second contralateral superior vena cava, with native drainage to heart (List separately in addition to code for primary procedure)), 9X002 (Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; azygos/hemi-azygos venous system (List separately in addition to code for primary procedure)), 9X003 (Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; coronary sinus (List separately in addition to code for primary procedure)), 9X004 (Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; venovenous collaterals originating at or above the heart (eg, from innominate vein) (List separately in addition to code for primary procedure)), and 9X005 (Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; venovenous collaterals originating below the heart (eg, from the inferior vena cava) (List separately in addition to code for primary procedure)). We believe that these codes meet the definition of imaging services under section 1848(b)(4)(B) of the Act, and thus, should be subject to the OPSS cap. We note that we previously proposed to add CPT code 76883 to the list of codes to which the OPSS cap applies in the CY 2023 PFS proposed rule, but we did not finalize its addition, noting that it was not within the statutory scope of services to which the OPSS cap applies, as it could not be split into professional and technical components at that time (87 FR 69475).

Since that time, we have reinstated CPT code 76883's PC/TC split based on feedback from billing practitioners, therefore we are proposing to add it to the OPSS cap list for CY 2024.

4. Valuation of Specific Codes for CY 2024

(1) Dorsal Sacroiliac Joint Arthrodesis (CPT code 2X000)

In September 2022, CPT deleted category III CPT code 0775T (*Arthrodesis, sacroiliac joint, percutaneous, with image guidance, includes placement of intra-articular implant(s) (eg, bone allograft[s], synthetic device[s])*) and created a new Category I CPT code 2X000 (*Arthrodesis, sacroiliac joint, percutaneous, with image guidance, including placement of intra-articular implant(s) (eg, bone allograft[s], synthetic device[s]), without placement of transfixation device*), which was surveyed for the January 2023 RUC meeting. CPT codes 27279 (*Arthrodesis, sacroiliac joint, percutaneous or minimally invasive (indirect visualization), with image guidance, includes obtaining bone graft when performed, and placement of transfixing device*) and 27280 (*Arthrodesis, sacroiliac joint, open, includes obtaining bone graft, including instrumentation, when performed*) were added as family codes to the level of interest (LOI) form for the RUC to review. However, the specialty societies indicated that they do not consider CPT codes 27279 and 27280 as part of the same code family and requested that they not be re-reviewed by the RUC for the January 2023 meeting. The RUC agreed with the specialty societies and did not review these codes at the January 2023 meeting. The RUC stated in their recommendations for 2X000 that the clinical nature of CPT codes 27279 and 27280 is extensively disparate from 2X000 for both the surgical approach and the specialties that perform the procedures. Additionally, they stated that no

substantive changes were made to CPT codes 27279 and 27280 at the September 2022 CPT panel meeting and 27279 has been reviewed by the RUC as recently as 2018.

We are proposing the RUC-recommended work RVU of 7.86 for CPT code 2X000. We are also proposing the RUC-recommended direct PE inputs without refinement.

(2) Vertebral Body Tethering (CPT codes 2X002, 2X003, and 2X004)

At the September 2022 CPT Panel meeting, two new Category I CPT codes, 2X002 (*Anterior thoracic vertebral body tethering, including thoracoscopy, when performed; up to 7 vertebral segments*) and 2X003 (*Anterior thoracic vertebral body tethering, including thoracoscopy, when performed; 8 or more vertebral segments*) were established for thoracic tethering. In addition, another new Category I CPT code, 2X004 (*Revision (eg, augmentation, division of tether), replacement, or removal of thoracic vertebral body tethering, including thoracoscopy, when performed*) was established for tether revision, replacement or removal. This code family was then surveyed for the January 2023 RUC meeting.

We are proposing the RUC-recommended work RVUs of 32.00 for CPT code 2X002, 35.50 for CPT code 2X003, and 36.00 for CPT code 2X004. We are also proposing the RUC-recommended direct PE inputs without refinement.

(3) Total Disc Arthroplasty (CPT codes 22857 and 22860)

In September 2021, the CPT Editorial Panel created CPT Category I code 22860 to describe *Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression); second interspace, lumbar (List separately in addition to code for primary procedure)* and replace CPT

Category III code 0163T (*Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression), each additional interspace, lumbar (List separately in addition to code for primary procedure)*), which prompted CPT codes 22860 and 22857 (*Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression); single interspace, lumbar*) to be surveyed for the January 2022 RUC meeting. At the January 2022 RUC meeting, the specialty societies indicated, and the RUC agreed, that the survey results for both CPT codes 22857 and 22860 were erroneous and that the codes should be resurveyed for the April 2022 RUC meeting. Therefore, we proposed and finalized to maintain the RUC-recommended work RVU of 27.13 for CPT code 22857 and contractor pricing for CPT code 22860 for CY 2023. For CY 2024, we are proposing the April 2022 RUC-recommended work RVU of 27.13 for CPT code 22857, which represents no change from the current work RVU. For CPT code 22860, we disagree with the April 2022 RUC-recommended survey median work RVU of 7.50 and are proposing the survey (with experience) 25th percentile work RVU of 6.88. We note that, of the 46 ZZZ-codes with an intraservice time of 60 minutes, only four have a work RVU higher than the RUC-recommended 7.50.

We note that our proposed work RVU of 6.88 will maintain relativity with CPT codes 22552 (*Arthrodesis, anterior interbody, including disc space preparation, discectomy, osteophytectomy and decompression of spinal cord and/or nerve roots; cervical below C2, each additional interspace (List separately in addition to code for primary procedure)*) (work RVU = 6.50, 45 minutes intra-service and 50 minutes total time), which is an anterior approach spine procedure that requires less time, and CPT

code 22208 (*Osteotomy of spine, posterior or posterolateral approach, 3 columns, 1 vertebral segment (eg, pedicle/vertebral body subtraction); each additional vertebral segment (List separately in addition to code for primary procedure)*) (work RVU = 9.66, 120 minutes intra-service and 135 minutes total time). As the RUC mentioned in their recommendations, these codes appropriately bracket CPT code 22860 and demonstrate relativity among similar surgical spine add-on codes. The RUC noted that their recommended work RVU of 7.50 reflects the increased intensity of spine procedures performed from an anterior approach, but we note that CPT code 22226 (*Osteotomy of spine, including discectomy, anterior approach, single vertebral segment; each additional vertebral segment (List separately in addition to code for primary procedure)*), which represents an anterior approach, and CPT code 22216 (*Osteotomy of spine, posterior or posterolateral approach, 1 vertebral segment; each additional vertebral segment (List separately in addition to primary procedure)*), which represents a posterior or posterolateral approach, are both valued at 6.03 work RVUs and have identical IWPUs of 0.1005. CPT codes 22216 and 22226 are ZZZ codes and have identical times as CPT code 22860, therefore, we believe the proposed survey (with experience) 25th percentile work RVU of 6.88 for CPT 22860 is more appropriate than the RUC recommended work RVU.

We are proposing the RUC-recommended direct PE inputs for both codes without refinement.

(4) Phrenic Nerve Stimulation System (CPT codes 3X008, 3X009, 3X010, 3X011, 3X012, 3X013, 3X014, 3X015, 9X045, 9X046, 9X047, and 9X048)

In September 2022, the CPT Editorial Panel created eight new Category I CPT codes to describe insertion, repositioning, removal, and removal and replacement of a phrenic nerve stimulator system, as well as adding four additional new Category I codes to describe activation, interrogation, and programming of a phrenic nerve stimulator system. These new codes will replace thirteen Category III codes, 0424T-0436T. The twelve new Category I codes were surveyed and then reviewed for the January 2023 RUC meeting.

We are proposing the RUC-recommended work RVU for all 12 codes in the Phrenic Nerve Stimulation System family. We are proposing a work RVU of 9.50 for CPT code 3X008 (*Insertion of phrenic nerve stimulator system (pulse generator and stimulating lead[s]) including vessel catheterization, all imaging guidance, and pulse generator initial analysis with diagnostic mode activation when performed*), a work RVU of 5.43 for CPT code 3X009 (*Insertion of phrenic nerve stimulator transvenous sensing lead*), a work RVU of 9.55 for CPT code 3X010 (*Removal of phrenic nerve stimulator including vessel catheterization, all imaging guidance, and interrogation and programming, when performed; system, including pulse generator and lead(s)*), a work RVU of 5.42 for CPT code 3X011 (*Removal of phrenic nerve stimulator including vessel catheterization, all imaging guidance, and interrogation and programming, when performed; transvenous stimulation or sensing lead(s) only*), a work RVU of 3.04 for CPT code 3X012 (*Removal of phrenic nerve stimulator including vessel catheterization, all imaging guidance, and interrogation and programming, when performed; pulse generator only*), a work RVU of 6.00 for CPT code 3X013 (*Repositioning of phrenic nerve stimulator transvenous lead(s)*), a work RVU of 6.05 for CPT code 3X014

(Removal and replacement of phrenic nerve stimulator including vessel catheterization, all imaging guidance, and interrogation and programming when performed; pulse generator), a work RVU of 8.51 for CPT code 3X015 (Removal and replacement of phrenic nerve stimulator including vessel catheterization, all imaging guidance, and interrogation and programming when performed; transvenous stimulation or sensing lead), a work RVU of 0.85 for CPT code 9X045 (Therapy activation of implanted phrenic nerve stimulator system including all interrogation and programming), a work RVU of 0.80 for CPT code 9X046 (Interrogation and programming (minimum one parameter) of implanted phrenic nerve stimulator system), a work RVU of 1.82 for CPT code 9X047 (Interrogation and programming of implanted phrenic nerve stimulator system during a polysomnography), and a work RVU of 0.43 for CPT code 9X048 (Interrogation, without programming of implanted phrenic nerve stimulator system).

We are proposing to refine the CA039 Post-operative visits (total time) for CPT code 3X014 from 36 minutes to 53 minutes to reflect the fact that this code has a Level 4 office visit and not a Level 3 office visit included in its global period; we believe that this was an unintended technical error in the RUC recommendation. We are also proposing to refine the equipment time for the exam table (EF023) equipment from 36 minutes to 53 minutes for CPT code 3X014 to conform to this proposed change in clinical labor time. For all other codes, we are proposing the direct PE inputs as recommended by the RUC without refinement.

(5) Posterior Nasal Nerve Ablation (CPT codes 30117, 30118, 3X016, and 3X017)

In September 2022, the CPT Editorial Panel created two new endoscopy codes for ablation of the posterior nasal nerve: CPT code 3X016 (*Nasal/sinus endoscopy, surgical;*

with destruction by radiofrequency ablation, posterior nasal nerve), and CPT code 3X017 (*Nasal/sinus endoscopy, surgical; with destruction by cryoablation, posterior nasal nerve*). In preparation for the January 2023 RUC meeting, both new posterior nasal nerve codes, 3X016 and 3X017, as well as family CPT codes 30117 and 30118, were surveyed. For CY 2024, the RUC recommended a work RVU of 3.91 for CPT code 30117, a work RVU of 9.55 for CPT code 30118, and a work RVU of 2.70 for both CPT codes 3X016 and 3X017.

We are proposing the RUC-recommended work RVU of 3.91 for CPT code 30117. We are proposing to remove the clinical labor for the CA037 (*Conduct patient communications*) activity code for CPT code 30117. This clinical labor is associated with patient communications which already take place during the CA036 (*Discharge day management*) activity code for 10-day and 90-day global procedures. We are proposing to remove this clinical labor as it would be duplicative with the communications already taking place under the CA036 activity code. We are proposing to delete supply item SB027 (*gown, staff, impervious*) because supply items SA042 (*pack, cleaning and disinfecting, endoscope*) and SA043 (*pack, cleaning, surgical instruments*) each include this same item. Supply items SA042 and SA043 are both included in the direct PE inputs for CPT code 30117.

We disagree with the RUC-recommended work RVU of 9.55 for CPT code 30118 and are proposing a work RVU of 7.75, based on a direct crosswalk from CPT code 28298 (*Correction, hallux valgus (bunionectomy), with sesamoidectomy, when performed; with proximal phalanx osteotomy, any method*) which has the same 60 minutes of intra-service time and similar total time as CPT code 30118. We believe the

work RVU should be lower than the RUC recommendation of 9.55 to reflect the decrease in intra-service time from 105 minutes to 60 minutes, and the decrease in total time from 288 minutes to 211 minutes. In the case of CPT code 30118, the intra-service work time is decreasing by 43 percent and the total work time is decreasing by 27 percent but the RUC-recommended work RVU is only decreasing by 4 percent. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in the surveyed work time should be reflected in commensurate decreases to work RVUs.

We also note that at the RUC-recommended work RVU of 9.55, the intensity of CPT code 30118 would be increasing by more than 50 percent. We disagree that there would be such a significant increase in the intensity for the procedure, as it is transitioning from inpatient to outpatient status which suggests that the intensity has remained the same or decreased over time. We also disagree that this would be the case since the intensity for CPT code 30117 is decreasing at the RUC-recommended work RVU of 3.91. Therefore, we are also proposing a work RVU of 7.75 because it maintains the current intensity of CPT code 30118 instead of resulting in an increase in intensity. The proposed work RVU of 7.75 is supported by the reference CPT codes we compared to CPT code 30118 with the same 60 minutes of intra-service time and similar total time as CPT code 30118; reference CPT code 11970 (*Replacement of tissue expander with permanent implant*) has a work RVU of 7.49, and reference CPT code 19325 (*Breast augmentation with implant*) has a work RVU of 8.12. We believe the proposed RVU of

7.75 is a more appropriate value overall than 9.55 when compared to the range of codes with the same intra-service time and similar total time.

We are proposing to remove the clinical labor for the CA037 (*Conduct patient communications*) activity code for CPT code 30118. This clinical labor is associated with patient communications which already take place during the CA036 (*Discharge day management*) activity code for 10-day and 90-day global procedures. We are proposing to remove this clinical labor from CPT code 30118 as it would be duplicative with the communications already taking place under the CA036 activity code.

We are proposing the RUC-recommended work RVU of 2.70 for CPT codes 3X016 and 3X017. Both CPT codes 3X016 and 3X017 are endoscopic procedures; therefore, we are proposing CPT code 31231 (*Nasal endoscopy, diagnostic, unilateral or bilateral (separate procedure)*) as the endoscopic base code for both of these codes because the description of these procedures includes what is described for CPT code 31231, with the additional component of the posterior nasal nerve ablation. Both of these procedures are performed with an endoscope. CPT codes 3X016 and 3X017 are not add-on codes, and both have a 0-day global period. The endoscopic base code that we are assigning to CPT codes 3X016 and 3X017 is used in a specific type of multiple procedure payment reduction that applies to some endoscopy codes.

We are proposing to refine the RUC-recommended direct PE inputs for both CPT codes 3X016 and 3X017. For CPT code 3X016, we are refining the equipment time for the ES031 equipment (*scope video system (monitor, processor, digital capture, cart, printer, LED light)*) from 39 minutes to 32 minutes. The RUC used the CA025 (*clean scope*) time of 10 minutes instead of the CA024 (*clean room/equipment by clinical staff*)

time of 3 minutes in the Scope Systems formula, when the time for CA024 is the standard; we believe that this was an unintended technical error in the RUC recommendation. We are similarly refining the equipment time for ES031 from 39 minutes to 34 minutes for CPT code 3X017.

For CPT code 3X017, we are refining the equipment time for the ES040 equipment (*PROXY endoscope, rigid, sinoscopy (0 degrees)*) from 39 minutes to 41 minutes because the RUC used 18 minutes of intra-service time for CA018 (*Assist physician or other qualified healthcare professional---directly related to physician work time (100%)*) instead of 20 minutes in the standard Scope formula. Also, for both CPT codes 3X016 and 3X017, we propose to delete supply item SB027 (*gown, staff, impervious*) because SA042 (*pack, cleaning and disinfecting, endoscope*) and SA043 (*pack, cleaning, surgical instruments*) each include this same item. Supply items SA042 and SA043 are both included in the PE inputs for CPT codes 3X016 and 3X017.

(6) Cystourethroscopy with Urethral Therapeutic Drug Delivery (CPT code 5X000)

In September 2022, the CPT Editorial Panel replaced Category III code 0499T (*Cystourethroscopy, with mechanical dilation and urethral therapeutic drug delivery for urethral stricture or stenosis, including fluoroscopy, when performed*) with the new Category I CPT code 5X000 (*Cystourethroscopy, with mechanical urethral dilation and urethral therapeutic drug delivery by drug coated balloon catheter for urethral stricture or stenosis, male, including fluoroscopy, when performed*) to describe cystourethroscopy with mechanical urethral dilation and urethral therapeutic drug delivery. For CY 2024, the RUC recommended a work RVU of 3.10 for CPT code 5X000.

We are proposing the RUC-recommended work RVU of 3.10 for CPT code 5X000. We are also proposing the RUC-recommended direct PE inputs for CPT code 5X000 without refinement.

Since this is an endoscopic procedure, we propose CPT code 52000 (*Cystourethroscopy (separate procedure)*) as the endoscopic base code for CPT code 5X000 because the description of this procedure includes what is described for CPT code 52000 with the additional component of the urethral therapeutic drug delivery. This procedure is performed with a cystoscope. CPT code 5X000 is not an add-on code, it has a 0-day global period. The endoscopic base code that we are assigning to CPT code 5X000 is a specific type of multiple procedure payment reduction that applies to some endoscopy codes.

(7) Transcervical RF Ablation of Uterine Fibroids (CPT code 5X005)

In September 2022, the CPT Editorial Panel deleted Category III code 0404T (*Transcervical uterine fibroid(s) ablation with ultrasound guidance, radiofrequency*) and created a new Category I CPT code 5X005 (*Transcervical ablation of uterine fibroid(s), including intraoperative ultrasound guidance and monitoring, radiofrequency*) to report and describe transcervical radiofrequency ablation of uterine fibroid(s) which prompted CPT code 5X005 to be surveyed for the January 2023 RUC meeting. At the January 2023 RUC meeting, the specialty societies indicated, and the RUC agreed, that the survey results for CPT code 5X005 showed that the survey 25th percentile work RVU of 7.21 appropriately recognizes the work involved in this service.

We are proposing the RUC-recommended work RVU of 7.21 for CPT code 5X005. The RUC recommends that CPT code 5X005 be placed on the New Technology

list to be re-reviewed by the RUC in 3 years to ensure correct valuation and utilization assumptions. We will revisit the valuations of CPT code 5X005 in future rulemaking as needed, based on our annual review process discussed in the background section of this proposed rule.

CPT code 5X005 includes a medium instrument pack (EQ138) as one of the practice expense inputs for this code. Since the medium instrument pack is classified as equipment, it should include time for cleaning the surgical instrument package. We noted a mistake in one of the equipment time formulas for the medium instrument pack (EQ138) which used the CA024 clean room/equipment by clinical staff time instead of the CA026 clean surgical instrument package time in the equipment formula. Therefore, we are proposing to refine the medium instrument pack equipment time from 65 minutes to 77 minutes to conform to our established policy for surgical instrument packs, otherwise we are proposing the RUC-recommended direct PE inputs without refinement.

(8) Suprachoroidal Injection (CPT code 6X000)

In September 2022, the CPT Editorial Panel introduced category I CPT code 6X000 as a new code. CPT code 6X000 describes suprachoroidal injection, which is the injection of medication into the space between the choroid and the sclera of the eye with procedure-specific needles and an injection kit. CPT code 6X000 replaces temporary category III CPT code 0465T (*Suprachoroidal injection of a pharmacologic agent (does not include supply of medication)*), which was contractor priced. While there are other existing general CPT codes for injections to the eye, the AMA RUC is adding CPT code 6X000 (*Suprachoroidal space injection of pharmacologic agent (separate procedure) (Report medication separately)*) to describe a more specific service to better distinguish this

procedure from the rest of the codes for eye injections in this family. CPT code 6X000 is a 000-day global code and currently, there is only one FDA-approved medication to treat macular edema associated with uveitis which is reported separately with HCPCS J-code J3299 triamcinolone acetonide (Xipere®).

We are proposing the RUC-recommended work RVU of 1.53 for CPT code 6X000. We are also proposing the RUC-recommended direct PE inputs for the code without refinement.

(9) Skull Mounted Cranial Neurostimulator (CPT codes 619X1, 619X2, and 619X3)

In February 2022, the CPT Editorial Panel created codes 619X1, 619X2, and 619X3 to describe Skull-Mounted Cranial Neurostimulator, and these codes were surveyed for the October 2022 RUC meeting.

We are proposing the RUC-recommended work RVU of 25.75 for CPT code 619X1 (*Insertion of skull-mounted cranial neurostimulator pulse generator or receiver, including craniectomy or craniotomy, when performed, with direct or inductive coupling, with connection to depth and/or cortical strip electrode array(s)*), the RUC-recommended work RVU of 11.25 for CPT code 619X2 (*Revision or replacement of skull-mounted cranial neurostimulator pulse generator or receiver with connection to depth and/or cortical strip electrode array(s)*), and the RUC-recommended work RVU of 15.00 for CPT code 619X3 (*Removal of skull-mounted cranial neurostimulator pulse generator or receiver with cranioplasty, when performed*).

We are proposing the RUC-recommended direct PE inputs for CPT codes 619X1, 619X2, and 619X3 without refinement.

(10) Spinal Neurostimulator Services (CPT codes 63685, 63688, 64XX2, 64XX3, and 64XX4)

For CPT codes 63685 (*Insertion or replacement of spinal neurostimulator pulse generator or receiver requiring pocket creation and connection between electrode array and pulse generator or receiver*) and 63688 (*Revision or removal of implanted spinal neurostimulator pulse generator or receiver, with detachable connection to electrode array*) we are proposing the RUC-recommended work RVUs of 5.19 and 4.35, respectively. We are proposing the RUC-recommended direct PE inputs for CPT codes 63685 and 63688 without refinement.

We agree with the RUC recommended contractor pricing for CPT codes 64XX2 (*Insertion or replacement of percutaneous electrode array, peripheral nerve, with integrated neurostimulator including imaging guidance, when performed; initial electrode array*), 64XX3 (*Insertion or replacement of percutaneous electrode array, peripheral nerve, with integrated neurostimulator including imaging guidance, when performed; each additional electrode array*), and 64XX4 (*Revision or removal of neurostimulator electrode array, peripheral nerve, with integrated neurostimulator*); and we are proposing contractor pricing for these three codes.

(11) Neurostimulator Services-Bladder Dysfunction (CPT codes 64590 and 64595)

For CPT codes 64590 (*Insertion or replacement of peripheral, sacral, or gastric neurostimulator pulse generator or receiver, requiring pocket creation and connection between electrode array and pulse generator or receiver*) and 64595 (*Revision or removal of peripheral, sacral, or gastric neurostimulator pulse generator or receiver,*

with detachable connection to electrode array) we are proposing the RUC-recommended work RVUs of 5.10 and 3.79, respectively.

We are requesting clarification on the direct PE inputs for CPT code 64590 in the non-facility setting. Specifically, we believe the RUC inadvertently proposed 56 minutes of equipment time for the EQ114 equipment (electrosurgical generator), instead of 48 minutes using the default formula for calculating equipment time. We believe that 48 minutes of equipment time for EQ114 is appropriate and matches the clinical labor time; therefore, we are proposing 48 minutes for the EQ114 equipment for CPT code 64590. We also believe that the EQ209 equipment (*programmer, neurostimulator (w-printer)*) was intended to match the same 84 minutes of equipment time listed for the EF031 power table as both were indicated to be used during the follow-up office visit. Therefore, we are proposing 84 minutes of equipment time for EQ209 for CPT code 64590.

We are proposing the remaining RUC-recommended direct PE inputs for CPT code 64590 without refinement. We are also proposing the RUC-recommended direct PE inputs for CPT code 64595 without refinement.

(12) Ocular Surface Amniotic Membrane Placement/Reconstruction (CPT codes 65778, 65779, and 65780)

CPT code 65778 (*Placement of amniotic membrane on the ocular surface; without sutures*) was identified by the Relativity Assessment Workgroup (RAW) via the high-volume growth screen for codes with Medicare utilization over 10,000 screen. During the September 2022 RAW meeting, the specialty societies stated that CPT codes 65778, 65779 (*Placement of amniotic membrane on the ocular surface; single layer,*

sutured), and 65780 (*Ocular surface reconstruction; amniotic membrane transplantation, multiple layers*) would be surveyed for the January 2023 RUC meeting.

For CY 2024, we are proposing the RUC-recommended work RVUs for all three CPT codes. We are proposing a work RVU of 0.84 for CPT code 65778 (*Placement of amniotic membrane on the ocular surface; without sutures*), a work RVU of 1.75 for CPT code 65779 (*Placement of amniotic membrane on the ocular surface; single layer, sutured*), and a work RVU of 7.03 for CPT code 65780 (*Ocular surface reconstruction; amniotic membrane transplantation, multiple layers*). We are also proposing the RUC-recommended direct PE inputs for CPT codes 65778, 65779, and 65780 without refinement.

(13) Fractional Flow Reserve with CT (CPT code 7X005)

For CY 2018, the CPT Editorial Panel established four new Category III CPT codes for fractional flow reserve derived from computed tomography (FFRCT): CPT codes 0501T-0504T. Medicare began payment for CPT code 0503T (*Noninvasive estimated coronary fractional flow reserve (FFR) derived from coronary computed tomography angiography data using computation fluid dynamics physiologic simulation software analysis of functional data to assess the severity of coronary artery disease; analysis of fluid dynamics and simulated maximal coronary hyperemia, and generation of estimated FFR model*) in the hospital outpatient department setting under the Outpatient Prospective Payment System (OPPS) in CY 2018 (82 FR 59284). For the PFS, we typically assign contractor pricing for Category III codes since they are temporary codes assigned to emerging technology and services. However, we made an exception for FFRCT services and we have since been trying to understand the costs of the PE resource

inputs for CPT code 0503T in the physician office setting. In the CY 2021 PFS final rule (85 FR 84630), we stated that we found FFRCT to be similar to other technologies that use algorithms, artificial intelligence, or other innovative forms of analysis to determine a course of treatment, where the analysis portion of the service cannot adequately be reflected under the PE methodology; and that our recent reviews for the overall cost of CPT code 0503T had shown the costs in the physician office setting to be similar to costs reflected in payment under the OPPI (85 FR 84630). As such, we proposed to use the geometric mean costs under the OPPI as a proxy for CPT code 0503T and ultimately finalized national pricing for CPT code 0503T based on a valuation crosswalk to the technical component (TC) of CPT code 93457 in the CY 2022 PFS final rule (86 FR 65037-65042).

For CY 2024, the CPT Editorial Panel approved the replacement of Category III codes 0501T-0504T with a single new Category I code (7X005) to report non-invasive estimate of coronary fractional flow reserve derived from augmentative software analysis of the dataset from a coronary computed tomography angiography. CPT code 7X005 (*Noninvasive estimate of coronary fractional flow reserve derived from augmentative software analysis of the data set from a coronary computed tomography angiography, with interpretation and report by a physician or other qualified health care professional*) was reviewed at the January 2023 RUC meeting and valuation recommendations were submitted to CMS. These recommendations include a software analysis fee for FFRCT listed as a supply input which accounts for the overwhelming majority of the code's valuation.

We have long had concerns that the software algorithm in the analysis fee for CPT code 7X005 is not well accounted for in our PE methodology; however, we recognize that practitioners are incurring resource costs for purchasing the FFRCT software and its ongoing use. This was the rationale for our previous policy to use a crosswalk that reflected the overall relative resource costs for this service while we continued to consider potentially refining and updating our PE methodology. The RUC recommendations include the previously mentioned software analysis fee for FFRCT as a supply input. However, analysis fees are not well accounted for in our current PE methodology. Although we recognize that these fees are a type of cost for practitioners, we have not traditionally recognized these analysis fees as forms of direct PE in our methodology. We previously stated our belief that crosswalking the RVUs for CPT code 0503T to a code with similar resource costs (the TC for CPT code 93457) allowed CMS to recognize that practitioners are incurring resource costs for the purchase and ongoing use of the software employed in CPT code 0503T, which would not typically be considered direct PE under our current methodology (86 FR 65038 and 65039).

We are therefore proposing to maintain the previous valuation crosswalk to the technical component of CPT code 93457 for the new FFRCT code 7X005. This new Category I code is intended as a direct replacement for Category III code 0503T, and maintaining the current crosswalk will allow the geometric mean costs under the OPSS to continue to serve as a proxy for valuation. We are specifically crosswalking the technical component of CPT code 7X005 to the technical component of CPT code 93457; we are proposing the RUC-recommended work RVU of 0.75 for the professional component of CPT code 7X005, and the global component will be comprised of their sums as usual.

We also note that there was an error in the RUC's recommended equipment time for the Professional PACS Workstation (ED053), which was listed at 14.5 minutes instead of the correct 13.5 minutes based on the sum of the intraservice work time (11 minutes) plus half of the preservice work time (5 divided by 2 = 2.5 minutes).

(14) Ultrasound Guidance for Vascular Access (CPT code 76937)

In order to specify the insertion of a peripherally inserted central venous catheter (PICC), the CPT Editorial Panel decided to create two new codes: CPT 36572 and CPT 36573, and revised CPT codes 36568, 36569 and 36584 in September of 2017. This revision of these codes created a scenario where these bundled services could be performed by a clinician that performs the procedure without imaging guidance or a radiologist that performs the procedure with imaging guidance. When this code family was surveyed again in January 2018, CPT code 76937 (*Ultrasound guidance for vascular access requiring ultrasound evaluation of potential access sites, documentation of selected vessel patency, concurrent realtime ultrasound visualization of vascular needle entry, with permanent recording and reporting (List separately in addition to code for primary procedure)*) was identified as part of this code family. Since it was expected that utilization of PICC procedures would decrease once CPT code 76937 was bundled with these services, the specialty societies that perform this service proposed to review CPT code 76937 after 2 years, once more data about these services became available. CPT code 76937 was reviewed at the October 2022 RUC meeting for CY 2024.

We are proposing the RUC-recommended work RVU of 0.30 for CPT 76937. We are also proposing the RUC-recommended direct PE inputs for CPT 76937.

(15) Neuromuscular Ultrasound (CPT codes 76881, 76882, and 76883)

Since their creation in 2011, CPT codes 76881 (*Ultrasound, complete joint (ie, joint space and peri-articular soft-tissue structures), real-time with image documentation*) and 76882 (*Ultrasound, limited, joint or other nonvascular extremity structure(s) (e.g., joint space, peri-articular tendon[s], muscle[s], nerve[s], other soft-tissue structure[s], or soft-tissue mass[es]), real-time with image documentation*) have been reviewed numerous times as New Technology/New Services by the Relativity Assessment Workgroup (RAW). In October 2016, the RAW reviewed these codes and agreed with the specialty societies that the dominant specialties providing the complete (CPT code 76881) versus the limited (CPT code 76882) ultrasound of extremity services were different than originally thought, causing variation in the typical PE inputs. The RAW recommended referral to the Practice Expense Subcommittee for review of the direct PE inputs and the CPT Editorial Panel to clarify the introductory language regarding the reference to one joint in the complete ultrasound. The PE Subcommittee reviewed the direct PE inputs for CPT codes 76881 and 76882 and adjusted the clinical staff time at the January 2017 RUC meeting, and the CPT Editorial Panel editorially revised CPT codes 76881 and 76882 to clarify the distinction between complete and limited studies and revised the introductory guidelines to clarify the reference to one joint in the complete ultrasound procedure in June 2017.

In October 2021, the CPT Editorial Panel approved the addition of CPT code 76883 (*Ultrasound, nerve(s) and accompanying structures throughout their entire anatomic course in one extremity, comprehensive, including real-time cine imaging with image documentation, per extremity*) for reporting real-time, complete neuromuscular ultrasound of nerves and accompanying structures throughout their anatomic course, per

extremity, and the revision of CPT code 76882 to add focal evaluation. CPT codes 76881 and 76882 were identified as part of the neuromuscular ultrasound code family with CPT code 76883 and surveyed for the January 2022 RUC meeting. We reviewed these recommendations for CY 2023 and discussed our concerns with the commenters' assertions regarding typical PE inputs for CPT code 76882 in the CY 2023 PFS final rule (87 FR 69506 through 69510). Specifically, given the changes in dominant specialty for these CPT codes from 2010 to 2017, and again from 2017 to 2022, we recommended that the RUC and interested parties reconsider the PE inputs for each code based on the dominant specialty for each CPT code, based on the most recent year's Medicare claims data, and consideration of survey responses submitted to CMS in response to the CY 2023 PFS proposed rule.

The PE inputs for CPT codes 76881, 76882, and 76883 were subsequently re-reviewed at the January 2023 RUC meeting and the RUC submitted refinements to the PE inputs for CPT code 76882 only. We are proposing the RUC-recommended PE refinements for CPT code 76882 with the exception of the RUC-recommended 13.5 minutes for ED053 (Professional PACS workstation) and 23 minutes for EQ250 (ultrasound unit, portable). We note that the old intraservice time of 11 minutes was used in error when calculating the standard equipment time for ED053. Therefore, we disagree with the RUC-recommended equipment time of 13.5 minutes and are proposing 17.5 minutes for ED053, which is calculated by using the standard equipment formula for ED053 established in the CY 2017 PFS final rule (81 FR 80182) with the updated intraservice time from the CY 2023 PFS final rule $((0.5*5)+15 = 17.5)$.

We disagree with the RUC-recommended 23 minutes of equipment time for EQ250, which includes one minute of clinical labor time for CA014 (Confirm order, protocol exam) in the highly technical equipment formula, as discussed beginning in the CY 2013 PFS final rule (77 FR 69028), in error. Therefore, the correct equipment time for EQ250 using the highly technical equipment formula would be 22 minutes. However, because the Summary of Recommendations included in the RUC recommendations did not provide a rationale for the use of the highly technical equipment formula for EQ250, we are proposing to maintain the 15 minutes of equipment time for EQ250 for CPT code 78882, which corresponds to the interservice time for this code and maintains consistency with how equipment time is allotted for EQ250 across the three codes in this family. We refer readers to the classification of highly technical equipment in the CY 2014 PFS final rule (79 FR 67639).

The RUC did not make recommendations on and we are not proposing any changes to the work RVU for CPT codes 76881, 76882, and 76883.

(16) Intraoperative Ultrasound Services (CPT codes 76998, 7X000, 7X001, 7X002, and 7X003)

In October 2018, the Relativity Assessment Workgroup (RAW) created a screen for CMS/Other codes with Medicare utilization of 20,000 or more, and CPT code 76998 (*Ultrasonic guidance, intraoperative*) was subsequently identified as part of that screen. When CPT code 76998 was identified in the CMS/Other screen, it was noted that many specialties were represented in the Medicare claims data. Specialties representing cardiothoracic surgery, general surgery, breast surgery, urology, interventional cardiology, interventional radiology and vascular surgery jointly submitted an action plan

that the RAW reviewed in October 2019. Based on the variability of intraoperative ultrasound for each specialty with differences in the typical patient and physician work, it was decided that each society would submit applications for new code(s) as needed to carve out the work currently reported with 76998 until the code was no longer needed, or until it was clear what the final dominant use of 76998 was so that a survey could be conducted.

In October 2019, the RUC referred this issue to the CPT Editorial Panel to clarify correct coding and accurately differentiate physician work, as multiple specialties currently report CPT code 76998. The CPT Editorial Panel addressed CPT code 76998 in 2020 and 2021 by adding instructional parentheticals that restrict the use of imaging guidance with vein ablation procedures and adding new codes that bundled imaging guidance for urological procedures. In May 2022, the CPT Editorial Panel created four new codes to report intraoperative cardiac ultrasound services, thus carving out most of the prior reporting of code 76998 by cardiothoracic surgeons and cardiologists.

After utilization was removed from code 76998 for vein ablation procedures, most urological procedures, cardiac procedures and intra-abdominal procedures through instructions and/or new or revised codes, it was determined that the dominant use of the code would be related to breast surgery, allowing for code 76998 to be surveyed. CPT codes 7X000 (*Ultrasound, intraoperative thoracic aorta (eg, epiaortic), diagnostic*), 7X001 (*Intraoperative epicardial cardiac (eg, echocardiography) ultrasound for congenital heart disease, diagnostic; including placement and manipulation of transducer, image acquisition, interpretation and report*), 7X002 (*Intraoperative epicardial cardiac (eg, echocardiography) ultrasound for congenital heart disease,*

diagnostic; placement, manipulation of transducer, and image acquisition only), 7X003 (*Intraoperative epicardial cardiac (eg, echocardiography) ultrasound for congenital heart disease, diagnostic; interpretation and report only*), and 76998 were surveyed by the specialty societies for the September 2022 RUC meeting.

We disagree with the RUC-recommended work RVU of 1.20 for CPT code 76998 and are proposing the total time ratio work RVU of 0.91. The RUC recommended a 7-minute total time decrease for CPT code 76998. We agree with the RUC that the intensity of CPT code 76998 (real-time during an operation) is greater than the identically-timed CPT code 76641 (*Ultrasound, breast, unilateral, real time with image documentation, including axilla when performed; complete*), which represents a single ultrasound session typically performed by a technician, whereas CPT code 76998 includes multiple, separate ultrasound maneuvers during a surgical procedure that require a more intense, immediate interpretation in order to direct resection of the breast tissue and ensure a thorough and complete surgical excision of the abnormal breast tissue. The proposed work RVU of 0.91 for CPT code 76998 adequately values the surgeon's 5 minutes of pre-service time, 12 minutes of intraservice time, and 5 minutes of immediate post-service time more than the same 5, 12, and 5 minutes of the technician's time for CPT code 76641, which has a work RVU of 0.73.

Additionally, the IWPUT of CPT code 76641 is appropriately less than the IWPUT of CPT code 76698, with IWPUTs of 0.0422 and 0.0572, respectively. We remind interested parties that we believe that, since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, decreases in time should be reflected in

decreases to work RVUs. We disagree with the RUC-recommended maintenance of the current work RVU for CPT code 76998 for a few reasons: the RUC recommendations did not advocate for a change in intensity, and presumably some higher-intensity cardiac procedures will no longer be reported using CPT code 76998, as they can now be reported using CPT codes 7X000 through 7X003. Instead, we are proposing an appropriately lower work RVU and associated IWP/UT to account for the 7-minute decrease in total time and removal of higher-intensity cardiac procedures previously reported by CPT code 76998. We note that the proposed work RVU of 0.91 for CPT code 76998 is supported by the upper brackets of CPT codes 72125 (*Computed tomography, cervical spine; without contrast material*), 72128 (*Computed tomography, thoracic spine; without contrast material*), and 72131 (*Computed tomography, lumbar spine; without contrast material*), and a lower bracket of CPT code 76641. CPT codes 72125, 72128, and 72131 represent spinal computed tomography (CT) of the cervical, thoracic, and lumbar spine, respectively.

We are proposing the RUC-recommended work RVU of 0.60 and work times of 5 minutes of pre-evaluation time, 10 minutes of intraservice time, and 3 minutes of immediate postservice time for total time of 18 minutes for CPT code 7X000. We are also proposing the RUC-recommended work times for CPT codes 7X001 and 7X002 of 10 minutes of pre-evaluation time and 20 minutes of intraservice time for both codes, and 5 and 10 minutes of immediate postservice time, for total times of 40 and 35 minutes, respectively. We are proposing the RUC-recommended work times for CPT code 7X003 with the exception of the intraservice time. We are proposing the survey median intraservice time of 15 minutes rather than the RUC-recommended 75th percentile based

on the assertion in the RUC's Summary of Recommendations that the cardiologist is typically in the operating room intraoperatively with the cardiothoracic surgeon prior to and after the cardiac repair. Based on this assertion, we do not believe the cardiologist spends the same amount of time in the operating room as the cardiothoracic surgeon in CPT codes 7X001 and 7X002. Therefore, we are proposing 5 minutes of pre-evaluation time, 15 minutes of intraservice time, and 10 minutes of immediate postservice time for total time of 30 minutes for CPT code 7X003.

Due to the CPT code descriptor for CPT code 7X001, we believe that the appropriate work for this service is reflected in the combined work of CPT codes 7X002 and 7X003. We note that in the CY 2015 PFS final rule (79 FR 67669), we reviewed a similarly constructed family of codes representing interventional transesophageal echocardiography (TEE) for congenital cardiac anomalies in the same way by proposing and finalizing a work RVU for CPT code 93315 (*Transesophageal echocardiography for congenital cardiac anomalies; including probe placement, image acquisition, interpretation and report*) equal to the combined work RVUs of CPT codes 93316 (*Transesophageal echocardiography for congenital cardiac anomalies; placement of transesophageal probe only*) and 93317 (*Transesophageal echocardiography for congenital cardiac anomalies; image acquisition, interpretation and report only*). We note that the Summary of Recommendations for 7X001 through 7X003 state that these intraoperative ultrasound services are expected to be very rare, as intraoperative TEE is considered the gold standard and can be performed for most patients instead, which could be reported using CPT codes 93315 through 93317. Because CPT codes 7X001 through 7X003 are an alternative to CPT codes 93315 through 93317 for congenital cardiac

anomalies when intraoperative TEE is contraindicated, we believe we should maintain consistency and propose a work RVU for CPT code 7X001 that equals the combined work RVUs of CPT codes 7X002 and 7X003.

Therefore, we disagree with the RUC-recommended work RVUs of 1.90, 1.20, and 1.55 for CPT codes 7X001, 7X002, and 7X003, respectively. We are proposing a work RVU of 1.62 for CPT code 7X001 based on a crosswalk to CPT codes 73219 (*Magnetic resonance (eg, proton) imaging, upper extremity, other than joint; with contrast material(s)*) and 78452 (*Myocardial perfusion imaging, tomographic (SPECT) (including attenuation correction, qualitative or quantitative wall motion, ejection fraction by first pass or gated technique, additional quantification, when performed); multiple studies, at rest and/or stress (exercise or pharmacologic) and/or redistribution and/or rest reinjection*). We note that this crosswalk is strongly supported by total time ratios between CPT code 7X001 and reference CPT codes 93312 (*Echocardiography, transesophageal, real-time with image documentation (2D) (with or without M-mode recording); including probe placement, image acquisition, interpretation and report*) and 93315, which equal 1.66 and 1.67 respectively. We also note that this is supported by a total time ratio to the current time and work RVU for the code that cardiothoracic surgeons currently use to report this service prior to the creation of CPT code 7X001, CPT code 76998 ($((40/29)*1.20 = 1.66)$). Lastly, this is also supported by a total time ratio to the same CPT code 76998 after factoring in the updated total time of 22 minutes and our proposed work RVU for CPT code 76998 of 0.91 ($((40/22)*0.91 = 1.65)$). We note that a work RVU of 1.62 for CPT code 7X001 yields an IWPUT of 0.059, which is slightly

higher than the IWPUTs of the intraoperative TEE CPT codes 93315 and 93312 that represent the complete procedure, which are 0.0532 and 0.0580, respectively.

Similar to how CPT code 7X001 is broken down into service parts by CPT code 7X002 and 7X003 to allow for multiple providers to perform different parts of the whole service done by one provider (represented by 7X001), CPT codes 93312 through 93314 and 93315 through 93317 are broken down as well. According to the RUC Database, CPT code 93316 represents placement of transesophageal probe only, typically performed by a cardiac anesthesiologist. CPT code 93313 (*Echocardiography, transesophageal, real-time with image documentation (2D) (with or without M-mode recording); placement of transesophageal probe only*) also represents placement of transesophageal probe only, when performed by a cardiac anesthesiologist. Similarly, CPT code 7X002 represents placement and manipulation of transducer and image acquisition only, which is typically performed by a cardiothoracic surgeon according to the Summary of Recommendations.

According to the RUC Database, CPT code 93317 represents image acquisition and interpretation and report only, typically done by the cardiologist after probe placement typically performed by the cardiac anesthesiologist, represented by CPT code 93316. CPT code 93314 (*Echocardiography, transesophageal, real-time with image documentation (2D) (with or without M-mode recording); image acquisition, interpretation and report only*) also represents image acquisition and interpretation and report only, typically done by the cardiologist after probe placement typically performed by the anesthesiologist, represented by CPT code 93313. Similarly, CPT code 7X003

represents interpretation and report only, which is typically performed by a cardiologist according to the Summary of Recommendations.

Because this family is broken down into service parts in the same way CPT codes 93312 through 93314 and 93315 through 93317 are, we disagree with the RUC's recommendation to assign work RVUs for CPT codes 7X002 and 7X003 that sum to more than the aggregate work RVU for CPT code 7X001. Therefore, we are proposing a work RVU of 1.08 for CPT code 7X002 and a work RVU of 0.54 for CPT code 7X003, which sum to the proposed aggregate work RVU of 1.62 for CPT code 7X001. The proposed work RVUs for CPT code 7X002 and 7X003 were calculated by taking the aggregate work RVU of the whole service, represented by CPT code 7X001, and dividing by three based on the number of discernable service parts: probe placement and manipulation, image acquisition, and interpretation and report. Because CPT code 7X002 represents two of the three service parts performed by a cardiothoracic surgeon, we allotted 2/3rds of the aggregated work RVU for CPT code 7X001, equaling 1.08 ($1.62 * 2/3 = 1.08$). Because CPT code 7X003 represents one of the three service parts performed by a cardiologist, we allotted 1/3rd of the aggregated work RVU for CPT code 7X001, equaling 0.54 ($1.62 * 1/3 = 0.54$). Because the Summary of Recommendations was unclear regarding the intensity of each part of the service as broken out, we invite comments on additional ways to break down the aggregate work RVU of CPT code 7X001 to adequately account for the cardiothoracic surgeon and cardiologist's time and intensity to perform CPT codes 7X002 and 7X003, but we believe that the work RVUs should sum to no more than the aggregate work RVU for CPT code 7X001 based on similarly broken down code families that represent the more widely used intraoperative

TEE procedures. The RUC did not recommend and we are not proposing any direct PE inputs for the five codes in the Intraoperative Ultrasound family.

(17) Percutaneous Coronary Interventions (CPT code 9X070)

In September 2022, the CPT Editorial Panel created one new Category I CPT code for percutaneous coronary lithotripsy. Sixteen other percutaneous coronary intervention (PCI) codes were considered part of the code family but were ultimately not reviewed by the RUC. New add-on CPT code 9X070 was reviewed by the RUC on an interim basis for CY 2024 while the entire percutaneous coronary intervention code family was referred to the CPT Editorial Panel for restructuring for the CY 2025 cycle.

We are proposing the RUC-recommended work RVU of 2.97 for CPT code 9X070 (*Percutaneous transluminal coronary lithotripsy*). The RUC did not recommend and we are not proposing any direct PE inputs for this facility-based add-on service.

(18) Auditory Osseointegrated Device Services (CPT codes 926X1 and 926X2)

In February 2022, the CPT Editorial Panel created CPT code 926X1 (*Diagnostic analysis, programming, and verification of an auditory osseointegrated sound processor, any type; first 60 minutes*) and 926X2 (*Diagnostic analysis, programming, and verification of an auditory osseointegrated sound processor, any type; each additional 15 minutes (list separately in addition to code for primary procedure)*) for CY 2024. CPT code 926X2 serves as the add-on code for base CPT code 926X1.

We are proposing the RUC-recommended work RVU of 1.25 for CPT code 926X1 and 0.33 for CPT 926X2. We are also proposing the RUC-recommended direct PE inputs for both codes. Additionally, because audiologists provide these services, we are proposing to add CPT codes 926X1 and 926X2 to the list of audiology services that

can be billed with the AB modifier, that is personally provided by audiologists without a physician/NPP referral for non-acute hearing conditions — the list for CY 2023 is available at <https://www.cms.gov/audiology-services>.

(19) Venography Services (CPT codes 9X000, 9X002, 9X003, 9X004, and 9X005)

In February 2022, the CPT Editorial Panel created six new CPT add-on codes to describe Venography services that are performed during cardiac catheterization for congenital heart defects in the superior vena cava (SVC), the inferior vena cava (IVC), and in other congenital veins, that will be reported in conjunction with the main cardiac catheterization procedure codes (CPT codes 93593 – 93598). CPT codes 9X000 (*Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; anomalous or persistent superior vena cava when it exists as a second contralateral superior vena cava, with native drainage to heart (List separately in addition to code for primary procedure)*) and CPT codes 9X001 (*Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; inferior vena cava (List separately in addition to code for primary procedure)*) were to replace the two more general CPT codes 75827 (*Venography, caval, superior, with serialography, radiological supervision and interpretation*) and 75825 (*Venography, caval, inferior, with serialography, radiological supervision and interpretation*). CPT code 9X001 has since been rescinded, and all the remaining new add-on codes have been clarified to state in their descriptors that they are specifically for congenital heart defects.

For CPT code 9X000 (*Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; anomalous or*

persistent superior vena cava when it exists as a second contralateral superior vena cava, with native drainage to heart (List separately in addition to code for primary procedure)), the AMA RUC proposes a work RVU of 1.20 for 10 minutes of intra-service time and total time. We are proposing the AMA RUC recommended work RVU of 1.20 with 10 minutes of intra-service time and total time for CPT code 9X000.

For CPT code 9X002 (*Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; azygos/hemi-azygos venous system (List separately in addition to code for primary procedure)*), the AMA RUC proposes a work RVU of 1.13 for 10 minutes of intra-service time and total time. We note that this code has the same number of minutes as CPT code 9X000, but with a lower recommended work RVU. We are proposing the AMA RUC recommended work RVU of 1.13 with 10 minutes of intra-service time and total time for CPT code 9X002.

For CPT code 9X003 (*Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; coronary sinus (List separately in addition to code for primary procedure)*) the AMA RUC proposes a work RVU of 1.43 for 12 minutes of intra-service time and total time. We note that this code has two additional minutes than CPT code 9X000 which is 20 percent more in physician time than the 10 minutes from CPT code 9X000. We are proposing the AMA RUC recommended work RVU of 1.43 with 12 minutes of intra-service time and total time for CPT code 9X003.

For CPT code 9X004 (*Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; venovenous collaterals originating at or above the heart (e.g., from innominate vein) (List separately*

in addition to code for primary procedure)), the AMA RUC proposes a work RVU of 2.11 for 16 minutes of intra-service time and total time. We note that this code has six additional minutes more than CPT code 9X000 (10 minutes), which is 60 percent more physician time. Although we do not imply that increases in time as reflected in survey values must equate to a one-to-one or linear increase in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant increases in time within the same code family should typically be reflected in increases to work RVUs. In the case of CPT code 9X004, we believe that it would be more accurate to propose a work RVU of 1.92 to account for this increase in the surveyed work time as compared with CPT code 9X000. Therefore, we are proposing a work RVU of 1.92 along with 16 minutes of intra-service time and total time for CPT code 9X004.

For CPT code 9X005 (*Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; venovenous collaterals originating below the heart (e.g., from the inferior vena cava) (List separately in addition to code for primary procedure)*)), the AMA RUC proposes a work RVU of 2.13 for 17 minutes of intra-service time and total time. We note that this code has seven additional minutes more than CPT code 9X000 (10 minutes), which is 70 percent more physician time than CPT code 9X000. Although we do not imply that increases in time as reflected in survey values must equate to a one-to-one or linear increase in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant increases in time within the same code family should typically be reflected in increases to work RVUs. In the case of CPT code 9X005, we believe that it would be more accurate to propose a work RVU of 2.04 to account for this increase in the

surveyed work time as compared with CPT code 9X000. Therefore, we are proposing a work RVU of 2.04 along with 17 minutes of intra-service time and total time for CPT code 9X005.

The RUC did not recommend and we are not proposing any direct PE inputs for the five codes in the Venography Services family.

(20) General Behavioral Health Integration Care Management (CPT code 99484, and HCPCS code G0323)

We are proposing to refine the work RVU of both CPT code 99484 and HCPCS code G0323, as proposed (see section II.J.1.c of this proposed rule), by increasing the work RVU to 0.93 from the current 0.61 and increasing the work time to 21 minutes to match the results of the surveyed work time. For CPT code 99484 we are proposing the direct PE inputs as recommended by the RUC without refinement. We are also proposing the same PE inputs for HCPCS code G0323.

CMS created four behavioral health integration (BHI) HCPCS G-codes for CY 2017. In 2018 the codes were replaced by new CPT codes. At that time RUC specialty societies undertook a survey but the RUC did not use the survey results to establish work RVUs, and instead adopted the valuations we had finalized in 2017. For CY 2017 we finalized a work RVU of 0.61 based on a direct crosswalk from CPT code 99490 (chronic care management services) (81 FR 80351). We recognized that the services described by CPT code 99490 are distinct from those furnished under BHI, but we stated that until we have more information about how the services described by G0507 (replaced in 2018 by CPT 99484) are typically furnished, we believed valuation based on an estimate of the

typical resources would be most appropriate (81 FR 80351). For CY 2022 we increased the value of CPT code 99490 from 0.61 to 1.00 (86 FR 65118).

In the CY 2023 PFS final rule (87 FR 69549) we finalized a new HCPCS code, G0323 (care management services for behavioral health conditions, at least 20 minutes of clinical psychologist or clinical social worker time, per calendar month. *(These services include the following required elements: Initial assessment or follow-up monitoring, including the use of applicable validated rating scales; behavioral health care planning in relation to behavioral/psychiatric health problems, including revision for patients who are not progressing or whose status changes; facilitating and coordinating treatment such as psychotherapy, coordination with and/or referral to physicians and practitioners who are authorized by Medicare to prescribe medications and furnish E/M services, counseling and/or psychiatric consultation; and continuity of care with a designated member of the care team.)*) (See section II.J.1.c. of this proposed rule, for proposed code descriptor refinement.) We valued HCPCS code G0323 based on a direct crosswalk to the work values and direct PE inputs for CPT code 99484, because we believed the services described by G0323 mirrored those described by CPT code 99484. We noted that we may consider changes in how this code is valued for future rulemaking.

We continue to be concerned about undervaluing care management services under the PFS given the variability of costs involved with these evolving models of care. The RUC has recommended revaluing CPT code 99484, following a survey of 63 respondents. The median survey work RVU was 1.30, and the median time was 21 minutes (all intra-service). The specialty societies recommend a value of 0.93 based on a crosswalk to code 99202. We believe the specialty societies are in a good position to

understand the evolving practice models. The RUC has recommended the 25th percentile survey work RVU of 0.85. Consistent with our goals of ensuring continued and consistent access to these crucial care management services we are proposing to increase the work RVU of CPT code 99484 to 0.93. This value reflects the work RVU of CPT code 99202, which has a similar work time.

We continue to believe that the services described by HCPCS code G0323 as proposed (section II.J.1.c. of this proposed rule) closely mirror those described by CPT code 99484. As we are proposing to update the work RVU and one of the PE inputs for CPT code 99484, we continue to believe that a direct crosswalk to the work values and direct PE inputs for CPT code 99484, is an appropriate valuation of the level, time, and intensity of the services under G0323 as proposed (section II.J.1.c. of this proposed rule). As such we propose to value HCPCS code G0323, as proposed (section II.J.1.c. of this proposed rule), based on a direct crosswalk to the work values and direct PE inputs for CPT code 99484, as proposed, previously in this section.

We continue to believe that there is a systemic undervaluation of work estimates for behavioral health services. We are proposing values for CY 2024 that we believe will more accurately value the work involved in delivering behavioral health services.

(21) Advance Care Planning (CPT codes 99497 and 99498)

In January 2022, the Relativity Assessment Workgroup reviewed CPT codes 99497 and 99498. The Workgroup determined these advance care planning services should be examined given the recent changes in evaluation and management services. The RUC recommended that CPT codes 99497 and 99498 be surveyed for physician work and practice expense for the April 2022 RUC meeting. The RUC recommended no

changes in physician time, work RVUs, or direct PE inputs for these services for CY 2024.

We are proposing the RUC-recommended work RVU of 1.50 for CPT code 99497 and 1.40 for CPT code 99498, which are the current values for these codes. We are proposing the RUC-recommended direct PE inputs for these codes without refinement.

(22) Pelvic Exam (CPT code 9X036)

In September 2022, the CPT Editorial Panel created a new CPT code for reporting a pelvic exam – CPT code 9X036. The specialty societies noted that reimbursement for the work would be captured with the problem-oriented E/M code billed for the visit. The CPT Editorial Panel agreed, thus the new code is a practice expense only code that captures the direct practice expenses associated with performing a pelvic exam in the non-facility setting. CPT code 9X036 (*Pelvic Exam*) captures the 4 minutes of clinical staff time associated with chaperoning a pelvic exam.

We are proposing the RUC-recommended direct-PE inputs for CPT code 9X036 without refinement. As a PE-only service, the RUC did not recommend and we are not proposing a work RVU for this code.

(23) Hyperthermic Intraperitoneal Chemotherapy (HIPEC) (CPT codes 9X034 and 9X035)

In September 2022, the CPT Editorial Panel created two time-based add-on Category I CPT codes 9X034 (*Intraoperative hyperthermic intraperitoneal chemotherapy (HIPEC) procedure, including separate incision(s) and closure, when performed; first 60 minutes*) and 9X035 (*Intraoperative hyperthermic intraperitoneal chemotherapy (HIPEC) procedure, including separate incision(s) and closure, when performed; each*

additional 30 minutes). CPT codes 9X034 and 9X035 were surveyed for the January 2023 RUC meeting. While reviewing the survey data, it was noted by specialty societies that the instructions were not sufficient as the survey data reflected time estimates that exceeded the time specified in the new time-based code descriptors. The RUC has stated that the survey results for both CPT codes 9X034 and 9X035 are inaccurate and that the codes should be resurveyed for 2025. Therefore, the RUC recommended contractor pricing for CPT codes 9X034 and 9X035 and that they be referred to the CPT Editorial Panel for revision.

We are proposing to contractor price CPT codes 9X034 and 9X035 for CY 2024.

(24) Hyperbaric Oxygen Under Pressure (HCPCS code G0277)

In 2015, CMS created HCPCS code G0277 (*Hyperbaric oxygen under pressure, full body chamber, per 30 minute interval*) to describe direct practice expense inputs associated with CPT code 99183 (*Physician or other qualified health care professional attendance and supervision of hyperbaric oxygen therapy, per session*) (consistent with the Medicare Hospital Outpatient Prospective Payment System coding mechanism). At the September 2022 Relativity Assessment Workgroup meeting, HCPCS code G0277 was identified as a high-volume growth code with Medicare utilization of 10,000 or more that have increased by at least 100 percent from 2015 through 2022, and was reviewed at the January 2023 RUC meeting. Hyperbaric oxygen therapy is typically administered to one patient in one hyperbaric chamber for two hours. Two hours is typical, and all inputs are prorated for four units being performed (each 30 minutes, totaling 2 hours). All medical supply and time inputs have been divided into quarters.

There has been a change in the dominant specialty providing this service, which is now primarily performed by family medicine. There has also been a change in clinical staff type, and it is now typical for a single staff person to perform all activities (RN/Respiratory Therapist) as opposed to two staff (an RN/LPN/MA and an RN/respiratory therapist). This is primarily due to a 2016 change by the National Board of Diving and Hyperbaric Medical Technology to no longer allow certified nursing assistants and certified medical assistants to be eligible to take the certified hyperbaric technologist examination. The PE Subcommittee agreed with the specialty societies to update the clinical staff type to reflect solely L047C *RN/Respiratory Therapist*. We agree with the specialties that the intra-service time is now more appropriately labeled as clinical activity CA021 (*Perform procedure/service---NOT directly related to physician work time*) as opposed to CA018 due to the change in clinical staff type.

We are proposing to refine the clinical labor time for the CA013 activity (*Prepare room, equipment, and supplies*) from 1.5 minutes to 0.5 minutes, as well as the clinical labor time for the CA016 activity (*Prepare, set-up and start IV, initial positioning and monitoring of patient*) from 1 minute to 0.5 minutes to align with the 2-minute standard for these clinical activities. We arrived at these refinements by dividing the standard 2-minutes of clinical labor times for CA013 and CA016 by four to account for all inputs being prorated for four units being performed for one typical two-hour session. CA013 and CA016 would each be 0.5 minutes per 30-minute interval, which amounts to the standard 2 minutes for these clinical activities when four units are billed for the typical two-hour session. The RUC recommends 30 minutes for clinical labor activity CA021 (*Perform procedure/service---Not directly related to physician work time (intra-service*

time) based on a flawed assumption that the current 15 minutes for CA021 accounts for two patients receiving treatment at the same time. We note that it has been standard for one patient to receive treatment at a time and the current 15 minutes for CA021 is based on a time ratio to the CY 2015 RUC-recommended direct PE inputs for CPT code 99183; therefore, we disagree with this RUC recommendation and are proposing to refine the recommended intra-service CA021 clinical labor time to maintain the current 15 minutes. This is to reflect the 2015 PFS final rule where “we used the RUC recommended direct PE inputs for 99183 and adjusted them to align with the 30 minute treatment interval” (79 FR 67677). Each PE input is prorated for four units of G0277 being provided in one typical two-hour session. Since CPT code 99183 (*Physician or other qualified health care professional attendance and supervision of hyperbaric oxygen therapy, per session*) is a 120-minute code with 60-minute intra-service time, all PE inputs in HCPCS code G0277 are prorated for four units being performed.

To conform to these changes in clinical labor time, we are also proposing to refine the equipment time for the EQ362 (*HBOT air break breathing apparatus demand system (hoses, masks, penetrator, and demand valve)*) and EQ131 (*hyperbaric chamber*) equipment items from the recommended 39.75 minutes to 23.25 minutes. This is a result of the 15-minute intra-service time, as opposed to the RUC recommendation of 30 minutes of intra-service time.

(25) Remote Interrogation Device Evaluation – Cardiovascular (HCPCS code G2066, and CPT codes 93297, and 93298)

CPT code 93299 (*Interrogation device evaluation(s), (remote) up to 30 days; implantable cardiovascular physiologic monitor system or subcutaneous cardiac rhythm*

monitor system, remote data acquisitions(s), receipt of transmissions and technician review, technical support and distribution of results) was meant to serve as a catch-all for both base CPT codes 93297 and 93298, which are work-only codes. However, the CPT Editorial Panel determined that CPT code 93299 was no longer necessary if CPT codes 93297 and 93298 were assigned direct PE inputs and therefore recommended CMS to delete CPT code 93299 at the beginning of CY 2020 under the assumption that CPT codes 93297 and 93298 would be assigned direct PE inputs. Since CMS did not agree with the recommended values, CMS decided to not allocate direct PE inputs for CPT codes 93297 or 93298 and instead created contractor priced HCPCS code G2066 for CY 2020 to ensure these services could still be furnished that were previously described under 93299 (84 FR 62777-62778). Since the publication of the CY 2020 PFS Final Rule, HCPCS code G2066 has remained contractor priced and CPT codes 93297 and 93298 remain as work-only codes. CMS continues to work with MACs and interested parties to address a lot of the payment concerns surrounding G2066 such as discrepancies in payment between jurisdictions. However, interested parties have indicated that a long-term solution is needed from CMS in order to help establish payment stability for these services.

Therefore, for CY 2024, we are proposing to delete HCPCS code G2066 and propose the RUC-recommended direct PE inputs for CPT codes 93297 and 93298. Since CPT code 93298 is most commonly billed with G2066, the RUC recommended the same inputs for CPT code 93298 and HCPCS code G2066 in the event that no change would be made for HCPCS code G2066. Since CMS does agree with the RUC recommended

values, we are proposing to delete HCPCS code G2066 altogether and establish direct PE-inputs for CPT codes 93297 and 93298 based on the RUC recommendations.

The RUC did not make recommendations on and we are not proposing any changes to the work RVUs for CPT codes 93297 and 93298.

(26) Payment for Caregiver Training Services

a. Background

In CY 2022, we received AMA RUC recommendations for a new code family of two codes (CPT code 96202 (*Multiple-family group behavior management/modification training for parent(s)/guardian(s)/caregiver(s) of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of parent(s)/guardian(s)/caregiver(s); initial 60 minutes*) and CPT code 96203 (*Multiple-family group behavior management/modification training for parent(s)/guardian(s)/caregiver(s) of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of parent(s)/guardian(s)/caregiver(s); each additional 15 minutes (List separately in addition to code for primary service)*) that describe group caregiver training services for patient behavior management/modification (without the patient in attendance). In CY 2023 we received AMA RUC recommendations for a family of three new caregiver training codes (CPT codes 9X015 (*Caregiver training in strategies and techniques to facilitate the patient's functional performance in the home or community (e.g., activities of daily living [ADLs], instrumental ADLs [IADLs], transfers, mobility, communication, swallowing, feeding,*

problem solving, safety practices) (without the patient present), face-to-face; initial 30 minutes), and add-on code, CPT code 9X016 (each additional 15 minutes (List separately in addition to code for primary service) (Use 9X016 in conjunction with 9X015)), and 9X017 (Group caregiver training in strategies and techniques to facilitate the patient's functional performance in the home or community (eg, activities of daily living [ADLs], instrumental ADLs [IADLs], transfers, mobility, communication, swallowing, feeding, problem solving, safety practices) (without the patient present), face-to-face with multiple sets of caregivers). Historically, we have taken the position that codes describing services furnished to other individuals without the patient's presence are not covered services. As we noted in the CY 2023 PFS final rule (87 FR 69521), we have explained in previous rulemaking that we read section 1862(a)(1)(A) of the Act to limit Medicare coverage and payment to items and services that are reasonable and necessary for the diagnosis and treatment of an individual Medicare patient's illness or injury or that improve the functioning of an individual Medicare patient's malformed body member. For example, in the CY 2013 PFS final rule (77 FR 68979), when discussing payment for the non-face-to-face care management services that are part of E/M services, we stated that Medicare does not pay for services furnished to parties other than the patient. We listed, as an example, communication with caregivers. Because the codes for caregiver behavior management training describe services furnished exclusively to caregivers rather than to the individual Medicare patient, we indicated that we did not review the RUC-recommended valuation of these codes or propose to establish RVUs for these codes for purposes of PFS payment. While we did not establish payment for the new caregiver behavior management training codes in the CY 2023 PFS final rule, we

indicated that we believed there could be circumstances where separate payment for such services may be appropriate. We stated that we would continue to consider the status of these and similar services in rulemaking for CY 2024 (87 FR 69522 through 69523). We specifically requested public comment on how a patient may benefit in medical circumstances when a caregiver is trained to effectively modify the patient's behavior, how current Medicare policies regarding these caregiver training services (CTS) can impact a patient's health, and how the services described by these codes might currently be bundled into existing Medicare-covered services. (87 FR 69521). Public comments were generally in favor of CMS making payment for these codes, stating that there is extensive empirical support for training parents/guardians/caregivers in behavior management/modification as a component of the standard of care for the treatment of certain health-related behavior issues and that this training promotes improved outcomes. Commenters also noted that there are several CPT codes paid under the PFS that describe services that do not include direct contact with the patient but are still considered integral to the patient's care, including, for example, separately billable care management services, interprofessional consultations, and caregiver-focused health risk assessment instrument (eg, depression inventory) for the benefit of the patient. In response to public comments, we acknowledged the important role caregivers could have in a patient's overall care.

As indicated in the CY 2023 PFS final rule, we have continued to consider whether the caregiver behavior management training and similar caregiver training services could be considered to fall within the scope of services that are reasonable and necessary under section 1862(a)(1)(A) of the Act, in alignment with the principles of the

recent Executive Order on Increasing Access to High-Quality Care and Supporting Caregivers (<https://www.whitehouse.gov/briefing-room/presidential-actions/2023/04/18/executive-order-on-increasing-access-to-high-quality-care-and-supporting-caregivers/>), and as part of a HHS level review of our payment policies to identify opportunities to better account for patient-centered care (<https://acl.gov/programs/support-caregivers/raise-family-caregiving-advisory-council>), changes in medical practice that have led to more care coordination and team-based care, and to promote equitable access to reasonable and necessary medical services. We also believe it is important for practitioners furnishing patient centered care to use various effective communication techniques when providing patient centered care, in alignment with requirements under section 1557 of the Affordable Care Act. We believe that, in certain circumstances, caregivers can play a key role in developing and carrying out the treatment plan or, as applicable to physical, occupational, or speech-language therapy, the therapy plan of care (collectively referred to in this discussion as the "treatment plan") established for the patient by the treating practitioner (which for purposes of this discussion could include a physician; nonphysician practitioner such as a nurse practitioner, physician assistant, clinical nurse specialist, clinical psychologist; or a physical therapist, occupational therapist, or speech-language pathologist). In this context, we believe Caregiver Training Services (CTS) could be reasonable and necessary to treat the patient's illness or injury as required under section 1862 (a)(1)(A) of the Act. We have had the opportunity to consider the best approach to establishing separate payment for the services described by the caregiver training codes, especially as it relates to a practitioner who is treating a patient and expending resources to train a

caregiver who is assisting or acting as a proxy for the patient. However, we continue to explore these issues and would appreciate public comments on all aspects of the CTS proposals.

In this proposed rule for CY 2024, we include a proposed definition of "caregiver" for purposes of CTS, discuss the circumstances under which patients may benefit from care involving caregivers, and propose that CTS may meet the conditions for Medicare payment when treating practitioners identify a need to involve and train caregivers to assist the patient in carrying out a treatment plan. We also propose values for each of the CTS codes.

(1) Definition of a Caregiver

In our ongoing education and outreach work on the use of caregivers in assisting patients, we have broadly defined a caregiver as a family member, friend, or neighbor who provides unpaid assistance to a person with a chronic illness or disabling condition (<https://www.cms.gov/outreach-and-education/outreach/partnerships/caregiver#:~:text=Caregivers%20are%20broadly%20defined%20as,chronic%20illness%20or%20disabling%20condition>). Further, in the context of our proposals for CTS services, we believe a caregiver is an individual who is assisting or acting as a proxy for a patient with an illness or condition of short or long-term duration (not necessarily chronic or disabling); involved on an episodic, daily, or occasional basis in managing a patient's complex health care and assistive technology activities at home; and helping to navigate the patient's transitions between care settings. For purposes of CTS, we also are including a guardian in this definition when warranted. For CTS, when we say "caregiver" we are also referring to guardians

who for purposes of CTS, are the caregiver for minor children or other individuals who are not legally independent. In these circumstances, a caregiver is a layperson assisting the patient in carrying out a treatment plan that is established for the patient by the treating physician or practitioner and assists the patient with aspects of their care, including interventions or other activities directly related to a treatment plan established for the patient to address a diagnosed illness or injury. In this context, caregivers would be trained by the treating practitioner in strategies and specific activities that improve symptoms, functioning, and adherence to treatment related to the patient's primary clinical diagnoses. Caregiver understanding and competence in assisting and implementing these interventions and activities from the treating practitioner is critical for patients with functional limitations resulting from various conditions.

(2) Patients Who Benefit from Care Involving Caregivers

We believe that a patient-centered treatment plan should appropriately account for clinical circumstances where the treating practitioner believes the involvement of a caregiver is necessary to ensure a successful outcome for the patient and where, as appropriate, the patient agrees to caregiver involvement. There may be clinical circumstances when it might be appropriate for the physician or practitioner to directly involve the caregiver in developing and carrying out a treatment plan. Such clinical circumstances could include various physical and behavioral health conditions and circumstances under which CTS may be reasonable and necessary to train a caregiver who assists in carrying out a treatment plan. Conditions include but are not limited to, stroke, traumatic brain injury (TBI), various forms of dementia, autism spectrum disorders, individuals with other intellectual or cognitive disabilities, physical mobility limitations,

or necessary use of assisted devices or mobility aids. The previously mentioned clinical scenarios are examples of circumstances under which CTS may be reasonable and necessary to train a caregiver who assists in carrying out a treatment plan. For example, patients with dementia, autism spectrum disorder, or individuals with other intellectual or cognitive disabilities, may require assistance with challenging behaviors in order to carry out a treatment plan, patients with mobility issues may need help with safe transfers in the home to avoid post-operative complications, patients with persistent delirium may require guidance with medication management, patients with certain degenerative conditions or those recovering from stroke may need assistance with feeding or swallowing. Separate from medical circumstances noted previously in this section above, we also seek to avoid potentially duplicative payment. We would not expect the caregiver population receiving these services on behalf of the patient to also receive CTS on behalf of the patient under another Medicare benefit category or Federal program. Also, we note that when Medicare and Medicaid cover the same services for patients eligible for both programs, Medicare generally is the primary payer in accordance with section 1902(a)(25) of the Act. Based on the specificity of the coding for our proposal, we do not expect that CTS will neatly overlap with any other coverage for patients who are dually eligible for Medicare and Medicaid. However, we are seeking public comment regarding whether States typically cover services similar to CTS under their Medicaid programs, and whether such coverage would be duplicative of the CTS service codes. We are seeking comment on this issue and whether payment is currently available for CTS through other Federal or other programs.

(3) Reasonable and Necessary CTS

We believe CTS could be reasonable and necessary when furnished based on an established individualized, patient-centered treatment plan or therapy plan of care accounting for the patient's specific medical needs, including, but not limited to, the examples specified previously in this proposed rule.

As provided in the code descriptors, treating practitioners may train caregivers in a group setting with other caregivers who are involved in care for patients with similar needs for assistance to carry out a treatment plan. Training for all of the caregivers for the patient could occur simultaneously, and the applicable CTS codes (CPT code 96202, 96203, and 9X017) would be billed once per beneficiary. We are seeking comment on this issue. We also seek comment on whether payment is currently available for CTS through other Federal or other programs. We are considering whether CTS would be reasonable and necessary when furnished to caregivers in more than one single session, or to (presumably the same) caregivers by the same practitioner for the same patient more than once per year and are seeking comment on this. We want to note that the treating physician or NPP may provide training to more than one caregiver for a single patient.

(4) Proposals

For CY 2024, we propose to establish an active payment status for CPT codes 96202 and 96203 (caregiver behavior management/modification training services) and CPT codes 9X015, 9X016, and 9X017 (caregiver training services under a therapy plan of care established by a PT, OT, SLP). These codes allow treating practitioners to report the training furnished to a caregiver, in tandem with the diagnostic and treatment services furnished directly to the patient, in strategies and specific activities to assist the patient to carry out the treatment plan. As discussed previously in this section, we believe that CTS

may be reasonable and necessary when they are integral to a patient's overall treatment and furnished after the treatment plan (or therapy plan of care) is established. The CTS themselves need to be congruent with the treatment plan and designed to effectuate the desired patient outcomes. We believe this is especially the case in medical treatment scenarios where assistance by the caregiver receiving the CTS is necessary to ensure a successful treatment outcome for the patient--for example, when the patient cannot follow through with the treatment plan for themselves (see examples previously mentioned in this section under "Patients Who Benefit from Care Involving Caregivers").

We are seeking public comment on this definition of 'caregiver' for purposes of CTS and are interested if there are any additional elements of a caregiver that we should consider incorporating in this proposed CTS caregiver definition. We think that our proposed definition would allow for holistic care of the patient with those who know and understand the patient, their condition, and their environment.

We propose that payment may be made for CTS services when the treating practitioner identifies a need to involve and train one or more caregivers to assist the patient in carrying out a patient-centered treatment plan. We further propose that because CTS services are furnished outside the patient's presence, the treating practitioner must obtain the patient's (or representative's) consent for the caregiver to receive the CTS. We further propose that the identified need for CTS and the patient's (or representative's) consent for one or more specific caregivers to receive CTS must be documented in the patient's medical record.

We are proposing to require the full 60 minutes of time to be performed in order to report CPT code 96202. The add on code, CPT code 96203, may be reported once 75

minutes of total time is performed. We are interested in and seeking comment on how the clinician and caregiver interactions would typically occur, including when the practitioner is dealing with multiple caregivers and how often these services would be billed considering the established treatment plan involving caregivers for the typical patient.

We are soliciting public comment on each of our proposals for CTS.

b. Coding

(1) Behavior management/modification training for guardians/caregivers of patients with a mental or physical health diagnosis (CPT Codes 96202 and 96203)

CPT code 96202 (*Multiple-family group behavior management/modification training for parent(s)/guardian(s)/caregiver(s) of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of parent(s)/guardian(s)/caregiver(s); initial 60 minutes*) and its add-on code, CPT code 96203 (*Multiple-family group behavior management/modification training for parent(s)/guardian(s)/caregiver(s) of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of parent(s)/guardian(s)/caregiver(s); each additional 15 minutes (List separately in addition to code for primary service)*), were two new codes created by the CPT Editorial Panel during its February 2021 meeting. The two codes are to be used to report the total duration of face-to-face time spent by the physician or other qualified health professional providing group behavior management/modification training to guardians or caregivers of patients. Although the

patient does not attend the group trainings, the goals and outcomes of the sessions focus on interventions aimed at effectuating the practitioner's treatment plan through addressing challenging behaviors and other behaviors that may pose a risk to the person, and/or others. According to the Summary of Recommendations (which was submitted by the AMA RUC with the valuation of this code), during the face-to-face service time, caregivers are taught how to structure the patient's environment to support and reinforce desired patient behaviors, to reduce the negative impacts of the patient's diagnosis on patient's daily life, and to develop highly structured technical skills to manage the patient's challenging behavior.

Behavior management/modification training for guardians/caregivers of patients with a mental or physical health diagnosis should be directly relevant to the person-centered treatment plan for the patient in order for the services to be considered reasonable and necessary under the Medicare program. Each behavior should be clearly identified and documented in the treatment plan, and the caregiver should be trained in positive behavior management strategies.

(a) Valuation

The RUC recommended the survey median work value for both CPT codes 96202 and 96203. Three specialty societies sent surveys to a random sample of a subset of their members. Based on survey results and after discussion, the RUC recommended a work RVU of 0.43 for a specific patient who is represented in the group session being billed for CPT code 96202. The RUC noted that this recommendation is based upon a median group size of six caregivers and includes 10 minutes pre-time, 60 minutes intra-time, and 20 minutes post-time for a total time of 90 minutes. For CPT code 96203, the 15-minute

add on code, the RUC recommended a work RVU of 0.12, which is also based upon a median group size of six. We are proposing the RUC-recommended work RVU of 0.43 for CPT code 96202 and the RUC-recommended work RVU of 0.12 for CPT code 96203. We are also proposing the RUC-recommended direct PE inputs for these codes.

Finally, we note that the RUC recommendation included information suggesting that the RUC intends to review the valuation of these services again soon.

(2) Caregiver training in strategies and techniques to facilitate the patient's functional performance (CPT codes 9X015, 9X016, and 9X017)

CPT codes 9X015 (*Caregiver training in strategies and techniques to facilitate the patient's functional performance in the home or community (eg, activities of daily living [ADLs], instrumental ADLs [IADLs], transfers, mobility, communication, swallowing, feeding, problem solving, safety practices) (without the patient present), face-to-face; initial 30 minutes*), and add-on code, CPT code 9X016 (*each additional 15 minutes (List separately in addition to code for primary service) (Use 9X016 in conjunction with 9X015)*), and 9X017 (*Group caregiver training in strategies and techniques to facilitate the patient's functional performance in the home or community (eg, activities of daily living [ADLs], instrumental ADLs [IADLs], transfers, mobility, communication, swallowing, feeding, problem solving, safety practices) (without the patient present), face-to-face with multiple sets of caregivers*) are new codes created by the CPT Editorial Panel during its October 2022 meeting. The three codes are to be used to report the total duration of face-to-face time spent by the physician or other qualified health professional providing individual or group training to caregivers of patients. Although the patient does not attend the trainings, the goals and outcomes of the sessions

focus on interventions aimed at improving the patient's ability to successfully perform activities of daily living (ADL's). Activities of daily living generally include ambulating, feeding, dressing, personal hygiene, continence, and toileting.

During the face-to-face service time, caregivers are taught by the treating practitioner how to facilitate the patient's activities of daily living, transfers, mobility, communication, and problem-solving to reduce the negative impacts of the patient's diagnosis on the patient's daily life and assist the patient in carrying out a treatment plan. These specific services are reasonable and necessary when treating practitioners identify a need to involve and train caregivers to assist the patient in carrying out a treatment plan. As part of an individualized plan of care, the caregiver is trained in skills to assist the patient in completing daily life activities. These trainings to the caregiver include the development of skills such as safe activity completion, problem solving, environmental adaptation, training in use of equipment or assistive devices, or interventions focusing on motor, process, and communication skills.

(a) Valuation

The RUC recommended work values for CPT codes 9X015, 9X016, and 9X017 based on the survey median values and the key reference CPT codes 97535 and 97130. The surveyed codes fall appropriately between these key reference services compared to the work RVU, total time, and related intensity of each service. Three specialty societies sent surveys to a random sample of a subset of their members. Based upon survey results and after discussion, the RUC recommended a work RVU 1.00 for CPT code 9X015, a work RVU of 0.54 for 9X016, and a work RVU of 0.23 per specific patient represented in the group service being billed for CPT code 9X017.

We are proposing the RUC-recommended work RVU 1.00 for CPT code 9X015, the RUC-recommended work RVU of 0.54 for 9X016, and the RUC-recommended work RVU of 0.23 per identified patient service for CPT code 9X017. The RUC noted that the recommendation for 9X017 is based on a median group size of five caregivers. We are also proposing the RUC-recommended direct PE inputs for these codes.

Finally, we note that the RUC recommendation included information suggesting that the RUC intends to review the valuation of these services again soon. We are proposing to designate 9X015, 9X016, and 9X017 as “sometimes therapy”. This means that the services of these codes are always furnished under a therapy plan of care when provided by PTs, OTs, and SLPs; but, in cases where they are appropriately furnished by physicians and NPPs outside a therapy plan of care, that is where the services are not integral to a therapy plan of care, they can be furnished under a treatment plan by physicians and NPPs.

We are proposing to accept RUC recommendations as stated previously in this section for these codes.

(27) Services Addressing Health-Related Social Needs (Community Health Integration services, Social Determinants of Health Risk Assessment, and Principal Illness Navigation Services)

a. Background

In recent years, we have sought to recognize significant changes in health care practice and been engaged in an ongoing, incremental effort to identify gaps in appropriate coding and payment for care management/coordination and primary care services under the PFS. See, for example, our CY 2013, 2015, and 2017 PFS final rules,

where we finalized new coding to provide separate payment for transitional care management services, chronic care management services, and behavioral health care management services to improve payment accuracy to better recognize resources involved in care management and coordination for certain patient populations (77 FR 68978, 79 FR 67715 and 82 FR 53163, respectively). To improve payment accuracy, we are exploring ways to better identify and value practitioners' work when they incur additional time and resources helping patients with serious illnesses navigate the healthcare system or removing health-related social barriers that are interfering with the practitioner's ability to execute a medically necessary plan of care. Practitioners and their staff of auxiliary personnel sometimes obtain information about and help address, social determinants of health (SDOH) that significantly impact the practitioner's ability to diagnose or treat a patient. Additionally, practitioners and their staff of auxiliary personnel sometimes help newly diagnosed cancer patients and other patients with similarly serious, high-risk illnesses navigate their care, such as helping them understand and implement the plan of care, and locate and reach the right practitioners and providers to access recommended treatments and diagnostic services, taking into account the personal circumstances of each patient. Payment for these activities, to the extent they are reasonable and necessary for the diagnosis and treatment of the patient's illness or injury, is currently included in payment for other services such as evaluation and management (E/M) visits and some care management services. Medical practice has evolved to increasingly recognize the importance of these activities, and we believe practitioners are performing them more often. However, this work is not explicitly identified in current coding, and as such, we believe it is underutilized and undervalued. Accordingly, we are

proposing to create new coding to expressly identify and value these services for PFS payment, and distinguish them from current care management services. We expect that our proposed new codes would also support the CMS pillars⁴ for equity, inclusion, and access to care for the Medicare population and improve patient outcomes, including for underserved and low-income populations where there is a disparity in access to quality care. They would also support the White House’s National Strategy on Hunger, Nutrition and Health, and the White House’s Cancer Moonshot Initiative.⁵

As part of this effort, in the CY 2023 PFS final rule (87 FR 69551 through 69551), we issued a Request for Information (RFI) related to Medicare Part B Payment for services involving Community Health Workers (CHWs). For CY 2024, we are considering how we could better recognize, through coding and payment policies, when members of an interdisciplinary team, including CHWs, are involved in treatment of Medicare beneficiaries. Currently, there is no separately enumerated statutory Medicare benefit category that provides direct payment to CHWs for their services. Additionally, current HCPCS coding does not specifically identify services provided by CHWs, even though CHWs may facilitate access to healthcare through community-based services that are necessary to alleviate barriers to care that are interfering with a practitioner’s ability to diagnosis or treat an illness or injury. In rulemaking for the CY 2023 PFS, to gain a broader perspective on CHWs and how we could refine our coding and payment policies to better recognize their role in furnishing Medicare-covered services, we solicited

⁴ CMS Strategic Plan | CMS.

⁵ White-House-National-Strategy-on-Hunger-Nutrition-and-Health-FINAL.pdf ([whitehouse.gov](https://www.whitehouse.gov)); Fact Sheet: President Biden Reignites Cancer Moonshot to End Cancer as We Know It | The White House <https://www.whitehouse.gov/briefing-room/statements-releases/2022/02/02/fact-sheet-president-biden-reignites-cancer-moonshot-to-end-cancer-as-we-know-it/>.

comment through an RFI on how services involving CHWs are furnished in association with the specific Medicare benefits established by the statute.

Commenters were supportive overall of potential, separate coding and payment for services involving CHWs. The public comments indicated that a number of physicians, practitioners, group practices, and other entities currently utilize the services of CHWs to bridge gaps in the continuum of their medical and behavioral healthcare furnished to Medicare patients. In public comments on our RFI, interested parties provided testimonials and evidence about the effectiveness of CHWs and the services that they provide to patients in the community by monitoring, interpreting, clarifying, and supporting the plans of care that physicians and practitioners establish for delivering care to patients.

In addition, in 2021, the AMA CPT Editorial Panel recognized in the CPT E/M Guidelines that SDOH needs can increase complexity of a practitioner’s medical decision making (MDM) for an E/M visit and increase risk to the patient, when diagnosis or treatment is significantly limited by SDOH.⁶ Specifically, the CPT Editorial Panel included as an example of moderate level MDM for E/M visit coding and level selection, a situation where diagnosis or treatment is significantly limited by SDOH. This situation is listed as an example of moderate risk of morbidity from additional diagnostic testing or treatment. The CPT E/M Guidelines defined SDOH as, “Economic and social conditions that influence the health of people and communities. Examples may include food or housing insecurity.”⁷ We adopted these revised CPT guidelines for MDM in E/M visits

⁶ 2021 CPT Codebook, p. 16.

⁷ 2021 CPT Codebook, p. 14.

through notice and comment rulemaking, effective January 1, 2021 (84 FR 62844 through 62860, 87 FR 69587 through 69614).

Physicians and NPPs are generally trained to obtain a patient’s social and family history, in support of patient-centered care, to aid in diagnosis, and to better understand and help address problem(s) addressed in a medical visit and associated risk factors.⁸ For example, a practitioner who discovers that a patient’s living situation does not permit reliable access to electricity may need to prescribe an inhaler rather than a power-operated nebulizer to treat asthma. Some practices and facilities employ social workers or other ancillary staff to help address SDOH needs that are impacting the ability to provide medically necessary care, such as appropriate treatment or diagnostic services after an office visit or following discharge from a facility.

Practitioners are increasingly expending resources to obtain information from the patient about health-related social needs and risks, and formulate diagnosis and treatment plans that take these needs into account. We believe that social workers, CHWs and other auxiliary personnel are currently performing some of these activities, and that the resources involved in these activities are not consistently appropriately reflected in current coding and payment policies. As such, we believe it would be appropriate to create codes to separately identify and more accurately value this work. Accordingly, we are proposing new coding to describe and separately value three types of services that may be provided by auxiliary personnel incident to the billing physician or practitioner’s

⁸ See for example Patient-Centered Communication: Basic Skills | AAFP; <https://www.aafp.org/about/policies/all/social-determinants-health-family-medicine-position-paper.html>; <https://doi.org/10.7326/M17-2441>; <https://nam.edu/social-determinants-of-health-201-for-health-care-plan-do-study-act/>; <https://www.ama-assn.org/system/files/2021-05/ama-equity-strategic-plan.pdf>; <https://edhub.ama-assn.org/steps-forward/module/2702762>. The Origins of the History and Physical Examination - Clinical Methods - NCBI Bookshelf (nih.gov) <https://www.ncbi.nlm.nih.gov/books/NBK458/>.

professional services, and under the billing practitioner's supervision, when reasonable and necessary to diagnose and treat the patient: community health integration services, SDOH risk assessment, and principal illness navigation. This section of our proposed rule lays out the proposed codes and their proposed valuation, and describes the circumstances under which we believe these services may be reasonable and necessary for the diagnosis or treatment of illness or injury such that Medicare payment may be made for them.

b. Community Health Integration (CHI) Services

In light of the feedback we have received from our RFI regarding CHWs, and increased recognition within the medical community of the role that social needs can play in patients' health (specifically, interfering with ability to diagnose and treat patients), we are proposing to establish separate coding and payment for community health integration (CHI) services. We are proposing to create two new G codes describing CHI services performed by certified or trained auxiliary personnel, which may include a CHW, incident to the professional services and under the general supervision of the billing practitioner. We are proposing that CHI services could be furnished monthly, as medically necessary, following an initiating E/M visit (CHI initiating visit) in which the practitioner identifies the presence of SDOH need(s) that significantly limit the practitioner's ability to diagnose or treat the problem(s) addressed in the visit.

We propose that the CHI initiating visit would be an E/M visit (other than a low-level E/M visit that can be performed by clinical staff) performed by the billing practitioner who will also be furnishing the CHI services during the subsequent calendar month(s). The CHI initiating visit would be separately billed (if all requirements to do so

are met), and would be a pre-requisite to billing for CHI services. We believe that certain types of E/M visits, such as inpatient/observation visits, ED visits, and SNF visits would not typically serve as CHI initiating visits because the practitioners furnishing the E/M services in those settings would not typically be the ones to provide continuing care to the patient, including furnishing necessary CHI services in the subsequent month(s).

The CHI initiating visit would serve as a pre-requisite to billing for CHI services, during which the billing practitioner would assess and identify SDOH needs that significantly limit the practitioner's ability to diagnose or treat the patient's medical condition and establish an appropriate treatment plan. The subsequent CHI services would be performed by a CHW or other auxiliary personnel incident to the professional services of the practitioner who bills the CHI initiating visit. The same practitioner would furnish and bill for both the CHI initiating visit and the CHI services, and CHI services must be furnished in accordance with the "incident to" regulation at § 410.26. We would not require an initiating E/M visit every month that CHI services are billed, but only prior to commencing CHI services, to establish the treatment plan, specify how addressing the unmet SDOH need(s) would help accomplish that plan, and establish the CHI services as incident to the billing practitioner's service. This framework is similar to our current requirements for billing care management services, such as chronic care management services. It also comports with our longstanding policy in the Medicare Benefit Policy Manual which provides, "where a physician supervises auxiliary personnel to assist him/her in rendering services to patients and includes the charges for their services in his/her own bills, the services of such personnel are considered incident to the physician's service if there is a physician's service rendered to which the services of such

personnel are an incidental part. This does not mean, however, that to be considered incident to, each occasion of service by auxiliary personnel (or the furnishing of a supply) need also always be the occasion of the actual rendition of a personal professional service by the physician. Such a service or supply could be considered to be incident to when furnished during a course of treatment where the physician performs an initial service and subsequent services of a frequency which reflect his/her active participation in and management of the course of treatment” (Chapter 15, Section 60.1.B of the Medicare Benefit Policy Manual (Pub. 100-02), available on our website at <https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/bp102c15.pdf> (cms.gov)).

We are also seeking comment on whether we should consider any professional services other than an E/M visit performed by the billing practitioner as the prerequisite initiating visit for CHI services, including, for example, an annual wellness visit (AWV) that may or may not include the optional SDOH risk assessment also proposed in this rule. Under section 1861(hhh)(3)(C) of the Act, the AWV can be furnished by a physician or practitioner, or by other types of health professionals whose scope of practice does not include the diagnosis and treatment involved in E/M services, for example a health educator. When the AWV is furnished by other types of health professionals, it is not necessarily furnished incident to the professional services of a physician or other practitioner. Therefore, if we were to allow an AWV furnished by a health care practitioner other than a physician or practitioner to serve as the initiating visit for CHI services, the CHI services would not necessarily be furnished consistent with our proposed application of the “incident to” regulations as a condition of payment. Further,

we believe that practitioners would normally bill an E/M visit in addition to the AWW when medical problems are addressed in the course of an AWW encounter, in accordance with our manual policy providing that a medically necessary E/M visit may be billed when furnished on the same occasion as an AWW in those circumstances (Chapter 12, Section 30.6.1.1.H of the Medicare Claims Processing Manual (Pub, 100-04).

For purposes of assigning a supervision level for these “incident to” services, we are proposing to designate CHI services as care management services that may be furnished under the general supervision of the billing practitioner in accordance with § 410.26(b)(5). General supervision means the service is furnished under the physician's (or other practitioner's) overall direction and control, but the physician's (or other practitioner's) presence is not required during the performance of the service (§ 410.26(a)(3)).

In this proposal, the phrase or term “problem addressed” refers to the definition in the CPT E/M Guidelines that we have adopted for E/M visits. Specifically, “[a] problem is a disease, condition, illness, injury, symptom, finding, complaint, or other matter addressed at the encounter, with or without a diagnosis being established at the time of the encounter. Problem addressed [means the following]: A problem is addressed or managed when it is evaluated or treated at the encounter by the physician or other qualified healthcare professional reporting the service. This includes consideration of further testing or treatment that may not be elected by virtue of risk/benefit analysis or patient/parent/guardian/surrogate choice. Notation in patient’s medical record that another professional is managing the problem without additional assessment or care coordination documented does not qualify as being addressed or managed by the

physician or other qualified healthcare professional reporting the service. Referral without evaluation (by history, examination, or diagnostic study[ies]) or consideration of treatment does not qualify as being addressed or managed by the physician or other qualified healthcare professional reporting the service. For hospital inpatient and observation care services, the problem addressed is the problem status on the date of the encounter, which may be significantly different than on admission. It is the problem being managed or co-managed by the reporting physician or other qualified healthcare professional and may not be the cause of admission or continued stay” (2023 CPT Codebook, p. 6-8).

For purposes of CHI services (and PIN services discussed later in this section), we propose that SDOH means economic and social condition(s) that influence the health of people and communities, as indicated in these same CPT E/M Guidelines (2023 CPT codebook, page 11). We are proposing to adopt CPT’s examples of SDOH, with additional examples. Specifically, we are proposing that SDOH(s) may include but are not limited to food insecurity, transportation insecurity, housing insecurity, and unreliable access to public utilities, when they significantly limit the practitioner’s ability to diagnose or treat the problem(s) addressed in the CHI initiating visit. Since Medicare payment generally is limited to items and services that are reasonable and necessary for the diagnosis or treatment of illness or injury, the focus of CHI services would need to be on addressing the particular SDOH need(s) that are interfering with, or presenting a barrier to, diagnosis or treatment of the patient’s problem(s) addressed in the CHI initiating visit.

We propose the following specific codes and descriptors:

GXXXI *Community health integration services performed by certified or trained auxiliary personnel, including a community health worker, under the direction of a physician or other practitioner; 60 minutes per calendar month, in the following activities to address social determinants of health (SDOH) need(s) that are significantly limiting ability to diagnose or treat problem(s) addressed in an initiating E/M visit:*

- *Person-centered assessment, performed to better understand the individualized context of the intersection between the SDOH need(s) and the problem(s) addressed in the initiating E/M visit.*

- ++ *Conducting a person-centered assessment to understand patient's life story, strengths, needs, goals, preferences and desired outcomes, including understanding cultural and linguistic factors.*

- ++ *Facilitating patient-driven goal-setting and establishing an action plan.*

- ++ *Providing tailored support to the patient as needed to accomplish the practitioner's treatment plan.*

- *Practitioner, Home-, and Community-Based Care Coordination*

- ++ *Coordinating receipt of needed services from healthcare practitioners, providers, and facilities; and from home- and community-based service providers, social service providers, and caregiver (if applicable).*

- ++ *Communication with practitioners, home- and community-based service providers, hospitals, and skilled nursing facilities (or other health care facilities) regarding the patient's psychosocial strengths and needs, functional deficits, goals, preferences, and desired outcomes, including cultural and linguistic factors.*

++ *Coordination of care transitions between and among health care practitioners and settings, including transitions involving referral to other clinicians; follow-up after an emergency department visit; or follow-up after discharges from hospitals, skilled nursing facilities or other health care facilities.*

++ *Facilitating access to community-based social services (e.g., housing, utilities, transportation, food assistance) to address the SDOH need(s).*

- *Health education- Helping the patient contextualize health education provided by the patient's treatment team with the patient's individual needs, goals, and preferences, in the context of the SDOH need(s), and educating the patient on how to best participate in medical decision-making.*

- *Building patient self-advocacy skills, so that the patient can interact with members of the health care team and related community-based services addressing the SDOH need(s), in ways that are more likely to promote personalized and effective diagnosis or treatment.*

- *Health care access / health system navigation*

++ *Helping the patient access healthcare, including identifying appropriate practitioners or providers for clinical care and helping secure appointments with them.*

- *Facilitating behavioral change as necessary for meeting diagnosis and treatment goals, including promoting patient motivation to participate in care and reach person-centered diagnosis or treatment goals.*

- *Facilitating and providing social and emotional support to help the patient cope with the problem(s) addressed in the initiating visit, the SDOH need(s), and adjust daily routines to better meet diagnosis and treatment goals.*

- *Leveraging lived experience when applicable to provide support, mentorship, or inspiration to meet treatment goals.*

GXXX2 – Community health integration services, each additional 30 minutes per calendar month (List separately in addition to GXXX1).

By way of example, tailored support could be provided through CHI services to a patient experiencing homelessness with signs of potential cognitive impairment and a history of frequent ED admissions for uncontrolled diabetes. The patient's primary care practitioner (PCP) learns during a clinic visit after discharge from the ED, that the patient has been able to reliably fill their prescriptions for diabetes medication, but frequently loses the medication (or access to it) while transitioning between homeless shelters and a local friend's home. In the medical record, the PCP documents SDOH need(s) of housing insecurity and transportation insecurity contributing to medication noncompliance, resulting in inadequate insulin control and a recent ED visit for hypoglycemia. The PCP's treatment plan is daily diabetes medication, with the goal of maintaining hemoglobin A1c within appropriate levels. To accomplish the treatment plan, the PCP orders CHI services to develop an individualized plan for daily medication adherence/access while applying for local housing assistance, and also orders a follow up visit for cognitive impairment assessment and care planning to further evaluate the potential contribution of cognitive impairment. The PCP's auxiliary personnel provide tailored support, comprised of facilitating communication between the patient, local shelters, and the friend, to help the patient identify a single location to reliably store their medication while applying for local housing assistance. The auxiliary personnel also help the patient identify a reliable means of transportation daily to that location for their medication, and show the patient

how to create a daily automated phone reminder to take the diabetes medication. The auxiliary personnel document these activities (including amount of time spent) in the medical record at the PCP's office, along with periodic updates regarding the status of the patient's housing assistance application.

To help inform whether our proposed descriptor times are appropriate and reflect typical service times, and whether a frequency limit is relevant for the add-on code, we are seeking comment on the typical amount of time practitioners spend per month furnishing CHI services to address SDOH needs that pose barriers to diagnosis and treatment of problem(s) addressed in an E/M visit. We are also seeking comment to better understand the typical duration of CHI services, in terms of the number of months for which practitioners furnish the services.

We are proposing that all auxiliary personnel who provide CHI services must be certified or trained to perform all included service elements, and authorized to perform them under applicable State laws and regulations. Under § 410.26(a)(1) of our regulations, auxiliary personnel must meet any applicable requirements to provide the services performed incident to the billing practitioner's professional services, including licensure, that are imposed by the State in which the services are being furnished. In States where there are no applicable licensure or other laws or regulations relating to individuals performing CHI services, we are proposing to require auxiliary personnel providing CHI services to be trained to provide them. Training must include the competencies of patient and family communication, interpersonal and relationship-building, patient and family capacity-building, service coordination and system navigation, patient advocacy, facilitation, individual and community assessment,

professionalism and ethical conduct, and the development of an appropriate knowledge base, including of local community-based resources. We are proposing these competencies because they reflect professional consensus regarding appropriate core competencies for CHWs, applied to this context.⁹ We are seeking public comment on whether it would be appropriate to specify the number of hours of required training, as well as the training content and who should provide the training.

We are proposing to require that time spent furnishing CHI services for purposes of billing HCPCS codes GXXX1-2 must be documented in the patient's medical record in its relationship to the SDOH need(s) they are intended to address and the clinical problem(s) they are intended to help resolve. The activities performed by the auxiliary personnel would be described in the medical record, just as all clinical care is documented in the medical record. We are proposing to require the SDOH need(s) to be recorded in the patient's medical record, and for data standardization, practitioners would be encouraged to record the associated ICD-10 Z-code (Z55-Z65) in the medical record and on the claim.

Since CHI services are community-based and involve connecting the patient with local resources in their community, and are highly personalized, e.g., hearing and understanding a patient's life story and culture, we believe that most of the elements of CHI services would involve direct contact between the auxiliary personnel and the patient, and that a substantial portion would be in-person but a portion might be performed via two-way audio. We are seeking to confirm our understanding of where and

⁹ <https://chwtraining.org/c3-project-chw-skills/>.

how these services would be typically provided (e.g., in-person, audio-video, two-way audio).

We are seeking public comment, in particular, regarding whether we should require patient consent for CHI services. For care management services that could generally be performed without any direct patient contact, we require advance patient consent to receive the services as a prerequisite to furnishing and billing the services, to avoid patients receiving bills for cost sharing that they might not be expecting to receive. For example, a patient might receive chronic care management services comprised of practitioners coordinating care with each other and reviewing or exchanging medical records between visits in ways that do not require involving the patient directly. As we have frequently discussed in prior rulemaking for care management services (for example, at 81 FR 80240), we do not have statutory authority to waive cost sharing for care management or other services. Rather, cost sharing remains applicable except as specified by statute such as for certain preventive services. In recent years, we have required advance documented patient consent to receive most care management services as a condition of the practitioner billing those services, to avoid a situation where the patient is surprised to receive a bill for the associated cost sharing. These consent requirements include informing the patient about applicable cost sharing, the right to discontinue services, and, where applicable, the limitation that payment is made for the service to only one practitioner per month. We have heard from interested parties over time that requiring advance patient consent is an administrative burden and may pose a barrier to receipt of needed services. We are not proposing to require consent for CHI services, since we believe these services typically would involve direct patient contact,

and largely be provided in-person. However, if we hear from public commenters that CHI services would frequently not involve direct contact with the patient, or could extend for periods of time for which the patient might not be expecting to incur cost sharing obligations (such as multiple months), we would consider requiring patient consent to receive CHI services in our final rule.

We are proposing that a billing practitioner may arrange to have CHI services provided by auxiliary personnel who are external to, and under contract with, the practitioner or their practice, such as through a community-based organization (CBO) that employs CHWs, if all of the “incident to” and other requirements and conditions for payment of CHI services are met. While we are proposing to allow CHI services to be performed by auxiliary personnel under a contract with a third party, we wish to be clear, as we have in our regulations for current care management services, that there must be sufficient clinical integration between the third party and the billing practitioner in order for the services to be fully provided, and the connection between the patient, auxiliary personnel, and the billing practitioner must be maintained. As we discussed in a similar context for care management services the CY 2017 PFS final rule, if there is little oversight by the billing practitioner or a lack of clinical integration between a third party providing the services and the billing practitioner, we do not believe CHI services, as we propose to define them, could be fully performed; and therefore, in such cases, CHI services should not be billed (see 81 FR 80249). We would expect the auxiliary personnel performing the CHI services to communicate regularly with the billing practitioner to ensure that CHI services are appropriately documented in the medical record, and to continue to involve the billing practitioner in evaluating the continuing need for CHI

services to address the SDOH need(s) that limit the practitioner's ability to diagnose and treat the problem(s) addressed in the initiating visit.

As noted in the CY 2023 PFS final rule (87 FR 69790) and explained in the CY 2023 PFS proposed rule (87 FR 46102), when we refer to community-based organizations, we mean public or private not-for-profit entities that provide specific services to the community or targeted populations in the community to address the health and social needs of those populations. They may include community-action agencies, housing agencies, area agencies on aging, centers for independent living, aging and disability resource centers or other non-profits that apply for grants or contract with healthcare entities to perform social services. As described earlier, they may receive grants from other agencies in the U.S. Department of Health and Human Services, including Federal grants administered by the Administration for Children and Families (ACF), Administration for Community Living (ACL), the Centers for Disease Control and Prevention (CDC), the Substance Abuse and Mental Health Services Administration (SAMHSA), or State-funded grants to provide social services. Generally, we believe such organizations know the populations and communities they serve, and may have the infrastructure or systems in place to assist practitioners to provide CHI services. We understand that many CBOs provide social services and do other work that is beyond the scope of CHI services, but we believe they are well-positioned to develop relationships with practitioners for providing reasonable and necessary CHI services.

Because we are concerned about potential fragmentation that could occur in addressing specific SDOH, we are proposing that only one practitioner per beneficiary

per calendar month could bill for CHI services. This would allow the patient to have a single point of contact for all their CHI services during a given month.

We are proposing that the practitioner could separately bill for other care management services during the same month as CHI services, if time and effort are not counted more than once, requirements to bill the other care management service are met, and the services are medically reasonable and necessary.

We propose that CHI services could not be billed while the patient is under a home health plan of care under Medicare Part B, since we believe there would be significant overlap between services furnished under a home health plan of care and CHI services, particularly in the home health services referred to as “medical social services,” and in comprehensive care coordination. For example, medical social services can be furnished to the patient's family member or caregiver on a short-term basis when the home health agency (HHAs) can demonstrate that a brief intervention by a medical social worker is necessary to remove a clear and direct impediment to the effective treatment of the patient's medical condition or to the patient's rate of recovery. Additionally, the home health agency (HHA) conditions of participation require that HHAs coordinate all aspects of the beneficiary's care while under a home health plan of care, such as integrating services, whether provided directly or under arrangement, to assure the identification of patient needs and factors that could affect patient safety and treatment effectiveness and the coordination of care provided by all disciplines; and involvement of the patient, representative (if any), and caregiver(s), as appropriate, in the coordination of care activities.

Also, we note that when Medicare and Medicaid cover the same services for patients eligible for both programs, Medicare generally is the primary payer in accordance with section 1902(a)(25) of the Act. Based on the specificity of the coding for our proposal, we do not expect that CHI services will neatly overlap with any other coverage for patients who are dually eligible for Medicare and Medicaid. However, we are seeking public comment regarding whether States typically cover services similar to CHI under their Medicaid programs, and whether such coverage would be duplicative of the CHI service codes. We also seek comment on whether there are other service elements not included in the proposed CHI service codes that should be included, or are important in addressing unmet SDOH need(s) that affect the diagnosis or treatment of medical problems, where CMS should consider coding and payment in the future.

c. Proposed CHI Services Valuation

For HCPCS code GXXX1, we are proposing a work RVU of 1.00 based on a crosswalk to CPT code 99490 (*Chronic care management services with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised, or monitored; first 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month*) as we believe these values most accurately reflect the resource costs incurred when the billing practitioner furnishes CHI services. CPT code 99490 has an intraservice time of 25 minutes and the work is of similar intensity to our proposed HCPCS code GXXX1. We are, therefore, proposing a work time of 25 minutes

for HCPCS code GXXX1, based on this same crosswalk to CPT code 99490. We are also proposing to use this crosswalk to establish the direct PE inputs for HCPCS code GXXX1.

For HCPCS code GXXX2, we are proposing a crosswalk to the work RVU and direct PE inputs associated with CPT code 99439 (*Chronic care management services with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised, or monitored; each additional 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)*) as we believe these values reflect the resource costs incurred when the billing practitioner furnishes CHI services. Therefore, we are proposing a work RVU of 0.70 and a work time of 20 minutes for HCPCS code GXXX2.

d. Social Determinants of Health (SDOH) –Proposal to establish a stand-alone G code

i. Background

As previously discussed, there is increasing recognition within the health care system of the need to take SDOH into account when providing health care services, given that it is estimated¹⁰ that around 50 percent of an individual's health is directly related to SDOH. Healthy People 2030 define the broad groups of SDOH as: economic stability, education access and quality, healthcare access and quality, neighborhood and built environment, and social and community context, which include factors like housing, food

¹⁰ <https://aspe.hhs.gov/sites/default/files/documents/e2b650cd64cf84aae8ff0fae7474af82/SDOH-Evidence-Review.pdf>.

and nutrition access, and transportation needs. Many Federal agencies are also developing policies to better address the impact SDOH have on patients, in support of HHS's Strategic Approach to Addressing Social Determinants of Health to Advance Health Equity¹¹, as well as the CMS Framework for Health Equity¹².

ii. Proposed SDOH Risk Assessment Code

Over the past several years, we have worked to develop payment mechanisms under the PFS to improve the accuracy of valuation and payment for the services furnished by physicians and other health care professionals, especially in the context of evolving models of care. Section 1862(a)(1)(A) of the Act generally excludes from coverage services that are not reasonable and necessary for the diagnosis or treatment of illness or injury or to improve the functioning of a malformed body member.

Practitioners across specialties have opined and recognized the importance of SDOH on the health care provided to their patients, including by recommending the assessment of SDOH through position or discussion papers^{13,14,15}, organizational strategic plans¹⁶, and provider training modules.¹⁷ Previously in this section of our proposed rule, we discuss how the practice of medicine currently includes assessment of health-related social needs or SDOH in taking patient histories, assessing patient risk, and informing medical decision making, diagnosis, care and treatment. The taking of a social history is generally performed by physicians and practitioners in support of patient-centered care to better

¹⁵ <https://nam.edu/social-determinants-of-health-201-for-health-care-plan-do-study-act/>.

¹⁶ <https://www.ama-assn.org/system/files/2021-05/ama-equity-strategic-plan.pdf>.

¹⁷ <https://edhub.ama-assn.org/steps-forward/module/2702762>.

understand and help address relevant problems that are impacting medically necessary care. We believe the resources involved in these activities are not appropriately reflected in current coding and payment policies. As such, we are proposing to establish a code to separately identify and value a SDOH risk assessment that is furnished in conjunction with an E/M visit.

We are proposing a new stand-alone G code, GXXX5, *Administration of a standardized, evidence-based Social Determinants of Health Risk Assessment, 5-15 minutes, not more often than every 6 months*. SDOH risk assessment refers to a review of the individual's SDOH or identified social risk factors that influence the diagnosis and treatment of medical conditions. We are proposing GXXX5 to identify and value the work involved in the administering a SDOH risk assessment as part of a comprehensive social history when medically reasonable and necessary in relation to an E/M visit. SDOH risk assessment through a standardized, evidence-based tool can more effectively and consistently identify unmet SDOH needs, and enable comparisons across populations. For example, through administration of the SDOH risk assessment for a patient presenting for diabetes management, a practitioner might discover that a patient's living situation does not permit reliable access to electricity, impacting the patient's ability to keep insulin refrigerated. The practitioner may then prescribe a type of insulin that remains stable at room temperature, or consider oral medication instead. In this example, the practitioner could furnish an SDOH risk assessment in conjunction with the E/M visit to gain a more thorough understanding of the patient's full social history and to determine whether other SDOH needs are also impacting medically necessary care.

We further propose that the SDOH risk assessment must be furnished by the practitioner on the same date they furnish an E/M visit, as the SDOH assessment would be reasonable and necessary when used to inform the patient's diagnosis, and treatment plan established during the visit. Required elements would include:

- Administration of a standardized, evidence-based¹⁸ SDOH risk assessment tool that has been tested and validated through research, and includes the domains of food insecurity, housing insecurity, transportation needs, and utility difficulties.

++ Billing practitioners may choose to assess for additional domains beyond those listed above if there are other prevalent or culturally salient social determinants in the community being treated by the practitioner.

Possible evidence-based tools include the CMS Accountable Health Communities¹⁹ tool, the Protocol for Responding to & Assessing Patients' Assets, Risks & Experiences (PRAPARE)²⁰ tool, and instruments identified for Medicare Advantage Special Needs Population Health Risk Assessment²¹.

Given the multifaceted nature of unmet SDOH needs, appropriate follow-up is critical for mitigating the effects of the identified, unmet SDOH needs on a person's health. An SDOH risk assessment without appropriate follow-up for identified needs would serve little purpose. As such, CMS is seeking comment on whether we should require as a condition of payment for SDOH risk assessment that the billing practitioner also have the capacity to furnish CHI, PIN, or other care management services, or have

¹⁸ <https://health.gov/healthypeople/tools-action/browse-evidence-based-resources/types-evidence-based-resources>.

¹⁹ <https://innovation.cms.gov/files/worksheets/ahcm-screeningtool.pdf>.

²⁰ <https://www.nachc.org/research-and-data/prapare/>.

²¹ CMS-10825.

partnerships with community-based organizations (CBO) to address identified SDOH needs.

The SDOH needs identified through the risk assessment must be documented in the medical record, and may be documented using a set of ICD-10-CM codes known as “Z codes”²² (Z55-Z65) which are used to document SDOH data to facilitate high-quality communication between providers. We are proposing GXXX5 have a duration of 5-15 minutes for the administration of an SDOH risk assessment tool, billed no more often than once every 6 months. We propose to limit the SDOH assessment service to once every six months, as we believe there are generally not significant, measurable changes to health outcomes impacted by a patient’s SDOH in intervals shorter than 6 months

iii. Proposed Valuation for SDOH Risk Assessment GXXX5

We propose a direct crosswalk to HCPCS code G0444 (*Screening for depression in adults, 5-15 minutes*), with a work RVU of 0.18, as we believe this service reflects the resource costs associated when the billing practitioner performs HCPCS code GXXX5. HCPCS code G0444 has an intraservice time of 15 minutes, and the physician work is of similar intensity to our proposed HCPCS code GXXX5. Therefore, we are proposing a work time of 15 minutes for HCPCS code GXXX5 based on this same crosswalk to G0444. We are also proposing to use this crosswalk to establish the direct PE inputs for HCPCS code GXXX5.

We believe these services would largely involve direct patient contact between the billing practitioner or billing practitioner’s auxiliary personnel and the patient through in-person interactions, which could be conducted via telecommunications as appropriate.

²² <https://www.cms.gov/files/document/z-codes-data-highlight.pdf>.

Therefore, we are proposing to add this code to the Medicare Telehealth Services List to accommodate a scenario in which the practitioner (or their auxiliary personnel incident to the practitioner's services) completes the risk assessment in an interview format, if appropriate. We believe it is important that when furnishing this service, all communication with the patient be appropriate for the patient's educational, developmental, and health literacy level, and be culturally and linguistically appropriate. We are seeking comment on where and how these services would be typically provided, along with other aspects of the proposed SDOH assessment service.

e. Principal Illness Navigation (PIN) Services

i. Background

Experts on navigation of treatment for cancer and other high-risk, serious illnesses have demonstrated the benefits of navigation services for patients experiencing these conditions²³. Experts have noted the importance of these services for all affected patients, but especially those with socioeconomic disadvantages or barriers to care. Navigation generally means the process or activity of ascertaining one's position and planning and following a route; the act of directing from one place to another; the skill or process of plotting a route and directing; the act, activity, or process of finding the way to get to a place you are traveling. In the context of healthcare, it refers to providing individualized help to the patient (and caregiver, if applicable) to identify appropriate practitioners and providers for care needs and support, and access necessary care timely, especially when the landscape is complex and delaying care can be deadly. It is often referred to in the context of patients diagnosed with cancer or another severe, debilitating illness, and

²³ See for example, <https://view.ons.org/3hjHjc> and <https://www.accc-cancer.org/docs/projects/pdf/patient-navigation-guide>.

includes identifying or referring to appropriate supportive services. It is perhaps most critical when a patient is first undergoing treatment for such conditions, due to the extensive need to access and coordinate care from a number of different specialties or service-providers for different aspects of the diagnosis or treatment, and in some cases, related social services (for example, surgery, radiation, chemotherapy for cancer; psychiatry, psychology, vocational rehabilitation for severe mental illness; psychiatry, psychology, vocational rehabilitation, rehabilitation and recovery programs for substance use disorder; infectious disease, neurology and immunology for human immunodeficiency virus (HIV)-associated neurocognitive disorders). For some conditions, patients are best able to engage with the healthcare system and access care if they have assistance from a single, dedicated individual who has “lived experience” (meaning they have personally experienced the same illness or condition the patient is facing). While we currently make separate payment under the PFS for a number of care management and other services that may include aspects of navigation services, those care management services are focused heavily on clinical aspects of care rather than social aspects, and are generally performed by auxiliary personnel who may not have lived experience or training in the specific illness being addressed. We are seeking to better understand whether there are gaps in coding for patient navigation services for treatment of serious illness, that are not already included in current care management services such as advance care planning services (CPT codes 99497-99498), chronic care management services (CPT codes 99490, 99439, 99491, 99437, 99487 and 99489), general behavioral health integration care management services (CPT code 99484), home health and hospice supervision (HCPCS codes G0181-G0182), monthly ESRD-related

services (CPT codes 90951-90970), principal care management services (CPT codes 99424-99427), psychiatric collaborative care management services (CPT codes 99492-99494), and transitional care management services (CPT codes 99495-99496). See additional information on our PFS Care Management Services webpage at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Care-Management>.

For CY 2024, we are proposing to better recognize through coding and payment policies when certified or trained auxiliary personnel under the direction of a billing practitioner, which may include a patient navigator or certified peer specialist, are involved in the patient’s health care navigation as part of the treatment plan for a serious, high-risk disease expected to last at least 3 months, that places the patient at significant risk of hospitalization or nursing home placement, acute exacerbation/decompensation, functional decline, or death. Examples of serious, high-risk diseases for which patient navigation services could be reasonable and necessary could include cancer, chronic obstructive pulmonary disease, congestive heart failure, dementia, HIV/AIDS, severe mental illness, and substance use disorder. We are proposing new coding for Principal Illness Navigation (PIN) services. In considering the appropriate patient population, we considered the patient population eligible for principal care management service codes (CPT codes 99424 through 99427), as well as clinical definitions of “serious illness.” For example, one peer-review study defined “serious illness” as a health condition that carries a high risk of mortality and either negatively impacts a person’s daily function or quality of life, or excessively strains their caregivers²⁴. Another study describes a serious

²⁴ <https://pubmed.ncbi.nlm.nih.gov/29125784/>.

illness as a health condition that carries a high risk of mortality and commonly affects a patient for several years.²⁵ Some measure serious illness by the amount of urgent health care use (911 calls, emergency department visits, repeated hospitalizations) and polypharmacy.²⁶ The navigation services such patients need are similar to CHI services (as discussed previously in this section), but SDOH need(s) may be fewer or not present; and there are specific service elements that are more relevant for the subset of patients with serious illness. Accordingly, we are proposing for PIN services a parallel set of services to the proposed CHI services, but focused on patients with a serious, high-risk illness who may not necessarily have SDOH needs; and adding service elements to describe identifying or referring the patient to appropriate supportive services, providing information/resources to consider participation in clinical research/clinical trials, and inclusion of lived experience or training in the specific condition being addressed.

ii. Proposed Principal Illness Navigation (PIN) Service Definition

PIN services could be furnished following an initiating E/M visit addressing a serious high-risk condition/illness/disease, with the following characteristics:

- One serious, high-risk condition expected to last at least 3 months and that places the patient at significant risk of hospitalization, nursing home placement, acute exacerbation/decompensation, functional decline, or death;
- The condition requires development, monitoring, or revision of a disease-specific care plan, and may require frequent adjustment in the medication or treatment regimen, or substantial assistance from a caregiver.

²⁵ <https://www.ajmc.com/view/serious-illness-a-high-priority-for-accountable-care>.

²⁶ <https://www.ajmc.com/view/serious-illness-a-high-priority-for-accountable-care>.

Examples of a serious, high-risk condition/illness/disease include, but are not limited to, cancer, chronic obstructive pulmonary disease, congestive heart failure, dementia, HIV/AIDS, severe mental illness, and substance use disorder.

We propose that the PIN initiating visit would be an E/M visit (other than a low-level E/M visit that can be performed by clinical staff) performed by the billing practitioner who will also be furnishing the PIN services during the subsequent calendar month(s). The PIN initiating visit would be separately billed (if all requirements to do so are met), and would be a pre-requisite to billing for PIN services. We believe that certain types of E/M visits, such as inpatient/observation visits, ED visits, and SNF visits would not typically serve as PIN initiating visits because the practitioners furnishing the E/M services in those settings would not typically be the ones to provide continuing care to the patient, including furnishing necessary PIN services in the subsequent month(s).

The PIN initiating visit would serve as a pre-requisite to billing for PIN services, during which the billing practitioner would identify the medical necessity of PIN services and establish an appropriate treatment plan. The subsequent PIN services would be performed by auxiliary personnel incident to the professional services of the practitioner who bills the PIN initiating visit. The same practitioner would furnish and bill for both the PIN initiating visit and the PIN services, and PIN services must be furnished in accordance with the “incident to” regulation at § 410.26. We would not require an initiating E/M visit every month that PIN services are billed, but only prior to commencing PIN services, to establish the treatment plan, specify how PIN services would help accomplish that plan, and establish the PIN services as incident to the billing practitioner’s service. This framework is similar to our current requirements for billing

care management services, such as chronic care management services. It also comports with our longstanding policy in the Medicare Benefit Policy Manual which provides, “where a physician supervises auxiliary personnel to assist him/her in rendering services to patients and includes the charges for their services in his/her own bills, the services of such personnel are considered incident to the physician’s service if there is a physician’s service rendered to which the services of such personnel are an incidental part. This does not mean, however, that to be considered incident to, each occasion of service by auxiliary personnel (or the furnishing of a supply) need also always be the occasion of the actual rendition of a personal professional service by the physician. Such a service or supply could be considered to be incident to when furnished during a course of treatment where the physician performs an initial service and subsequent services of a frequency which reflect his/her active participation in and management of the course of treatment” (Chapter 15, Section 60.1.B of the Medicare Benefit Policy Manual (Pub. 100-02), available on our website at <https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/bp102c15.pdf>).

We are also seeking comment on whether we should consider any professional services other than an E/M visit performed by the billing practitioner as the prerequisite initiating visit for PIN services, including, for example, an annual wellness visit (AWV) that may or may not include the optional SDOH risk assessment also proposed in this rule. Under section 1861(hhh)(3)(C) of the Act, the AWV can be furnished by a physician or practitioner, or by other types of health professionals whose scope of practice does not include the diagnosis and treatment involved in E/M services, for example a health educator.

When the AWW is furnished by other types of health professionals, it is not necessarily furnished incident to the professional services of a physician or other practitioner. Therefore, if we were to allow an AWW furnished by a health care practitioner other than a physician or practitioner to serve as the initiating visit for PIN services, the PIN services would not necessarily be furnished consistent with our proposed application of the “incident to” regulations as a condition of payment. Further, we believe that practitioners would normally bill an E/M visit in addition to the AWW when medical problems are addressed in the course of an AWW encounter, in accordance with our manual policy providing that a medically necessary E/M visit may be billed when furnished on the same occasion as an AWW in those circumstances (Chapter 12, Section 30.6.1.1.H of the Medicare Claims Processing Manual (Pub, 100-04)).

For purposes of assigning a supervision level for payment, we are proposing to designate PIN services as care management services that may be furnished under general supervision under § 410.26(b)(5). General supervision means the service is furnished under the physician's (or other practitioner's) overall direction and control, but the physician's (or other practitioner's) presence is not required during the performance of the service (§ 410.26(a)(3)).

We propose the following codes for PIN services. As described previously, and in our proposed PIN code descriptors, the term “SDOH need(s)” means an SDOH need(s) that is identified by the billing practitioner as significantly limiting the practitioner’s ability to diagnose or treat the serious, high-risk condition/illness/disease addressed in the initiating E/M visit. “Addressed” means the definition in the CPT E/M Guidelines that we have adopted for E/M visits. Specifically, “[a] problem is a disease, condition, illness,

injury, symptom, finding, complaint, or other matter addressed at the encounter, with or without a diagnosis being established at the time of the encounter. Problem addressed [means the following]: A problem is addressed or managed when it is evaluated or treated at the encounter by the physician or other qualified healthcare professional reporting the service. This includes consideration of further testing or treatment that may not be elected by virtue of risk/benefit analysis or patient/parent/guardian/surrogate choice. Notation in patient's medical record that another professional is managing the problem without additional assessment or care coordination documented does not qualify as being addressed or managed by the physician or other qualified healthcare professional reporting the service. Referral without evaluation (by history, examination, or diagnostic study[ies]) or consideration of treatment does not qualify as being addressed or managed by the physician or other qualified healthcare professional reporting the service. For hospital inpatient and observation care services, the problem addressed is the problem status on the date of the encounter, which may be significantly different than on admission. It is the problem being managed or co-managed by the reporting physician or other qualified healthcare professional and may not be the cause of admission or continued stay" (2023 CPT Codebook, pages. 6 through 8).

For purposes of PIN services, we propose that SDOH means economic and social condition(s) that influence the health of people and communities, as indicated in these same CPT E/M Guidelines (2023 CPT codebook, page 11). We are proposing to adopt CPT's examples of SDOH, with additional examples. Specifically, we are proposing that SDOH(s) may include but are not limited to food insecurity, transportation insecurity, housing insecurity, and unreliable access to public utilities, when they significantly limit

the practitioner's ability to diagnose or treat the serious, high-risk illness/condition/disease. Since Medicare payment is limited to items and services that are reasonable and necessary for the diagnosis or treatment of illness or injury, with respect to addressing SDOH need(s), the focus of PIN services would need to be on addressing particular SDOH need(s) that are interfering with, or presenting a barrier to, diagnosis or treatment of the serious, high-risk condition.

GXXX3 Principal Illness Navigation services by certified or trained auxiliary personnel under the direction of a physician or other practitioner, including a patient navigator or certified peer specialist; 60 minutes per calendar month, in the following activities:

- *Person-centered assessment, performed to better understand the individual context of the serious, high-risk condition.*

- ++ *Conducting a person-centered assessment to understand the patient's life story, strengths, needs, goals, preferences, and desired outcomes, including understanding cultural and linguistic factors.*

- ++ *Facilitating patient-driven goal setting and establishing an action plan.*

- ++ *Providing tailored support as needed to accomplish the practitioner's treatment plan.*

- *Identifying or referring patient (and caregiver or family, if applicable) to appropriate supportive services.*

- **Practitioner, Home, and Community-Based Care Coordination**

++ *Coordinating receipt of needed services from healthcare practitioners, providers, and facilities; home- and community-based service providers; and caregiver (if applicable).*

++ *Communication with practitioners, home-, and community-based service providers, hospitals, and skilled nursing facilities (or other health care facilities) regarding the patient's psychosocial strengths and needs, functional deficits, goals, preferences, and desired outcomes, including cultural and linguistic factors.*

++ *Coordination of care transitions between and among health care practitioners and settings, including transitions involving referral to other clinicians; follow-up after an emergency department visit; or follow-up after discharges from hospitals, skilled nursing facilities or other health care facilities.*

++ *Facilitating access to community-based social services (e.g., housing, utilities, transportation, food assistance) as needed to address SDOH need(s).*

- *Health education- Helping the patient contextualize health education provided by the patient's treatment team with the patient's individual needs, goals, preferences, and SDOH need(s), and educating the patient (and caregiver if applicable) on how to best participate in medical decision-making.*

- *Building patient self-advocacy skills, so that the patient can interact with members of the health care team and related community-based services (as needed), in ways that are more likely to promote personalized and effective treatment of their condition.*

- *Health care access / health system navigation.*

++ *Helping the patient access healthcare, including identifying appropriate practitioners or providers for clinical care, and helping secure appointments with them.*

++ *Providing the patient with information/resources to consider participation in clinical trials or clinical research as applicable.*

- *Facilitating behavioral change as necessary for meeting diagnosis and treatment goals, including promoting patient motivation to participate in care and reach person-centered diagnosis or treatment goals.*

- *Facilitating and providing social and emotional support to help the patient cope with the condition, SDOH need(s), and adjust daily routines to better meet diagnosis and treatment goals.*

- *Leverage knowledge of the serious, high-risk condition and/or lived experience when applicable to provide support, mentorship, or inspiration to meet treatment goals.*

GXXX4 – *Principal Illness Navigation services, additional 30 minutes per calendar month (List separately in addition to GXXX3).*

To help inform whether our proposed descriptor times are appropriate and reflect typical service times, and whether a frequency limit is relevant for the add-on code, we are seeking comment on the typical amount of time practitioners spend per month furnishing PIN services. We are also seeking comment to better understand the typical duration of PIN services, in terms of the number of months for which practitioners furnish PIN services following an initiating visit.

We are proposing that all auxiliary personnel who provide PIN services must be certified or trained to provide all included PIN service elements, and be authorized to perform them under applicable State law and regulations. Under § 410.26(a)(1) of our

regulations, auxiliary personnel must meet any applicable requirements to provide incident to services, including licensure, imposed by the State in which the services are being furnished. Many States have applicable rules and certifications, and there are existing certification programs for navigators working in certain settings of care or with specified conditions, such as cancer navigators, diabetes navigators, cardiovascular navigators, mental health navigators, geriatric care navigators, pediatric navigators, social worker navigators, primary care navigators, general patient advocate navigators, and nurse navigators in ambulatory settings.²⁷ Approximately 48 States have professional certification programs for peer support specialists providing services to patients with substance use or mental health conditions, which is required for billing peer support specialists' services to Medicaid. For substance use and mental health conditions, SAMHSA recently published National Model Standards for Peer Support Certification.²⁸

In States that do not have applicable licensure, certification, or other laws or regulations, we are proposing to require auxiliary personnel providing PIN services to be trained to provide them. Training must include the competencies of patient and family communication, interpersonal and relationship-building, patient and family capacity building, service coordination and systems navigation, patient advocacy, facilitation, individual and community assessment, professionalism and ethical conduct, and the development of an appropriate knowledge base, including specific certification or training on the serious, high-risk condition/illness/disease addressed in the initiating visit.

We are proposing these competencies because we believe they reflect professional

²⁷ <https://resumecat.com/blog/patient-navigator-certifications>.

²⁸ <https://peerrecoverynow.org/product/comparative-analysis-of-state-requirements-for-peer-support-specialist-training-and-certification-in-the-us/> and <https://store.samhsa.gov/sites/default/files/pep23-10-01-001.pdf>.

consensus regarding appropriate core competencies, adjusted to this context.²⁹ We are seeking public comment on the number of hours of training to require, as well as the training content and who should provide the training.

We are proposing that time spent furnishing PIN services for purposes of billing HCPCS codes GXXX3-4 must be documented in the medical record in its relationship to the serious, high-risk illness. The activities performed by the auxiliary personnel, and how they are related to the treatment plan for the serious, high-risk condition, would be described in the medical record, just as all clinical care is documented in the medical record. We would require identified SDOH need(s), if present, to be recorded in the medical record, and for data standardization, practitioners would be encouraged to record the associated ICD-10 Z-code (Z55-Z65) in the medical record and on the claim.

Similar to CHI services (discussed previously in this proposed rule), we believe that many of the elements of PIN services would involve direct contact between the auxiliary personnel and the patient, but may not necessarily be in-person and a portion might be performed via two-way audio. We are seeking to confirm our understanding of where and how PIN services would be typically provided (for example, with or without direct patient contact, in-person, using audio-video, using two-way audio; and whether navigators are typically local to the patient).

We are seeking public comment in particular regarding whether we should require patient consent for PIN services. For care management services that could generally be

[https://www.samhsa.gov/sites/default/files/national-model-standards-for-peer-support-certification.pdf?utm_source=SAMHSA&utm_campaign=4b88ba3e51-EMAIL_CAMPAIGN_2023_06_05_02_41&utm_medium=email&utm_term=0_-4b88ba3e51-%5BBLIST_EMAIL_ID%5D.](https://www.samhsa.gov/sites/default/files/national-model-standards-for-peer-support-certification.pdf?utm_source=SAMHSA&utm_campaign=4b88ba3e51-EMAIL_CAMPAIGN_2023_06_05_02_41&utm_medium=email&utm_term=0_-4b88ba3e51-%5BBLIST_EMAIL_ID%5D)

performed without any direct patient contact, we require advance patient consent to receive the services as a prerequisite to furnishing and billing the services, to avoid patients receiving bills for cost sharing that they might not be expecting to receive. For example, a patient might receive chronic care management services comprised of practitioners coordinating care with each other and reviewing or exchanging medical records between visits, in ways that do not require involving the patient directly. As we have frequently discussed in prior rulemaking for care management services (for example, at 81 FR 80240), we do not have statutory authority to waive cost sharing for care management or other services. Rather, cost sharing remains applicable, except as specified by statute such as for certain preventive services. In recent years, we have required advance documented patient consent to receive most care management services as a condition of the practitioner billing those services, to avoid a situation where the patient is surprised to receive a bill for the associated cost sharing. These consent requirements include informing the patient about applicable cost sharing, the right to discontinue services, and, where applicable, the limitation that payment is made for the service to only one practitioner per month. We have heard from interested parties over time that requiring advance patient consent is an administrative burden and may unnecessarily prevent patient receipt of needed services. We are not proposing to require consent for PIN services, since we believe these services typically would involve direct patient contact, and largely be provided in-person. However, if we hear from public commenters that PIN services would frequently not involve direct contact with the patient, or could extend for periods of time for which the patient might not be expecting

to incur cost sharing obligations (such as several months), we would consider requiring patient consent to receive PIN services in our final rule.

We are proposing that a billing practitioner may arrange to have PIN services provided by auxiliary personnel who are external to, and under contract with, the practitioner or their practice, such as through a community-based organization (CBO) that employs CHWs, if all of the “incident to” and other requirements and conditions for payment of PIN services are met. While we are proposing to allow PIN services to be performed by auxiliary personnel under a contract with a third party, we wish to be clear, as we have in our regulations for current care management services, that there must be sufficient clinical integration between the third party and the billing practitioner in order for the services to be fully provided, and the connection between the patient, auxiliary personnel, and the billing practitioner must be maintained. As we discussed in a similar context for care management services the CY 2017 PFS final rule, if there is little oversight by the billing practitioner or a lack of clinical integration between a third party providing the services and the billing practitioner, we do not believe PIN services, as we propose to define them, could be fully performed; and therefore, in such cases, PIN services should not be billed (81 FR 80249). We would expect the auxiliary personnel performing the PIN services to communicate regularly with the billing practitioner to ensure that PIN services are appropriately documented in the medical record, and to continue to involve the billing practitioner in evaluating the continuing need for PIN services to address the serious, high-risk condition.

In the CY 2023 final rule (87 FR 69790) and as explained in the CY 2023 PFS proposed rule (87 FR 46102), where we refer to community-based organizations, we

mean public or private not-for-profit entities that provide specific services to the community or targeted populations in the community to address the health and social needs of those populations. They may include community-action agencies, housing agencies, area agencies on aging, centers for independent living, aging and disability resource centers or other non-profits that apply for grants or contract with healthcare entities to perform social services. As described earlier, they may receive grants from other agencies in the U.S. Department of Health and Human Services, including Federal grants administered by the Administration for Children and Families (ACF), Administration for Community Living (ACL), the Centers for Disease Control and Prevention (CDC), the Substance Abuse and Mental Health Services Administration (SAMHSA), or State-funded grants to provide social services. Generally, we believe such organizations know the populations and communities they serve, and may have the infrastructure or systems in place to assist practitioners to provide PIN services. We understand that many CBOs provide social services and do other work that is beyond the scope of PIN services, but we believe they are well-positioned to develop relationships with practitioners for providing reasonable and necessary PIN services.

We are proposing that only one practitioner per beneficiary per calendar month could bill for PIN services for a given serious, high-risk condition, because we are concerned about potential care fragmentation if the patient has more than one navigator for their condition during a given month. Our proposal would allow the patient to have a single point of contact for navigation of their condition.

We are proposing that the practitioner could bill separately for other care management services during the same month as PIN, if time and effort are not counted

more than once, requirements to bill the other care management services are met, and the services are medically reasonable and necessary.

Similar to CHI service (as discussed previously in this proposed rule), there are aspects of PIN services, or PIN services for certain conditions, that may be covered under a Medicaid program. When Medicare and Medicaid cover the same services for patients eligible for both programs, Medicare generally is the primary payer in accordance with section 1902(a)(25) of the Act. We are seeking public comment regarding whether States typically cover services similar to PIN under their Medicaid programs, and whether such coverage would be duplicative of the PIN service codes. We also seek comment on if there are other service elements not included in the PIN service codes that are part of associated care that should be included in the PIN service codes, or are important in navigation for high-risk conditions, where CMS should consider coding and payment in the future. For example, are there circumstances when clinical navigators, under the supervision of another professional, typically spend time face-to-face with patients that the PIN services codes, as currently described, may not fully account for?

iii. Proposed PIN Services Valuation

For HCPCS code GXXX3, we are proposing a work RVU of 1.00 based on a crosswalk to CPT code 99490 (Chronic care management services with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised, or monitored; first 20 minutes of clinical staff time directed by a physician or other qualified health care

professional, per calendar month) as we believe these values most accurately reflect the resource costs associated when the billing practitioner performs PIN services. CPT code 99490 has an intraservice time of 25 minutes and the physician work is of similar intensity to our proposed HCPCS code GXXX3. Therefore, we are proposing a work time of 25 minutes for HCPCS code GXXX3 based on this same crosswalk to CPT code 99490. We are proposing to use this crosswalk as well to establish the direct PE inputs for HCPCS code GXXX3.

For HCPCS code GXXX4, we are proposing a crosswalk to the work RVU and direct PE inputs associated with CPT code 99439 (*Chronic care management services with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised, or monitored; each additional 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)*) as we believe these values reflect the resource costs associated with the clinician's direction of clinical staff who are performing the PIN services. Therefore, we are proposing a work RVU of 0.70 and a work time of 20 minutes for HCPCS code GXXX4.

(28) Maternity Services (CPT codes 59400, 59410, 59425, 59426, 59430, 59510, 59515, 59610, 59614, 59618, 59622)

In the CY 2021 PFS final rule with comment period (85 FR 84554-84555), we finalized our proposal to revalue the bundled maternity codes used to bill for delivery,

antepartum, and postpartum maternity care services to account for increases in the values of office/outpatient E/M services. These codes are all designated with a unique global period indicator “MMM.” There are 11 MMM codes that include E/M visits as part of their valuation.

For CY 2024, we are proposing to update the work RVUs and work times of these MMM codes to reflect any relevant E/M updates associated with their global periods that were finalized in CY 2023. Table 11 contains a list of these codes and the proposed work RVUs for CY 2024. MMM codes are unique within the PFS in that they are the only global codes that provide a single payment for almost 12 months of services, which include a relatively large number of E/M visits performed along with delivery services and imaging; and were valued using a building-block methodology as opposed to the magnitude estimation method.

TABLE 11: Current and Proposed Value for Each Maternity Services Code

CPT code	Current Work RVU value	2023 E/M adjustment value	New Work RVU Value
59400	36.58	0.42	37.00
59410	18.34	0.42	18.76
59425	7.80	0.00	7.80
59426	14.30	0.00	14.30
59430	3.22	0.00	3.22
59510	40.39	0.66	41.05
59515	22.13	0.66	22.79
59610	38.29	0.42	38.71
59614	20.06	0.42	20.48
59618	40.91	0.66	41.57
59622	22.66	0.66	23.32

TABLE 12: CY 2024 Work RVUs for New, Revised, and Potentially Misvalued

Codes

HCPCS	Descriptor	Current work RVU	RUC work RVU	CMS work RVU	CMS time refinement
22857	Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression); single interspace, lumbar	27.13	27.13	27.13	No
22860	Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression); second interspace, lumbar (List separately in addition to code for primary procedure)	C	7.50	6.88	No
2X000	Arthrodesis, sacroiliac joint, percutaneous, with image guidance, including placement of intra-articular implant(s) (eg, bone allograft[s], synthetic device[s]), without placement of transfixation device	NEW	7.86	7.86	No
2X002	Anterior thoracic vertebral body tethering, including thoracoscopy, when performed; up to 7 vertebral segments	NEW	32.00	32.00	No
2X003	Anterior thoracic vertebral body tethering, including thoracoscopy, when performed; 8 or more vertebral segments	NEW	35.50	35.50	No

F. Evaluation and Management (E/M) Visits

1. Background

Over the past several years, we have engaged in a multi-year effort with the American Medical Association (AMA) and other interested parties to update coding and payment for evaluation and management (E/M) visits, so that they better reflect the current practice of medicine, are less administratively complex, and are paid more accurately under the PFS. This work is critical to improve payment accuracy and help reduce practitioner burnout.

E/M visits comprise approximately 40 percent of all allowed charges under the PFS. The office/outpatient (O/O) E/M visits comprise approximately half of these allowed charges (approximately 20 percent of total PFS allowed charges), and Other E/M visits (such as inpatient/observation visits, nursing facility visits and home/residence visits) comprise the other half (approximately 20 percent of total PFS allowed charges). As we have discussed in prior rules, within the E/M services represented in these percentages, there is wide variation in the volume and level of E/M visits billed by different specialties (84 FR 62844). According to Medicare claims data, E/M visits are furnished by nearly all specialties, but represent a greater share of total allowed services for physicians and other practitioners who do not routinely furnish procedural interventions or diagnostic tests. Accordingly, our policies for revaluation of E/M visits have a significant impact on relative resource valuation under the PFS, which could potentially impact patient care more broadly.

In this section of our proposed rule, we continue our work to address two outstanding issues in E/M visit payment: implementing separate payment for the O/O E/M visit complexity add-on code for separate payment, and our definition of split (or shared) visits which we delayed last year.

For CY 2018, we solicited public comment regarding how we could comprehensively reform the E/M documentation guidelines to reduce administrative and clinical burden, improve

payment accuracy, and better align E/M coding and documentation with the current practice of medicine (82 FR 34078-34079, 82 FR 53163). We believed that the documentation requirements for history and physical exam were particularly outdated clinically and that medical decision making (MDM) and time were the more significant factors in distinguishing visit levels (82 FR 53164). Public commenters recommended a transparent, iterative, and perhaps transitional approach, and some commenters suggested that CMS and the AMA should also undertake revision and revaluation of the E/M visit code set itself, in addition to updating the documentation guidelines (82 FR 53165). Having reviewed the public comments, we noted they illustrated how difficult it is to utilize or rely upon such a relatively small set of codes to describe and pay for the work of a wide range of physicians and practitioners in many vastly different clinical contexts; that E/M documentation guidelines were not simply a matter of administrative burden, but were also clinically outdated and intimately related to the definition and description of E/M work as well as valuation; and that there were different opinions on potential redefinition and revaluation of the E/M code set depending on practitioner specialty, and the type of work dominating the specialty (for example, primary care, so-called “cognitive” specialty work, or global procedures that have E/M visits bundled in rather than separately performed and documented) (82 FR 53165). We stated that we would continue working on these issues with interested parties in future years.

Because we agreed with commenters that we should take an incremental approach to these issues, the following year we proposed changes largely limited to the O/O E/M visit code family (83 FR 59628). In our CY 2019 PFS final rule, we finalized documentation changes, some of which took effect in CY 2019 (83 FR 59628-59535), while others (notably choice of MDM or time for supporting documentation) would be effective in CY 2021 in conjunction with finalized coding and payment changes for O/O E/M visits (83 FR 59636-59645). The coding and payment changes included a single payment rate for levels 2 through 4 O/O E/M visits

(retaining separate payment for level 5 visits to account for the most complex patients and visits); two HCPCS add-on codes to provide separate, additional payments for the resource costs involved in furnishing certain types of O/O E/M visit care, specifically visit complexity inherently associated with primary care and non-procedural specialty care; and a third HCPCS code for O/O E/M visits taking extended amounts of time (83 FR 59638).

In January-February 2019, we held listening sessions, and we learned that the AMA was convening an E/M Workgroup to develop an alternative solution to some of these issues (84 FR 40673). The AMA proceeded to revise and resurvey the O/O E/M visit code family (see 84 FR 62844 through 62847). Effective January 1, 2021, the CPT Editorial Panel redefined the codes for O/O E/M visits such that the furnishing practitioner may select the level of visit to bill based either on the amount of practitioner time spent performing the visit or the level of medical decision-making (MDM) involved. The CPT Editorial Panel redefined MDM in the CPT E/M Guidelines, which are an accompanying set of CPT interpretive guidelines delineating different levels of MDM and various other reporting parameters. Additionally, history of present illness (History) and a physical exam were no longer used to select the O/O E/M visit level. These service elements were updated to remove reliance on clinically outdated parameters to contribute to selection of visit level, such as number of body systems reviewed, and to require instead that a medically appropriate history and exam are performed. Also, effective January 1, 2021, the CPT Editorial Panel revised the O/O E/M visit descriptor times. Previously, the CPT code descriptors included typical service times, but they were revised to specify new time ranges that must be furnished in order to select a given visit level using time. The AMA RUC resurveyed the O/O E/M visit CPT codes, and provided us with revaluation recommendations that we then addressed in our CY 2020 PFS proposed rule, a year in advance of when the revised codes would take effect in CY 2021 (84 FR 40675 through 40678).

In our CY 2020 PFS final rule, we generally adopted the revised O/O E/M code set and the related changes in the CPT E/M Guidelines, including the revised approach to visit level selection and documentation, for payment purposes under the PFS effective January 1, 2021 (84 FR 62844 through 62859). While we accepted the revised CPT codes and approach for the O/O E/M visits, we finalized Medicare-specific coding for prolonged O/O service codes, because we were concerned that the CPT codes were administratively complex, and their use would have impacted our ability to tell how much total time was spent with the patient and could have resulted in inappropriately inflated payment (84 FR 62849 through 62850, and 85 FR 84572 through 84575).

In our CY 2020 PFS final rule, we generally accepted the RUC recommendations, which reflected increased service times (84 FR 62851 through 62854). This resulted in increased values for the O/O E/M visit codes beginning in CY 2021. However, since we believed these increased valuations still did not account for the resources involved in furnishing certain kinds of care included in the O/O E/M visit code set, in the CY 2021 PFS final rule, we retained our add-on codes for visit complexity inherently associated with primary care and non-procedural specialty care, though we refined and consolidated them into a single code, a HCPCS add-on code G2211 (*O/O E/M visit complexity*) that can be reported in conjunction with O/O E/M visits to better account for additional resources associated with primary care, or similarly ongoing medical care related to a patient's single, serious condition, or complex condition (84 FR 62854 through 62856, 85 FR 84571). (Hereafter in this rule, we refer to this code as the O/O E/M visit complexity add-on).

After we issued the CY 2021 PFS final rule, section 113 of Division CC of the Consolidated Appropriations Act, 2021 (Pub. L. 116-260, December 27, 2020) (CAA, 2021) imposed a moratorium on Medicare payment for this service by prohibiting CMS from making payment under the PFS for services described by HCPCS code G2211 (or any successor or

substantially similar code) before January 1, 2024. Accordingly, the O/O E/M visit complexity add-on code can be reported, but it is currently assigned a bundled payment status indicator. See our fact sheet available at Physician Fee Schedule (PFS) Payment for Office/Outpatient Evaluation and Management (E/M) Visits – Fact Sheet³⁰ (*cms.gov*).

In the CY 2022 PFS final rule, we established revised payment rules for split (or shared) visits (86 FR 65150 through 65159). The following year the CPT Editorial Panel defined a split (or shared) visit for the first time in the CPT E/M Guidelines for 2023. However, we did not adopt the CPT definition as it did not conform with our established final policy or address which practitioner should report a shared visit.

For CY 2023, the CPT Editorial Panel also revised the rest of the E/M visit code families (except critical care services) to match the general framework of the O/O E/M visits, including inpatient and observation visits, emergency department (ED) visits, nursing facility visits, domiciliary or rest home visits, home visits, and cognitive impairment assessment. We refer to these other E/M visit code families as "Other E/M" visits or CPT codes, as relevant. Effective January 1, 2023, the CPT Editorial Panel redefined the Other E/M visits so that they parallel the O/O E/M visits, where visit level is selected based on the amount of practitioner time spent with the patient or the level of MDM as redefined in the CPT E/M Guidelines. As for the O/O E/M visits, a medically appropriate history and/or physical exam is a required element of the services, but no longer impacts the Other E/M visit level. The CPT Editorial Panel also revised the service times within the descriptors, the associated CPT prolonged service codes, and the CPT E/M Guidelines for the Other E/M CPT codes. The CPT Editorial Panel also consolidated a considerable number of the Other E/M CPT codes, with inpatient and observation visits being combined into a single code set, and home and domiciliary visits being combined into a single

³⁰ <https://www.cms.gov/files/document/physician-fee-schedule-pfs-payment-officeoutpatient-evaluation-and-management-em-visits-fact-sheet.pdf>.

code set. The CPT Editorial Panel created one new CPT code for prolonged inpatient services by physicians and other qualified healthcare professionals on the date of the E/M visit. Finally, the RUC resurveyed the Other E/M visits and associated prolonged service codes, and provided revaluation recommendations to CMS.

We addressed all of these changes to the Other E/M visit families in the CY 2023 PFS final rule (87 FR 69586 through 69616). In that final rule, we adopted the revised CPT codes and descriptors for Other E/M visits, except for prolonged services for which we finalized Medicare-specific coding. We also adopted the CPT E/M Guidelines for levels of MDM as revised for 2023. Regarding valuation, we adopted most of the RUC-recommended values for Other E/M visits, which increased their relative valuation in aggregate. However, we stated our belief that certain types of O/O E/M visits remain undervalued, given the moratorium on separate payment for the O/O E/M visit complexity add-on (87 FR 69588). We expressed concern about assumptions made in the RUC recommendations for Other E/M visits that patient needs were inherently more complex, or work was more intense for E/M visits furnished in non-office settings (for example, inpatient, ED, and home settings) when compared to the office settings (87 FR 69587 through 69588). We stated that this direct comparison between Other E/M visits and the O/O E/M visit codes may not be appropriate or accurate, and laid out reasons why practitioners in office settings may expend more resources than practitioners in institutional and other settings. We note that the survey times for O/O E/M visits increased significantly when resurveyed (85 FR 50123), while times for Other E/M visits generally decreased significantly or remained the same when resurveyed, despite the level of MDM remaining constant (87 FR 69598, 69605). To the extent we adopted the RUC-recommended values for Other E/M visits beginning in CY 2023, we expressed that we did not agree that the RUC-recommended relative values for E/M visits fully accounted for the complexity of certain kinds of visits, especially for

those in the office setting, nor do they fully reflect appropriate relative values, since separate payment is not yet made for the O/O E/M visit complexity add-on (87 FR 69588).

During the CAA, 2021 moratorium on separate payment for the O/O E/M visit complexity add-on, interested parties have continued to engage CMS about the appropriate valuation of O/O E/M visits relative to other PFS services, including through public comments on the proposed revaluation of Other E/M visits (87 FR 70218), as well as in meetings and letters submitted to CMS outside of the rulemaking process. Anticipating the end of the CAA, 2021 moratorium, interested parties including the AMA, several medical associations, and others recently approached CMS outside of the rulemaking process with recommendations regarding implementation and potential refinements to the service beginning in 2024 to ensure the appropriate relative valuation of O/O E/M visits. Interested parties have also continued to approach CMS and the CPT Editorial Panel with questions and recommendations about payment rules for split (or shared) visits.

2. Office/Outpatient (O/O) E/M Visit Complexity Add-on Implementation

a. Background

As discussed above, in the CY 2021 PFS final rule, CMS refined the O/O E/M visit complexity add-on code, GPC1X (which was replaced by HCPCS code G2211), to describe intensity and complexity inherent to O/O E/M visits associated with medical care services that serve as the continuing focal point for all needed health care services and/or with medical care services that are part of ongoing care related to a patient's single, serious, or complex condition. (85 FR 84569-84571). While we adopted the AMA RUC recommendations for the revised O/O E/M CPT visit codes, those values did not fully account for the resource costs associated with primary care and other longitudinal care of complex patients. Under our final policy, which was delayed by the CAA, 2021 before it was implemented, the O/O E/M visit complexity add-on code could be reported with all O/O E/M visit levels. We disagreed with comments suggesting

that billing of the O/O E/M visit complexity add-on code should be restricted to higher level office/outpatient E/M visits; and responded that, given the wide variety of visit types billable with the office/outpatient E/M visit code set, we did not believe that the value associated with the typical visit accounts for the additional resources associated with primary care or ongoing care related to a patient's single, serious, or complex chronic condition, regardless of the visit level. The full descriptor for the O/O E/M visit complexity add-on code, as refined in the CY 2021 PFS final rule, is HCPCS code G2211 (*Visit complexity inherent to evaluation and management associated with medical care services that serve as the continuing focal point for all needed health care services and/or with medical care services that are part of ongoing care related to a patient's single, serious condition or a complex condition. (Add-on code, list separately in addition to office/outpatient evaluation and management visit, new or established)*) (85 FR 84571) We also estimated that the O/O E/M visit complexity add-on service would be reported by specialties that rely on office/outpatient E/M visits to report the majority of their services and would be billed in addition to those E/M visits. While we did not explicitly prohibit billing the O/O E/M visit complexity add-on in conjunction with visits that are reported with various modifiers, and did not exclude those from our utilization estimates, we stated we did not expect the add-on service to be reported for visits billed with a payment modifier, for example, to identify a separately billable E/M visit in conjunction with a minor procedure (85 FR 84571 through 84572). We stated that visits reported with payment modifiers are likely to involve resources that are distinct from the stand-alone O/O E/M visits for primary care and other longitudinal care of complex patients, and that we may consider this issue in potential future rulemaking. We further stated that we do not expect the O/O E/M visit complexity add-on code to be reported when the O/O E/M visit is reported with payment modifiers such as modifier -25 which describes separately billed visits on the same day as another visit or procedure (see our

fact sheet, identifying additional modifiers, available at Physician Fee Schedule (PFS) Payment for Office/Outpatient Evaluation and Management (E/M) Visits – Fact Sheet (*cms.gov*)).

Interested parties have continued to express uncertainty about when it would be appropriate to report the O/O E/M visit complexity add-on service. Some interested parties have expressed larger concerns about potential reductions to the PFS CF or redistributive impacts among specialties if we were to implement the O/O E/M visit complexity add-on code. In the CY 2021 PFS final rule, we clarified and refined the service definition to alleviate some of these concerns and revised our utilization estimates (85 FR 84572). Conversely, some interested parties, specifically practitioners that rely on office/outpatient E/M visits to report the majority of their services, who could use the add-on code to better reflect the resources they use to furnish complex longitudinal services expressed continued support for our policy. We reiterated our belief that the O/O E/M visit complexity add-on reflects the time, intensity, and PE resources involved when practitioners furnish the kinds of O/O E/M office visit services that enable them to build longitudinal relationships with all patients (that is, not only those patients who have a chronic condition or single high-risk disease) and to address the majority of patients' health care needs with consistency and continuity over longer periods of time. In response to comments, we also made further refinements to the HCPCS code descriptor to clarify that the code applies to a serious condition rather than any single condition. We also acknowledged concerns that, given the request by some medical societies for additional time to educate their members about appropriate use of the O/O E/M visit complexity add-on code, ongoing implementation of the revisions to the O/O E/M visit code set, electronic health records integration, and the persistence of the COVID-19 pandemic, practitioners that rely on O/O E/M visits to report the majority of their services are not likely to report the complexity add-on code with every office visit. However, we disagreed with commenters who thought the O/O E/M visit complexity add-on code would be billed with only 10 to 25 percent of O/O E/M services. Because we had not

implemented any additional policies that restricted the billing of this code, we estimated that the add-on code would be billed with 90 percent of O/O E/M visits billed by certain physician specialties (roughly 58 percent of all office/outpatient E/M visits).

b. Proposal for O/O E/M Visit Complexity Add-on HCPCS code G2211

Interested parties have continued to engage with us and provide recommendations for implementation of the O/O E/M visit complexity add-on. Some commenters recommended that CMS delay the implementation of HCPCS add-on code G2211, citing concerns about the expected budget neutrality adjustment necessitated by implementation of the O/O E/M visit complexity add-on and redistributive impact on PFS payment (85 FR 84572). Many commenters who rely upon O/O E/M visits to report the majority of their services continued to be supportive of HCPCS add-on code G2211 (85 FR 84570) and have recommended that we speedily implement it. Some of these commenters also recommended ways to clarify the intended use of the O/O E/M visit complexity add-on code, which could reduce redistributive impacts. Finally, as noted above, the values we established for the revised O/O E/M CPT codes in the CY 2021 PFS final rule were finalized in concert with a policy that would have provided separate payment for the new add-on code G2211 (87 FR 69588). To the extent we adopted the RUC-recommended values for Other E/M visits beginning in CY 2023, we expressed that we did not agree that the RUC-recommended relative values for E/M visits fully reflected appropriate relative values, since separate payment is not yet made for HCPCS code G2211.

The CAA, 2021 moratorium on Medicare payment under the PFS for HCPCS code G2211 will end on December 31, 2023. We are proposing to change the status of HCPCS code G2211 to make it separately payable by assigning the “active” status indicator, effective January 1, 2024. After considering feedback we have received from interested parties, both through the CY 2021 PFS rulemaking process and during the moratorium, we are also proposing several policy refinements (with respect to HCPCS code G2211). We stated in the CY 2021 PFS final

rule that we would not expect HCPCS add-on code G2211 to be reported when the O/O E/M service is reported with a payment modifier, such as the modifier -25, which denotes a separately billable E/M service by the same practitioner furnished on the same day of a procedure or other service (85 FR 84572). We continue to believe that separately identifiable O/O E/M visits occurring on the same day as minor procedures (such as zero-day global procedures) have resources that are sufficiently distinct from the costs associated with furnishing stand-alone O/O E/M visits to warrant different payment (85 FR 84572). As such we are proposing that the O/O E/M visit complexity add-on code, HCPCS code G2211, would not be payable when the O/O E/M visit is reported with payment modifier-25.

Interested parties have also requested that we reconsider our previous utilization assumptions. In the CY 2021 PFS final rule, we had assumed that specialties that rely on O/O E/M visit codes to report the majority of their services would be most likely to report the O/O E/M visit complexity add-on code, and that they would report the add-on code with every O/O E/M visit they report. We acknowledged commenters' concerns that, given the request by some medical societies to educate their members about appropriate use, and ongoing implementation of the revisions to the office/outpatient E/M visit code set, and electronic health records integration, practitioners that rely on office/outpatient E/M visits to report the majority of their services would not be likely to report HCPCS code G2211 with every O/O E/M visit they report (85 FR 84572).

Interested parties have presented reasons we find persuasive that such practitioners would not be likely to report HCPCS code G2211 with every O/O E/M visit they report. They reasoned that many practitioners delivering care in settings specifically designed to address acute health care needs, without coordination or follow-up, will regularly have encounters with patients that are not part of continuous care.

Furthermore, in contrast to situations, where the patient's overall, ongoing care is being managed, monitored, and/or observed by a specialist for a particular disease condition, we continue to believe that there are many visits with new or established patients where the O/O E/M visit complexity add-on code would not be appropriately reported, such as when the care furnished during the O/O E/M visit is provided by a professional whose relationship with the patient is of a discrete, routine, or time-limited nature; such as, but not limited to, a mole removal or referral to a physician for removal of a mole; for treatment of a simple virus; for counseling related to seasonal allergies, initial onset gastroesophageal reflux disease; treatment for a fracture; and where comorbidities are either not present or not addressed, and/or when the billing practitioner has not taken responsibility for ongoing medical care for that particular patient with consistency and continuity over time, or does not plan to take responsibility for subsequent, ongoing medical care for that particular patient with consistency and continuity over time (85 FR 84570 and 84571).

These considerations taken together with our proposal that the O/O E/M visit complexity add-on code, HCPCS code G2211, would not be payable when the O/O E/M visit is reported with payment modifier -25 have informed our revised utilization assumptions. Taking into consideration the comments received by interested parties, and the reasons discussed above, we now estimate that HCPCS code G2211 will be billed with 38 percent of all O/O E/M visits initially. We calculated these revised utilization assumptions by considering the uptake of new codes in prior years, and the O/O E/M billing patterns of all specialties. Specifically, we took into account the likelihood that primary care specialties will have a higher utilization of the add-on code than other specialties, surgical specialties will have the lowest utilization since they are less likely to establish longitudinal care relationships with patients, and other specialists are more likely to have longitudinal care relationships than surgical specialties but less likely than primary care specialists. We also revised our estimates by excluding (1) claims from

practitioners participating in CMS capitated models, and (2) claims for established patient visits performed by certain specialties that are unlikely to have a longitudinal care relationship with a beneficiary. We also accounted for the proportion of visits billed that were furnished as consults or for the purpose of obtaining a second clinical opinion and excluded these types of visits from our estimates. We estimate that when fully adopted, HCPCS code G2211 will be billed with 54 percent of all O/O E/M visits. This fully adopted estimate is informed by considering uptake of new codes after several years. We seek comment on these utilization assumptions and the application of this proposed policy for CY 2024.

c. Request for Comment About Evaluating E/M Services More Regularly and Comprehensively

Over the last several years, we have received suggestions/recommendations outside of the rulemaking process that CMS consider using a different approach for valuing services that relies on research and data other than the AMA RUC's specialty-specific valuation recommendations. These commenters have highlighted that the evolving practice of medicine looks significantly different than it did when the resource-based relative value scale (RBRVS) was established three decades ago. Disease prevention and health promotion have grown in practice and patient expectations are higher for the management of hypertension, diabetes, and hypercholesterolemia. Additionally, more pharmaceuticals and new biologics have expanded therapeutic options for non-procedural care. Commenters have suggested convening expert panels that might review pertinent research and recommend resource recalibrations for purposes of updating relative values under the PFS. The commenters suggested that such independent assessments could support CMS and the broader health delivery and health finance community in addressing growing distortions in resource allocations under the PFS for certain types of services, including evaluation and management visits and other non-procedural/non-surgical services.

For many years, CMS has worked to address coding and payment deficiencies, explicitly focusing on instances where resources are not well accounted for in the inputs for certain

services, including where significant differences in relative resources involved in furnishing care are not reflected in the coding distinctions, or where too-specific coding makes valuation at appropriate intervals impractical. As we continue ongoing work to establish resource-based relative units for PFS services, we also seek public comment about the potential range of approaches CMS could take to improve the accuracy of valuing services. We are especially interested in how we might improve the accuracy of valuation for services, and we are seeking information about how we might evaluate E/M services with greater specificity, more regularly and comprehensively.

As we consider how CMS can potentially move forward with reforms to the way we establish values for E/M and other services, we are particularly interested in receiving comments from the public on the following questions:

- a. Do the existing E/M HCPCS codes accurately define the full range of E/M services with appropriate gradations for intensity of services?
- b. Are the methods used by the RUC and CMS appropriate to accurately value E/M and other HCPCS codes?
- c. Are the current Non-E/M HCPCS codes accurately defined?
- d. Are the methods used by the RUC and CMS appropriate to accurately value the non-E/M codes?
- e. What are the consequences if services described by HCPCS codes are not accurately defined?
- f. What are the consequences if services described by HCPCS codes are not accurately valued?
- g. Should CMS consider valuation changes to other codes similar to the approach in section II.J.5. of this rule?

We are particularly interested in ways that CMS could potentially improve processes and methodologies, and we request that commenters provide specific recommendations on ways that we can improve data collection and to make better evidence-based and more accurate payments for E/M and other services. We are particularly interested in recommendations on ways that we can make more timely improvements to our methodologies to reflect changes in the Medicare population, treatment guidelines and new technologies that represent standards of care. We are also interested in recommendations that would ensure that data collection from, and documentation requirements for, physician practices are as least burdensome as possible while also maintaining strong program integrity requirements. Finally, we are also interested in whether commenters believe that the current AMA RUC is the entity that is best positioned to provide -recommendations to CMS on resource inputs for work and PE valuations, as well as how to establish values for E/M and other physicians' services; or if another independent entity would better serve CMS and interested parties in providing these recommendations.

3. Split (or Shared) Visits

The split (or shared) "substantive portion" policy for services furnished in facility settings was reflected in subregulatory guidance until it was withdrawn in May 2021, in response to a petition under the, since rescinded, Good Guidance regulation (see 87 FR 44002 (February 25, 2022)). In the CY 2022 PFS final rule (86 FR 65150 through 65159), we finalized a policy for evaluation and management (E/M) visits furnished in a facility setting, to allow payment to a physician for a split (or shared) visit (including prolonged visits), where a physician and non-physician practitioner (NPP) provide the service together (not necessarily concurrently) and the billing physician personally performs a substantive portion of the visit. Commenters were generally supportive of our CY 2022 proposals; however, there were divided comments with regard to our proposed definition of "substantive portion." Some commenters preferred the use of

medical decision making (MDM) or one of the three key visit components as opposed to time for purposes of defining the "substantive portion" of the service.

a. Background

A split (or shared) visit refers to an E/M visit performed by both a physician and an NPP in the same group practice. In the non-facility (for example, office) setting, the rules for "incident to" billing apply under this circumstance. However, "incident to" services are not available for services furnished in a facility setting. Longstanding CMS policy has been that, for split (or shared) visits in the facility (for example, hospital) setting, the physician can bill for the services if they perform a substantive portion of the encounter. Otherwise, the NPP would bill for the service. Section 1833(a)(1)(N) of the Act specifies that payment is made for services furnished and billed by a physician at 100 percent of the PFS rate, while under section 1833(a)(1)(O)(i) of the Act, certain NPPs are paid for the services they furnish and bill for at a reduced PFS rate (85 percent of the PFS).

For CY 2023, after considering the public comments we received, we finalized that we would delay implementation of our definition of the substantive portion as more than half of the total practitioner time until January 1, 2024. We defined "substantive portion" in the CY 2022 PFS final rule (86 FR 65152 through 65156) and provided for billing of split (or shared) visits in certain settings (86 FR 65156 through 65157) and for certain patient types (new and established) (86 FR 65156). After consideration of the public comments on the CY 2022 PFS proposed rule, we finalized a phased-in approach to this policy (86 FR 65153). For CY 2022, we finalized the definition of "substantive portion" as one of the following: either one of the three key E/M elements (that is, history, exam, or MDM) or more than half of total time. We also stated that we would delay the full implementation of the definition of "substantive portion" as more than half of total time until CY 2023 (86 FR 65152 and 65153).

Additionally, in the CY 2022 PFS final rule (86 FR 65158 through 65159), we finalized our proposal to create a payment modifier (modifier FS), to describe split (or shared) visits (see 86 FR 65158 through 65159 for this discussion). Over time, implementing and using this modifier will better enable us to quantify split (or shared) visits and better understand the billing patterns of practitioners that typically furnish them. Such information is helpful to CMS for program integrity purposes and may also inform us on whether we need to clarify or further revise the policy for these services in future rulemaking. To date, we have roughly one year's worth of claims data from the time the modifier was instituted as part of our ongoing engagement with interested parties. We have continued to hear concerns about our intent to implement our policy to use more than half of the total time to define the "substantive portion" of a split or shared visit, and have received requests to continue to recognize MDM as the "substantive portion." Many of these concerns specifically reference disruptions to current team-based practice patterns, and the potential for significant adjustments to the practice's internal processes or information systems to allow for tracking visits based on time, rather than MDM. With these concerns in mind, in the CY 2023 PFS final rule (87 FR 69614 through 69616), we finalized a policy to delay implementation of our definition of substantive portion as more than half of the total practitioner time until January 1, 2024.

After much consideration, we are proposing to delay the implementation of our definition of the "substantive portion" as more than half of the total time through at least December 31, 2024 for the same reasons outlined in the CY 2023 PFS final rule (87 FR 69614 through 69616). We are proposing to maintain the current definition of substantive portion for CY 2024 that allows for use of either one of the three key components (history, exam, or MDM) or more than half of the total time spent to determine who bills the visit. This proposed additional delay allows interested parties to have another opportunity to comment on this policy, and gives CMS time to consider more recent feedback and evaluate whether there is a need for additional rulemaking on

this aspect of our policy. We are interested in how facilities are currently implementing our split (or shared) services policy in their workflows and how facilities are currently accounting for services of billing practitioners that are performed split (or shared). We are also interested in how to better account for the services of the billing practitioner in team-based care clinical scenarios. We understand that the AMA CPT Editorial Panel is considering revisions to aspects of split or shared visits that may impact our policies, but those changes may not be finalized before this proposed rule is published. We will review the AMA CPT Editorial Panel's changes to split or shared visits when and if available before the final rule and in the context of our policy proposal. We will consider any changes that are made and their relationship to our previously finalized policies, and whether a further implementation delay beyond CY 2024 or revision of the definition of substantive portion is warranted. We would address any changes through future rulemaking.

We are proposing to amend 42 CFR 415.140 to revise the definition of "substantive portion" in the interim while we continue to analyze and collect information from interested parties and commenters as to whether we should permanently modify our current definition. We note the current definition of "substantive portion" applies for visits other than critical care visits furnished in CY 2022 through CY 2024. We are amending § 415.140 by removing "the year 2022 and 2023" and adding in its place "years 2022 through 2024" after the phrase "For visits other than critical care visits furnished in calendar." Therefore, the proposed paragraph would specify, for visits other than critical care visits furnished in calendar years 2022 through 2024, *substantive portion* means either one of the three key components (history, exam, or MDM) or more than half of the total time spent by the physician and NPP performing the split (or shared) visit.

G. Geographic Practice Cost Indices (GPCIs)

1. Background

Section 1848(e)(1)(A) of the Act requires CMS to develop separate Geographic Practice Cost Indices (GPCIs) to measure relative cost differences among localities compared to the national average for each of the three fee schedule components (that is, work, practice expense (PE), and malpractice (MP)). Section 1848(e)(1)(E) of the Act provides for a 1.0 floor for the work GPCIs for the purposes of payment for services furnished on or after January 1, 2004, and before January 1, 2024. Congress recently extended the 1.0 work GPCI floor only through December 31, 2023, in division CC, section 101 of the Consolidated Appropriations Act, 2021 (Pub. L. 116-260, enacted December 27, 2020). Therefore, the CY 2024 work GPCIs and summarized GAFs do not reflect the 1.0 work floor. See Addenda D and E to this proposed rule for the CY 2024 GPCIs and summarized GAFs. These Addenda are available on the CMS website under the supporting documents section of the CY 2024 PFS proposed rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>.

2. Review of the California Fee Schedule Areas Used for Payment for CY 2024

Section 220(h) of the Protecting Access to Medicare Act (PAMA) (Pub. L. 113-93, April 1, 2014) added a new section 1848(e)(6) to the Act that modified the fee schedule areas used for payment purposes in California beginning in CY 2017. Prior to CY 2017, the fee schedule areas used for payment in California were based on the revised locality structure that was implemented in 1997 as previously discussed. Beginning in CY 2017, section 1848(e)(6)(A)(i) of the Act required that the fee schedule areas used for payment in California must be Metropolitan Statistical Areas (MSAs) as defined by the Office of Management and Budget (OMB) as of December 31 of the previous year; and section 1848(e)(6)(A)(ii) of the Act required that all areas not located in an MSA must be treated as a single rest-of-State fee schedule area. The resulting modifications to California's locality structure increased its number of fee schedule areas from 9 under the previous locality structure to 27 under the MSA-based locality structure; although for

the purposes of payment, the actual number of fee schedule areas under the MSA-based locality structure is 32. We refer readers to the CY 2017 PFS final rule (81 FR 80267) for a detailed discussion of this operational decision.

Section 1848(e)(6)(D) of the Act defined transition areas as the counties in fee schedule areas for 2013 that were in the rest-of-State locality, and locality 3, which was comprised of Marin, Napa, and Solano counties. Section 1848(e)(6)(B) of the Act specified that the GPCI values used for payment in a transition area are to be phased in over 6 years, from 2017 through 2022, using a weighted sum of the GPICs calculated under the new MSA-based locality structure and the GPICs calculated under the PFS locality structure that was in place prior to CY 2017. That is, the GPCI values applicable for these areas during this transition period were a blend of what the GPCI values would have been for California under the locality structure that was in place prior to CY 2017, and what the GPCI values would be for California under the MSA-based locality structure. For example, in CY 2020, which represented the fourth year of the transition period, the applicable GPCI values for counties that were previously in the rest-of-State locality or locality 3 and are now in MSAs were a blend of $\frac{2}{3}$ of the GPCI value calculated for the year under the MSA-based locality structure, and $\frac{1}{3}$ of the GPCI value calculated for the year under the locality structure that was in place prior to CY 2017. The proportions continued to shift by $\frac{1}{6}$ in each subsequent year so that, by CY 2021, the applicable GPCI values for counties within transition areas were a blend of $\frac{5}{6}$ of the GPCI value for the year under the MSA-based locality structure, and $\frac{1}{6}$ of the GPCI value for the year under the locality structure that was in place prior to CY 2017. Beginning in CY 2022, the applicable GPCI values for counties in transition areas were the values calculated solely under the new MSA-based locality structure; therefore, the phase-in for transition areas is complete. Additionally, section 1848(e)(6)(C) of the Act establishes a hold harmless requirement for transition areas beginning with CY 2017; whereby, the applicable GPCI values for a year under the new MSA-based locality structure may not be

less than what they would have been for the year under the locality structure that was in place prior to CY 2017. There are 58 counties in California, 50 of which were in transition areas as defined in section 1848(e)(6)(D) of the Act. The eight counties that were not within transition areas are: Orange; Los Angeles; Alameda; Contra Costa; San Francisco; San Mateo; Santa Clara; and Ventura counties. We note that while the phase-in for transition areas is no longer applicable, the hold harmless requirement is not time-limited, and therefore, is still in effect.

For the purposes of calculating budget neutrality and consistent with the PFS budget neutrality requirements as specified under section 1848(c)(2)(B)(ii)(II) of the Act, in the CY 2017 PFS final rule (81 FR 80266), we finalized the policy to start by calculating the national GPCIs as if the fee schedule areas that were in place prior to CY 2017 are still applicable nationwide; then, for the purposes of payment in California, we override the GPCI values with the values that are applicable for California consistent with the requirements of section 1848(e)(6) of the Act. This approach to applying the hold harmless requirement is consistent with the implementation of the GPCI floor provisions that have previously been implemented—that is, as an after-the-fact adjustment that is made for purposes of payment after both the GPCIs and PFS budget neutrality have already been calculated.

Additionally, section 1848(e)(1)(C) of the Act requires that, if more than 1 year has elapsed since the date of the last GPCI adjustment, the adjustment to be applied in the first year of the next adjustment shall be 1/2 of the adjustment that otherwise would be made. For a comprehensive discussion of this provision, transition areas, and operational considerations, we refer readers to the CY 2017 PFS final rule (81 FR 80265 through 80268).

a. Refinement to number of unique fee schedule areas in California for CY 2024

In the CY 2020 final rule (84 FR 62622), a commenter indicated that some of the distinct fee schedule areas that were used during the period between CY 2017 and CY 2018 are no longer necessary. Specifically, with regard to the Los Angeles-Long Beach-Anaheim MSA,

which contains 2 counties (across two unique locality numbers, 18 and 26) that are not transition areas, we acknowledge that we only needed more than one unique locality number for that MSA for payment purposes in CY 2017, which was the first year of the implementation of the MSA-based payment locality structure. Neither of the counties in the Los Angeles-Long Beach-Anaheim MSA (Orange County and Los Angeles County) are transition areas under section 1848(e)(6)(D) of the Act. Therefore, the counties were not subject to the aforementioned GPCI value incremental phase-in (which is no longer applicable) or the hold-harmless provision at section 1848(e)(6)(C) of the Act. Similarly, the San Francisco-Oakland-Berkeley MSA contains four counties – San Francisco, San Mateo, Alameda, and Contra Costa counties – across three unique locality numbers, 05, 06, and 07. These counties are not transition areas and will receive the same GPCI values, for payment purposes, going forward. In response to the comment, we acknowledged that we did not propose any changes to the number of fee schedule areas in California, but would consider the feasibility of a technical refinement to consolidate into fewer unique locality numbers; and if we determined that consolidation was operationally feasible, we would propose the technical refinement in future rulemaking. This refinement would ultimately change the number of distinct fee schedule areas for payment purposes in California from 32 to 29. In the CY 2023 PFS proposed rule (87 FR 46008), we proposed to identify the Los Angeles-Long Beach-Anaheim MSA, containing Orange County and Los Angeles County, by one unique locality number, 18, as opposed to two, thus retiring locality number 26, as it is no longer needed. Similarly, we proposed to identify the San Francisco-Oakland-Berkeley MSA containing San Francisco, San Mateo, Alameda, and Contra Costa counties by one unique locality number, 05, as opposed to three, thus retiring locality numbers 06 and 07, as they are no longer needed. Additionally, we noted that we would modify the MSA names as follows: the San Francisco-Oakland-Berkeley (San Francisco Cnty) locality (locality 05) would become San Francisco-Oakland-Berkeley (San Francisco/San Mateo/Alameda/Contra Costa Cnty), and Los Angeles-

Long Beach-Anaheim (Los Angeles Cnty) locality (locality 18) would become Los Angeles-Long Beach-Anaheim (Los Angeles/Orange Cnty). We noted that because Marin County is in a transition area and subject to the hold harmless provision at section 1848(e)(6)(C) of the Act, we needed to retain a unique locality number for San Francisco-Oakland-Berkeley (Marin Cnty), locality 52. Based on support from commenters in the CY 2023 PFS final rule (87 FR 69621), we finalized to identify the Los Angeles-Long Beach-Anaheim MSA, containing Orange County and Los Angeles County, by one unique locality number, 18, and the San Francisco-Oakland-Berkeley MSA containing San Francisco, San Mateo, Alameda, and Contra Costa counties by one unique locality number, 05, as proposed. We noted that, while we believed these changes were appropriate to consolidate fee schedules areas that are no longer operationally necessary, we were unable to operationalize these changes for CY 2023 due to timing constraints relating to the actions and coordination with the various systems maintainers required to effectuate changes to claims processing (87 FR 69621). Therefore, for CY 2023, there were no changes to the existing locality numbers 05, 06, 08, 18, or 26. We noted in the CY 2023 PFS final rule that we would operationalize these finalized changes for CY 2024. We reiterate here that we are operationalizing these locality number changes for CY 2024 via instruction to the MACs, and therefore, locality numbers 06, 07, and 26 will no longer be used for the PFS starting January 1, 2024. We note that these changes, when operationalized, do not have any payment implications under the PFS because these counties are not transition areas and will receive the same GPCI values, for PFS payment purposes, going forward.

H. Payment for Skin Substitutes

1. Background

In the CY 2023 PFS proposed rule, CMS outlined several objectives related to refining skin substitute policies under Medicare, including: (1) ensuring a consistent payment approach for skin substitute products across the physician office and hospital outpatient department

setting; (2) ensuring that appropriate HCPCS codes describe skin substitute products; (3) using a uniform benefit category across products within the physician office setting, regardless of whether the product is synthetic or comprised of human or animal-based material, to incorporate more consistent payment methodologies; and (4) maintaining clarity for interested parties on CMS skin substitutes policies and procedures. When considering potential changes to policies involving skin substitutes, we noted that we believe it would be appropriate to take a phased approach over multiple rulemaking cycles to examine how we could appropriately incorporate skin substitutes as supplies under the PFS ratesetting methodology. We determine the direct PE for a specific service by adding the costs of the direct resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing that service. For a detailed explanation of the direct PE methodology, including examples, we refer readers to the 5-year review of work RVUs under the PFS and proposed changes to the PE methodology CY 2007 PFS proposed notice (71 FR 37242) and the CY 2007 PFS final rule with comment period (71 FR 69629).

Similar to how we assess costs for other incident to supplies, our approach to identifying appropriate PE direct costs for skin substitute products may include: reviewing various sources for price information, including performing market research, reviewing invoices submitted by interested parties, or reviewing cost information on Medicare claims. Further, we would assess how the incident to supplies are billed or represented while also considering the service with which it is typically furnished. For example, if the supply is billed separately, with the base service, or usually bundled and incident to the base service. Also, we would consider whether there are different supply costs or other meaningful stratifications (for example, a unit of measure or product type) that should be accounted for as we develop direct PE costs, considering how the base service is furnished.

We are soliciting comments on how best to use these approaches under our PFS ratesetting methodology as potential methods to establish appropriate payment for skin substitute products under the PFS.

2. Sources of Price Information

We have refined specific PE data inputs in recent years, using market research and publicly available data (for example, market research on medical supply and equipment items and BLS data to update clinical labor wages) to update the direct PE data inputs used in the PFS ratesetting process. Historically, under the PFS, various sources of information have helped inform payment for specific services used to establish direct PE inputs. Direct PE inputs may derive from assessing the current value of products on the market, which may be achieved by utilizing Average Sales Price (ASP) data or Wholesale Acquisition Cost data (WAC). Since some manufacturers self-report ASP/WAC data at the end of every quarter, this may help to inform CMS of the current market value of these products.

We also review submitted invoices, which reflect the specific cost of products that practitioners are paying manufacturers for these products. We note in the CY 2011 PFS final rule (75 FR 73205) we update supply and equipment prices through an invoice submission process. In this process, we consider the invoice information and incorporate it into our direct costs database if the submitted pricing data indicates the typical market price of the supply or equipment item.

While performing market research and the invoice submission process are different methods to derive pricing for specific products, reviewing cost information on Medicare claims may also help us identify the variability in product costs. For example, assessing detailed cost information on claims with skin substitute products could inform how these products are priced and allow us to consider how the skin substitutes are typically furnished and where these services

are performed. This information would enable us to refine our payment policies for these products across different care settings.

We seek comment on the various cost-gathering approaches discussed above that could inform how we establish direct PE inputs for skin substitute products and appropriately develop payment rates for physician services that involve furnishing skin substitute products.

3. Approaches to Billing

We acknowledge that there are various approaches that we could use to identify and establish direct cost inputs for the skin substitute products. We are also considering how to account for these products' variability and resource costs, especially as new products increasingly become available.

Similar to how different sources of information can influence cost information for supplies, specifically considering variables such as different units of measurement, product type, product composition, or in what clinical circumstances the product is used, for example, would help us appropriately reflect costs in payment for the services that include the specific supply. We believe this to be pertinent to how we propose to pay for skin substitute products. For instance, grouping the direct costs for particular skin substitute products based on the typically associated application procedure could help us systematically incorporate the resource costs involved for different product billing scenarios. This approach can be seen in the Outpatient Prospective Payment System (OPPS), where a high-cost/low-cost system is used for skin substitute products billed with a specific procedure code based on their cost grouping.

Alternatively, when services and products are not performed frequently enough to be grouped, retaining separate procedure coding can help inform specificity and granularity for coding and payment of these services. Specifically, we could create separate procedure coding for specific product types, which could be billed with the appropriate skin substitute application services. We would account for cost variability for the different products (that is, establishing

individual or group direct cost profiles and allocating direct costs inputs based on these groupings) under any combination of approaches discussed above. We could also review the unit of measurement for billed products, as available in our internal data or received in submissions, and create direct cost groupings for the products based on the reviewed/billed units of measurement. We could also establish direct cost inputs by employing our standard 'crosswalk' method using information from interested parties. Specifically, we would derive PE inputs by reviewing similarly resourced services to establish RVUs for a service that includes the cost of the skin substitute products and other information to account for the physician's work in furnishing the skin substitute product. We would employ this method to establish payment for individual services that include specific skin substitute products or services that describe cost groupings of similarly priced skin substitute products. As we have discussed in prior rulemaking, we believe that the nature of the PFS relative value system is such that all services are appropriately subject to comparisons to one another. There is a long history of using crosswalk codes for this kind of valuation under the PFS, which is generally established through notice and comment rulemaking.

We seek comment on how these methods discussed above may help reflect the resource costs involved with skin substitute products as furnished with different skin application procedures.

I. Supervision of Outpatient Therapy Services, KX Modifier Thresholds, Diabetes Self-Management Training (DSMT) Services by Registered Dietitians and Nutrition Professionals, and DSMT Telehealth Services

1. Supervision of Outpatient Therapy Services in Private Practices

(a) Remote therapeutic monitoring for physical therapists and occupational therapists in private practice.

In the CY 2023 PFS final rule, we finalized new policies that would allow Medicare payment for remote therapeutic monitoring (RTM) services, including allowing any RTM service to be furnished under our general supervision requirements (87 FR 69649). RTM refers to the use of devices to monitor a patient's health or response to treatment using non-physiological data (please see more detailed list of RTM services at section II.D. of this proposed rule). The current regulations, however, at §§ 410.59(a)(3)(ii) and 410.60(a)(3)(ii) specify that all occupational and physical therapy services are performed by, or under the direct supervision of, the occupational or physical therapist, respectively, in private practice. These regulations make it difficult for physical therapists in private practice (PTPPs) and occupational therapists in private practice (OTPPs) to bill for the RTM services performed by the physical therapist assistants (PTAs) and occupational therapy assistants (OTAs) they are supervising, since the PTPP or OTTP must remain immediately available when providing direct supervision of PTAs and OTAs (even though we noted in the CY 2022 PFS final rule that PTPPs and OTTPs were intended to be among the primary billers of RTM services (86 FR 65116)). We designated the RTM codes as “sometimes therapy” codes (originally in the CY 2022 PFS final rule (86 FR 65116)), meaning that these services may be furnished outside a therapy plan of care when they are performed by physicians and certain NPPs where their State practice includes the provision of physical therapy, occupational therapy, and/or speech-language pathology services. Because we did not propose revisions to §§ 410.59 and 410.60 last year for OTTPs and PTPPs, we are proposing to establish an RTM-specific general supervision policy at §§ 410.59(a)(3)(ii) and (c)(2) and 410.60(a)(3)(ii) and (c)(2) to allow OTTPs and PTPPs to provide general supervision only for RTM services furnished by their OTAs and PTAs, respectively.

We also note that Medicare requires each therapist in private practice to meet the requirements specified in our current regulations at §§ 410.59(c) and 410.60(c) to qualify under Medicare as a supplier of outpatient occupational therapy or physical therapy services. Given

that occupational therapists (OTs) and physical therapists (PTs) who are not enrolled and working as employees of OTPPs or PTPPs do not meet these requirements, we believe they should continue to function under direct supervision of the OTPP or PTPP. This is consistent with the Medicare Benefit Policy Manual, Pub. 100-02, Chapter 15, section 230.4.B which states that in a private practice, OTPPs and PTPPs must provide direct supervision of all services, including those furnished by OTs and PTs who are not yet enrolled in Medicare (even if they meet the other requirements for occupational therapists and physical therapists at 42 CFR part 484). As such, we are proposing to retain the OTPP and PTPP direct supervision requirement for unenrolled PTs or OTs by clarifying that the proposed RTM general supervision regulation at §§ 410.59(c)(2) and 410.60(c)(2) applies only to the OTA and PTA and does not include the unenrolled OT or PT. We are seeking comment on this specific proposal as we want to know more about how this policy is now functioning with OTs and PTs who are not enrolled and our proposal to maintain this longstanding policy for direct supervision.

We believe this proposal will increase access to these remotely provided services performed by PTAs and OTAs under the general supervision furnished by PTPPs and OTPPs. This aligns the regulatory text at §§ 410.59 and 410.60 with the RTM general supervision policy that we finalized in our CY 2023 rulemaking.

(b) General Supervision for PTs and OTs in Private Practice Comment Solicitation:

Sections 1861(p) and 1861(g) (by cross-reference to section 1861(p)) of the Act describe outpatient physical therapy and occupational therapy services furnished to individuals by physical and occupational therapists meeting licensing and other standards prescribed by the Secretary, including conditions relating to the health and safety of individuals who are furnished services on an outpatient basis. The second sentence of section 1861(p) of the Act describes outpatient therapy services that are provided to an individual by a physical therapist or occupational therapist (in their office or in such individual's home) who meets licensing and

other standards prescribed by the Secretary in regulations, and differentiates the therapists that furnish these outpatient therapy services from those working for an institutional provider of therapy services. In regulations, we have specifically addressed these therapists, previously referred to as PTPPs and OTPPs, since 1999 (63 FR 58868 through 58870). Because we wanted to create consistent requirements for therapists and therapy assistants, we clarified in the CY 2005 PFS final rule with comment period (69 FR 66345) that the personnel qualifications applicable to home health agencies (HHAs) in 42 CFR part 484 are applicable to all outpatient physical therapy, occupational therapy, and speech-language pathology services. Also, in the CY 2005 PFS final rule, we cross-referenced the qualifications for OTs and their OTAs and PTs and their PTAs for all occupational therapy and physical therapy services, respectively, including those who work in private practices, to 42 CFR part 484 by adding a basic rule at §§ 410.59(a) and 410.60(a), respectively. Under Medicare Part B, outpatient therapy services are generally covered when reasonable and necessary and when provided by PTs and OTs meeting the qualifications set forth at 42 CFR part 484. Services provided by qualified therapy assistants, including PTAs and OTAs, may also be covered by Medicare when furnished under the specified level of therapist supervision that is required for the setting in which the services are provided (institutions, and private practice therapist offices and patient homes).

In accordance with various regulations, the minimum level of supervision for services performed by PTAs and OTAs by PTs and OTs working in institutional settings is a general level of supervision (see Table A in the Report to Congress titled Standards for Supervision of PTAs and the Effects of Eliminating the Personal PTA Supervision Requirement on the Financial Caps for Medicare Therapy Services found at

<https://www.cms.gov/Medicare/Billing/TherapyServices/Downloads/61004ptartc.pdf>). For

example, 42 CFR 485.713 specifies that when an OTA or PTA provides services at a location that is off the premises of a clinic, rehabilitation agency, or public health agency, those services

are supervised by a qualified occupational or physical therapist who makes an onsite supervisory visit at least once every 30 days. We note that the Medicare Benefit Policy Manual, Pub. 100-02, chapter 8, section 30.2.1 defines skilled nursing and/or skilled rehabilitation services as those services, furnished pursuant to physician orders, that, among other requirements, “must be provided directly by or under the general supervision of these skilled nursing or skilled rehabilitation personnel to assure the safety of the patient and to achieve the medically desired result.” The same manual provision notes that in the SNF setting, skilled nursing or skilled rehabilitation personnel include PTs, OTs, and SLPs. However, since 2005 in the private practice setting, we have required direct supervision for physical and occupational therapy services furnished by PTAs and OTAs, requiring an OTPP or PTPP to be immediately available to furnish assistance and direction throughout the performance of the procedure(s). We finalized this direct supervision policy in the CY 2005 PFS final rule (69 FR 66354 through 66356) — changing it from personal supervision, which required the OTPP or PTPP to be in the same room as the therapy assistant when they were providing the therapy services. Under the current regulations §§ 410.59(c)(2) and 410.60(c)(2), all services not performed personally by the OTPP or PTPP, respectively, must be performed under the direct supervision of the therapist by employees of the practice. Subsequently, in the CY 2008 PFS final rule (72 FR 66328 through 66332), we updated the qualification standards at 42 CFR part 484 for OTs, OTAs, PTs, PTAs, along with those for speech-language pathologists (SLPs).

Over the last several years, interested parties have requested that we revise our direct supervision policy for PTPPs and OTPPs to align with the general supervision policy for physical and occupational therapists working in Medicare institutional providers that provide therapy services (for example, outpatient hospitals, rehabilitation agencies, SNFs and CORFs), to allow for the general supervision of their therapy assistants. Additionally, the interested parties

have informed us that all-but-one State allows for general supervision of OTAs and at least 44 States allow for the general supervision of PTAs, via their respective State laws and policies.

We are considering whether to revise the current direct supervision policy for PTPPs and OTPPs of their PTAs and OTAs, to general supervision for all physical therapy and occupational therapy services furnished in these private practices at this time, and are soliciting comments from the public that we may consider for possible future rulemaking. We are particularly interested in receiving comments regarding the possibility of changing the PTA and OTA supervision policy from direct supervision to general supervision in the private practice setting, and whether a general supervision policy could have implications for situations or conditions raised below:

- Because we want to ensure quality of care for therapy patients, could the general supervision policy raise safety concerns for therapy patients if the PT or OT is not immediately available to assist if needed? Do State laws and policies allow a PTA or OTA to practice without a therapist in a therapy office or in a patient's home?
- Could any safety concerns be addressed by limiting the types of services permitted under a general supervision policy?
- Would a general supervision policy be enhanced with a periodic visit by the PT or OT to provide services to the patient? If so, what number of visits or time period should we consider?
- Would a general supervision policy potentially cause a change in utilization? Would such a change in the supervision policy cause a difference in hiring actions by the PT or OT with respect to therapy assistants?

Interested parties have been requesting that CMS reconsider its supervision policies with respect to occupational therapy or physical therapy services, and in light of experiences during the PHE for COVID-19, we may consider proposing a general supervision policy for all services

furnished by OTAs and PTAs employed by a PTPP or OTPP in the future after reviewing the comments and supporting data in response to this comment solicitation. We are, therefore, soliciting public comment, along with supporting data, about the questions and concerns we highlighted above, for our consideration for possible future rulemaking. We are further interested in public comment regarding changing §§ 410.59(a)(3)(ii), 410.59(c)(2), 410.60(a)(3)(ii), and 410.60(c)(2) to allow for general supervision of OTAs and PTAs by the OTPP and PTPP, respectively, when furnishing therapy services. Additionally, we are seeking public comment for our consideration for possible future rulemaking regarding any appropriate exceptions to allowing general supervision in the furnishing of therapy services.

2. KX Modifier Thresholds

Formerly referred to as the therapy cap amounts, the KX modifier thresholds were established through section 50202 of the Bipartisan Budget Act (BBA) of 2018 (Pub. L. 115-123, February 9, 2018). These per-beneficiary amounts under section 1833(g) of the Act (as amended by section 4541 of the Balanced Budget Act of 1997) (Pub. L. 105-33, August 5, 1997) are updated each year based on the percentage increase in the Medicare Economic Index (MEI). In the CY 2023 PFS final rule (87 FR 69688 through 69710), we rebased and revised the MEI to a 2017 base year. Specifically, these amounts are calculated by updating the previous year's amount by the percentage increase in the MEI for the upcoming calendar year and rounding to the nearest \$10.00. Thus, for CY 2024, we propose to increase the CY 2023 KX modifier threshold amount by the most recent forecast of the 2017-based MEI. For CY 2024, the proposed growth rate of the 2017-based MEI is estimated to be 4.5 percent, based on the IHS Global, Inc. (IGI) first quarter 2023 forecast with historical data through the fourth quarter of 2022.³¹ Multiplying the CY 2023 KX modifier threshold amount of \$2,230 by the proposed CY

³¹ IGI is a nationally recognized economic and financial forecasting firm with which we contract to forecast the components of the MEI and other CMS market baskets.

2024 percentage increase in the MEI of 4.5 percent ($\$2,230 \times 1.045$), and rounding to the nearest \$10.00, results in a proposed CY 2024 KX modifier threshold amount of \$2,330 for physical therapy and speech-language pathology services combined and \$2,330 for occupational therapy services. We are also proposing that if more recent data are subsequently available (for example, a more recent estimate of the CY 2024 2017-based MEI percentage increase) later this year, we would use such data, if appropriate, to determine the CY 2024 MEI percentage increase and would apply that new estimate to formulate our values in the CY 2024 PFS final rule.

Section 1833(g)(7)(B) of the Act describes the targeted medical review (MR) process for services of physical therapy, speech-language pathology, and occupational therapy services. The threshold for targeted MR is \$3,000 until CY 2028, when it will be updated by the percentage increase in the MEI. Consequently, for CY 2024, the MR threshold is \$3,000 for physical therapy and speech-language pathology services combined and \$3,000 for occupational therapy services. Section 1833(g)(5)(E) of the Act states that CMS shall identify and conduct targeted medical review using factors that may include the following:

(1) The therapy provider has had a high claims denial percentage for therapy services under this part or is less compliant with applicable requirements under this title.

(2) The therapy provider has a pattern of billing for therapy services under this part that is aberrant compared to peers or otherwise has questionable billing practices for such services, such as billing medically unlikely units of services in a day.

(3) The therapy provider is newly enrolled under this title or has not previously furnished therapy services under this part.

(4) The services are furnished to treat a type of medical condition.

(5) The therapy provider is part of a group that includes another therapy provider identified using the factors described previously in this section.

We track each beneficiary's incurred expenses for therapy services annually and count them towards the KX modifier and MR thresholds by applying the PFS rate for each service less any applicable MPPR amount for services of CMS-designated "always therapy" services (see the CY 2011 PFS final rule at 75 FR 73236). We also track therapy services furnished by critical access hospitals (CAHs), applying the same PFS-rate accrual process, even though they are not paid for their therapy services under the PFS and may be paid on a cost basis (effective January 1, 2014) (see the CY 2014 PFS final rule at 78 FR 74406 through 74410).

When the beneficiary's incurred expenses for the year for outpatient therapy services exceeds one or both of the KX modifier thresholds, therapy suppliers and providers use the KX modifier on claims for subsequent medically necessary services. Through the use of the KX modifier, the therapist and therapy provider attest that the services above the KX modifier thresholds are reasonable and necessary and that documentation of the medical necessity for the services is in the beneficiary's medical record. Claims for outpatient therapy services exceeding the KX modifier thresholds without the KX modifier included are denied. (See the CY 2023 PFS final rule at 87 FR 69650 through 69651))

3. Diabetes Self-Management Training (DSMT) Services Furnished by Registered Dietitians (RDs) and Nutrition Professionals

During the CY 2022 PFS rulemaking, we adopted a regulation at § 410.72(d) that requires the services that RDs and nutrition professionals furnish to beneficiaries to be directly performed by them. This is based on the MNT regulations at subpart G, §§ 410.130 – 410.134. When developing this policy, we were only referring to MNT services. These MNT services are distinct from the DSMT services that RDs or nutrition professionals may furnish when they are or represent an accredited DSMT entity.

We note that the RD or nutrition professional, when named in or a sponsor of an accredited DSMT entity, may act as the DSMT certified provider, which is defined at section

1861(qq) of the Act as a physician, or other individual or entity to which Medicare makes payment for other services. RDs and nutrition professionals may qualify as DSMT certified providers within the meaning of the statute since they provide and bill for MNT services. This is reinforced in our sub-regulatory manual provisions (Pub. 100-02, Chapter 15, section 300.2), which specifies that DSMT certified providers may bill and be paid for the entire DSMT program and further clarifies that the RD or nutrition professional is eligible to bill on behalf of an entire DSMT program (or entity) on or after January 1, 2002, after obtaining a Medicare provider number. In addition, section 1861(qq) of the Act requires that DSMT certified providers meet quality standards established by the Secretary, except that the physician or other individual or entity shall be deemed to have met such standards if the physician or other individual or entity meets applicable standards originally established by the National Diabetes Advisory Board and subsequently revised by organizations who participated in the establishment of standards by such Board. DSMT entities are required to meet the National Standards for Diabetes Self-management Education Programs (NSDSMEP) set of quality standards at § 410.144(b). DSMT entities are also required to be recognized or accredited by CMS Accreditation Organizations (AOs). There are currently two national DSMT AOs— the American Diabetes Association (ADA) or the Association of Diabetes Care & Education Specialists (ADCES) (Medicare Program Integrity Manual, Pub. 100-08, chapter 10, section 10.2.4.B). The ADA and ADCES also review and approve the credentials of DSMT program instructors.

Interested parties have alerted us that the wording of § 410.72(d) has caused confusion for DSMT entities/suppliers and Part B Medicare Administrative Contractors (MACs) about whether RD or nutrition professionals must personally provide DSMT services. To alleviate any confusion, we believe a clarification is needed to distinguish between when a RD or nutritional professional is personally providing MNT services, in accordance with the MNT regulations, and

when they are acting as or on behalf of an accredited DSMT entity and billing for DSMT services that may be provided by a group of other professionals working under an accredited DSMT entity, for example registered nurses (RNs), pharmacists, or RDs other than the sponsoring RD. Under the NSDSMEP quality standards, the RD, RN, or pharmacist is permitted to provide the educational DSMT services on a solo basis, that is without a multi-disciplinary team; however, only the RD or nutrition professional, when enrolled as a Medicare supplier, in these accredited DSMT entities is authorized by statute at section 1861(qq)(2)(A) to bill Medicare on behalf of the entire DSMT entity as the DSMT certified provider.

Consequently, we propose to amend the regulation at § 410.72(d) to clarify that a RD or nutrition professional must personally perform MNT services. Additionally, we propose to clarify that a RD or nutrition professional may bill for, or on behalf of, the entire DSMT entity as the DSMT certified provider regardless of which professional furnishes the actual education services. We propose to clarify § 410.72(d) to provide that, except for DSMT services furnished as, or on behalf of, an accredited DSMT entity, registered dietitians and nutrition professionals can be paid for their professional MNT services only when the services have been directly performed by them.

4. DSMT Telehealth Issues

(a) Distant Site Practitioners:

Since 2006, RDs and nutrition professionals have been recognized as distant site practitioners for purposes of Medicare telehealth services under section 1834(m)(4)(E) of the Act. Section 1834(m)(4)(E) of the Act specifies that the practitioners listed at section 1842(b)(18)(C) of the Act, which include RDs and nutrition professionals as of 2006, can serve as distant site practitioners for Medicare telehealth services. Our regulations and sub-regulatory policies for Medicare telehealth services do not address scenarios involving the furnishing of DSMT services via telehealth when the actual services are personally furnished by individuals

who provide them, for example, RNs, pharmacists, or other multidisciplinary team members, who are not recognized as telehealth distant site practitioners under the statutory definition. In keeping with the NSDSMEP quality standards, an RD is often part of a DSMT entity, and when they are, they can be considered a “certified provider” when they are enrolled in Medicare and intend to bill for the DSMT services, in accordance with the statutory provision at section 1861(qq)(2)(A) of the Act, which defines certified providers as physicians, or other individuals or entities designated by the Secretary, that, in addition to providing DSMT services, provides other items or services for which Medicare payment may be made. As we noted previously in this section of the proposed rule, there may be other RDs among the group or team of professionals, along with RNs and/or pharmacists, that are performing DSMT services in addition to the sponsoring or billing RD or nutrition professional functioning as the certified provider. Additionally, our Medicare Benefit Policy Manual, Pub. 100-02, Chapter 15, section 300.2 clarifies that these certified providers, including RDs or nutrition professionals, may bill for services of the DSMT entity. Since we allow RDs and other DSMT certified providers to bill on behalf of the DSMT entity when other professionals personally furnish the service in face-to-face encounters, we believe that this should also be our policy when DSMT is furnished as a Medicare telehealth service. To increase access to DSMT telehealth services, we are proposing to codify billing rules for DSMT services furnished as Medicare telehealth services at § 410.78(b)(2)(x) to allow distant site practitioners who can appropriately report DSMT services furnished in person by the DSMT entity, such as RDs and nutrition professionals, physicians, nurse practitioners (NPs), physician assistants (PAs), and clinical nurse specialists (CNSs), to also report DSMT services furnished via telehealth by the DSMT entity, including when the services are performed by others as part of the DSMT entity. This proposed revision to our regulation will preserve access to DSMT services via telehealth for Medicare beneficiaries in cases where the DSMT service is provided in accordance with the NSDSMEP quality standards.

We note that DSMT services are on the Medicare Telehealth Services List, and are subject to the requirements and conditions of payment under section 1834(m) of the Act and §410.78 of our regulations, including originating site and geographic location requirements, when they are in effect. See section II.D. for a discussion of Medicare telehealth policies.

(b) Telehealth Injection Training for Insulin-Dependent Beneficiaries:

Currently, our manual instruction for Payment for Diabetes Self-Management Training (DSMT) in the Medicare Claims Processing Manual, Pub. 100-04, chapter 12, section 190.3.6, requires 1 hour of the 10-hour DSMT benefit's initial training and 1 hour of the 2-hour follow-up annual training to be furnished in-person to allow for effective injection training when injection training is applicable for insulin-dependent beneficiaries. This policy was clarified for 2019 to specify that in-person training only applies to a beneficiary for whom the injection training was applicable via CMS Transmittal 4173, available at <https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/2018Downloads/R4173CP.pdf>.

We believe that, with the expansion of the use of telehealth during the PHE for COVID-19, there have been significant changes in clinical standards, guidelines, and best practices regarding services furnished using interactive telecommunications technology, including for injection training for insulin-dependent patients. We do not want our policies to prevent injection training via telehealth when clinically appropriate. Consequently, we are proposing to revise our policy at 410.78(e) to allow the 1 hour of in-person training (for initial and/or follow-up training), when required for insulin-dependent beneficiaries, to be provided via telehealth. If finalized, we anticipate revising the Medicare Claims Processing Manual, Pub. 100-04, chapter 12, section 190.3.6 to reflect that flexibility.

J. Advancing Access to Behavioral Health Services

1. Implementation of Section 4121(a) of the Consolidated Appropriations Act, 2023

a. Statutory Amendments

Section 4121(a) of Division FF, Title IV, Subtitle C of the Consolidated Appropriations Act of 2023 (CAA, 2023) (Pub. L. 117-328, December 29, 2022), Coverage of Marriage and Family Therapist Services and Mental Health Counselor Services under Part B of the Medicare Program, provides for Medicare coverage of and payment for the services of health care professionals who meet the qualifications for marriage and family therapists (MFTs) and mental health counselors (MHCs) when billed by these professionals.

Specifically, section 4121(a)(1) of the CAA, 2023 amended section 1861(s)(2) of the Act by adding a new benefit category under Medicare Part B in new subparagraph (II) to include marriage and family therapist services (as defined in an added section 1861(III)(1) of the Act) and mental health counselor services (as defined in an added section 1861(III)(3) of the Act).

Section 4121(a)(2) of the CAA, 2023 added a new subsection (III) to section 1861 of the Act, which defines marriage and family therapist services, marriage and family therapist (MFT), mental health counselor services, and mental health counselor (MHC). Section 1861(III)(1) of the Act defines “marriage and family therapist services” as services furnished by an MFT for the diagnosis and treatment of mental illnesses (other than services furnished to an inpatient of a hospital), which the MFT is legally authorized to perform under State law (or the State regulatory mechanism provided by State law) of the State in which such services are furnished, as would otherwise be covered if furnished by a physician or as an incident to a physician’s professional service. Section 1861(III)(2) of the Act defines the term MFT to mean an individual who:

- Possesses a master’s or doctor’s degree which qualifies for licensure or certification as a MFT pursuant to State law of the State in which such individual furnishes marriage and family therapist services;
- Is licensed or certified as a MFT by the State in which such individual furnishes such services;

- After obtaining such degree has performed at least 2 years of clinical supervised experience in marriage and family therapy; and

- Meets such other requirements as specified by the Secretary.

Section 1861(III)(3) of the Act defines “mental health counselor services” as services furnished by a mental health counselor (MHC) for the diagnosis and treatment of mental illnesses (other than services furnished to an inpatient of a hospital), which the MHC is legally authorized to perform under State law (or the State regulatory mechanism provided by the State law) of the State in which such services are furnished, as would otherwise be covered if furnished by a physician or as incident to a physician’s professional service. Section 1861(III)(4) of the Act defining MHC as an individual who:

- Possesses a master’s or doctor’s degree which qualifies for licensure or certification as a mental health counselor, clinical professional counselor, or professional counselor under State law of the State in which such individual furnishes MHC services;

- Is licensed or certified as a mental health counselor, clinical professional counselor, or professional counselor by the State in which the services are furnished;

- After obtaining such degree has performed at least 2 years of clinical supervised experience in mental health counseling; and

- Meets such other requirements as specified by the Secretary.

Section 4121(a)(3) of the CAA, 2023 amended section 1833(a)(1) of the Act to add a new subparagraph (FF), which provides that, with respect to MFT services and MHC services under section 1861(s)(2)(II) of the Act, the amounts paid shall be 80 percent of the lesser of the actual charge for the services or 75 percent of the amount determined for payment of a psychologist under subparagraph (L).

Section 1888(e)(2)(A)(ii) of the Act, as amended by section 4121(a)(4) of the CAA, 2023, excludes MFT and MHC services from consolidated billing requirements under the skilled

nursing facility (SNF) prospective payment system. For further discussion about this exclusion of MFT and MHC services from SNF consolidated billing, see discussion in the FY 2024 SNF Prospective Payment System (PPS) proposed rule (88 FR 21316)³². Section 4121(a)(5) of the CAA, 2023 amended section 1842(b)(18)(C) of the Act to add MFTs and MHCs to the list of practitioners whose services can only be paid by Medicare on an assignment-related basis. MFTs, MHCs, and other practitioners described in section 1842(b)(18)(C) of the Act may not bill (or collect any amount from) the beneficiary or another person for any services for which Medicare makes payment, except for deductible and coinsurance amounts applicable under Part B. More information on assignment of claims can be found at in the Medicare Claims Processing Manual, Pub. 100-04, Chapter 1, Section 30.3.1.

We also note that section 1861(aa)(1)(B) of the Act was amended by section 4121(b)(1) of the CAA, 2023 to add services furnished by MFTs and MHCs to the definition of rural health clinic services. See section III.B of this proposed rule for discussion related to MFT and MHC services furnished in RHCs and FQHCs.

Additionally, section 1861(dd)(2)(B)(i)(III) of the Act was amended by 4121(b)(2) of the CAA, 2023 to require a hospice program to have an interdisciplinary team that includes at least one social worker, MFT or MHC. For further discussion about this amended requirement for hospice program interdisciplinary teams, see section III.O of this proposed rule.

b. Proposed Changes to Regulations

Consistent with the changes to the statute described above, we are proposing to create two new regulation sections at § 410.53 and § 410.54 to codify the coverage provisions for MFTs and MHCs, respectively.

Specifically, we are proposing to define a marriage and family therapist at § 410.53 as an individual who:

³² <https://www.govinfo.gov/content/pkg/FR-2023-04-10/pdf/2023-07137.pdf>.

- Possesses a master's or doctor's degree which qualifies for licensure or certification as a marriage and family therapist pursuant to State law of the State in which such individual furnishes the services defined as marriage and family therapist services;
- After obtaining such degree, has performed at least 2 years or 3,000 hours of post master's degree clinical supervised experience in marriage and family therapy in an appropriate setting such as a hospital, SNF, private practice, or clinic; and
- Is licensed or certified as a marriage and family therapist by the State in which the services are performed.

We note that we are aware that there may be some States that require a number of hours of clinical supervised experience for MFT licensure that may be inconsistent with the statutory requirement in section 1861(s)(2) of the Act that requires at least 2 years of clinical supervised experience. We believe it could be possible for an MFT to have completed the required number of clinical supervised hours required for licensure in their State, but to have accomplished this in less than two years. Therefore, we are proposing a requirement for MFTs to have performed at least 2 years or 3,000 hours of post master's degree clinical supervised experience, if consistent with State licensure requirements. We believe that 3,000 hours is roughly equivalent to the statutory requirement to have performed 2 years of clinical supervised experience and note that the regulatory requirements for clinical social workers (CSWs) at § 410.73(a)(3)(ii) allow 2 years or 3,000 hours of supervised experience. Additionally, the statutory benefit category for both MFTs and CSWs is defined as services for the diagnosis and treatment of mental illnesses. As such, we believe it would be appropriate to provide similar flexibility in the required amount of clinical supervised experience for MFTs and CSWs. We are also interested in public comments regarding States that have a supervised clinical hour requirement for MFT licensure that is less than 2 years.

We are proposing to define “Marriage and family therapist services” at § 410.53(b)(1) as services furnished by a marriage and family therapist for the diagnosis and treatment of mental illnesses (other than services furnished to an inpatient of a hospital), which the marriage and family therapist is legally authorized to perform under State law (or the State regulatory mechanism provided by State law) of the State in which such services are furnished. We are also proposing at § 410.53(b)(1) that the services must be of a type that would be covered if they were furnished by a physician or as an incident to a physician's professional service and must meet the requirements of this section.

Lastly, we are proposing at § 410.53(b)(2) that the following services do not fall under the Medicare Part B benefit category for MFT services:

- Services furnished by a marriage and family therapist to an inpatient of a Medicare-participating hospital.

Similarly, we are proposing to define a mental health counselor at § 410.54 as an individual who:

- Possesses a master's or doctor's degree which qualifies for licensure or certification as a mental health counselor, clinical professional counselor, or professional counselor under the State law of the State in which such individual furnishes the services defined as mental health counselor services;

- After obtaining such a degree, has performed at least 2 years or 3,000 hours of post master’s degree clinical supervised experience in mental health counseling in an appropriate setting such as a hospital, SNF, private practice, or clinic; and

- Is licensed or certified as a mental health counselor, clinical professional counselor, or professional counselor by the State in which the services are performed. As previously explained for MFTs, and for the same reasons, we are proposing a requirement for MHCs to have performed at least 2 years or 3,000 hours of post master’s degree clinical supervised

experience, if consistent with State licensure requirements. We believe that 3,000 hours is roughly equivalent to the statutory requirement to have performed 2 years of clinical supervised experience and note that the regulatory requirements for clinical social workers at § 410.73(a)(3)(ii) allows 2 years or 3,000 hours. The MHC statutory benefit category authorizes MHCs to furnish services for the diagnosis and treatment of mental illnesses as it does for CSWs. We are also interested in public comments regarding States that have a supervised clinical hour requirement for MHC licensure that is less than 2 years.

We are proposing to define “mental health counselor services” at § 410.54(b)(1) as services furnished by a mental health counselor (as defined in paragraph (a) of this section) for the diagnosis and treatment of mental illnesses (other than services furnished to an inpatient of a hospital), which the mental health counselor is legally authorized to perform under State law (or the State regulatory mechanism provided by State law) of the State in which such services are furnished. We are also proposing at § 410.54(b)(1) that the services must be of a type that would be covered if they were furnished by a physician or as an incident to a physician's professional service.

We are proposing at § 410.54(b)(2) that the following services do not fall under the Medicare Part B benefit category for MHC services:

- Services furnished by a mental health counselor to an inpatient of a Medicare-participating hospital.

We are proposing to amend § 410.10 to add marriage and family therapist services and mental health counselor services to the list of included medical and other health services. We are also proposing to amend § 410.150 to add marriage and family therapists and mental health counselors, to the list of individuals or entities to whom payment is made.

Currently, § 410.32(a)(2) lists the health care practitioners that may order diagnostic tests. Since this list currently includes CSWs and clinical psychologists (CPs), who are also

authorized by statute to furnish services for the diagnosis and treatment of mental illnesses, we are proposing to amend § 410.32(a)(2) to add MFTs and MHCs to the list of practitioners who may order diagnostic tests, as for the other non-physician practitioners, to the extent that the MFT or MHC is legally authorized to perform the service under State law (or the State regulatory mechanism provided by State law) of the State in which such services are furnished.

We are also proposing to codify in a new § 414.53 the payment amounts authorized under section 1833(a)(1)(FF) for MFT and MHC services . Additionally, we are proposing to codify at § 414.53 the payment amount for clinical social worker (CSW) services as authorized under section 1833(a)(1)(F) of the Act. As we reviewed our regulations to implement section 4121 of the CAA, 2023, we found that the payment amounts for CSWs are not yet codified under regulations. Specifically, we are proposing to add that the payment amount for CSW, MFT, and MHC services is 80 percent of the lesser of the actual charge for the services or 75 percent of the amount determined for clinical psychologist services under the PFS.

We are also proposing to add MFTs and MHCs to the list of practitioners who are eligible to furnish Medicare telehealth services at the distant site. See section II.D. of this proposed rule for a discussion of this proposal.

Additionally, we are proposing to allow Addiction Counselors who meet all of the applicable requirements (possess a master's or doctor's degree which qualifies for licensure or certification as a mental health counselor; after obtaining such degree have performed at least 2 years (or, as proposed, 3,000 hours) of clinical supervised experience in mental health counseling; and licensed or certified as a MHC, clinical professional counselor, or professional counselor by the State in which the services are furnished) to enroll in Medicare as MHCs. That is, under this proposal, Addiction Counselors would be considered Mental Health Counselors and would be eligible to enroll and bill Medicare for MHC services if they meet these requirements. We understand there is variation in the terminology used for licensure across

States for MHCs and MFTs and are seeking information pertaining to other types of professionals who may meet the applicable requirements for enrollment as mental health counselors. We note that in past rulemaking, we have discussed the term ‘mental health’ to be inclusive of diagnosis and treatment of substance use disorders. For example, in the CY 2022 PFS final rule (86 FR 65061), we stated that SUD services are considered mental health services for the purposes of the expanded definition of “interactive telecommunications system.” We propose to apply that same interpretation for purposes of the mental health services included in the definition of MFT, MHC, and to clarify that the same interpretation applies for CSW, and CP services.

c. Coding Updates to Allow MFT and MHC Billing

In light of the new statutory benefits for MFTs and MHCs authorized by section 4121(a) of the CAA, 2023, we have considered whether updates to certain HCPCS codes are required in order to allow MFTs and MHCs to bill for the services described by those HCPCS codes. In the CY 2023 PFS final rule, we finalized new coding and payment for General Behavioral Health Integration services performed by CPs or CSWs to account for monthly care integration where the mental health services furnished by a CP or CSW serve as the focal point of care integration. In light of the new coverage under Medicare for MFT and MHC services for the diagnosis and treatment of mental illness, we are proposing to revise the code descriptor for HCPCS code G0323 in order to allow MFTs and MHCs, as well as CPs and CSWs, to be able to bill for this monthly care integration service. We note that MFTs and MHCs, like CSWs, are authorized by statute for the diagnosis and treatment of mental illnesses (other than services furnished to an inpatient of a hospital), which the MFT or MHC is legally authorized to perform under State law (or the State regulatory mechanism provided by State law) of the State in which such services are furnished, as would otherwise be covered if furnished by a physician or as an incident to a physician’s professional service. The proposed code descriptor for HCPCS code G0323 is: *Care*

management services for behavioral health conditions, at least 20 minutes of clinical psychologist, clinical social worker, mental health counselor, or marriage and family therapist time, per calendar month. (These services include the following required elements: Initial assessment or follow-up monitoring, including the use of applicable validated rating scales; behavioral health care planning in relation to behavioral/psychiatric health problems, including revision for patients who are not progressing or whose status changes; facilitating and coordinating treatment such as psychotherapy, coordination with and/or referral to physicians and practitioners who are authorized by Medicare to prescribe medications and furnish E/M services, counseling and/or psychiatric consultation; and continuity of care with a designated member of the care team.)

Lastly, we note that consistent with the proposed changes to valuation of CPT code 99484 in the Valuation of Specific Codes section (section II.E. of this proposed rule), which describes General BHI and is the crosswalk code used for valuation of HCPCS code G0323, we are also proposing conforming updates to the valuation for work and PE inputs for HCPCS code G0323. See section II.E. of this proposed rule for further discussion of changes to the valuation for HCPCS code G0323.

We welcome comments regarding any other HCPCS codes that may require updating to allow MFTs and MHCs to bill for the services described in the HCPCS code descriptor.

d. Medicare Enrollment of MFTs and MHCs

MFTs and MHCs who meet the applicable requirements (possess a master's or doctor's degree which qualifies for licensure or certification as a mental health counselor; after obtaining such degree have performed at least 2 years (or, as proposed, 3,000 hours) of clinical supervised experience in mental health counseling; and is licensed or certified as a MHC, clinical professional counselor, or professional counselor by the State in which the services are furnished) described in detail above in this section, as finalized, will need to enroll in Medicare

as MFTs and MHCs in order to submit claims for marriage and family therapist services and mental health counselor services, respectively, furnished to Medicare beneficiaries. Under § 424.510, a provider or supplier must complete, sign, and submit to its assigned MAC the appropriate Form CMS–855 (OMB Control No. 0938–0685) application in order to enroll in the Medicare program and obtain Medicare billing privileges. The Form CMS–855, which can be submitted via paper or electronically through the internet-based Provider Enrollment, Chain, and Ownership System (PECOS) process (SORN: 09–70–0532; 104 Provider Enrollment, Chain, and Ownership System), captures information about the provider or supplier that is needed for CMS or its MACs to determine whether the provider or supplier meets all Medicare requirements. We propose that the MFT and MHC supplier types, like most non-physician practitioner types, be subject to limited-risk screening under § 424.518, for we have no basis on which to assign these suppliers as a class to a higher screening category.

MFTs and MHCs that meet the proposed requirements in §§ 410.53 and 410.54 as finalized, would enroll in Medicare via the Form CMS-855I application (Medicare Enrollment Application – Physicians and Non-Physician Practitioners; OMB No. 0938-1355) and could begin submitting their enrollment applications after the publication of the CY 2024 PFS final rule. However, as the new benefit categories authorized by section 4121(a) of the CAA, 2023, do not take effect until January 1, 2024, MFT or MHC claims for MFT or MHC services furnished to Medicare beneficiaries with dates of service prior to January 1, 2024 will not be payable under Medicare Part B. MFTs and MHCs can visit <https://www.cms.gov/medicare/provider-enrollment-and-certification> for basic information on the provider enrollment process.

2. Implementation of Section 4123 of the CAA, 2023

Section 4123(a)(1) of the CAA, 2023, Improving Mobile Crisis Care in Medicare, amended section 1848 of the Act by adding a new paragraph (b)(12) regarding payment for

psychotherapy for crisis services furnished in an applicable site of service. New subparagraph (A) of section 1848(b)(12) of the Act requires the Secretary to establish new HCPCS codes under the PFS for services described in subparagraph (B) that are furnished on or after January 1, 2024. Subparagraph (B) of section 1848(b)(12) of the Act describes these services as psychotherapy for crisis services that are furnished in an applicable site of service. Section 1848(b)(12)(C) of the Act specifies that the payment amount for these psychotherapy for crisis services shall be equal to 150 percent of the fee schedule amount for non-facility sites of service for each year for the services identified (as of January 1, 2022) by HCPCS codes 90839 (*Psychotherapy for crisis; first 60 minutes*) and 90840 (*Psychotherapy for crisis; each additional 30 minutes (List separately in addition to code for primary service)*), and any succeeding codes.

For purposes of this provision, subparagraph (D)(i) of new section 1848(b)(12) of the Act defines an applicable site of service as a site of service other than a site where the facility rate under the PFS applies and other than an office setting, while subparagraph (D)(ii) requires that the code descriptors for these new psychotherapy for crisis services be the same as the services identified (as of January 1, 2022) by HCPCS codes 90838 and 90840, and any succeeding codes, except that the new codes shall be limited to services furnished in an applicable site of service.

Therefore, consistent with the requirements described in new paragraph (12) of section 1848(b) of the Act, we are proposing to create two new G-codes describing psychotherapy for crisis services furnished in any place of service at which the non-facility rate for psychotherapy for crisis services applies, other than the office setting: HCPCS codes GPFC1 and GPFC2.

To identify the places of service that are assigned the non-facility rate, § 414.22(b)(5)(i) states that there are usually two levels of PE RVUs that correspond to each code paid under the PFS: facility PE RVUs and non-facility PE RVUs. Under § 414.22(b)(5)(i)(A), the facility PE RVUs apply to services furnished in a hospital, skilled nursing facility, community mental health center, hospice, ambulatory surgical center, or wholly owned or wholly operated entity providing

preadmission services under § 412.2(c)(5), or for services furnished via telehealth under § 410.78 (though we note that special rules relating to the PHE for COVID-19 currently apply, and we include proposals regarding the place of service for telehealth services in section II.D). Under § 414.22(b)(5)(i)(B), the non-facility rate is paid in all other settings, including a physician’s office, the patient’s home, a nursing facility, or a comprehensive outpatient rehabilitation facility. We provide the full list of places of service that are assigned a non-facility rate on the CMS website at <https://www.cms.gov/Medicare/Coding/place-of-service-codes>. We propose that the two new G-codes describing psychotherapy for crisis services can be billed when the services are furnished in any non-facility place of service other than the physician’s office setting. We also note that in the CY 2022 PFS final rule (86 FR 65059), in our discussion of Medicare telehealth services where the patient’s home is a permissible originating site for services furnished for diagnosis, evaluation, or treatment of a mental health disorder, we indicated that we define the term “home” broadly to include temporary lodging, such as hotels and homeless shelters (86 FR 65059). We clarified that, for circumstances where the patient, for privacy or other personal reasons, chooses to travel a short distance from the exact home location during a telehealth service, that would qualify as the patient’s home. For purposes of implementing section 1848(b)(12) of the Act, we are proposing to use the same broad definition of the patient’s home for purposes of these proposed G-codes describing psychotherapy for crisis services.

The proposed new G-codes and their descriptors are:

- GPFC1 (*Psychotherapy for crisis furnished in an applicable site of service (any place of service at which the non-facility rate for psychotherapy for crisis services applies, other than the office setting); first 60 minutes*); and
- GPFC2 (*Psychotherapy for crisis furnished in an applicable site of service (any place of service at which the non-facility rate for psychotherapy for crisis services applies, other than*

the office setting);; each additional 30 minutes (List separately in addition to code for primary service)).

As required by section 1848(b)(12)(C) of the Act, we are proposing to establish a fee schedule amount for these two new G-codes that is 150 percent of the current PFS non-facility RVUs for CPT codes 90839 (*Psychotherapy for crisis; first 60 minutes*) and 90840 (*Psychotherapy for crisis; each additional 30 minutes (List separately in addition to code for primary service)*), respectively. Specifically, we are proposing to calculate the work, PE, and MP RVUs for HCPCS codes GPFC1 and GPFC2 by multiplying the work, PE, and MP RVUs for CPT codes 90839 and 90840, respectively, by 1.5.

We note that section 4123(a)(2) of the CAA, 2023 amends section 1848(c)(2)(B)(iv) of the Act to include a waiver of budget neutrality providing that subsection (b)(12) shall not be taken into account in applying PFS budget neutrality requirements under section 1848(c)(2)(B)(ii)(II) of the Act for 2024. Accordingly, we are proposing to exclude expected expenditures for HCPCS codes GPFC1 and GPFC2 from the budget neutrality calculation for CY 2024 PFS ratesetting.

Additionally, section 4123(d) of the CAA, 2023 requires that the Secretary use existing communication mechanisms to provide education and outreach to providers of services, physicians, and practitioners with respect to the ability of auxiliary personnel, including peer support specialists, to participate, consistent with applicable requirements for auxiliary personnel, in the furnishing of psychotherapy for crisis services billed under the PFS under section 1848 of the Act, behavioral health integration services, as well as other services that can be furnished to a Medicare beneficiary experiencing a mental or behavioral crisis. We understand that there are varying definitions of the term “peer support specialist.” The Substance Abuse and Mental Health Services Administration (SAMHSA) defines a “peer support specialist” as a person who uses their lived experience of recovery from mental illness

and/or addiction, plus skills learned in formal training, to deliver services to promote recovery and resiliency. The essential principles of peer support include shared personal experience and empathy, a focus on individual strengths, and supporting individuals as they work toward recovery pursuant to a person-centered plan of care. However, for Medicare payment purposes, we note that the term auxiliary personnel is defined at § 410.26(a)(1) as any individual who is acting under the supervision of a physician (or other practitioner), regardless of whether the individual is an employee, leased employee, or independent contractor of the physician (or other practitioner) or of the same entity that employs or contracts with the physician (or other practitioner), has not been excluded from the Medicare, Medicaid, and all other Federally funded health care programs by the Office of Inspector General or had his or her Medicare enrollment revoked, and meets any applicable requirements to provide incident to services, including licensure, imposed by the State in which the services are being furnished. We do not include definitions of any specific types of personnel who could be included under the definition of auxiliary personnel in our regulations and are not proposing to do so through this rule. CMS anticipates conducting this outreach and education through existing communications mechanisms as required by the CAA, 2023.

3. Implementation of Section 4124 of the Consolidated Appropriations Act, 2023 (CAA, 2023)

Section 4124 of the CAA, 2023, Ensuring Adequate Coverage of Outpatient Mental Health Services under the Medicare Program, establishes Medicare coverage and payment for intensive outpatient services for individuals with mental health needs when furnished by hospital outpatient departments, community mental health centers, RHCs, and FQHCs, effective January 1, 2024. Please see the discussion of our proposed implementation of section 4124 in the CY 2024 Outpatient Prospective Payment System (OPPS) proposed rule, section VIII. Payment for Partial Hospitalization and Intensive Outpatient Services.

4. Health Behavior Assessment and Intervention (HBAI) Services

The current Health and Behavior Assessment and Intervention codes (CPT codes 96156, 96158, 96159, 96164, 96165, 96167, 96168, 96170, and 96171) were created by the CPT Editorial Panel during its September 2018 meeting. The CPT Editorial Panel deleted the six previous HBAI CPT codes and replaced them with nine new CPT codes. As discussed in the CY 2023 PFS final rule (87 FR 69541), the HBAI range of CPT codes are intended to be used for psychological assessment and treatment, when the primary diagnosis is a medical condition. A health behavior assessment under these HBAI services is conducted through health-focused clinical interviews, behavioral observation and clinical decision-making and includes evaluation of the person's responses to disease, illness or injury, outlook, coping strategies, motivation, and adherence to medical treatment. HBAI services are provided individually, to a group (two or more patients), and/or to the family, with or without the patient present, and include promotion of functional improvement, minimization of psychological and/or psychosocial barriers to recovery, and management of and improved coping with medical conditions. The HBAI codes apply to services that address psychological, behavioral, emotional, cognitive, and interpersonal factors in the treatment/management of people diagnosed with physical health issues. According to the CPT prefatory language in the CPT 2023 Professional Edition, the patient's primary diagnosis is physical in nature and the focus of the assessment and intervention is on factors complicating medical conditions and treatments. The HBAI codes capture services related to physical health, such as adherence to medical treatment, symptom management, health-promoting behaviors, health related risky behaviors, and adjustment to physical illness.

In light of the new benefit categories authorized by section 4121(a)(2) of the CAA, 2023, which authorize MFTs and MHCs to furnish services for the diagnosis and treatment of mental illness, this prompted us to consider whether MFTs and MHCs could furnish and bill for HBAI services. Additionally, we re-examined whether CSWs could furnish and bill these HBAI codes given that their statutory benefit category also authorizes them to furnish services for the

diagnosis and treatment of mental illnesses. We note that prior to the passage of the CAA, 2023, which authorized benefit categories for MFTs and MHCs, there was previously a National Coverage Determination (NCD) that stated, the CPT codes 96156, 96158, 96159, 96164, 96165, 96167 and 96168 may be used only by a Clinical Psychologist (CP), (Specialty Code 68). However, we note that this NCD was retired on December 8, 2022.³³

Like CPs, who can currently bill Medicare for HBAI services, CSWs, MFTs, and MHCs have the education and training to address psychosocial barriers to meet the needs of patients with physical health conditions. In accordance with State law and scope of practice, CSWs, MFTs, and MHCs can assess, diagnose, and treat psychological and/or psychosocial behaviors associated with physical health conditions. Interested parties have informed us that like CSWs, MHCs and MFTs can play a key role in a multidisciplinary team approach that leads to successful outcomes in patient care, including offering integrated care within hospitals and medical practices where patients are diagnosed with physical health conditions. For example, mental health professionals such as MHCs and MFTs facilitate “behavioral management and reinforcement, guided problem-solving, supporting patients in setting realistic and attainable goals, and teaching relaxation strategies for managing diabetes-related stressors.”³⁴ In this role, mental health professionals such as CSWS, MHCs, and MFTs help patients manage mental health symptoms associated with a physical health condition. Moreover, according to the National Cancer Institute at the National Institutes of Health, mental health professionals can also provide emotional and social support to assist cancer patients in reducing “levels of depression, anxiety, and disease and treatment-related symptoms among patients.”³⁵ Therefore, we are proposing to allow the HBAI services described by CPT codes 96156, 96158, 96159,

96164, 96165, 96167, and 96168, and any successor codes, to be billed by CSWs, MFTs, and MHCs, in addition to CPs. We note that in order for payment to be made under Medicare for HBAI services furnished to a beneficiary, the HBAI services must be reasonable and necessary for the diagnosis or treatment of illness or injury or to improve the functioning of a malformed body member, in accordance with section 1862(a)(1)(A) of the Act.

5. Adjustments to Payment for Timed Behavioral Health Services

There is an ongoing behavioral health crisis in the United States, which has been exacerbated by the COVID-19 pandemic, the overdose crisis,³⁶ and worsening behavioral healthcare workforce shortages.³⁷ Public comments received in response to the CY 2023 PFS proposed rule described practices that furnish treatment for behavioral health conditions experiencing difficulty recruiting and retaining behavioral health clinicians and expressed concern that people are experiencing unprecedented delays in receiving medically necessary services across care settings. Commenters described workforce shortages nationwide that, combined with increasing demand for behavioral health care services, have limited Medicare beneficiary access to these vital services. Prior to the pandemic, the Health Resources and Services Administration (HRSA) projected shortages of seven selected types of behavioral health providers by 2025.³⁸ As of March 31, 2023, HRSA designated more than 6,635 health professional shortage areas for mental health, with more than one-third of Americans living in these shortage designations.³⁹ Additionally, according to SAMHSA's guide on *Addressing Burnout in the Behavioral Health Workforce Through Organizational Strategies*, staffing shortages, and high turnover rates place enormous demands on the workforce, jeopardizing the

³⁹ Health Resources and Services Administration, Health Workforce Shortage Areas, <https://data.hrsa.gov/topics/health-workforce/shortage-areas>.

provision of care, especially to underserved individuals.⁴⁰ The behavioral health workforce experiences high levels of work-related stress, relatively low salaries, and full caseloads; these combined factors place individuals working in the behavioral health field at high risk for experiencing burnout.⁴¹ Over 50 percent of behavioral health providers report experiencing burnout symptoms. The rate of burnout will likely increase, given the continued growth in the number of people seeking behavioral health care, behavioral health staffing, and retention challenges.⁴²

In CY 2023 PFS rulemaking, we sought comment on how we can best help ensure beneficiary access to behavioral health services, including any potential adjustments to the PFS ratesetting methodology, for example, any adjustments to systematically address the impact on behavioral health services paid under the PFS. We described that as part of our review of our payment policies and systems, we understand that the PFS ratesetting methodology and application of budget neutrality may impact certain services more significantly than others based on factors such as how frequently codes are revalued and the ratio of physician work to PE. In the CY 2018 PFS final rule (82 FR 52999), we discussed feedback we received from some interested parties suggesting that, for codes with very low direct PE inputs, our methodology for allocating indirect PE does not produce a differential between facility and nonfacility PE RVUs that accurately reflects the relative indirect costs involved in furnishing services in non-facility settings. We stated that primary therapy and counseling services available to Medicare beneficiaries for the treatment of behavioral health conditions, including substance use disorders, are among the services most affected by our methodology. For example, we stated at the time that, for the most commonly reported psychotherapy service (CPT code 90834), the difference

⁴⁰ <https://bhw.hrsa.gov/sites/default/files/bureau-health-workforce/data-research/bh-workforce-projections-fact-sheet.pdf>.

⁴¹ Kelly, R.J., Hearld, L.R. Burnout and Leadership Style in Behavioral Health Care: a Literature Review. *J Behav Health Serv Res* 47, 581–600 (2020). <https://doi.org/10.1007/s11414-019-09679-z>.

⁴² https://store.samhsa.gov/sites/default/files/SAMHSA_Digital_Download/pep22-06-02-005.pdf.

between the nonfacility and facility PE RVUs was only 0.02 RVUs, which seemed unlikely to represent the difference in relative PE resource costs in terms of administrative labor, office expense, and all other expenses incurred by the billing practitioner for 45 minutes of psychotherapy services when furnished in the office setting versus the facility setting. We agreed with these interested parties that the site of service differential for these services produced by our PE methodology seems unlikely to reflect the relative resource costs for the practitioners furnishing these services in nonfacility settings. For example, we believe the 0.02 RVUs, which translated at the time to approximately \$0.72, was unlikely to reflect the relative administrative labor, office rent, and other overhead involved in furnishing the 45-minute psychotherapy service in a nonfacility setting. Consequently, we modified our PE methodology to establish a minimum nonfacility PE RVU for certain outlier codes with very low direct PE inputs as compared to work RVUs, most of which are primarily furnished by behavioral health professionals. We finalized a policy to implement only one quarter of the minimum value for nonfacility indirect PE for the identified outlier codes over a 4-year transition period, beginning with CY 2018. We stated that we recognized that this change in the PE methodology could significantly impact the allocation of indirect PE RVUs across all PFS services (82 FR 53000).

In light of increasing patient needs for behavioral health services and continued workforce shortages, we have been examining a number of dynamics in our processes for developing values for behavioral health services under the PFS. We continue to consider approaches to ensuring that the relative values we establish for these services accurately reflect the resources involved in furnishing them, especially since any potential systemic undervaluation could serve as an economic deterrent to furnishing these kinds of services and be a contributing factor to the workforce shortage.

Interested parties have long raised concerns regarding the valuation of services that primarily involve person-to-person interactions with beneficiaries, particularly those services that

are comprised of conversational interactions rather than physical interactions, because these services require minimal equipment and supplies compared to other services, and therefore, valuation is based almost entirely on the practitioner's work. Because the physician/practitioner work RVU is developed based on the time and intensity of the service, the issues regarding the valuation of these types of services are particularly pronounced for services that are billed in time units (like psychotherapy codes) that directly reflect the practitioner time inputs used in developing work RVUs, compared to other services that are not billed in time units in which work RVUs are based on estimates of typical time, usually based on survey data. For example, a 2016 report by the Urban Institute entitled *Collecting Empirical Physician Time Data*⁴³ (the Urban Institute report) reviewed empirical time estimates for 60 services paid under the PFS with relative values developed based on time estimates derived from survey data (as opposed to actual reported time). The Urban Institute report suggested that there may be systemic overestimations of times for these services within the PFS, which would lead to overvaluation of these services and, by implication, undervaluation of other services.

The dynamic described by the Urban Institute report can lead to systemic undervaluation for some kinds of time-based codes for several, interrelated reasons. First, overestimates of time for some kinds of codes compared to other kinds of codes results in "implied intensity" (that is the ratio of work RVU/per minute, sometimes referred to by the AMA RUC as intra-service work per unit of time, or IWPUT) that is artificially low. This is important since we understand that the implied intensity is used as part of the AMA RUC review of survey data to contextualize the credibility of data and the resulting recommended work RVUs compared to codes with similar times. CMS' review of the RUC recommendations similarly utilizes implied intensity as

⁴³ https://www.urban.org/sites/default/files/publication/87771/2001123-collecting-empirical-physician-time-data-piloting-approach-for-validating-work-relative-value-units_0.pdf.

important contextual information in order to assess the relative values assigned to particular services.

The second reason this dynamic could result in potential undervaluation of certain services is that time-based codes that describe one-on-one time with the patient are highly unlikely to become more efficient over multiple years. In contrast, surgical procedures tend to become more efficient over the years as they become more common, professionals gain more experience with them, improved technology is deployed, and other general operational improvements are implemented. Meanwhile, 45 minutes of psychotherapy remains static in terms of efficiency since, by definition, it requires 45 minutes of time, personally spent by the billing professional, one-on-one with the patient. Moreover, even if there were efficiencies that reduced the time required to furnish therapy services, the services would then be reported with time-based codes with lower total values. Additionally, in contrast to services such as procedures that utilize clinical staff, no part of the one-on-one therapy service can be performed by clinical staff working with the billing professional. This means that any overestimations in the initial estimates of time used to establish work times and values, as discussed above, are likely compounded over time as there are gains in efficiencies for some services in terms of time, clinical staff delegation, and improved technology, but no such gains for other services.

For many professionals who provide a heterogeneous range of services paid under the PFS, this phenomenon may not have a significant overall impact on their Medicare PFS payments. However, this phenomenon would have an outsized impact on Medicare PFS payments for professionals who predominantly furnish services involving person-to-person interactions with patients that are reported and valued in time-based units. It would not be logical to assume that the marketplace ignores this dynamic, since the opportunity for increased revenue generation through efficiency for timed, one-on-one services is limited as compared to services for which there are multiple avenues to gain efficiencies.

We also recognize that, while this underlying valuation dynamic may create distortion of increasing magnitude over time, the quickly changing needs of Medicare beneficiaries relative to behavioral health also likely contribute to systemic distortion. This is especially the case as beneficiaries rely on behavioral health professionals for ongoing care of chronic and acute mental health needs. In other words, at the same time that the intensity of the work involved in furnishing services to Medicare beneficiaries increases, the work RVUs assigned to these services may be initially undervalued relative to other services that are valued based on potentially inflated time data, and therefore, may not accurately reflect the current relative resource costs associated with these services.

One approach to curb the impact of this dynamic would be to conduct more frequent revaluations of these kinds of services, including timed psychotherapy services. However, our current valuation process relies primarily, as noted, on times reported through survey data of professionals who furnish these services and assessment by the RUC of those survey data. We believe that survey results from the professionals that currently provide behavioral health services, including physicians, psychologists, and social workers could reflect the increased intensity of the work due to changes in the complexity of care for beneficiaries, but would be unlikely to address any relative undervaluation of work estimates. We are interested in working with the broader community, including the AMA RUC, to address these specific concerns over the long term.

However, given the emerging need for access to behavioral health care and the continuing difficulties in behavioral health workforce capacity, we believe it would be appropriate to take immediate steps to improve the accuracy of the valuation of these services until we can develop systemic solutions to longstanding process limitations. Consequently, we propose to address the immediate need for improvement in valuation for timed psychotherapy services in such a way that considers the policy we initially finalized in the CY 2020 PFS final

rule (84 FR 62856) to address valuation distortions for primary and longitudinal care through implementation of an add-on code for office/outpatient E/M services that involve inherent complexity, and are proposing to reestablish in this rule. Our proposed implementation of that policy is discussed in section II.F. of this proposed rule. Like E/M visits that are furnished for primary and longitudinal care, we believe that the psychotherapy codes similarly describe treatment that is ongoing or longitudinal, and therefore, we believe it is appropriate to propose to address the need for improvement in valuation for timed psychotherapy services based on the proposed valuation for the inherent complexity add-on code for office/outpatient E/M services.

Under this proposal, we would apply an adjustment to the work RVUs *for* the psychotherapy codes payable under the PFS. We propose to base this adjustment on the difference in total work RVUs for office/outpatient E/M visit codes (CPT codes 99202-99205 and 99211-99215) billed with the proposed inherent complexity add-on code (HCPCS code G2211) compared to the total work RVUs for visits that are not billed with the inherent complexity add-on code. This would result in an approximate upward adjustment of 19.1 percent for work RVUs for these services, comparable to the relative difference in office/outpatient visits that are also systemically undervalued absent such an adjustment, which we are proposing to implement over a 4-year transition. In making significant adjustments to RVUs in past rulemaking, we have implemented such changes using a 4-year transition, noting that a transition period allows for a more gradual adjustment for affected practitioners. We are proposing to apply this adjustment to the following time-based psychotherapy codes that describe one-on-one time with the patient that are significantly unlikely to become more efficient over multiple years: CPT code 90832 (*Psychotherapy, 30 minutes with patient*); CPT code 90834 (*Psychotherapy, 45 minutes with patient*); CPT code 90837 (*Psychotherapy, 60 minutes with patient*); 90839 (*Psychotherapy for crisis; first 60 minutes*); CPT code 90840 (*Psychotherapy for crisis; each additional 30 minutes (List separately in addition to code for primary service)*); CPT

code 90845 (*Psychoanalysis*); 90846 (*Family psychotherapy (without the patient present), 50 minutes*); CPT code 90847 (*Family psychotherapy (conjoint psychotherapy) (with patient present), 50 minutes*); CPT code 90849 (*Multiple-family group psychotherapy*); CPT code 90853 (*Group psychotherapy (other than of a multiple-family group)*) and newly proposed HCPCS codes GPFC1 and GPFC2 (*Psychotherapy for crisis furnished in an applicable site of service (any place of service at which the non-facility rate for psychotherapy for crisis services applies, other than the office setting)*). We are not proposing to include CPT codes 90833, 90836, and 90838 in this list of codes for which we would make the adjustment because these are add-on codes for psychotherapy that is performed with an E/M visit and under our proposal described at section II.E of this proposed rule, E/M codes will be eligible to be billed with HCPCS code G2211, therefore, the psychotherapy codes that are performed with an E/M visit will already be eligible for an adjustment to account for the resources costs involved in furnishing longitudinal care. We believe that implementing an adjustment to the work RVUs for psychotherapy services concurrent with implementation of HCPCS code G2211 will help address distortions that may occur within our valuation process that may otherwise result in understated estimates of the relative resources involved in furnishing psychotherapy services. We recognize that many other services share some similarities with these psychotherapy services. For example, there are other services that are reported in time units. Likewise, there are other codes that primarily describe conversational interactions between medical professionals and beneficiaries. However, we believe that these services are unique because neither technology nor clinical staff can be utilized to increase efficiency, and because these services represent the significant majority of services furnished by certain types of professionals. If finalized, the implementation of this proposal for CY 2024, concurrent with the proposal to implement the inherent complexity add-on code, if finalized, will also mitigate any negative impact in valuation for psychotherapy services based on redistributive impacts if we were to finalize only the inherent complexity add-on code for E/M

visits without proposing and finalizing any adjustments for psychotherapy. We welcome comments on this proposal, including and especially how the PFS valuation processes for these services and other services with similar characteristics can be improved in the future in order to mitigate the kinds of distortions described above.

Additionally, as noted above in this section, in the CY 2018 PFS final rule (82 FR 52999), we identified a set of outlier codes for which we believed it would be appropriate to establish a minimum nonfacility indirect PE RVU that would be a better reflection of the resources involved in furnishing these services. For each of the outlier codes, we compared the ratio between indirect PE RVUs and work RVUs that result from the application of the standard methodology to the ratio for a marker code, which was CPT code 99213. The finalized change in the methodology then increased the allocation of indirect PE RVUs to the outlier codes to at least one quarter of the difference between the two ratios. We stated we believed this approach reflected a reasonable minimum allocation of indirect PE RVUs, but that we did not have empirical data that would be useful in establishing a more precise number. We finalized implementation of one quarter of the minimum value for nonfacility indirect PE for the identified outlier codes. We stated that we recognized that this change in the PE methodology could have a significant impact on the allocation of indirect PE RVUs across all PFS services and finalized that we would implement this change over a 4-year transition, beginning in CY 2018 and ending in CY 2021. We welcome comments on whether we should consider further adjustments to the nonfacility indirect PE for the identified outlier codes. Specifically, we request comment on whether this minimum value adjustment to the indirect PE for certain services sufficiently accounted for the resources involved in furnishing these services, or whether we should consider further adjustments, such as applying 50 percent of the calculated minimum value for nonfacility indirect PE values for these services, and whether we should consider implementing further changes using a similar 4-year transition.

6. Updates to the Payment Rate for the PFS Substance Use Disorder (SUD) bundle (HCPCS codes G2086-G2088)

In the CY 2023 PFS final rule (87 FR 69772 through 69774), we finalized a modification to the payment rate for the non-drug component of the bundled payment for episodes of care under the Opioid Treatment Program (OTP) benefit to base the rate for individual therapy on a crosswalk to CPT code 90834 (*Psychotherapy, 45 minutes with patient*), which reflects a 45-minute psychotherapy session, instead of a crosswalk to CPT code 90832 (*Psychotherapy, 30 minutes with patient*), as was our current policy at the time. We received public comments urging us to consider adopting this modification for other bundled payments for SUD under the PFS, such as the bundled rate for office-based SUD treatment, to reflect the complexity of treating these patients and ensure that there is consistent and sufficient access to counseling for SUD across settings of treatment. The commenters noted that some patients who are prescribed buprenorphine in non-OTP settings will have similarly complex care needs requiring more intensive therapeutic care, and that by recognizing the appropriate complexity and intensity of the services in setting the rates, CMS can incentivize more office-based practices to offer these services and build out the treatment teams that deliver this care.

In the CY 2020 PFS final rule (84 FR 62673 through 62677), we finalized the establishment of bundled payments for the overall treatment of OUD, including management, care coordination, psychotherapy, and counseling activities. We stated that for the purposes of valuation of HCPCS codes G2086 (*Office-based treatment for a substance use disorder, including development of the treatment plan, care coordination, individual therapy and group therapy and counseling; at least 70 minutes in the first calendar month*) and G2087 (*Office-based treatment for a substance use disorder, including care coordination, individual therapy and group therapy and counseling; at least 60 minutes in a subsequent calendar month*), we assumed two individual psychotherapy sessions per month and four group psychotherapy

sessions per month, and noted that we understand that the number of therapy and counseling sessions furnished per month will vary among patients and also fluctuate over time based on the individual patient's needs. We are persuaded by the public comments received in response to the CY 2023 PFS proposed rule requesting that these codes be priced consistent with the crosswalk codes used to value the bundled payments made for OUD treatment services furnished at OTPs, as beneficiaries receiving buprenorphine in settings outside of OTPs may have similarly complex care needs as compared to beneficiaries receiving OUD treatment services at OTPs. In order to update the valuation for HCPCS codes G2086 and G2087, we are proposing to increase the current payment rate to reflect two individual psychotherapy sessions per month, based on a crosswalk to the work RVUs assigned to CPT code 90834 (*Psychotherapy, 45 minutes with patient*), rather than CPT code 90832 (*Psychotherapy, 30 minutes with patient*). The current work RVU assigned to CPT code 90834 is 2.24, compared to the work RVU assigned to CPT code 90832, which is 1.70, which results in a difference of 0.54 work RVUs. Because the bundled payments described by HCPCS codes G2086 and G2087 include two individual psychotherapy sessions per month, we are proposing to add 1.08 RVUs to the work value assigned to HCPCS codes G2086 and G2087, which results in a new work RVU of 8.14 for HCPCS code G2086 and 7.97 for HCPCS code G2087. We note that as described above, we are also proposing to update the work RVUs assigned to CPT code 90834 in this proposed rule. If our proposal to update the work RVUs for the standalone psychotherapy codes is finalized, CPT code 90834 would be assigned a work RVU of 2.35. In that case, our proposed update to HCPCS codes G2086 and G2087 would also reflect the updated work RVUs for 90834, and would result in a work RVU of 8.36 for HCPCS code G2086 and a work RVU of 8.19 for HCPCS code G2087.

7. Comment Solicitation on Expanding Access to Behavioral Health Services

In recent years, we have made efforts to undertake rulemaking and establish policies to expand access to behavioral health services, consistent with the CMS Behavioral Health Strategy, which aims to strengthen quality and equity in behavioral health care; improve access to substance use disorders prevention, treatment, and recovery services; ensure effective pain treatment and management; improve mental health care and services; and utilize data for effective actions and impact⁴⁴. We continue to be interested in hearing feedback regarding ways we can continue to expand access to behavioral health services. For example, we welcome feedback regarding ways to increase access to behavioral health integration (BHI) services, including the psychiatric collaborative care model; whether we could consider new coding to allow interprofessional consultation to be billed by practitioners who are authorized by statute for the diagnosis and treatment of mental illness; intensive outpatient (IOP) services furnished in settings other than those addressed in the CY 2024 OPSS proposed rule; and how to increase psychiatrist participation in Medicare given their low rate of participation relative to other physician specialties. Additionally, we are seeking comment on whether there is a need for potential separate coding and payment for interventions initiated or furnished in the emergency department or other crisis setting for patients with suicidality or at risk of suicide, such as safety planning interventions and/or telephonic post-discharge follow-up contacts after an emergency department visit or crisis encounter, or whether existing payment mechanisms are sufficient to support furnishing such interventions when indicated.

We welcome comments from the public on these topics as well as any other ways we might consider expanding access to behavioral health services for Medicare beneficiaries.

8. Request for Information on Digital Therapies, such as, but not limited to, digital Cognitive Behavioral Therapy

⁴⁴ <https://www.cms.gov/cms-behavioral-health-strategy>.

The widespread adoption and use of software technologies, including, but not limited to digital therapeutics, is creating new ways to treat patients. In recent years, the Food and Drug Administration (FDA) has reviewed and cleared several mobile medical applications (“apps”) that have been shown to demonstrate a reasonable assurance of safety and effectiveness for addressing a variety of health conditions including sleep disorders disturbances and substance use disorders. These breakthrough devices include apps for depression and anxiety. Our understanding is that these mobile medical apps generally require a prescription or referral from a clinician and are used for specific medical purposes rather than general wellness and education.

As technologies have evolved, we have sought public comment and expanded Medicare payment under Part B for use of technologies in remote monitoring of treatment and physical health. Beginning in 2018, CMS began making separate payment for the services described by CPT code 99091, which paid for collection and interpretation of physiologic data digitally stored and/or transmitted to the practitioner. Beginning in 2019, we began paying for additional new remote physiologic monitoring (RPM) codes.

We have continued to improve and expand payment for remote treatment and monitoring in subsequent years. In 2022, we began paying for a new class of CPT codes (98975, 98980, and 98981) for Remote Therapeutic Monitoring (RTM) in addition to RPM, which enabled reimbursement of monitoring of non-physiologic data, to help ensure Medicare beneficiaries have access to these services. RTM is currently limited to monitoring respiratory system status, musculoskeletal status, and therapy adherence, or therapy response (87 FR 69647). However, we continue to add, clarify, and refine payment for RTM codes.

In the CY 2023 PFS final rule (87 FR 69645), we finalized a new RTM code for supply of a device for cognitive behavioral therapy monitoring (CPT Code 989X6 *Remote therapeutic monitoring (e.g., therapy adherence, therapy response); device(s) supply with scheduled (e.g., daily) recording(s) and/or programmed alert(s) transmission to monitor cognitive behavior*

therapy, each 30 days). In that rule, we noted specialty societies indicated the technologies for this service are still evolving, and as a result, there were no invoices for devices specific to the cognitive behavioral therapy monitoring services described by the code that could be shared. We accepted the RUC recommendation to contractor price CPT code 989X6, a PE-only device code. We stated we would work with Medicare Administrative Contractors (MACs) to better understand the devices and device costs they encounter as they review claims for payment for the new cognitive behavioral monitoring code.

For both RPM and RTM codes, the device used must meet the FDA definition of a device as described in section 201(h) of the Federal Food, Drug and Cosmetic Act (FFDCA). As we continue to gather information on how remote monitoring services are used in clinical practice and experience with coding and payment policies for these codes, we request information on the following areas to improve our understanding of the opportunities and challenges related to our coverage and payment policies, as well as claims processing, as we consider the need for further practitioner education, program instructions, and guidance, or potential future rulemaking regarding these services.

- How do practitioners determine which patients might be best served by digital therapeutics? How do practitioners monitor the effectiveness of prescribed interventions, such as, but not limited to, for their patients on an ongoing basis once the intervention has begun?

- We seek comment and real-life examples where digital cognitive behavioral therapy or other digital enabled therapy services are used by clinicians, and how the technology is imbedded in various practice models. For example, how is the patient evaluated and/or how is the treating clinician involved in the services received when the patient participates in digital cognitive behavioral therapy?

- What standards have interested parties developed or consulted to ensure the physical safety and privacy of beneficiaries utilizing digital cognitive behavioral therapy (CBT) and/or other digital therapeutics for behavioral health?
- What are effective models for distribution/delivery of digital therapeutics, such as prescription digital mental health therapy products to patients? What best practices exist to ensure that patients have the necessary support and training to use applications effectively?
- What practitioners and auxiliary staff are involved in furnishing RPM and RTM services, including training patients on its use, and to what extent is additional training or supervision of auxiliary staff necessary to provide an appropriate for and/or recommended standard of care in the delivery of these services?
- How are data that are collected by the technology maintained for recordkeeping and care coordination?
- What information exists about how an episode of care should be defined, particularly in circumstances when a patient may receive concurrent RTM or digital CBT services from two different clinicians engaged in separate episodes of care?
- We noted in previous rulemaking that even when multiple medical devices are provided to a patient, the services associated with all the medical devices can be billed by only one practitioner, only once per patient, per 30-day period, and only when at least 16 days of data have been collected. We seek information on the type and frequency of circumstances that involve multiple medical devices and multiple clinicians. How might allowing multiple, concurrent RTM services for an individual beneficiary affect access to health care, patient out-of-pocket costs, the quality of care, health equity, and program integrity?
- Do interested parties believe digital CBT could be billed using the existing remote therapeutic monitoring codes described by CPT codes 98975, 98980, and 98981? What impediments may exist to using these codes for digital CBT?

- In the past, commenters generally supported the concept of a generic RTM device code, and offered a wide variety of possible use cases, including where FDA approved devices and devices that have gone through other premarket pathways exist for the purpose of monitoring various conditions that do not meet the current scope of the existing RTM codes.

- ++ What are the advantages and disadvantages of a generic RTM device code, versus specific RTM codes?

- ++ Would generic device codes undermine or stall progress toward a wider set of specific codes that would provide less ambiguity on reimbursement?

- ++ How might generic RTM codes for supply of a device be valued given the broad array of pricing models?

- What scientific and clinical evidence of effectiveness should CMS consider when determining whether digital therapeutics for behavioral health are reasonable and necessary?

- What aspects of digital therapeutics for behavioral health should CMS consider when determining whether it fits into a Medicare benefit category, and which category should be used?

- If CMS determines the services fit within an existing Medicare benefit category or if other coverage requirements are met, what aspects of delivering digital cognitive based therapy services should be considered when determining potential Medicare payment? Under current practice models, are these products used as incident-to supplies or are they used independent of a patient visit with a practitioner? If used independently of a clinic visit, does a practitioner issue an order for the services?

- Are there barriers to digital CBT reaching underserved populations, and would a supervision requirement impact access to digital CBT for underserved populations?

- What strategies, if any, within the digital therapeutics for behavioral health support disadvantaged/hard to reach populations in advancing equity in health care services?

- What are some potential considerations for protecting the privacy and confidentiality of the patient population in digital therapeutics, including compliance with State behavioral health privacy requirements?

K. Proposals on Medicare Parts A and B Payment for Dental Services Inextricably Linked to Specific Covered Services

1. Medicare Payment for Dental Services

a. Overview

Section 1862(a)(12) of the Act generally precludes payment under Medicare Parts A or B for any expenses incurred for services in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth. (Collectively here, we will refer to “the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth” as “dental services.”) In the CY 2023 PFS final rule (87 FR 69663 through 69688), we identified certain clinical scenarios where payment is permitted under both Medicare Parts A and B for certain dental services in circumstances where the services are not considered to be in connection with dental services within the meaning of section 1862(a)(12) of the Act.

The regulation at § 411.15(i)(3)(i) includes examples of services for which payment can be made under Medicare Parts A and B for dental services, furnished in an inpatient or outpatient setting, that are inextricably linked to, and substantially related to the clinical success of, certain other covered services (hereafter in this section, “inextricably linked to other covered services”).

Recognizing that there may be other instances where covered services necessary to diagnose and treat the individual’s underlying medical condition and clinical status may require the performance of certain dental services, we are proposing to expressly identify other instances where dental services are inextricably linked to other covered services such that they are not in connection with dental services within the meaning of section 1862(a)(12) of the Act. At the same time, we recognize that there are dental services that are not inextricably linked to other

covered services. In these instances, we continue to believe that Medicare payment is precluded by section 1862(a)(12) of the Act, except when, due to the patient's underlying medical condition and clinical status or the severity of the dental procedure, hospitalization is required; and that in those instances, the Medicare Part A exception provided under section 1862(a)(12) of the Act would apply.

In the CY 2023 PFS final rule (87 FR 69682, 69685, 69687), we also established a process for the public to submit additional dental services that may be inextricably linked to other covered services for our consideration and review, and finalized a policy to permit payment for certain dental services, such as dental examinations and necessary treatment, prior to or contemporaneously with the treatment of head and neck cancers, beginning in CY 2024.

We are proposing to codify in section § 411.15(i)(3)(i)(A) additional policies to permit payment for certain dental services that are inextricably linked to, and substantially related and integral to, the clinical success of, other covered services. We are also proposing to make non-substantive technical changes to improve clarity of the regulation text.

b. Other Medical Services for which Dental Services may be Inextricably Linked

In the CY 2023 PFS final rule, we discussed whether we should specify that payment can be made under Medicare Parts A and B for certain dental services prior to the initiation of immunosuppressant therapy, joint replacement procedures, or other surgical procedures. We stated that we remain committed to exploring the inextricable link between dental and covered services associated with immunosuppressant therapy, joint replacement surgeries, and other surgical procedures, and that we welcomed continued engagement with the public to review the clinical evidence to determine whether certain dental services were inextricably linked to covered services (87 FR 69668 and 69680 through 69686).

We partnered with researchers at the Agency for Healthcare Research and Quality (AHRQ) to consider the relationship between dental services and specific covered services, and

review available clinical evidence regarding the relationship between dental services and medical services in the treatment of cancer using chemotherapeutic agents, which may lead to more clinically severe infections and often involve immunosuppression in patients.^{45 46} The AHRQ report⁴⁷ regarding dental services and the link between medical services is available at <https://effectivehealthcare.ahrq.gov/products/receiving-chemotherapy-cancer/rapid-review>. For example, it is generally understood that many chemotherapeutic agents used in the treatment of cancer target rapidly proliferating cells (which include those cells found in healthy tissue, like the oral mucosa). This targeting of rapidly reproducing cells in the oral mucosa can lead to the development of oral mucositis, which can negatively affect individuals with periodontitis and other dental conditions more severely, especially when they are exposed to higher doses/duration of chemotherapy.⁴⁸ Another example of a dental-related issue resulting from covered services that are immunosuppressive in nature is medication-related osteonecrosis of the jaw (MRONJ). MRONJ may occur as an adverse effect when patients with cancer receive specific covered services, such as high-dose antiresorptive and/or antiangiogenic drug therapy (for example, high doses of bisphosphonates or drugs like denosumab used to treat osteoporosis) or bone-modifying therapy in conjunction with their chemotherapy regimen. Patients with existing dental disease are most at risk for developing MRONJ secondary to bone-modifying therapy. MRONJ complicates the cancer treatment and can lead to reduced survival rates up to 3 years post-

⁴⁵ Immunosuppression describes an impairment of the cells of a patient's immune system and a reduction in their ability to fight infections and other diseases.

treatment.⁴⁹ Dental services to identify and treat oral complications/comorbidities prior to and, sometimes, throughout chemotherapy treatment have been associated with improved outcomes for the patient receiving medical services in the treatment of cancer.⁵⁰ Further, AHRQ noted that there is abundant worldwide experience and related standards of care in the management of patients whose medical conditions require chemotherapy regimens that induce immunosuppression, and that this experience has led to an understanding of how improved dental care potentially can reduce the incidence of serious infections and improve overall patient outcomes.

The AHRQ examined the effects of dental care prior to treatment on the success of medical services for patients receiving chemotherapy regimens (primary medical service) in the treatment of cancer (primary medical illness). As part of this analysis, AHRQ identified 26 primary research studies, 7 systematic reviews, and 5 practice guidelines that outline benefits and harms of pre-treatment dental services and their effects on cancer chemotherapy regimens. The studies were selected using specific inclusion criteria: a sample of patients beginning cancer treatment within two months; targeted dental services occurring prior to cancer treatment; outcomes data, such as rates of serious adverse events, quality of life, cancer relapse rates, mortality, or adherence to cancer treatment; and a minimum sample size of 10 patients.

The 26 primary research studies identified by AHRQ included prospective cohort studies, retrospective cohort studies, randomized controlled trials, and registry-based studies. From this group of studies, AHRQ found evidence to support that dental evaluation/treatment prior to cancer treatment led to decreased incidence and/or less severity of serious oral infections and complications (such as, oral mucositis and osteonecrosis) with the covered services, as well as

requiring fewer emergency treatments.^{51 52} There was further evidence found in systematic reviews that showed a possible increased incidence of oral mucositis when dental treatment is not administered at least 2-3 weeks prior to initiation of cancer treatment, further complicating the totality of services a patient received to treat their cancer.⁵³ They note that treatment of a broad range of malignancies often requires the use of chemotherapeutic agents that suppress the body's production of white blood cells, thereby impairing the body's ability to resist serious (often life-threatening) bacterial and fungal infections, and that the route of entry of these offending bacteria can be the mouth. AHRQ also analyzed several clinical practice guidelines that supported a dental evaluation/treatment before initiating chemotherapy so that any oral complications could be mitigated prior to initiating care to treat the cancer.^{54 55 56}

c. Submissions Received Through Public Submission Process

In the CY 2023 PFS final rule, we stated that we believed there may be additional clinical scenarios we have not yet identified under which Medicare payment could be made for certain dental services on the basis that dental services are inextricably linked to other covered services (87 FR 69686). In order to ensure we are appropriately considering other potential clinical scenarios that may involve such dental services, we finalized an annual public process, including notice and comment rulemaking, whereby interested parties can submit recommendations for

other clinical scenarios for potential inclusion on the list of dental services for which payment can be made under § 411.15(i)(3)(i).

Through this process, we stated that we would review clinical evidence to assess whether there is an inextricable link between certain dental and covered services because the standard of care for that medical service is such that one would not proceed with the medical procedure or service without performing the dental service(s) because the covered services would or could be significantly and materially compromised absent the provision of the inextricably-linked dental services, or where dental services are a clinical prerequisite to proceeding with the primary medical procedure and/or treatment (87 FR 69685). We also stated that, section 1862(a)(12) of the Act does not apply only when dental services are inextricably linked to, and substantially related and integral to the clinical success of, certain other covered services, such that the standard of care for that medical service would be compromised or require the dental services to be performed in conjunction with the covered services. (87 FR 69666) As such, we requested that documentation accompanying recommendations should include medical evidence to support that certain dental services are inextricably linked to certain other covered services. Specifically, we requested that the medical evidence should:

(1) Provide support that the provision of certain dental services leads to improved healing, improved quality of surgery, and the reduced likelihood of readmission and/or surgical revisions, because an infection has interfered with the integration of the medical implant and/or interfered with the medical implant to the skeletal structure;

(2) Be clinically meaningful and demonstrate that the dental services result in a material difference in terms of the clinical outcomes and success of the procedure such that the dental services are inextricably linked to, and substantially related and integral to the clinical success of, the covered services; and

(3) Be compelling to support that certain dental services would result in clinically significant improvements in quality and safety outcomes (for example, fewer revisions, fewer readmissions, more rapid healing, quicker discharge, and quicker rehabilitation for the patient). (87 FR 69686)

We stated that interested parties should submit medical evidence to support, for the recommended clinical scenario, the inextricable link between certain dental services and other covered services by providing any of the following:

(1) Relevant peer-reviewed medical literature and research/studies regarding the medical scenarios requiring medically necessary dental care;

(2) Evidence of clinical guidelines or generally accepted standards of care for the suggested clinical scenario;

(3) Other ancillary services that may be integral to the covered services; and/or

(4) Other supporting documentation to justify the inclusion of the proposed medical clinical scenario requiring dental services (87 FR 69686, 69687).

We stated that we intended to use the PFS annual rulemaking process to discuss public submissions when considering whether the recommended dental services associated with certain clinical scenarios should be considered outside the scope of the general preclusion on payment for dental services under section 1862(a)(12) of the Act because they are inextricably linked to other covered services. We continue to believe that public feedback is important, especially when considering Medicare payment for dental services that may benefit the clinical outcomes for certain covered services. We believe that using our annual notice and comment rulemaking process to discuss submitted recommendations will allow the public to comment and submit further medical evidence to assist us in evaluating whether certain dental services furnished in certain clinical scenarios would meet the standard to permit Medicare payment for the dental services. Under the public process established in the CY 2023 PFS final rule, recommendations

received by February 10th of a calendar year would be reviewed for consideration and potential inclusion within the PFS proposed rule for the subsequent calendar year. The deadline for submissions for potential consideration for CY 2024 rulemaking was February 10, 2023. We received eight submissions from various organizations on or before February 10, 2023. We received one submission after the deadline that presented nominations for covered services that have already been addressed by this payment policy.

Submissions included recommendations for payment under Medicare Parts A and B of dental services prior to covered services associated with the treatment of cancer (chemotherapy, chimeric antigen receptor (CAR) T-cell therapy, bone-modifying agents or antiresorptive therapy), total joint arthroplasty, all cardiovascular procedures, diabetes treatment, treatment for sickle-cell anemia and hemophilia, and systemic autoimmune diseases. Additionally, many submissions recommended that CMS refine certain terminology surrounding previously finalized policies, specifically around whether payment can be made for dental services furnished during and after the performance of certain covered services.

Several submissions recommended that Medicare make payment under Parts A and B for dental services prior to covered services associated with the treatment of patients with leukemia and lymphoma, as well as other cancers. Most submitting organizations stated that, by examining and addressing the oral health of the patient prior to the initiation of chemotherapy in the treatment of cancer, with or without radiation, oral complications could be appropriately addressed or prevented that would improve the clinical success of the overall cancer treatment. Submissions also recommended Medicare payment under Parts A and B for dental services before, during, and after CAR T-cell therapy and other lymphodepleting covered services (lymphodepleting therapy involves a short course of chemotherapy that targets T-cells, preconditioning the body prior to enhance treatments like CAR T-cell therapy). These

submissions stressed the need to detect early and monitor dental issues and to avoid the increased risk of related infections and complications.

Most submissions stated that medication-related osteonecrosis of the jaw (MRONJ) is a serious complication of antiresorptive and/or antiangiogenic drug therapy used to help manage the treatment of cancer. Several recommended that Medicare make payment under Parts A and B for dental services for patients where high-dose bisphosphonate therapy for cancers is indicated, such as blood and solid tumor cancers and metastatic cancers associated with risk of osteonecrosis of the jaw. These submissions recommended payment of dental services prior to and during antiresorptive therapy or prior to, during, and after the use of bone-modifying drugs. One provided references that support the provision of dental services to prevent, or as part of treatment for MRONJ. Another submission stated that the risk of MRONJ is significantly greater in patients receiving antiresorptive therapy in connection with cancer treatment compared to patients receiving antiresorptive therapy for osteoporosis. However, the submitter stated that the combination of poly-pharmaceutical management of cancer patients and related immunosuppression are risk factors for MRONJ without exposure to antiresorptive agents, and that it would be difficult to identify a single medication as the etiologic agent for MRONJ in case reports or mini-case series. The submitter stated that prevention of MRONJ would be the clinical gold standard.

One submission also recommend that Medicare make payment under Parts A and B for dental services prior to all cardiovascular procedures. In their view, the provision of dental services to reduce risk of perioperative and postoperative infection and complications is critical to ensure optimal surgical outcomes for all patients requiring invasive and/or interventional cardiac procedures. They cited a literature review in support of the need for screening and treatment for oral/dental infections prior to cardiac surgery. This submission did not recommend dental services prior to a specific cardiovascular procedure; rather, it recommended dental

services prior to all cardiovascular procedures. The literature review they cited, (which we discuss below at section II.K.3. of this proposed rule) noted that there was a mixture of medical literature to support the performance of dental services prior to all cardiac procedures in part because such cardiovascular procedures are more urgent or emergent than elective.

One submission recommended that Medicare make payment under Medicare Parts A and B for dental services prior to joint replacement surgeries, specifically total knee and hip arthroplasty. The submitting organization stated that the provision of dental services prior to or contemporaneously with joint replacement surgeries may result in more rapid healing and quicker rehabilitation, especially if a known dental infection could be addressed and potentially prevent surgical and rehabilitation complications for the patient. However, the submission acknowledged that there is no consensus on whether performing dental services prior to joint replacement surgeries improves the clinical outcomes of the medical service, or whether it is typical in practice to furnish dental services before joint replacement procedures.

Other submissions recommended Medicare make payment for dental services for patients diagnosed with a specific condition(s), such as patients with poorly controlled diabetes mellitus, or individuals living with sickle cell disease (SCD) or hemophilia.

Submissions also recommended Medicare payment for dental services for persons affected by systemic autoimmune disease. They argued that dental services are an essential component of medical treatment for these individuals who are at much higher risk of advanced dental decay, dental loss, and/or gum disease. They stated that reducing oral infection of the mucosa, teeth, and gums; oral inflammation; and tooth loss through consistent oral management reduces the systemic impact that these dental conditions have on a patient's systemic autoimmune disease. One submission stated that oral health disparities disproportionately affect members of racial or ethnic minority groups, which they offered is most pronounced in populations aged 65 and older. Another presented their proposal to bridge the gap in health

equity and to improve the health outcomes for those ages 65 and older living with autoimmune diseases.

We thank all those who submitted recommendations for clinical scenarios for which they believe Medicare payment for dental services would be consistent with the policies we codified and clarified in the CY 2023 PFS final rule under which Medicare payment could be made for dental services when inextricably linked to other covered services. We continue to encourage interested parties to engage with us regularly and to submit recommendations for our consideration of additional clinical scenarios where dental services may be inextricably linked to specific covered services. As stated earlier, interested parties should provide evidence to support or refute that at least one of the three criteria listed above for submissions is met. Furthermore, submissions should focus on the inextricably linked relationship between dental and medical services, not a specific medical condition, and whether it is not clinically advisable to move forward with the medical service without having first completed the dental service(s). We remind readers that, to be considered for purposes of CY 2025 PFS rulemaking, submissions through our public process for recommendations on payment for dental services should be received by February 10, 2024, via email at MedicarePhysicianFeeSchedule@cms.hhs.gov. Interested parties should include the words “dental recommendations for CY 2025 review” in the subject line of their email submission to facilitate processing. We stress to submitters that recommendations must include at least one of the types of evidence listed earlier when submitting documentation to support the inextricable link between specified dental services and other covered services. We note that we may also consider recommendations that are submitted as public comments during the comment period following the publication of the PFS proposed rule.

2. Proposed Additions to Current Policies Permitting Payment for Dental Services Inextricably Linked to Other Covered Services

Under our current policy, we have identified several clinical scenarios where dental services are inextricably linked to a primary medical service that is covered by Medicare, such that Medicare payment for the dental services is not precluded by section 1862(a)(12) of the Act. After further review of current medical practice, and through internal and external consultations and consideration of the submissions received through the public process established in the CY 2023 PFS final rule (87 FR 69669), we believe there are additional circumstances that are clinically similar to the scenarios we codified in our regulation at § 411.15(i)(3)(i) as examples of clinical scenarios under which Medicare payment may be made for certain dental services because they are inextricably linked to other covered medical service(s).

In the case of the proposed primary, covered services, we believe that dental services are inextricably linked to, and substantially related and integral to the clinical success of, the proposed covered services because such dental services serve to mitigate the substantial risk to the success of the medical services, due to the occurrence and severity of complications caused by the primary medical services, including infection. Additionally, section 1862(a)(12) of the Act does not apply only when dental services are inextricably linked to, and substantially related and integral to the clinical success of, certain other covered services, such that the standard of care for that medical service would be compromised or require the dental services to be performed in conjunction with the covered services or if the dental services are considered to be a critical clinical precondition to proceeding with the primary medical procedure and/or treatment. As such, we believe the dental services are not in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth, but instead are inextricably linked to, and substantially related and integral to the clinical success of, the following medical services, and the statutory dental exclusion would not apply:

- (1) Chemotherapy when used in the treatment of cancer;
- (2) CAR T-Cell therapy, when used in the treatment of cancer; and

(3) Administration of high-dose bone-modifying agents (antiresorptive therapy) when used in the treatment of cancer.

As such, we propose to amend our regulation at § 411.15(i)(3)(i)(A) to permit payment under Medicare Parts A and Part B for:

(1) Dental or oral examination performed as part of a comprehensive workup in either the inpatient or outpatient setting prior to Medicare-covered: chemotherapy when used in the treatment of cancer, chimeric antigen receptor (CAR) T-cell therapy when used in the treatment of cancer, and the administration of high-dose bone-modifying agents (antiresorptive therapy) when used in the treatment of; and

(2) Medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with: chemotherapy when used in the treatment of cancer, CAR T-cell therapy when used in the treatment of cancer, and the administration of high-dose bone-modifying agents (antiresorptive therapy) when used in the treatment of cancer. Furthermore, we propose that payment under the applicable payment system could also be made for services that are ancillary to these dental services, such as x-rays, administration of anesthesia, and use of the operating room as currently described in our regulation at § 411.15(i)(3)(ii).

a. Dental services inextricably linked to chemotherapy services when used in the treatment of cancer

In the CY 2023 PFS final rule (87 FR 69663 through 69688), and as described in section II.K.1 of this proposed rule, we stated that we would continue to study the relationship between dental care and medical services that cause immunosuppression in patients, and the risk of dental infection and complications that arise because of the treatment-induced immunosuppression. As discussed in section II.K.1 of this proposed rule, we received submissions through the public process and comments on the CY 2023 PFS proposed rule requesting that Medicare payment

should be permitted under Parts A and B for dental services when medical services that cause immunosuppression are being provided to treat a variety of medical conditions.

Commenters asserted that immunocompromised patients are at an increased risk of serious infection that can lead to severe conditions (87 FR 69683). We stated that we agreed with commenters that individuals who are immunocompromised may be prone to serious infection, and that we would continue to consider feedback and the clinical literature provided by interested parties to determine whether there are other clinical scenarios, such as the initiation of immunosuppressive therapies, where Medicare payment should not be excluded for dental services under section 1862(a)(12) of the Act, because the services are inextricably linked to certain other covered services.

In the CY 2023 PFS final rule (87 FR 69681) and as discussed in section II.K.2 of this rule, we stated that we were finalizing a policy for CY 2024 that Medicare Parts A and B payment may be made for dental or oral examination performed as part of a comprehensive workup in either the inpatient or outpatient setting, as well as medically necessary diagnostic and treatment services to eliminate an oral or dental infection, prior to or contemporaneously with Medicare-covered treatments for head and neck cancer. We stated that removing infections in the oral cavity is necessary to prepare patients for treatment and is inextricably linked to the clinical success of treatment for cancers of the head and neck. Additionally, as described in the comments received on the CY 2023 PFS proposed rule and summarized in the CY 2023 PFS final rule (87 FR 69683), commenters suggested that the patient population with any cancer receiving chemotherapy treatments required dental services that were linked to the clinical success of the completion of the chemotherapy treatment. They indicated that immunocompromised patients, such as individuals with blood cancers (leukemia and lymphoma) or other types of cancers, are at increased risk of serious infection that can lead to severe complications and adverse outcomes. Commenters provided information showing that

chemotherapy drugs used for treatment of head and neck cancers can have many side effects, including sores and lesions in the mouth and throat tissues, difficulty swallowing, bleeding in the mouth, and tooth decay. Additionally, commenters stated that, because chemotherapy reduces the body's ability to fight opportunistic infections, patients who begin chemotherapy with untreated infections (including infections in the oral cavity) are at risk of developing a number of complications, ranging from fungal or viral infections of the mouth and throat to systemic infections or fatal sepsis. Commenters observed that complications arising from untreated infections could cause treatment interruptions which could compromise the success of the treatment and the patient's outcomes. One commenter observed that the need for removing oral infection prior to starting chemotherapy is analogous to the rationale for providing oral care prior to renal transplant, and thus (like a dental exam prior to renal transplant) should be considered substantially related and inextricably linked to the clinical success of the treatment. Commenters recommended that patients receiving chemotherapy for head or neck cancer receive a dental exam and stabilization, if applicable. Several commenters noted that providing an oral exam prior to starting chemotherapy is the standard of care in many cancer centers (87 FR 69681 through 69683).

Additionally, in the CY 2023 PFS final rule (87 FR 69682), we stated that many commenters recommended that we permit payment under Medicare Parts A and B for dental services prior to treatment for all types of cancer patients instead of just those with head and neck cancers; commenters suggested that the linkage between the medical services (chemotherapy, with or without radiation) and dental services was the same whether the medical services are used to specifically treat head and neck cancers or other cancers. Commenters stated that the increased risk of infections and sepsis among cancer patients could constitute major health setbacks that are costly to treat and can compromise the success of the cancer treatment. We reiterated that we would continue to review and evaluate information that supports the

relationship between dental care and covered treatments for cancer (including treatments related to conditions not localized in the head, neck, or oral cavity), and have continued to study this issue.

We believe immunosuppression is commonly understood to be a suppression or reduction of the body's immune response, which can be caused by various factors that increase susceptibility to infections and an increased risk of developing certain types of conditions.⁵⁷ There is significant and abundant worldwide experience and research regarding the care of patients whose medical conditions require chemotherapy regimens that induce acute immunosuppression.^{58,59} The treatment of a broad range of malignancies often requires the use of chemotherapeutic agents that in turn suppress the body's production of white blood cells, thereby impairing the body's ability to resist serious (potentially life-threatening) infections. The route of entry of the offending pathogens can be the mouth.^{60,61,62} Therefore, individuals receiving chemotherapy treatment for cancer who become immunosuppressed may be more susceptible to infection and other adverse events with serious consequences for the patient. We understand that medical services used in the treatment of cancer, such as chemotherapy, induce immunosuppression. As such, we believe that cancer patients being treated with chemotherapy represent an acutely-impacted, immunocompromised patient population due to the nature of the effects of such chemotherapy treatment. If dental or oral infections are left undetected or untreated in these patients, serious complications may occur, negatively impacting the clinical

success of the medical services and outcomes for the patients. Moreover, the immunosuppression induced by the chemotherapy medical services in the treatment of cancer increases the likelihood and intensity of complications for the patient that could potentially jeopardize or impact the ability to complete the totality of the treatment across a normal course of treatment.^{63,64} If an oral or dental infection is not properly diagnosed and treated prior to and/or during the chemotherapy in the treatment of cancer, which suppresses the immune system, there may be an increased risk for local and systemic infections from odontogenic sources; and furthermore, the successful completion of that treatment could be compromised. Additionally, if such an infection is not treated, then there is an increased likelihood of morbidity and mortality resulting from the spreading of the local infection to sepsis^{65 66}

Individuals undergoing chemotherapy services used in the treatment of cancer who become immunosuppressed by the treatment may also experience oral mucositis, which often facilitates entry of oral bacteria into the body, potentially increasing the risk of infection for the patient and compromising the chemotherapy regimen. The risk of mucositis and potential complications to the clinical success of medical services for cancer treatment is similar to the risk for patients receiving Hematopoietic Stem Cell Transplants (HSCT) and bone marrow transplants^{67 68}, for which we finalized payment for certain dental services prior to these medical

services (87 FR 69677). These potential complications, resulting from the combined immunosuppression and mucositis caused by the chemotherapy services, present a risk to the patient and the success of the medical chemotherapy regimen, unless mitigated by the provision of dental services. Additionally, as described above, evidence found in systematic reviews showed a possible increased incidence of oral mucositis when dental treatment is not administered at least 2-3 weeks prior to initiation of cancer treatment, further complicating the totality of services a patient received to treat their cancer.⁶⁹

Moreover, as described above in section II.K.1. of this proposed rule, dental services to identify and treat oral complications/comorbidities prior to and, sometimes, throughout chemotherapy treatment have been associated with improved outcomes for the patient receiving medical services in the treatment of cancer.⁷⁰ Additionally, as discussed in section II.K.1. of this proposed rule, research studies support that dental evaluation/treatment prior to cancer treatment led to decreased incidence and/or less severity of serious oral infections and complications (such as, oral mucositis and osteonecrosis) with the medical services, as well as requiring fewer emergency treatments.^{71 72}

Consequently, we believe that the evidence supports that the standard of care is such that one would not proceed with the chemotherapy when used in the treatment of cancer without performing the dental services, because the covered services would or could be significantly and

materially compromised, such that clinical outcomes of the chemotherapy treatment could be compromised absent the provision of the inextricably-linked dental services.

As described in the CY 2023 PFS final rule (87 FR 69685), we noted that evidence to support the linkage between the dental and covered services could include information demonstrating that the standard of care would be to not proceed with the covered medical procedure until a dental or oral exam is performed to clear the patient of an oral or dental infection; or, in instances where a known oral or dental infection is present, the standard is such that the medical professional would not proceed with the medical service until the patient received the necessary treatment to eradicate the infection. Our review of relevant clinical practice guidelines demonstrated that multiple professional societies recommend the performance of dental services prior to the initiation of or during chemotherapy.^{73 74} For instance, the United Kingdom published a guideline for dental evaluation and treatment before and after treatments for head and neck cancer (5th edition of the UK Multi-Disciplinary Guidelines for Head and Neck Cancer), based on guidance from the National Institute for Health and Care Excellence (NICE) and expert recommendations: "Preventive oral care must be delivered to patients whose cancer treatment will affect the oral cavity, jaws, salivary glands and oral accessibility."⁷⁵ Additionally, as described in the CY 2023 PFS final rule (87 FR 69680), several commenters provided data regarding the treatment of head and neck cancer that illustrated that conditions such as oral mucositis or osteonecrosis of the jaw that occur during the treatment may compromise the clinical success of the primary medical service (chemotherapy for the treatment of head and neck cancer), potentially leading to multiple hospitalizations, including systemic infections or fatal sepsis, if dental infections remained untreated.

We believe chemotherapy used in the treatment of cancer causes acute immunosuppression, causing significant oral complications and adverse events, including the possibility of an oral or dental infection, which in turn may lead to serious and imminent risks to the success of the primary medical procedures and treatments. These treatment-induced complications, including possible infection, prevent the ability to proceed with the primary, covered medical service (that is, lead to delays in treatment and/or cause inability of the patient to complete the course of treatment, thereby potentially reducing effectiveness of the therapy) and the standard of care would be to not proceed with the covered medical procedure until a dental or oral exam is performed to address the oral complications and/or clear the patient of an oral or dental infection. In the case of the Medicare covered chemotherapy when used in the treatment of cancer, dental services serve to mitigate the likelihood of occurrence and severity of complications caused by the primary medical services, including infection, and consequently the dental services facilitate the successful completion of the prescribed course of treatment and therefore the dental services are integral and inextricably linked to these medical services, and the statutory dental exclusion would not apply.

We believe that proceeding without a dental or oral exam and necessary diagnosis and treatment of any presenting infection of the mouth prior to chemotherapy when used in the treatment of cancer could lead to systemic infection or sepsis, as well as other complications for the patient. We also believe that an oral or dental infection could present substantial risk to the success of chemotherapy when used in the treatment of cancer, such that the standard of care would be to not proceed with the procedure when there is a known oral or dental infection present. We believe dental services furnished to identify, diagnose, and treat oral or dental infections prior to and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with chemotherapy when used in the treatment of cancer are not in connection with the care, treatment, filling, removal, or replacement of teeth

or structures directly supporting teeth, but instead are inextricably linked to these other covered services.

We also seek comment on whether we should consider radiation therapy in the treatment of cancer more broadly (not in conjunction with chemotherapy, and not in relation to head and neck cancer treatment) as medical services that may be inextricably linked to dental services. We do not believe that radiation therapy alone necessarily leads to the same level of treatment-induced immunosuppression as for cancer patients receiving chemotherapy since radiation specifically targets malignant cells and has more targeted and localized effects on the body as compared to system-wide immunosuppression effects of chemotherapy for cancer treatment. However, we seek comment on whether dental services prior to radiation therapy in the treatment of cancer, when furnished without chemotherapy, such as second line therapy for metastasized cancer in the head and neck, would be inextricably linked to the radiation therapy services, and therefore payable under Medicare Parts A and B.

In summary, after consideration of clinical practice guidelines, recommendations provided by the public, and our analyses of the studies and research available regarding the connection between dental services and the clinical success of chemotherapy services, we believe that there is an inextricable link between certain dental and chemotherapy services when used in the treatment of cancer because the standard of care is such that one would not proceed with the medical procedure or service without performing the dental service(s) because the covered medical services would or could be significantly and materially compromised absent the provision of the inextricably-linked dental services and that dental services are a clinical prerequisite to proceeding with the chemotherapy services when used in the treatment of cancer. Chemotherapy services when used in the treatment of cancer cause immunosuppression which may lead to significant oral complications and adverse events, including the possibility of an oral or dental infection, which in turn lead to serious and imminent risks to the success of the primary

medical procedures and treatments. The complications, including possible infection, may prevent the ability to both initiate and proceed with the primary, covered medical service (that is, lead to delays in treatment and/or cause inability of the patient to complete the course of treatment, thereby potentially reducing effectiveness of the therapy) such that the standard of care would be to not proceed with the covered medical procedure until a dental or oral exam is performed to address the oral complications and/or clear the patient of an oral or dental infection. In the case of chemotherapy services when used in the treatment of cancer, dental services serve to mitigate the likelihood of occurrence and severity of complications caused by the primary medical services, including infection, and consequently the dental services facilitate the successful completion of the prescribed course of treatment. Therefore, we believe the dental services are integral and inextricably linked to the chemotherapy when used in the treatment of cancer, and the statutory dental exclusion under section 1862(a)(12) of the Act would not apply.

We are proposing to add this clinical scenario to the examples of clinical scenarios under which payment can be made for certain dental services in our regulation at § 411.15(i)(3)(i)(A). Specifically, we propose to amend the regulation to include dental or oral examination performed as part of a comprehensive workup in either the inpatient or outpatient setting prior to Medicare-covered chemotherapy when used in the treatment of cancer; and, medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with chemotherapy when used in the treatment of cancer. We seek comments on all aspects of this proposal. Additionally, we note that we are proposing to make payment for dental services that are inextricably linked to chemotherapy used in the treatment of cancer with or without the use of other therapy types, including radiation therapy in the treatment of cancer. That is, this proposal is not meant to be limited to cases where chemotherapy in the treatment of cancer is provided without the use of other therapies. We seek comment on this aspect of the proposal.

b. Dental services inextricably linked to CAR T-Cell therapy, when used in the treatment of cancer

In the CY 2023 PFS final rule (87 FR 69677), commenters stated that individuals receiving CAR T-cell treatment for cancer may also require dental services, suggesting that these dental services are inextricably linked to covered CAR T-cell medical services, asserting that dental and oral services improve clinical outcomes for these types of medical services. We also received submissions through the public process providing evidence to show that dental services are inextricably linked to the clinical success of CAR T-cell medical services and other lymphodepleting therapy when used in the treatment of cancer. The submissions stated that, because CAR T-cell medical services cause a patient to be immunosuppressed, an untreated oral or dental infection could complicate or compromise the clinical outcome of the CAR T-cell medical service. Two submissions cited research indicating that patients undergoing CAR T-cell therapy and other lymphodepleting therapy, which is a short course of chemotherapy for the purpose of killing off a portion (or all) of the patient's own lymphocytes and/or other white blood cells prior to an immunotherapy or a bone marrow transplant, experience a higher infection risk in the first 100 days post-treatment.⁷⁶ Submitters also stressed the need to detect early and monitor for dental issues during CAR T-cell therapy in order to avoid the increased risk of related infections and complications. These submissions also highlighted that clinical practice guidelines recommend dental services prior to initiating the CAR T-cell therapy and

⁷⁶ Wudhikarn K, Palomba ML, Pennisi M, Garcia-Recio M, Flynn JR, Devlin SM, Afuye A, Silverberg ML, Maloy MA, Shah GL, Scordo M, Dahi PB, Sauter CS, Batlevi CL, Santomasso BD, Mead E, Seo SK, Perales MA. Infection during the first year in patients treated with CD19 CAR T cells for diffuse large B cell lymphoma. *Blood Cancer J.* 2020 Aug 5;10(8):79. doi: 10.1038/s41408-020-00346-7. PMID: 32759935; PMCID: PMC7405315.

other lymphodepleting therapy in order to eliminate any sources of infection before and during treatment. ^{77,78,79,80,81}

After consideration of clinical practice guidelines, recommendations provided by the public, and our analyses of the studies and research available regarding the connection between dental services and the clinical success of CAR T-cell therapy, we are persuaded that dental services to diagnose and treat infection prior to CAR T-cell therapy are inextricably linked to the clinical success of CAR T-cell therapy, and that these services also represent a clinically analogous scenario to dental services for which Medicare payment under Parts A and B is currently permitted when furnished in the inpatient or outpatient setting, such as prior to organ transplant, cardiac valve replacement, or valvuloplasty procedures. We believe there is an inextricable link between dental and CAR T-cell therapy when used in the treatment of cancer because the standard of care is such that one would not proceed with the medical procedure or service without performing the dental service because the covered medical services would or could be significantly and materially compromised absent the provision of the inextricably-linked dental services and that dental services are a clinical prerequisite to proceeding with the CAR T-cell therapy when used in the treatment of cancer.

We believe that proceeding without a dental or oral exam and necessary diagnosis and treatment of any presenting infection of the mouth prior to (CAR) T-cell therapy when used in the treatment of cancer could lead to systemic infection or sepsis, as well as other complications for the patient. We also believe that an oral or dental infection could present substantial risk to the success of the (CAR) T-cell therapy when used in the treatment of cancer, such that the standard of care would be to not proceed with the procedure when there is a known oral or dental infection present. We believe dental services furnished to identify, diagnose, and treat oral or dental infections prior to and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with (CAR) T-cell therapy when used in the treatment of cancer are not in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth, but instead are inextricably linked to these other covered medical services. As such, we are proposing to add this clinical scenario to the examples of clinical scenarios under which payment can be made for certain dental services in our regulation at § 411.15(i)(3)(i)(A). Specifically, we propose to amend the regulation to include a dental or oral examination performed as part of a comprehensive workup in either the inpatient or outpatient setting prior to Medicare-covered CAR T-cell therapy when used in the treatment of cancer; and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with, CAR T-cell therapy when used in the treatment of . We seek comments on all aspects of this proposal.

We also seek comment on whether we should add as an example of dental services for which payment may be made under Medicare Parts A and B other types of lymphodepleting medical services used for cancer treatment, in addition to those used in conjunction with CAR T-cell therapy for cancer treatment. Commenters specifically stated that CAR T-Cell therapies constituted lymphodepleting therapies, and we believe there may be other immunotherapies that may have a similar lymphodepletion component, but we received no specific information

regarding such therapies. Evidence submitted by the public through the finalized public submission process indicates that treatment-induced immunosuppression may also occur with lymphodepleting medical services, and that complications caused by the treatment-induced immunosuppression, including possible infection, may prevent the ability to proceed with the primary, covered medical service (that is, lead to delays in treatment and/or cause inability of the patient to complete the course of treatment, thereby potentially reducing the effectiveness of the therapy) and the standard of care would be to not proceed with the covered medical procedure until a dental or oral exam is performed to address the oral complications and/or clear the patient of an oral or dental infection. However, we request comment on what specific medical services also involve lymphodepletion and should therefore be considered in addition to CAR T-cell therapy. We also request additional information regarding how those specific services might be impacted by dental infections/conditions. We note that if we receive compelling clinical evidence, we may finalize in the CY 2024 PFS final rule additional clinical scenarios, such as dental services prior to other types of specific lymphodepleting medical services where the treatment may induce immunosuppression for patients with cancer and the standard of care would be to not proceed with the medical services without having first complete the dental services, where payment could be made under Medicare Part A or Part B. We are seeking comment on whether there is a significant quality of care detriment if certain dental services are not provided prior to these other types of lymphodepleting medical services, and if so, we request a description of that systematic evidence. Specifically, similar to the evidence we requested in the CY 2023 PFS proposed rule, we are looking for medical evidence that the provision of certain dental services leads to improved healing, improved quality of surgery, and the reduced likelihood of readmission and/or surgical revisions, because an infection has interfered with the integration of the implant and interfered with the implant to the skeletal structure. If commenters are able to provide us with compelling evidence to support that a dental

exam and necessary treatment prior to specific other lymphodepleting medical services where the treatment may induce immunosuppression for patients with cancer, would result in clinically significant improvements in quality and safety outcomes, for example, fewer revisions, fewer readmissions, more rapid healing, quicker discharge, quicker rehabilitation for the patient, then we would consider whether such dental services may be inextricably linked to, and substantially related and integral to the clinical success of, the specific lymphodepleting medical services for patients with cancer.

c. Dental services inextricably linked to administration of high-dose bone-modifying agents (antiresorptive therapy) when used in the treatment of cancer

As discussed above, submissions received through the public process we established in the CY 2023 PFS final rule stated that medication-related osteonecrosis of the jaw (MRONJ) is a serious complication of the administration of bone-modifying agents (such as bisphosphonates and denosumab, and other biosimilar agents) used when managing certain cancers.⁸² MRONJ is a rare occurrence, multifactorial in nature, and can have the same clinical presentation in patients who have not been exposed to an antiresorptive medication⁸³. that Medicare make payment under Parts A and B for dental services for patients where high-dose bisphosphonate therapy for cancers is indicated and recommended payment for dental services prior to and during antiresorptive therapy or prior to, during, and after the use of bone-modifying drugs. Additionally, in our internal review of clinical practice guidelines, we noted that one professional society provided recommendations regarding dental services prior to the initiation of, or during, the administration of high-dose bone-modifying agents (antiresorptive therapy) when used in the treatment of cancer. Specifically, the Multinational Association of Supportive Care in

⁸² American Association of Oral and Maxillofacial Surgeons. (2022). Medication-related osteonecrosis of the Jaw-2022 update (position paper). Available at:

https://www.aaoms.org/docs/govt_affairs/advocacy_white_papers/mronj_position_paper.pdf.

⁸³ American Association of Oral and Maxillofacial Surgeons. (2022). Medication-related osteonecrosis of the Jaw-2022 update (position paper). Available at:

https://www.aaoms.org/docs/govt_affairs/advocacy_white_papers/mronj_position_paper.pdf.

Cancer/International Society of Oral Oncology (MASCC/ISOO) and American Society of Clinical Oncology (ASCO) Clinical Practice Guideline⁸⁴ states that cancer patients should receive an oral care assessment (including a comprehensive dental, periodontal, and oral radiographic exam, when feasible) prior to initiating the administration of high-dose bone-modifying agents (antiresorptive therapy) when used in the treatment of cancer in order to reduce complications and manage modifiable risk factors. We believe that this practice guideline demonstrate that the standard of care would be to address dental infections prior to proceeding with the covered medical procedure, including oral care assessments and the completion of medically necessary dental procedures prior to the start of the administration of high-dose bone-modifying agents (antiresorptive therapy) when used in the treatment of cancer, especially as these dental concerns and/or procedures may relate to the cancer treatment and avoidance of MRONJ.

In summary, after consideration of clinical practice guidelines, recommendations provided by the public, and our analyses of the studies and research available regarding the connection between dental services and the clinical success of the administration of high-dose bone-modifying agents (antiresorptive therapy) when used in the treatment of cancer, we are proposing to add this clinical scenario to the examples of clinical scenarios under which payment can be made for certain dental services in our regulation at § 411.15(i)(3)(i)(A). We believe that there is an inextricable link between dental and administration of high-dose bone-modifying agents (antiresorptive therapy) when used in the treatment of cancer because the standard of care is such that one would not proceed with the medical procedure or service without performing the dental service because the covered medical services would or could be significantly and materially compromised absent the provision of the inextricably-linked dental services and that

⁸⁴ Yarom N, Shapiro CL, Peterson DE, et al. Medication-Related Osteonecrosis of the Jaw: MASCC/ISOO/ASCO Clinical Practice Guideline. *J Clin Oncol*. 2019 Sep 1;37(25):2270-90. doi: <https://dx.doi.org/10.1200/JCO.19.01186>. PMID: 31329513.

dental services are a clinical prerequisite to proceeding with the administration of high-dose bone-modifying agents (antiresorptive therapy) when used in the treatment of cancer. Specifically, we propose to amend the regulation to include dental or oral examination performed as part of a comprehensive workup in either the inpatient or outpatient setting prior to Medicare-covered the administration of Medicare-covered high-dose bone-modifying agents (antiresorptive therapy), when used in the treatment of cancer; and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with, administration of high-dose bone-modifying agents (antiresorptive therapy), when used in the treatment of cancer. We seek comments on all aspects of this proposal.

We note that in the CY 2023 PFS final rule (87 FR 70225) and now codified in our regulation at § 411.15(i)(3)(i), we finalized that for dental services that are inextricably linked to, and substantially related and integral to the clinical success of, a certain covered medical service, payment may be made under Medicare Parts A and B for services when furnished in either the inpatient or outpatient setting; therefore, we proposed that these provisions would apply to the proposed amendments to regulation at § 411.15(i)(3)(i) to allow for payment under Medicare Parts A and Part B in either the inpatient or outpatient setting. We further propose that payment under the applicable payment system could also be made for services that are ancillary to these dental services, such as x-rays, administration of anesthesia, and use of the operating room as described in our regulation at § 411.15(i)(3)(ii).

If the proposed policies are finalized, we anticipate making conforming changes to the Medicare Benefit Policy Manual (IOM Pub. 100-02) to reflect the final changes or clarifications. Additionally, if finalized, we intend to issue educational and outreach materials to inform billing and payment for any policies finalized in the final rule. We seek comments on these proposals.

d. Proposed amendments to regulations regarding dental services inextricably linked to treatment for head and neck cancer

In the CY 2023 PFS final rule, we finalized for CY 2024 that payment under Medicare Parts A and B can be made for an oral or dental examination as part of a comprehensive workup in either the inpatient or outpatient setting, and medically necessary diagnostic and treatment services to eliminate an oral or dental infection, prior to and contemporaneously with treatments (radiation, chemotherapy, and surgery) for head and neck cancer (87 FR 69671, 69677, and 69681-69682). We note that we stated the policy in some instances without explicitly including both “prior to” and “contemporaneously with.” (87 FR 69669, 69681, 69682, and 69687.)

We also indicated that we wanted to continue to consider various aspects of our finalized policy and that we anticipated additional clarifying rulemaking on this final policy for CY 2024. In the CY 2023 PFS final rule we stated that we wanted to examine the clinical data and consider whether greater specificity may be needed to describe the medical services involved in this type of treatment. We stated that we were cognizant of concerns that, absent clear guidelines and definitions, beneficiaries, practitioners, and MACs may need additional information prior to providing payment under Medicare Parts A and B, and without it could lead to inconsistent application of the policy. In particular, we stated that it is important to determine whether any additional guidance is necessary to identify conditions considered “head and neck cancer” and qualifying covered medical services considered within the treatments for these cancers beyond just radiation (with or without chemotherapy).

Upon further study, as pointed out by one submitter, we understand that the term “head and neck cancer” encompasses a multitude of pathologies that often require multi-modality therapies including radiation, chemotherapy and surgery. This submitter noted that approximately 80 percent of head and neck cancer patients will receive radiation therapy at least once during the course of their disease. While the majority of head and neck cancers are

squamous cell carcinomas that originate from the mucosa of the oral cavity, pharynx or larynx, they may also arise from the salivary glands, the nasal cavities and the paranasal sinuses. They can be locally advanced, regionally metastatic to the cervical nodes and can spread to distant sites such as the lungs and liver. According to the submitter, regardless of origin, the clinical diagnostic and therapeutic approaches for head and neck cancers are fundamentally similar, and treatment modalities often result in both acute and chronic oral toxicities.

If unaddressed, existing oral or dental infection may compromise the delivery of the appropriate modalities of care (radiation, chemotherapy, surgery). The standard of care is to address and eliminate oral and dental infections prior to the treatment of some (or many) head and neck cancers. Additionally, as discussed in section II.K.2.a of this proposed rule, the complications caused by treatment-induced vulnerabilities, which may include infection and osteoradionecrosis, can prevent the ability to proceed with the primary, covered medical service (that is, can lead to delays in treatment and/or cause inability of the patient to complete the course of treatment, thereby potentially reducing effectiveness of the therapy); and the standard of care would be to not proceed with the covered medical procedure until a dental or oral exam is performed to address the oral complications and/or clear the patient of an oral or dental infection.

As discussed in the CY 2023 final rule, we believe that addressing any oral or dental infection prior to the initiation of treatment serves to minimize the potential development of the treatment-induced complications. Moreover, we believe that these treatment-induced complications can occur as a result of and during multiple rounds of treatment.

Therefore, we are proposing to clarify that Medicare Parts A and B payment may be made for dental or oral examination performed as part of a comprehensive workup in either the inpatient or outpatient setting, as well as for the medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to the initiation of, or during, treatments for

head and neck cancer, whether primary or metastatic, regardless of site of origin, and regardless of initial modality of treatment.

In summary, we are proposing to amend our regulation at § 411.15(i)(3)(i)(A) to allow for payment under Medicare Parts A and Part B for:

(1) Dental or oral examination in either the inpatient or outpatient setting prior to the initiation of, or during, Medicare-covered treatments for head and neck cancer; and

(2) Medically necessary diagnostic and treatment services to eliminate an oral or dental infection in either the inpatient or outpatient setting prior to the initiation of, or during, Medicare-covered treatments for head and neck cancer.

We note that in the CY 2023 PFS final rule (87 FR 70225) and now codified in our regulation at § 411.15(i)(3)(i), we finalized that for dental services that are inextricably linked to, and substantially related and integral to the clinical success of, a certain covered medical service, payment may be made under Medicare Parts A and B for services when furnished in either the inpatient or outpatient setting; therefore, we proposed that these provisions would apply to the proposed amendments to regulation at § 411.15(i)(3)(i) to allow for payment under Medicare Parts A and Part B in either the inpatient or outpatient setting. We further propose that payment under the applicable payment system could also be made for services that are ancillary to these dental services, such as x-rays, administration of anesthesia, and use of the operating room as described in our regulation at § 411.15(i)(3)(ii). If finalized, we anticipate making conforming changes to the Medicare Benefit Policy Manual (IOM Pub. 100-02) to reflect the final changes or clarifications. We seek comments on all aspects of these proposals.

3. Request for Information on Dental Services Integral to Covered Cardiac Interventions

In the CY 2023 PFS final rule, we finalized a policy to permit payment for dental or oral examination performed as part of a comprehensive workup in either the inpatient or outpatient setting prior to Medicare-covered cardiac valve replacement or valvuloplasty procedures; and

medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with, the cardiac valve replacement or valvuloplasty procedure (87 FR 69675).

We recognized that, without a dental or oral exam and necessary diagnosis and treatment of any presenting infection of the mouth prior to a cardiac valve replacement or valvuloplasty procedure, an undetected, non-eradicated oral or dental infection could lead to bacteria seeding the valves and the surrounding cardiac muscle tissues involved with the surgical site and conceivably leading to systemic infection or sepsis, all of which increase the likelihood of unnecessary and preventable acute and chronic complications for the patient (87 FR 69667).⁸⁵ Specifically, we noted that the replaced valve is also at risk of being a seeding source for future endocarditis. Endocarditis can carry a high risk of mortality for these patients, and eliminating an infection prior to or contemporaneously with the procedure would be important for preventing future endocarditis related to the new valve (87 FR 69678).

We also concluded that an oral or dental infection could present a substantial risk to the success of organ transplants, such that the standard of care would be to not proceed with the procedure when there is a known oral or dental infection present. We stated that we believe dental services furnished to identify, diagnose, and treat oral or dental infections prior to organ transplant, cardiac valve replacement, or valvuloplasty procedures are not in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth, but instead are inextricably linked to these other covered medical services (89 FR 69667).

We encouraged the public to use the public submission process finalized in the CY 2023 PFS final rule to identify additional clinical scenarios and related medical evidence to support an inextricable link between specified dental services and other covered medical services.

⁸⁵ Knox, K.W., & Hunter, N. (1991). The role of oral bacteria in the pathogenesis of infective endocarditis. *Australian dental journal*, 36(4), 286–292. <https://doi.org/10.1111/j.1834-7819.1991.tb00724.x>.

Through the submission process, an interested party has encouraged CMS to consider extending Medicare payment to include dental services to eliminate infection prior to all cardiovascular procedures, as the mitigation of risks of perioperative and postoperative infection and complications is critical to ensure optimal surgical outcomes for all patients requiring invasive and/or interventional cardiac procedures. This submission noted that the current standard of care does not conclusively require dental evaluation, diagnosis, or treatment services prior to certain cardiac procedures, perhaps in part because such cardiac procedures are often performed on a more urgent or emergent basis where there is not an opportunity to consider the possible presence of dental infection. Moreover, the submission noted that much of the scientific literature is inconclusive as to whether pre-operative dental treatments impact postoperative surgical outcomes in cardiovascular surgery, including cardiac valve procedures.⁸⁶ A systematic literature review by Cotti *et al.* found that, based upon expert opinion, there is general agreement on the need for screening and treatment of oral/dental infections in patients who are to undergo cardiac surgery (although no standardized clinical guidelines or protocols exist to outline the screening process, in terms of either dental treatment options and/or timing of such procedures in relation to the planned cardiac intervention).⁸⁷ The authors convened an expert panel from six Italian scientific societies (including cardiologists, cardiac surgeons, and dental specialists) to establish a consensus on early screening and resolution of dental or periodontal infections prior to cardiac surgery, that they intended would result in a standardized protocol for evaluating oral infections and dental treatments for cardiac patients to be used in the interventional preparation

⁸⁶ Lockhart, P.B., DeLong, H.R., Lipman, R.D., Estrich, C.G., Araujo, M.W.B. and Carrasco-Labra, A. (2019). Effect of dental treatment before cardiac valve surgery: Systematic review and meta-analysis. *Journal of the American Dental Association*,150(9). 739-747. <https://doi.org/10.1016/j.adaj.2019.04.024>.

⁸⁷ Cotti, E., Cairo, F., Bassareo, P.P., Fonzar, F., Venturi, M., Landi, L., Parolari, A., Franco, V., Fabiani, C., Barili, F., Di Lenarda, A., Gulizia, M., Borzi, M., Campus, G., Musumeci, F., and Mercuro, G. (2019). Perioperative dental screening and treatment in patients undergoing cardiothoracic surgery and interventional cardiovascular procedures. A consensus report based on RAND/UCLA methodology. *International Endodontic Journal*,53. 186-199. <https://doi.org/10.1111/iej.13166>.

phase by both dental and cardiac teams.⁸⁸ The authors noted, however, the lack of scientific evidence on the risk-to-benefit ratio for perioperative dental treatment in patients undergoing cardiovascular surgery.

We believe, after further review of current medical practice, through consultations with interested parties (including commenters on last year's final rule and those commenting on current topics) and our medical officers, and through evidence submitted through the public submission process we established in the CY 2023 PFS final rule, that there may be additional circumstances that are clinically similar to examples we codified in our regulation at § 411.15(i)(3)(i) where Medicare payment for dental services could be made under other clinical circumstances where the dental services are inextricably linked to a covered cardiac medical service(s).

To gain further understanding of any potential relationship between dental services and specific covered cardiac medical services, we again partnered with researchers at the AHRQ to review available clinical evidence regarding the relationship between dental services and covered cardiac medical services, including implantation of ventricular assist devices, artificial pacemakers, implantable defibrillators, synthetic vascular grafts and patches, and coronary and vascular stents. This AHRQ report⁸⁹ is available at <https://effectivehealthcare.ahrq.gov/products/implantable-cardiovascular-devices/rapid-review>.

As stated in their report, the available evidence does not permit conclusions regarding the effect of pre-treatment dental care for preventing downstream infections related to any of these devices. They noted that professional society guidelines endorse the provision of patient education on routine oral hygiene practices but have not recommended other pre-treatment dental

⁸⁸ *Ibid.*

⁸⁹ Hickam DH, Gordon CJ, Armstrong CE, Paynter R. The Efficacy of Dental Services for Reducing Adverse Events in Those Undergoing Insertion of Implantable Cardiovascular Devices. Rapid Response. (Prepared by the Scientific Resource Center under Contract No. 75Q80122C00002.) AHRQ Publication No. 23-EHC020. Rockville, MD: Agency for Healthcare Research and Quality; June 2023. DOI: <https://doi.org/AHRQEPCRAPIDDENTALCARDIO>.

care prior to insertion of these devices. They also noted that professional society guidelines recommend ongoing routine dental examinations for some patients treated with cardiovascular devices.

Nonetheless we seek comment to identify additional cardiac interventions (that is, specific medical services) where the risk of infection posed to beneficiaries is similar to that associated with cardiac valve replacement or valvuloplasty. We note that, in order to consider whether certain dental services are inextricably linked to the clinical success of other covered medical services, we need to identify specific medical services for which there is clinical evidence that certain dental services are so integral to the clinical success that they are inextricably linked to other covered service(s). We encourage interested parties to use the public submission process to submit recommendations and relevant clinical evidence for establishing this connection. Above, in section II.K.1.c. of this proposed rule, we have described the various types of documentation to support recommendations through this process. We are considering, and seek comment on, whether the following cardiac interventions are examples of specific medical services for which dental services are inextricably linked to clinical success: implantation of electronic devices in the heart, such as pacemakers, cardioverter defibrillators, and monitors. We are also considering, and seek comment on, whether the following procedures would be considered examples of specific medical services for which dental services are inextricably linked to their clinical success: the placement of intracardiac or intravascular foreign material, such as a stent or for hemodialysis, or for a vascular access graft, whereas you would not proceed with the medical service without having first completed a dental evaluation and/or treatment as determined necessary. We seek comment on whether preoperative and perioperative dental services are inextricably linked to any other covered cardiac interventions as supported by clinical evidence.

4. Request for Comment on Dental Services Integral to Specific Covered Services to Treat Sickle Cell Disease (SCD) and Hemophilia

Interested parties using the public submission process we finalized in the CY 2023 PFS final rule urged us to propose to provide that payment can be made for dental services for individuals living with SCD and hemophilia.

These submissions provided information and references supporting prevention of dental infection among individuals with SCD to reduce need for more extensive procedures that may result in bleeding complications and require hospitalization. They also provided information detailing increased dental caries and periodontal disease in people with SCD,⁹⁰ many of whom lose a number of teeth, which greatly limits nutrition, general well-being, and overall quality of life.

We seek comment on whether certain dental services are inextricably linked to other covered services used in the treatment of SCD, such as, but not limited to, hydroxyurea therapy. We seek comment identifying such covered services for SCD and whether an inextricable link is supported by clinical evidence as described in section II.K.1.c. of this proposed rule.

Interested parties also urged us to propose a policy to permit payment for dental services for individuals living with hemophilia. They noted that periodic dental care reduces the risks of

⁹⁰ Kakkar M, Holderle K, ShethM, Arany S, Schiff L, Planerova A. Orofacial Manifestation and Dental Management of Sickle Cell Disease: A Scoping Review. *Anemia*. 2021 Oct22; 2021:5556708. Doi: 10.1155/2021/5556708. PMID: 34721900; PMCID: PMC8556080.

dental complications requiring haemostatic therapy (such as tooth extractions that may require clotting factor treatment) or oral surgeries requiring clotting factor replacement therapy.^{91 92 93}

We note that many submitters stated that good dental and oral health benefits a patient's overall health generally. Several commenters on the CY 2023 PFS proposed rule also expressed that good oral hygiene, along with routine dental services, contributes to better outcomes for patients. We recognized in the CY 2023 PFS final rule in response to those comments that there is a great deal of evidence suggesting that dental health is generally an important component of overall health; however, we are interested in comments on whether certain dental services are considered so integral to the primary covered services that the necessary dental interventions are inextricably linked to, and substantially related and integral to clinical success of, the primary covered services such that they are not subject to the statutory preclusion on Medicare payment for dental services under section 1862(a)(12) of the Act.

We seek comment on whether certain dental services are inextricably linked to certain other covered services for hemophilia, supported by clinical evidence as described in section II.K.1.c., above. We seek comment identifying such covered services for the treatment of hemophilia. We also seek comment specifically on whether dental services such as prophylaxis are a standard of care in the management of hemophilia.

5. Request for Comment Regarding Dental Services Possibly Inextricably Linked to Other Medicare-Covered Services,

⁹¹ Raso S, Napolitano M, Sirocchi D, Siragusa S, Hermans C. The important impact of dental care on haemostatic treatment burden in patients with mild haemophilia. *Haemophilia*. 2022 Nov;28(6):996-999. doi: 10.1111/hae.14626. Epub 2022 Jul 25. PMID: 35879819.

PMID: 32744769.

⁹³ Peisker A, Raschke GF, Schultze-Mosgau S. Management of dental extraction in patients with Haemophilia A and B: a report of 58 extractions. *Med Oral Patol Oral Cir Bucal*. 2014 Jan 1;19(1):e55-60. doi: 10.4317/medoral.19191. PMID: 24121912; PMCID: PMC3909433.

Commenters, submitters, and other interested parties have urged us to consider the importance of access to oral health care for people with chronic auto-immune conditions, and other chronic disease conditions, such as, but not limited to, diabetes. We understand and appreciate the interest in such requests. Because the Medicare statute generally prohibits payment for dental services payment may only be made when the dental services are inextricably linked to, and substantially related and integral to the clinical success of, certain other covered services. We urge interested parties to consider the circumstances under which dental services are inextricably linked to specific covered services (not diagnoses) used to treat patients with auto-immune conditions or other chronic conditions, supported by clinical evidence as described in section II.K.1.c. of this proposed rule.

We have encouraged interested parties who believe certain dental services are inextricably linked to certain covered services to use our public submission process to provide information on these clinical scenarios, supported by clinical evidence or other documentation, as discussed in section II.K.1.c. of this proposed rule, such as that it would be the standard of care to not proceed with the medical service without having completed the dental service.

Commenters are welcome to submit additional information regarding clinical scenarios presented in the CY 2023 PFS rulemaking discussions, which we are not proposing for the CY 2024, such as dental services involved with the treatment of chronic conditions such as, but not limited to, diabetes (87 FR 69686). As summarized above in section II.K.1.c. of this proposed rule, through the public submission process we finalized in the CY 2023 PFS final rule, interested parties should submit medical evidence to support an inextricable link between certain dental services and covered services by providing any of the following:

- (1) Relevant peer-reviewed medical literature and research/studies regarding the medical scenarios requiring medically necessary dental care;

(2) Evidence of clinical guidelines or generally accepted standards of care for the suggested clinical scenario;

(3) Other ancillary services that may be integral to the covered services; and/or

(4) Other supporting documentation to justify the inclusion of the proposed medical clinical scenario requiring dental services.

As discussed above in section II.K.1.c. of this proposed rule, in order to consider whether certain dental services are inextricably linked to the clinical success of other covered services, we need to identify specific medical services for which there is medical evidence that certain dental services are so integral to the clinical success that they are inextricably linked to the covered service. The medical evidence should support that in the case of surgery, the provision of certain dental services leads to improved healing, improved quality of surgery, and the reduced likelihood of readmission and/or surgical revisions, because an infection has interfered with the integration of the medical implant and/or interfered with the medical implant to the skeletal structure. Medical evidence should be clinically meaningful and demonstrate that the dental services result in a material difference in terms of the clinical outcomes and success of the primary medical procedure such that the dental services are inextricably linked to, and substantially related and integral to, the clinical success of the covered services. Medical evidence should support that the dental services would result in clinically significant improvements in quality and safety outcomes (for example, fewer revisions, fewer readmissions, more rapid healing, quicker discharge, and quicker rehabilitation for the patient), or, medical evidence should demonstrate that the standard of care would be to not proceed with the covered medical procedure until a dental or oral exam is performed to address the oral complications and/or clear the patient of an oral or dental infection

6. Request for Information on Implementation of Payment for Dental Services Inextricably Linked to Other Specific Covered Services

We continue to consider improvements to our payment policies for dental services as finalized in the CY 2023 PFS final rule (87 FR 69663 through 69688). As such, we are interested in receiving comments from interested parties on ways to best continue to implement these policies. Additionally, given comments and questions we have received from interested parties through rulemaking and the public submission process, we want to provide further clarity on the policies we finalized in the CY 2023 PFS final rule. Therefore, we are requesting comments on several policies related to implementation of policies for dental services for which Medicare payment can be made.

In the CY 2023 PFS final rule, we clarified and codified our policy on payment for dental services and added in § 411.15(i)(3)(i) of our regulation examples of circumstances where payment can be made for certain dental services, including a dental exam and services to diagnose and eliminate an oral or dental infection prior to organ transplant, cardiac valve replacement, or valvuloplasty procedures (87 FR 69664 through 69667).

We provided as examples of dental services that could be furnished to eradicate infection services such as, but not limited to, diagnostic services, evaluations and exams (for example, CDT codes payable with D0120, D0140 or D0150), extractions (for example, CDT codes payable with D7140, D7210), restorations (removal of the infection from tooth/actual structure, such as filling procedures - for example, CDT codes payable with D2000-2999), periodontal therapy (removal of the infection that is surrounding the tooth, such as scaling and root planing - for example, CDT codes payable with D4000-4999, more specifically D4341, D4342, D4335 and D4910), or endodontic therapy (removal of infection from the inside of the tooth and surrounding structures, such as root canal - for example, CDT codes payable with D3000-3999). However, we continue to believe that additional dental services, such as a dental implant or crown, may not be considered immediately necessary to eliminate or eradicate the infection or its source. Therefore, we reiterate that such additional services would not be inextricably linked to

the specific covered services. As such, no Medicare payment would be made for the additional services that are not immediately necessary to eliminate or eradicate the infection. We further clarify that we did not in CY 2023 nor are we proposing in CY 2024 to adjust any payment policy for services involving the preparation for, or placement of dentures, and maintain that these services are not payable under Medicare Parts A and B. We also reiterate our policy, as finalized in the CY 2023 PFS final rule, that Medicare could make payment for dental services occurring over multiple visits, as clinically appropriate. We refer readers to 87 FR 69678 for a more full description of this policy.

We continue to recognize that many Medicare beneficiaries have separate or supplemental dental coverage, such as through a Medigap plan, another private insurance plan offering commercial dental coverage, or for those individuals dually eligible for Medicare and Medicaid, through a state Medicaid program. As a result, we seek comment on the coordination of multiple dental benefits that Medicare beneficiaries may have, if and how other plans currently cover and pay for dental services, and what type of guidance CMS should provide about the dental payment policies we have established and their relationship to other separate or supplemental dental coverages. We also seek comment on approaches utilized by other plans to mitigate issues with third party payment, including when Medicare is secondary payer and when coordinating with state Medicaid programs. In addition, we note there is an informal practice where dental professionals may submit a dental claim to Medicare for the purposes of producing a denial so that Medicaid or another third-party payer can make primary payment. Given the complexity of dental professionals submitting claims for purposes of denial, we seek comment on the impact of third-party payers, including state Medicaid programs, requiring a Medicare denial for adjudication of primary payment for dental services that are not inextricably linked to another specific covered service. In these cases where the dental services are not inextricably linked to another specific covered service, dental professionals must include the appropriate

HCPCS modifier on the respective dental claim form, which serves as a certification that the professionals believe that Medicare should not pay the claim. We also seek comment regarding an informal process on claims denials for the purposes of supporting payment by other payers is currently achieved in practice when using the dental claim form 837d. We note that the submission of a claim without one or more of the HCPCS modifier(s) meant to produce a denial shows belief by the enrolled billing practitioner that Medicare, not another payer, should be the primary payer in accordance with all applicable payment policies. As such, submission of a claim for dental services without such a modifier would mean that the billing practitioner believes the dental service is inextricably linked to another Medicare-covered service, or that payment for the service is otherwise permitted under our regulation at § 411.15(i). We seek comment on the practices of other payers related to submission of claims in order to generate a denial and how these practices impact claim submission and claim adjudication with third party payers, including state Medicaid programs. Additionally, we are seeking comment on types of guidance, such as best practices or criteria, that are needed for purposes of coordinating payment for dental services under the policies specified in the rule.

As described in the CY 2023 PFS final rule (87 FR 69663 through 69688), Medicare payment under Parts A and B may be made for dental services that are inextricably linked to the covered primary service. We believe the dental and covered services would most often be furnished by different professionals, and that in order for the dental services to be inextricably linked to the covered services such that Medicare payment can be made, there must be coordination between these professionals. This coordination should occur between the practitioners furnishing the dental and covered services regardless of whether both individuals are affiliated with or employed by the same entity. This coordination can occur in various forms such as, but not limited to, a referral or exchange of information between the practitioners furnishing the dental and covered services. Additionally, any evidence of coordination between

the professionals furnishing the primary medical service and dental services should be documented. If there is no evidence to support exchange of information, or integration, between the professionals furnishing the primary medical service and the dental services, then there would not be an inextricable link between the dental and other covered services within the meaning of our regulation at § 411.15(i)(3). As such, Medicare payment for the dental services would be excluded under section 1862(a)(12) of the statute (though payment for the dental services might be available through supplemental health or dental coverage). Additionally, we are seeking information regarding the potential impact of these payment policies in settings other than inpatient and outpatient facilities, such as federally qualified health centers, rural health clinics, etc. We understand that some Medicare beneficiaries may access dental services in these settings and seek to understand what, if any, impact may potentially occur within the context of this payment policy.

As stated in the CY 2023 PFS final rule, we note that, to be eligible to bill and receive direct payment for professional services under Medicare Part B, a dentist must be enrolled in Medicare and meet all other requirements for billing under the PFS. Alternatively, a dentist not enrolled in Medicare could perform services incident to the professional services of a Medicare enrolled physician or other practitioner. In that case, the services would need to meet the requirements for incident to services under § 410.26, including the appropriate level of supervision, and payment would be made to the enrolled physician or practitioner who would bill for the services (87 FR 69673). In the CY 2023 PFS final rule (87 FR 69687), we finalized that we would continue to contractor price the dental services for which payment is made under § 411.15(i)(3). We will maintain this policy and continue to contractor price the dental services for which payment is made under § 411.15(i)(3) for CY 2024. Additionally, in the CY 2023 PFS final rule, we agreed with the suggestions made by commenters that there may be publicly available data sources that could aid MACs in determining these payment rates in order to

account for geographic variation. Recognizing that dental offices may range in the services that they provide, from simple office visits to complex surgical procedures, dental services will continue to be contractor priced. We are seeking comment on what specific information could help inform appropriate payment for these dental services (87 FR 69679).

In the CY 2023 PFS final rule (87 FR 69682), we stated that we would update our payment files, so that these dental services could be billed appropriately under the applicable payment system for services furnished in either the inpatient or outpatient setting. We have revised the HCPCS and PFS payment and coding files to include payment indicators for Current Dental Terminology (CDT) codes, such as bilateralism, multiple procedures, and other indicators that are included in the PFS Relative Value (RVU) files (posted at our website at <https://www.cms.gov/medicare/medicare-fee-for-service-payment/physicianfeesched/pfs-relative-value-files>) for CDT codes. We seek comment on whether payment indicators as outlined in the PFS RVU files appropriately align with existing dental billing and coding conventions, or whether edits are necessary. Medical and dental providers should bill using CDT or Current Procedure Terminology (CPT) codes where applicable, and for claims submissions during CY 2023, should submit claims using the professional or institutional claim forms, as appropriate. Although we propose to continue contractor pricing services billed using CDT codes, we are soliciting comment on whether the current payment indicators included for these CDT codes follow existing dental billing conventions, for example, for payment adjustment for multiple procedures, and whether there is a need for additional guidance regarding the submission of claims for services for which payment is permitted under the regulation at § 411.15(i)(3). In the CY 2023 PFS final rule (87 FR 69679), we acknowledged the need to address and clarify certain operational issues, and we are continuing to work to address these operational issues, including efforts to adopt the dental claim form. These efforts include continuing to work with our MACs

and encouraging continued feedback from interested parties to help identify concerns or questions regarding the submission and processing of dental claims.

Finally, in order to promote the correct coding and processing of Medicare claims, dentists who practice general or specialized dentistry currently self-designate their specialty under two specialty codes, specialty 19 (oral surgery—dentists only) or specialty 85 (maxillofacial surgery). We seek comment on whether additional specialty codes should be considered for use in Medicare, and if so, what are the other specific specialties that should be included. We also seek comment on whether these specialty codes may impact the coordination of benefits with a third-party payer. Finally, we recognize that issues could occur related to coordination of benefits for dual eligible beneficiaries, for example beneficiaries with hemophilia, and we seek comment on how to best coordinate a potential payment policy in this area with respect to state Medicaid plans or private insurance. We also seek comment on other coordination of benefits issues, or implementation topics that would be helpful for CMS to address in relation to continuing to implement these PFS payment policies.

III. Other Provisions of the Proposed Rule

A. Drugs and Biological Products Paid Under Medicare Part B

1. Provisions from the Inflation Reduction Act Relating to Drugs and Biologicals Payable Under Medicare Part B (§§ 410.152, 414.902, 414.904, 489.30)

Drugs and biologicals (for the purposes of the discussion in this section III.A., “drugs”) payable under Medicare Part B fall into three general categories: those furnished incident to a physician’s service (hereinafter referred to as “incident to”) (section 1861(s)(2) of the Act), those administered via a covered item of durable medical equipment (DME) (section 1861(n) of the Act), and others as specified by statute (for example, certain vaccines described in sections 1861(s)(10)(A) and (B) of the Act). Payment amounts for most drugs separately payable under Medicare Part B are determined using the methodology in section 1847A of the Act, and in many

cases, payment is based on the average sales price (ASP) plus a statutorily mandated 6 percent add-on.

The Inflation Reduction Act (Pub. L. 117-169, August 16, 2022) (hereinafter referred to as “IRA”) contains several provisions that affect payment limits or beneficiary out-of-pocket costs for certain drugs payable under Part B. Among those provisions, two affect payment limits for biosimilar biological products (hereinafter referred to as “biosimilars”):

- Section 11402 of the IRA amends the payment limit for new biosimilars furnished on or after July 1, 2024 during the initial period when ASP data is not available. We are proposing to codify this provision in regulation.

- Section 11403 of the IRA makes changes to the payment limit for certain biosimilars with an ASP that is not more than the ASP of the reference biological for a period of 5 years. We implemented section 11403 of the IRA under program instruction^{94,95}, as permitted under section 1847A(c)(5)(C) of the Act. We are now proposing conforming changes to regulatory text to reflect these provisions.

In addition, two provisions (among others in the IRA) make statutory changes that affect beneficiary out-of-pocket costs for certain drugs payable under Medicare Part B:

- Section 11101 of the IRA requires that beneficiary coinsurance for a Part B rebatable drug is to be based on the inflation-adjusted payment amount if the Medicare payment amount for a calendar quarter exceeds the inflation-adjusted payment amount, beginning on April 1, 2023. We issued initial guidance implementing this provision, as permitted under section 1847A(c)(5)(C) of the Act, on February 9, 2023⁹⁶. We are proposing conforming changes to regulatory text.

- Section 11407 of the IRA provides that for insulin furnished through an item of DME

⁹⁴ <https://www.cms.gov/files/document/r11496cp.pdf>.

⁹⁵ <https://www.cms.gov/medicare/medicare-fee-for-service-part-b-drugs/mcrpartbdrugavgsalesprice>.

⁹⁶ <https://www.cms.gov/files/document/medicare-part-b-inflation-rebate-program-initial-guidance.pdf>.

on or after July 1, 2023, the deductible is waived and coinsurance is limited to \$35 for a month's supply of insulin furnished through a covered item of DME. We have implemented this provision under program instruction for 2023, as permitted under section 11407(c) of the IRA.⁹⁷ We are now proposing to codify this provision in a manner that is consistent with the program instruction for 2023.

a. Payment for Drugs under Medicare Part B During an Initial Period

Section 1847A of the Act provides for certain circumstances in which the payment limit of a drug is based on its wholesale acquisition cost (WAC). For a single source drug or biological (as defined in section 1847A(c)(6)(D) of the Act), the Medicare payment could have a WAC-based payment determined under the methodology specified in section 1847A(b)(4) of the Act and described at § 414.904(d)(1), which requires that payment limits for such drugs are determined using the lesser of ASP plus 6 percent or WAC plus 6 percent. Typically, the ASP-based payment limit is the lesser of the two. Under section 1847A(c) of the Act, payments for new drugs during an initial period for which ASP data is not sufficiently available are based on WAC or the Medicare Part B drug payment methodology in effect on November 1, 2003. Historically, WAC-based payment under section 1847A(c)(4) of the Act was up to 106 percent of WAC, but in the CY 2019 PFS final rule (83 FR 59661 through 59666), we adopted a policy of paying up to 103 percent of WAC in this instance. Subsequently, section 6 of the Sustaining Excellence in Medicaid Act of 2019 (Pub. L. 116-39, enacted August 6, 2019), amended section 1847A(c)(4) of the Act to specify, effective January 1, 2019, a payment limit not to exceed 103 percent of the WAC or based on the Part B drug payment methodology in effect on November 1, 2003 during an initial period when ASP data is not sufficiently available. There were no regulatory changes at that time. Therefore, we are proposing to amend § 414.904(e)(4) to reflect this statutory change.

⁹⁷ <https://www.congress.gov/bill/117th-congress/house-bill/5376/text>.

More recently, section 11402 of the IRA amended section 1847A(c)(4) of the Act by adding subparagraph (B), which limits the payment amount for biosimilars during the initial period described in section 1847A(c)(4)(A) of the Act. The provision requires that for new biosimilars furnished on or after July 1, 2024, during the initial period when ASP data is not sufficiently available, the payment limit for the biosimilar is the lesser of (1) an amount not to exceed 103 percent of the WAC of the biosimilar or the Medicare Part B drug payment methodology in effect on November 1, 2003, or (2) 106 percent of the lesser of the WAC or ASP of the reference biological, or in the case of a selected drug during a price applicability period, 106 percent of the maximum fair price of the reference biological.

We propose to codify these changes to section 1847A(c)(4) of the Act at § 414.904. Specifically, we are proposing to revise paragraph (e)(4) at § 414.904 by adding paragraphs (e)(4)(i)(A) and (B) to conform the regulatory text for WAC-based payment limits before January 1, 2019 and for such payment limits on or after January 1, 2019 with the requirements established in section 6 of the Sustaining Excellence in Medicaid Act of 2019. We are also proposing to add paragraphs (A) and (B) to § 414.904(e)(4)(ii) to codify the payment limit for new biosimilars furnished on or after July 1, 2024 during the initial period as required by section 1847A(c)(4)(B) of the Act.

b. Temporary Increase in Medicare Part B Payment for Certain Biosimilar Biological Products

Consistent with section 1847A(b)(8) of the Act, Medicare Part B payment limit for a biosimilar is its ASP plus 6 percent of the reference biological product. In the CY 2016 PFS final rule (80 FR 71096 through 71101), we clarified that the payment limit for a biosimilar biological product is based on the ASP of all National Drug Codes (NDCs) assigned to the biosimilar biological products included within the same billing and payment code and amended § 414.904(j) to reflect this policy. In the CY 2018 PFS final rule (82 FR 53182 through 53186), we finalized a policy to separately assign individual biosimilar biological products to separate

billing and payment codes and pay for biosimilar biological products accordingly. However, we did not change the regulation text at § 414.904(j) at that time.

Section 11403 of the IRA amended section 1847A(b)(8) of the Act by establishing a temporary payment limit increase for qualifying biosimilar biological products furnished during the applicable 5-year period. Section 1847A(b)(8)(B)(iii) of the Act defines “qualifying biosimilar biological product” (hereinafter referred to as “qualifying biosimilars”) as a biosimilar biological product (as described in section 1847A(b)(1)(C) of the Act) with an ASP (as described in section 1847A(b)(8)(A)(i) of the Act) less than the ASP of the reference biological for a calendar quarter during the applicable 5-year period. Section 11403 of the IRA requires that a qualifying biosimilar be paid at ASP plus 8 percent of the reference biological’s ASP rather than 6 percent during the applicable 5-year period. Section 1847A(b)(8)(B)(ii) of the Act defines the applicable 5-year period for a qualifying biosimilar for which payment has been made using ASP (that is, payment under section 1847A(b)(8) of the Act) as of September 30, 2022 as the 5-year period beginning on October 1, 2022. For a qualifying biosimilar for which payment is first made using ASP during the period beginning October 1, 2022 and ending December 31, 2027, the statute defines the applicable 5-year period as the 5-year period beginning on the first day of such calendar quarter of such payment.⁹⁸

In this proposed rule, we propose to add definitions of “applicable 5-year period” and “qualifying biosimilar biological product” at § 414.902 to reflect the definitions in statute, and we propose to make conforming changes to regulatory text to reflect the requirements mandated under section 1847A(b)(8)(B) of the Act for the temporary payment limit increase for qualifying biosimilar biological products at § 414.904 (j) by adding paragraphs (j)(1) and (2).

c. Inflation-adjusted Beneficiary Coinsurance and Medicare Payment for Medicare Part B

⁹⁸ In accordance with these provisions, the ASP Drug Pricing File reflects the temporary increased payment limit for qualifying biosimilars beginning with the October 2022 file available at <https://www.cms.gov/medicare/medicare-fee-for-service-part-b-drugs/mcrpartbdrugavgsalesprice>.

Rebatable Drugs

Section 11101(a) of the IRA amended section 1847A of the Act by adding a new subsection (i), which requires the payment of rebates into the Supplementary Medical Insurance Trust Fund for Part B rebatable drugs if the payment limit amount exceeds the inflation-adjusted payment amount, which is calculated as set forth in section 1847A(i)(3)(C) of the Act. The provisions of section 11101 of the IRA are currently being implemented through program instruction, as permitted under section 1847A(c)(5)(C) of the Act. As such, we issued final guidance for the computation of inflation-adjusted beneficiary coinsurance under section 1874A(i)(5) of the Act and amounts paid under section 1833(a)(1)(EE) of the Act on February 9, 2023.^{99,100} For additional information regarding implementation of section 11101 of the IRA, please see the inflation rebates resources page at <https://www.cms.gov/inflation-reduction-act-and-medicare/inflation-rebates-medicare>.

Section 1847A(i)(5) of the Act requires that for Part B rebatable drugs, as defined in section 1847A(i)(2)(A) of the Act, furnished on or after April 1, 2023, in quarters in which the amount specified in section 1847A(i)(3)(A)(ii)(I) of the Act (or, in the case of selected drugs described under section 1192(c) of the Act, the amount specified in section 1847A(b)(1)(B) of the Act), exceeds the inflation-adjusted payment amount determined in accordance with section 1847A(i)(3)(C) of the Act, the coinsurance will be 20 percent of the inflation-adjusted payment amount for such quarter (hereafter, the inflation-adjusted coinsurance amount). This inflation-adjusted coinsurance amount is applied as a percent, as determined by the Secretary, to the payment amount that would otherwise apply for such calendar quarter in accordance with section 1847A(b)(1)(B) or (C) of the Act, as applicable, including in the case of a selected drug. In this

⁹⁹ <https://www.cms.gov/files/document/medicare-part-b-inflation-rebate-program-initial-guidance.pdf>.

¹⁰⁰ In addition, beginning with the April 2023 ASP Drug Pricing file, the file includes the coinsurance percentage for each drug and specifies “inflation-adjusted coinsurance” in the “Notes” column if the coinsurance for a drug is less than 20 percent of the Medicare Part B payment amount. Drug pricing files are available at <https://www.cms.gov/medicare/medicare-fee-for-service-part-b-drugs/mcrpartbdrugavgsalesprice>.

proposed rule, we propose to codify the coinsurance amount for Part B rebatable drugs as required by section 1847A(i)(5) of the Act in § 489.30, specifically by adding a new paragraph (b)(6).

Section 11101(b) of the IRA amended section 1833(a)(1) of the Act by adding a new subparagraph (EE), which requires that if the inflation-adjusted payment amount of a Part B rebatable drug exceeds the payment amount described in section 1847A(i)(3)(A)(ii)(I) (or, in the case of a selected drug, the payment amount described in section 1847A(b)(1)(B), the Part B payment will, subject to the deductible and sequestration, equal the difference between such payment amount and the inflation-adjusted coinsurance amount. In this proposed rule, we propose to codify the Medicare payment for Part B rebatable drugs in § 410.152, specifically by adding new paragraph (m).

d. Limitations on Monthly Coinsurance and Adjustments to Supplier Payment Under Medicare Part B for Insulin Furnished Through Durable Medical Equipment

Drugs furnished through a covered item of DME are covered under Medicare Part B as provided in sections 1861(n) and (s)(6) of the Act. Insulin administered through covered DME, such as a durable insulin pump, is covered under this benefit. As required by section 1842(o)(1)(C) and (D) of the Act, effective January 1, 2017, infusion drugs furnished through DME, including insulin, are paid under section 1847A of the Act (see 82 FR 53180 through 53181), which is typically ASP plus 6 percent. Prior to July 1, 2023, beneficiaries are responsible for coinsurance of 20 percent of the payment amount of such insulin, subject to the Part B deductible.

Section 11407 of the IRA made three changes to the manner in which beneficiaries pay for insulin furnished through covered DME. First, section 11407(a) of the IRA amended section 1833(b) of the Act to waive the Part B deductible for insulin furnished through covered DME on or after July 1, 2023. Second, section 11407(b)(2) of the IRA amended section 1833(a) of the

Act to establish a limit of \$35 on the beneficiary coinsurance amount for a month's supply of such insulin furnished on or after July 1, 2023. This statutory change means that the beneficiary coinsurance responsibility, which is limited to \$35 for a month's supply of insulin, could equal less than 20 percent if the Part B payment amount of a month's supply of insulin is greater than \$175. Third, section 11407(b)(2) of the IRA also added a new sentence to section 1833(a) of the Act to require the Secretary to increase to the Medicare Part B payment to above 80 percent in the case the coinsurance amount for insulin furnished through covered DME equals less than 20 percent of the payment amount to pay for the full difference between the payment amount and coinsurance. The adjustment specified in paragraph (b)(2) ensures the supplier is not responsible for the reduction in the beneficiary coinsurance amount.

The above provisions were implemented through program instruction¹⁰¹, as required by section 11407(c) of the IRA, for CY 2023. Section 80 in Chapter 17 and section 140 in Chapter 20 of the Medicare Claims Processing Manual will be updated to reflect these changes, effective July 1, 2023. To operationalize this provision, the \$35 coinsurance limit applies to the duration of the calendar month in which the date of service occurs. As stated in the section 110.5, Chapter 15 of the Medicare Benefit Policy Manual¹⁰², the date of service on the claim must be the date that the beneficiary or authorized representative receives the insulin or, for mail order, the date the insulin is shipped. A new \$35 coinsurance limit for a month's supply applies to each calendar month. It follows that, as stated in the program instruction, when a 3-month supply (that is, the amount of such insulin that is required for treatment for up to 3 calendar months) is billed for insulin furnished through covered DME, that a coinsurance limit of \$105 would apply for that 3-calendar month period (\$35 coinsurance limit for each month's supply of insulin). The program instruction also states that the Medicare Administrative Contractors (MACs) will ensure

¹⁰¹ <https://www.cms.gov/files/document/r11917cp.pdf>.

¹⁰² <https://www.hhs.gov/guidance/sites/default/files/hhs-guidance-documents/bp102c15.pdf>.

that coinsurance does not exceed \$35 for a 1-month supply or \$105 for a 3-month supply for claims billing insulin administered through covered DME.

Here, we propose to codify these elements (that are currently in program instruction) for CY 2024 and future years in regulation text, because section 11407(c) of the IRA states that only implementation for CY 2023 may be through program instruction or other forms of guidance. Specifically, we propose to codify the new statutory monthly coinsurance limits of \$35 for a 1-month supply and \$105 for a 3-month supply at § 489.30 by adding paragraph (b)(7) and the adjustment to the provider payment at § 410.152 by adding paragraph (n). In addition, we propose to codify at § 489.30 that the \$35 coinsurance limit for a month's supply of insulin furnished through covered DME will apply to the duration of the calendar month in which the date of service (or services) occurs. In other words, the \$35 coinsurance limit will apply for a month's supply of insulin each calendar month. Similarly, we propose to codify that the \$105 coinsurance limit for 3 months' supply of insulin furnished through covered DME will apply to the duration of the calendar month in which the date of service (or services) occurs and the 2 following calendar months

2. Request for Information (RFI): Drugs and Biologicals which are Not Usually Self-Administered by the Patient, and Complex Drug Administration Coding

Section 1861(s)(2)(A) of the Act allows Medicare to pay for services and supplies, including drugs and biologicals (hereafter, drugs) that are not usually self-administered by the patient, which are furnished as "incident to" a physician's professional service. Section 112 of the Benefits, Improvements & Protection Act of 2000 (BIPA) (Pub. L. 106-554, December 21, 2000) amended the above-referenced sections 1861(s)(2)(A) and 1861(s)(2)(B) of the Act, which formerly referred to drugs "which cannot be self-administered," to read, "which are not usually self-administered." Drugs that are "usually self-administered" are thus statutorily excluded from coverage and payment under Part B under the "incident to" benefit.

We have provided definitions and other guidance for MACs regarding determinations on drugs that are “not usually self-administered by the patient” in Chapter 15, Section 50.2 of the Medicare Benefit Policy Manual. Chapter 15 also describes the evidentiary criteria that MACs should use in determining whether a drug is usually self-administered. The guidance directs MACs to publish a description of the process they use to make that determination, and to publish a list of the drugs that are subject to the self-administered exclusion on their website. The guidance also requires that this list include the data and rationale that led to the determinations. This list is referred to as the “self-administered drug (SAD) list,” and each MAC maintains their own version of the list, which is applicable to that MAC’s area of jurisdiction. While the lists are often similar between MACs, they are not identical. Drugs that are put on a SAD list are excluded from Part B coverage, but in those situations, they are almost always covered by Medicare Part D prescription drug coverage. For several years, interested parties have requested that we update and clarify this SAD list guidance. These parties believe that the current guidance may not adequately address circumstances posed by newly approved drugs.

In a similar vein, we have received concerns from interested parties that non-chemotherapeutic complex drug administration payment has become increasingly inadequate due to existing coding and Medicare billing guidelines that do not accurately reflect the resources used to furnish these infusion services. Interested parties have asserted that these infusion services are similar to complex and clinically intensive Chemotherapy and Other Highly Complex Biological Agent Administration (“Chemotherapy Administration”) services that are billed using CPT code series 96401-96549, as opposed to Therapeutic, Prophylactic, and Diagnostic Injections and Infusion services billed using CPT code series 96360-96379. We note that we discuss our policies for these services in Pub. 100-04 Medicare Claims Processing Manual, Chapter 12, Section 30.5D.

We are soliciting comments on the above two policy areas, since they both involve Part B

drug payment policies that have been impacted by new developments in the field. In an effort to promote coding and payment consistency and patient access to infusion services, we are seeking comment and information from interested parties regarding the relevant resources involved, as well as inputs and payment guidelines and/or considerations, that could be used in determining appropriate coding and payment for complex non-chemotherapeutic drug administration. We are seeking comment on whether or not we should revise our policy guidelines as discussed to better reflect how these specific infusion services are furnished and should be billed.

We are also soliciting comments regarding our policies on the exclusion of coverage for certain drugs under Part B which are usually self-administered by the patient. Specifically, we are soliciting comments regarding our policies for the following items:

- Definitions of the following terms, as referenced in this section:
 - ++ “Administered.”
 - ++ “Self-Administered.”
 - ++ “Usually.”
 - ++ “By the patient.”
- The process for determining which drugs are classified as those “not usually self-administered by the patient.”
- The process for issuing decisions on which drugs are classified as those “not usually self-administered by the patient,” and the process for issuing any changes to those classifications.
- The relevant resources involved, as well as inputs and payment guidelines and/or considerations, that could be used in determining appropriate coding and payment for complex non-chemotherapeutic drug administration.
- Whether or not CMS should revise policy guidelines to better reflect how complex non-chemotherapeutic drug administration infusion services are furnished and billed.

3. Requiring Manufacturers of Certain Single-Dose Container or Single-Use Package Drugs to Provide Refunds With Respect to Discarded Amounts (§§ 414.902 and 414.940)

a. Background

Section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117-58, November 15, 2021) (hereinafter is referred to as “the Infrastructure Act”) amended section 1847A of the Act to redesignate subsection (h) as subsection (i) and insert a new subsection (h), which requires manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug (hereafter referred to as “refundable drug”). The refund amount is the amount of discarded drug that exceeds an applicable percentage, which is required to be at least 10 percent, of total charges for the drug in a given calendar quarter.

In the CY 2023 PFS final rule (87 FR 69710 through 69734), we adopted many policies to implement section 90004 of the Infrastructure Act. We finalized the requirement that billing providers and suppliers report the JW modifier for all separately payable drugs with discarded drug amounts from single use vials or single use packages payable under Part B, beginning January 1, 2023. We also finalized the requirement that billing providers and suppliers report the JZ modifier for all such drugs with no discarded amounts beginning no later than July 1, 2023, and we stated that we would begin claims edits for both the JW and JZ modifiers beginning October 1, 2023 (87 FR 69718 through 69719). Subsequent to the issuance of the CY 2023 PFS final rule, CMS published the JW Modifier and JZ Modifier Policy Frequently Asked Questions (FAQ) document¹⁰³ addressing the correct use of these modifiers. We adopted a definition of “refundable single-dose container or single-use package drug” at 42 CFR 414.902, which also specifies exclusions from this definition (87 FR 69724). These three exclusions are: radiopharmaceutical or imaging agents, certain drugs requiring filtration, and drugs approved by

¹⁰³ <https://www.cms.gov/medicare/medicare-fee-for-service-payment/hospitaloutpatientpps/downloads/jw-modifier-faqs.pdf>.

FDA on or after November 15, 2021, and for which payment has been made under Part B for fewer than 18 months. Regarding reports to manufacturers, we specified that CMS would send reports (including information described in section 1847A(h)(1) of the Act) for each calendar quarter on an annual basis to all manufacturers of refundable drugs (87 FR 69726). We finalized the manner in which the refund amount will be calculated at § 414.940 (87 FR 69731).

Regarding drugs with unique circumstances for which CMS can increase the applicable percentage otherwise applicable for determining the refund, we adopted an increased applicable percentage of 35 percent for drugs reconstituted with a hydrogel and with variable dosing based on patient-specific characteristics (87 FR 69731). Lastly, we adopted a dispute resolution process through which manufacturers can challenge refund calculations, and we established enforcement provisions (including manufacturer audits, provider audits, and civil money penalties required by statute) (87 FR 69732 through 69734).

As noted in the CY 2023 PFS final rule (87 FR 69711), sections 11101 and 11102 of the Inflation Reduction Act (IRA) (Pub. L. 117–169, August 16, 2022) established new requirements under which manufacturers must pay inflation rebates if they raise their prices for certain Part B and Part D drugs faster than the rate of inflation. Drug manufacturers are required to pay rebates to Medicare if prices for certain Part B drugs increase faster than the rate of inflation for quarters beginning with the first quarter of 2023; drug manufacturers are required to pay rebates to Medicare if prices for certain Part D drugs increase faster than the rate of inflation over 12-month periods, starting with the 12-month period that began October 1, 2022.

We explained that we believe implementation of the Part B and Part D inflation rebate programs established under the IRA should be considered together with the operational implications of the discarded drug refunds, because the refunds and rebates both require CMS to accept from drug manufacturers payments that must be deposited into the Federal Supplementary Medical Insurance (SMI) Trust Fund.

Therefore, to align the operation of these programs and minimize burden, we declined to finalize some aspects of the invoicing and collection of discarded drug refunds. Specifically, we declined to finalize the timing of the initial reports and which quarters' information will be included in each report. We also declined to finalize specific dates by which manufacturer refund obligations are due and those associated with the dispute resolution process, as those are scheduled in tandem with the reporting dates. Lastly, we stated our intent to address these aspects in future rulemaking.

In this proposed rule, we propose the date of the initial report to manufacturers, the date for subsequent reports, method of calculating refunds for discarded amounts in lagged claims data, method of calculating refunds when there are multiple manufacturers for a refundable drug, increased applicable percentages for certain drugs with unique circumstances, and a future application process by which manufacturers may apply for an increased applicable percentage for a drug, which would precede proposals to increase applicable percentages in rulemaking. We also propose modification to the JW and JZ modifier policy for drugs payable under Part B from single-dose containers that are furnished by a supplier who is not administering the drug.

b. Provision of Information to Manufacturers

In the CY 2023 PFS final rule (87 FR 69724 through 69726), we discussed our proposals related to meeting the requirements under section 1847A(h)(1) of the Act related to the timing and contents of the report to manufacturers, including what types of information to include, which quarters' data we would include in the initial report, the amount of lagged claims data we would include, whether to send reports quarterly or annually, and the definition of a manufacturer. However, we explained that due to the enactment of the IRA and our efforts to align the operations of the refunds with the inflation rebate programs and minimize burden, we did not finalize certain aspects of the discarded drug refund provision. Specifically, we did not

finalize the date that we would send the first report to manufacturers or which quarters' information would be included in each report.

Although we did not finalize the noted aspects related to timing, we adopted regulations at § 414.940(a)(3) providing that we will send reports to manufacturers on an annual basis and indicated in the preamble text that reports will contain discard information (described in section 1847A(h)(1)(A) of the Act) for each calendar quarter (87 FR 69724 through 69726). We also finalized that we will send reports to all manufacturers of refundable drugs. In addition, in response to commenters suggesting that we provide manufacturers an opportunity to engage with us on discard amount data in the first year of this provision's implementation, we stated that we would issue, no later than December 31, 2023, a preliminary report on estimated discarded amounts based on available claims data from the first two quarters of CY 2023.

To implement the discarded drug refund in a timely manner, we propose to issue the initial refund report to manufacturers, to include all calendar quarters for 2023, no later than December 31, 2024. (Note that this report, which we refer to as the “initial refund report” in this proposed rule, would be separate and distinct from the preliminary report that we intend to issue by December 31, 2023, that will include estimated discarded amounts based on available claims data for the first two quarters of CY 2023.)

With respect to subsequent annual reports, that is, reports for quarters in 2024 and thereafter, we intend to align delivery of the refund reports with the delivery of Part B and Part D inflation rebate reports to the extent practicable. As stated in the initial guidance for Part B inflation rebates¹⁰⁴, inflation rebate reports will be sent on a quarterly basis, each no later than 6 months after the end of the calendar quarter as required in section 1847A(i)(1)(A) of the Act.

¹⁰⁴ <https://www.cms.gov/files/document/medicare-part-b-inflation-rebate-program-initial-guidance.pdf>

Consistent with section 1847A(i)(1)(C) of the Act, CMS may delay reporting Part B inflation rebate information for calendar quarters in CY 2023 and CY 2024 until September 30, 2025.¹⁰⁵

To align these reports, we propose that, other than for the initial refund report, we will send annual refund reports for discarded drug refunds for the 4 quarters of a calendar year at or around the time we send Part B inflation rebate report for the first quarter of the following year. Thus, for example, we would send the second refund report for the calendar quarters in 2024 when we send the inflation rebate report for Q1 2025, which is required to be sent no later than September 30, 2025.

As noted in the CY 2023 PFS final rule (87 FR 69725), because providers and suppliers have a 12-month period to submit Medicare Part B claims, including claims for drugs payable under Part B, there can be a lag between the date of service when a drug is administered and when the claim is submitted and adjudicated. Therefore, there is a lag in available JW modifier data for any given date of service quarter. An evaluation of July 2010 Medicare Part B claims in the Physician/Supplier-Carrier setting showed that 91.68, 96.84, and 98.32, and 99.13 percent of claims were final at 3, 6, 9, and 12 months, respectively, following the date of service. At 24 and 48 months after the date of service, 99.83 and 100 percent of the claims, respectively, were considered to be final. Since, based on our evaluation of the 2010 claims data, a small percentage of lagged claims data from a calendar quarter likely would not be available when the quarter is first included on a report, we propose that annual reports (subsequent to the initial report) include lagged claims data (that is, true-up information) for quarters from 2 calendar years prior. In other words, we propose that each report would include information for 8 calendar quarters: 4 from the previous calendar year (hereafter, referred to as new refund quarters) and 4 from 2 calendar years prior (hereafter, referred to as updated refund quarters). We propose all reports (except the

¹⁰⁵ <https://www.cms.gov/files/document/medicare-part-b-inflation-rebate-program-initial-guidance.pdf>.

initial refund report) would include the following information for updated refund quarters to address lagged claims data:

- The updated total number of units of the billing and payment code of such drug, if any, that were discarded during such updated refund quarter, as determined using a mechanism such as the JW modifier used as of the date of enactment of this subsection (or any such successor modifier that includes such data as determined appropriate by the Secretary).

- The updated refund amount that the manufacturer is liable for with respect to such updated quarter that was not previously accounted for in the prior year's report.

For example, as proposed above, the second annual report (sent no later than September 30, 2025) would include: (1) the total number of units of the billing and payment code of such drug, if any, that were discarded during new refund quarters (all calendar quarters in 2024), (2) the refund amount that the manufacturer is liable for pursuant to section 1847A(h)(3) of the Act for all calendar quarters in 2024, (3) the updated total number of units of the billing and payment code of such drug, if any, that were discarded during the updated refund quarters (all calendar quarters in 2023), and (4) the refund amount that the manufacturer is liable for or the amount CMS owes the manufacturer pursuant to section 1847A(h)(3) of the Act for all calendar quarters in 2023 that was not accounted for in the previous year's report.

We are proposing to define “new refund quarter” and “updated refund quarter” at § 414.902 and to revise § 414.940(a)(3) to reflect the inclusion of lagged data in reports subsequent to the initial refund report. We solicit comment on these proposals. See section III.A.3.d. of this rule for the proposed calculation of refund amounts for updated refund quarters.

c. Manufacturer Provision of Refund

In the CY 2023 PFS final rule (87 FR 69726 through 69727) we adopted §414.940(b), which requires manufacturers to pay refunds in 12-month intervals in a form and manner specified by CMS. In the CY 2023 PFS final rule (87 FR 69727), we also discussed our proposal

for the timing of both the initial report and manufacturers' corresponding refund obligations. That is, we proposed to issue reports to manufacturers by October 1 and require refund obligations to be paid by December 31, except in circumstances where a dispute is pending. Regulations at § 414.940(b)(2) specify that in the case that a disputed report results in a refund amount due, that amount must be paid no later than 30 days after resolution of the dispute.

However, we declined to finalize the deadlines by which manufacturer refund obligations are due and those associated with the dispute resolution process, as those timelines correspond with the dates of the annual refund reports and, as explained above, we declined to finalize the timeline for the report in the CY 2023 PFS final rule in order to align the operation of the discarded drug refunds with the inflation rebate programs. In the CY 2023 PFS final rule (87 FR 69727), we stated our intent to revisit the process and timeline for manufacturers' provisions of refunds in future rulemaking.

As described in section III.A.3.b. of this proposed rule, we are proposing to issue the initial refund report to manufacturers no later than December 31, 2024. Accordingly, we propose to require that the refund amounts specified in the initial refund report be paid no later than February 28, 2025, except in circumstances where a report is under dispute. We believe a payment deadline that is two calendar months after the issuance of the report provides adequate time for manufacturers to review the reports and submit a dispute if needed prior to the refund payment deadline.

As noted above, we are proposing that we will issue the second annual refund report to manufacturers no later than September 30, 2025, and once annually thereafter no later than September 30 for every year thereafter. Accordingly, we are proposing to require manufacturers to pay refunds specified in each report (beginning with the second report) no later than December 31 of the year in which the report is sent, except in circumstances where a report is under dispute. In cases in which a manufacturer disputes a report, beginning with the initial

refund report, any manufacturer liability determined upon the resolution of the dispute would be due by the above stated due date or 30 days following the resolution, as described in § 414.940(b)(2), whichever is later. We propose to revise § 414.940(b)(1) to reflect these dates.

d. Refund Amount

(1) Calculation of Refund Amounts for Updated Quarters

As discussed in section III.A.3.b. of this proposed rule, we are proposing to include information for lagged claims data in all reports other than the initial report. In addition, we propose that such additional lagged JW modifier data, if any, will be used to calculate revisions to the manufacturer refund amount. Specifically, we propose to calculate the refund with updated data in the same manner as was finalized in the 2023 PFS final rule (87 FR 69727) and subtract the refund amount that already paid for such refundable drug for such quarter to determine the updated quarter refund amount. We propose that the refund amount owed by a manufacturer, with respect to a refundable drug assigned to a billing and payment code for an updated refund quarter is the amount equal to the estimated amount (if any) by which:

- The product of:

- ++ The total number of units of the billing and payment code for such drug that were discarded during such quarter; and

- ++ The amount of payment determined for such drug or biological under section 1847A(b)(1)(B) or (C) of the Act, as applicable, for such quarter.

- Exceeds the difference of:

- ++ An amount equal to the applicable percentage of the estimated total allowed charges for such a drug (less the amount paid for packaged drugs) during the quarter; and

- ++ The refund amount previously paid for such refundable drug for the given quarter.

We propose that if the resulting refund calculation for an updated quarter is a negative number, then it will be netted out of the any refund owed for other updated quarters or new quarters.

We propose to revise § 414.940 by adding new paragraphs (c)(2) and (3) to reflect the above proposed method of calculation of revisions to the refund amount owed for quarters in the year that is two calendar years prior.

(2) Calculation of Refund for a Drug when there are Multiple Manufacturers

In the CY 2023 PFS final rule (87 FR 69727 through 69731), consistent with section 1847A(h)(3) of the Act, we adopted regulations at § 414.940(c) specifying the manner in which the refund amount will be calculated with respect to a refundable drug of a manufacturer assigned to a billing and payment code for a calendar quarter beginning on or after January 1, 2023. The refund for which the manufacturer is liable is the amount equal to the estimated amount (if any) by which:

- The product of:

++ The total number of units of the billing and payment code for such drug that were discarded during such quarter; and

++ The amount of payment determined for such drug or biological under section 1847A(b)(1)(B) or (C) of the Act, as applicable, for such quarter;

- Exceeds an amount equal to the applicable percentage of the estimated total allowed charges for such a drug (less the amount paid for packaged drugs) during the quarter.

We stated we will estimate the total allowed charges during the quarter by multiplying the drug's payment amount for the quarter by the total number of units of the billing and payment code of such drug that were subject to JW modifier reporting including those for which the JZ modifier would be required if no units were discarded. As specified in section 1847A(h)(1)(C) of the Act, the total number of units of the billing and payment code of a refundable drug paid

during a calendar quarter for purposes of subparagraph (A)(i) and the determination of the estimated total allowed charges for the drug in the quarter for purposes of paragraph (3)(A)(ii) exclude such units that are packaged into the payment amount for an item or service and are not separately payable.

Because refundable drugs are single source drugs or biologicals, they typically will have one manufacturer. However, a refundable drug could have more than one manufacturer, for example, in the circumstance where a refundable drug is produced by one manufacturer, and also by one or more manufacturer(s) that is a repackager or relabeler. Multiple manufacturers of a refundable drug could also occur in the case of one or more authorized generic products that are marketed under the same FDA-approval as the original FDA applicant. In such cases, the National Drug Codes (NDCs) for the drug typically are assigned to the same billing and payment code, and each manufacturer is responsible for reporting ASP data to CMS, which includes sales volume. In the CY 2023 PFS final rule (87 FR 69724 through 69726), we stated that we would identify the manufacturer responsible for the provision of refunds by the labeler code of the refundable drug.

Therefore, there is a need to establish a method for apportioning billing units of a refundable drug sold during a calendar quarter in situations where there are multiple manufacturers of a refundable drug. When calculating the refund amount owed by manufacturers for a refundable drug that has more than one manufacturer, we propose to identify such refundable drugs using the ASP sales data reported for the calendar quarter for which a refund amount is calculated. Furthermore, we propose to apportion financial responsibility for the refund amount among each manufacturer in the following manner: by dividing the sum of the individual manufacturer's billing units sold during the refund quarter for all the manufacturer's NDCs assigned to the billing and payment code (as reported in the ASP data submissions), by the sum of all manufacturers' billing units sold during the refund quarter for all NDCs of the

refundable drug assigned to the billing and payment code (as reported in the ASP data submissions).

This calculation approach is consistent with the approach for apportioning inflation rebate obligations discussed in section 50.13 of the Medicare Part B Drug Inflation Rebates Paid by Manufacturers: Initial Memorandum, Implementation of Section 1847A(i) of the Social Security Act, and Solicitation of Comments¹⁰⁶, released on February 9, 2023.

We propose to apportion the discarded drug refund when there is more than one manufacturer for a refundable drug, using the proportion of billing unit sales, expressed as a percentage, attributed to each NDC (at the NDC-11 level) assigned to the billing and payment code for such refund quarter. The number of billing unit sales for each NDC would be the reported number of NDCs sold (as submitted in the ASP report to CMS each quarter) multiplied by the billing units per package for such NDC. We propose that the refund amount attributed to such NDCs for which the manufacturer is liable would be the amount equal to the estimated amount (if any) by which:

- The product of:

- ++ The total number of units of the billing and payment code for such drug that were discarded during such quarter;

- ++ The percentage of billing unit sales of the applicable code attributed to the NDC; and

- ++ The amount of payment determined for such drug or biological under section 1847A(b)(1)(B) or (C) of the Act, as applicable, for such quarter;

- Exceeds an amount equal to the product of:

- ++ The applicable percentage of the estimated total allowed charges for such a drug (less the amount paid for packaged drugs) during the quarter; and

- ++ The percentage of billing unit sales of the applicable code attributed to the NDC.

¹⁰⁶ <https://www.cms.gov/files/document/medicare-part-b-inflation-rebate-program-initial-guidance.pdf>

For example, if a billing and payment code for a refundable drug includes three NDCs, each from a different manufacturer as shown below in Table 18, there were 3,000 units discarded during the refund quarter, the payment limit amount for the refundable drug was \$50.00 per billing unit, the applicable percentage was 10 percent, and the estimated total allowed charges for the refundable drug during the refund quarter was \$1.05 million, the proposed calculation for the refund amount owed by Manufacturer 1 would be as follows: $(3,000)(23.81\%)(\$50) - (21,000)(10\%)(23.81\%)(\$50) = \text{refund amount of } \$10,714.50$.

TABLE 18: Example of Proportion of Sales Calculation when there are Multiple Manufacturers for a Refundable Drug

NDC	Manufacturer	Refund Quarter Sales (billing units)	Proportion of Sales (percent)
12345-6789-01	Manufacturer 1	5,000	23.81%
23456-7890-01	Manufacturer 2	6,000	28.57%
34567-8901-01	Manufacturer 3	10,000	47.62%
	TOTAL:	21,000	100%

The report to manufacturers described in section 1847A(h)(1) of the Act and discussed in the previous section III.A.3.b. of this proposed rule, in the case that there are multiple manufacturers for a refundable drug, would include: (1) the total number units of the billing and payment code of such drug attributed to the manufacturer’s NDC assigned to the billing and payment code of the refundable drug that were discarded during such quarter, if any; and (2) the refund amount that the manufacturer of that NDC is liable for pursuant to section 1847A(h)(3) of the Act. We propose that this method of calculation apply beginning with calendar quarters in CY 2023 included in the initial refund report, which we propose to be sent no later than December 31, 2024. We propose that this method of calculation would be done for new refund quarters and updated refund quarters.

We propose to revise § 414.940 by adding a new paragraph (c)(4) to reflect the above proposed method of calculation of the refund amount attributed to a NDC when there are multiple manufacturers.

(3) Increased Applicable Percentage for Drugs with Unique Circumstances

Section 1847A(h)(3)(B)(ii) of the Act provides that, in the case of a refundable drug that has unique circumstances involving similar loss of product as that described in section 1847A(h)(8)(B)(ii) of the Act, the Secretary may increase the applicable percentage otherwise applicable as determined appropriate by the Secretary. In the CY 2023 PFS final rule (87 FR 69727 through 69731), we adopted an increased applicable percentage of 35 percent for drugs reconstituted with a hydrogel and with variable dosing based on patient-specific characteristics (§ 414.490(d)(1)). We have identified only one drug, Jelmyto[®] (mitomycin for pyelocalyceal solution), with such unique circumstances. We stated in that final rule that we recognize that there are drug products that may indeed have other unique circumstances, and that an increased applicable percentage for these products would have to be determined through future notice and comment rulemaking, as required by the statutory provision. We stated that we planned to collect additional information about drugs that may have unique circumstances along with potential increased applicable percentages that might be appropriate for such drugs, and to collect additional information about a process to identify unique circumstances based on manufacturer input. We explained that we would revisit additional increased applicable percentages for drugs that have unique circumstances, and a process to identify such circumstances, through future notice and comment rulemaking. To that end, we hosted a town hall meeting on February 1, 2023 to discuss what criteria would be appropriate to determine whether a refundable drug has unique circumstances, and whether a categorical approach (that is, unique circumstances that apply to more than one drug), drug-by-drug approach, or a hybrid of these two approaches should be used for determining drugs for which an increased applicable percentage is appropriate.

After considering input from interested parties provided at the town hall and in subsequent meetings, in this proposed rule, we are proposing a hybrid approach to determining

when it is appropriate to increase the applicable percentage for a drug with unique circumstances. First, we are proposing two categorical unique circumstances along with proposed increased applicable percentages and, secondly, we are proposing an application process so manufacturers may request that CMS consider whether an increased applicable percentage would be appropriate for a particular drug in light of its unique circumstances (and if an increased applicable percentage is considered appropriate it would then be proposed in future notice-and-comment rulemaking).

As discussed in the CY 2023 PFS final rule and further discussed at the town hall, many interested parties requested CMS increase applicable percentages (defined at § 414.940(c)(3) as 10 percent, except where an increased applicable percentage is applied in paragraph (d) of that section) for drugs packaged with small vial fill amounts or low-volume products (generally, those with a fill amount less than 1 mL). These parties stated that, for certain drugs, the small volume of drug contained in the vial (as identified on the package or FDA labeling) often represents the minimum volume necessary to safely and effectively prepare and administer the prescribed dose. Certain labeled amounts that are unused and discarded include amounts remaining in the syringe hub, amounts remaining in the syringe that are not part of the prescribed dose, amounts left in the vial that cannot be removed (such as drug adhering to the side of the vial or pooling around the vial stopper), and amounts left in the vial when it contains enough drug for two administration attempts.

We agree that such drugs have unique circumstances, because certain FDA-labeled amounts on the vial or package are unused and discarded after administration of the labeled dose, and these amounts are not available to be administered. The unique circumstances described for such drugs are similar to loss of product from filtration described in section 1847A(h)(8)(B)(ii) of the Act because in both circumstances, such amounts lost are amounts that are not part of the recommended dose and are not available to be administered to the patient (one being loss due to

labeled amounts remaining in the filter and the other due to labeled amounts remaining in other areas such as the vial or syringe).

Since not all drugs with small fill volumes have certain labeled amounts that are unused and discarded, we believe more specific criteria are required to identify certain drugs with unique circumstances in this case. For example, if a drug is available as 0.8 mL in a prefilled syringe, the total volume in the presentation is small, however, the entire labeled amount in the syringe may be administered to the patient as part of a labeled dose; the unique circumstances described above only occur when the volume of the labeled dose that is withdrawn from a vial or container is very small and there is a labeled amount that is unused and discarded and not available for administration, (based on drugs currently available in the market, we have observed this to occur with doses contained within less than 0.4 mL). Therefore, we propose an increased applicable percentage for drugs with a “low volume dose.” We consider a low volume dose to be a dose of a drug for which the volume removed from the vial containing the labeled dose does not exceed 0.4 mL (which is about 8 drops of liquid). We propose to revise § 414.902 and define a low volume dose to be a labeled dose (based on FDA-approved labeling) that is contained within no more than 0.4 mL when removed from the vial or container. For example, if a labeled dose is 4 mg and a vial contains a suspension with a concentration of 40 mg/mL, the labeled dose would be contained in 0.1 mL, which would not exceed 0.4 mL and would, therefore, be considered a low volume dose. We propose that this definition of low volume dose apply even if the drug is further diluted after removal from the vial and prior to administration because, even if the dose is further diluted, a dose withdrawn from the vial and diluted would still have the same physical constraints as a dose that was not diluted, and those constraints would necessitate the loss of product as described in the previous paragraph. In addition, we propose that for a drug to meet these unique circumstances, all labeled doses of the drug would be low volume doses. As proposed, this definition would not affect the determination of units as defined at section

1847A(b)(2)(B) of the Act and codified at § 414.802, and we note that the statutory definition of unit is exclusive of any diluent without reference to volume measures pertaining to liquids. The proposed definition of low volume dose would only be applied for the determination of whether a higher applicable percentage is warranted for a drug.

We propose a two-tiered increased applicable percentage for drugs with low volume doses, because the percentage that is unused and discarded for these drugs decreases as the volume of the dose increases. We propose that, for drugs with labeled doses contained within 0.1 mL or less when removed from the vial or container, the applicable percentage be increased to 90 percent. We are proposing 90 percent applicable percentage for this tier because certain drugs with low volume doses of 0.1 mL or less have up to 90 percent of the labeled amount that is unused and discarded and not part of the labeled dose available to be administered.^{107,108} We are not proposing to add an additional 10 percent to this number as we did in the case of hydrogel, as discussed in the CY 2023 final rule (see 87 FR 69729), because, generally, we do not believe it would be appropriate for any product to have an applicable percentage of 100 percent. Such an applicable percentage would, in effect, exclude drugs from the refund liability altogether. We believe it would be inappropriate to effectively expand the list of exclusions described in section 1847A(h)(8)(B) of the Act by proposing an increased applicable percentage of 100 percent to drugs not expressly excluded in statute. However, we considered whether some additional percentage might be appropriate in this case. We solicit comment on whether an additional percentage above 90 percent (but less than 100 percent) is warranted for drugs with low volume doses of 0.1 mL or less.

In the second tier of the low volume dose unique circumstances, we propose that for drugs with labeled doses contained within 0.11 – 0.4 mL, the applicable percentage be increased

¹⁰⁷ https://www.accessdata.fda.gov/drugsatfda_docs/label/2021/211950Orig1s000correctedlbl.pdf.

¹⁰⁸ https://www.accessdata.fda.gov/drugsatfda_docs/label/2007/022223,022048lbl.pdf.

to 45 percent. Certain drugs currently marketed that fall into this category have up to 35.6 percent of the labeled amount that is unused and discarded and not part of the labeled dose to be administered. In the same manner as the applicable percentage for the hydrogel finalized in the CY 2023 PFS final rule, we propose to add the discarded amount percentage to the applicable percentage of 10 percent that is used for drugs without unique circumstances (that is, 35.6 percent plus 10 percent), and we propose to round that number to an applicable percentage of 45 percent for this tier.

In summary, we propose to increase the applicable percentages for drugs with a low volume dose (a dose of a drug for which the volume removed from the vial or container containing the labeled dose does not exceed 0.4 mL). Specifically, we propose that:

- Refundable drugs with labeled doses that are contained within 0.1 mL or less when removed from the vial or container have an increased applicable percentage of 90 percent and;
- Refundable drugs with labeled doses that are contained within 0.11 – 0.4 mL when removed from the vial or container have an increased applicable percentage of 45 percent.

To date, we have identified certain drugs that would meet the proposed criteria for such unique circumstances and would have a proposed increased applicable percentage of 90 percent, including Triesence[®] (triamcinolone acetonide injection, suspension) and Xipere[®] (triamcinolone acetonide injection, suspension), along with some other ophthalmic drugs with such low volume doses that do not include all of the target fill volume in the labeled amount (that is, those that are labeled such that the low volume dose is equal to the labeled amount). We also note that, although Susvimo[™] (ranibizumab injection, solution) would qualify for the proposed 90 percent applicable percentage, it is excluded from the definition of refundable drug due to filtration requirements as discussed in the 2023 PFS final rule (87 FR 69723 through 69724). To date, we have identified certain drugs that would meet the proposed criteria for such unique circumstances and would have a proposed increased applicable percentage of 45 percent, including Xiaflex[®]

(collagenase clostridium histolyticum) and Kimmtrak[®] (tebentafusp injection, solution, concentrate).

The second categorical unique circumstances we are proposing is for orphan drugs administered to a low volume of unique beneficiaries, which we propose to be fewer than 100 unique Medicare fee-for-service beneficiaries per calendar year (hereafter referred to as rarely utilized orphan drugs); we propose an increased applicable percentage of 26 percent for drugs with these unique circumstances. There is a higher probability that the percentage of discarded amounts for rarely utilized orphan drugs may not have a normal statistical distribution from quarter to quarter, which could disproportionately affect manufacturers of such drugs by resulting in highly variable refund amounts as compared with the variability of drugs administered to a higher number of beneficiaries. This is evidenced by our analysis of quarterly discarded drug data reported using the JW modifier of 30 refundable drugs identified in the 2021 Medicare Part B Discarded Drug Units data with greater than 10 percent units discarded¹⁰⁹, three of which were orphan drugs furnished to a patient population of less than 100 unique fee-for-service Medicare beneficiaries in CY 2021: J9262 (*omacetaxine mepesuccinate*); J9269 (*tagraxofusp-erzs*); and J0223 (*givosiran*). This analysis of JW modifier data for quarters in 2021 and 2022 showed that the average standard deviation of the percentage of units discarded across quarters for the rarely utilized orphan drugs is 6.21 percent, compared with an average standard deviation for all other refundable drugs (with a percentage of discarded units over 10 percent in 2021) of 2.35 percent. In other words, the standard deviation from the mean discarded drug percentage for rarely utilized orphan drugs is 2.64 times greater than that of the group of refundable drugs with larger patient populations and claims volume. In addition, based on the 2021 Medicare Part B Discarded Drug Units data for the three aforementioned drugs, the most

¹⁰⁹ <https://data.cms.gov/summary-statistics-on-use-and-payments/medicare-medicaid-spending-by-drug/medicare-part-b-discarded-drug-units>.

historical public data is associated with J9262, which shows that the percent discarded units for J9262 was 23.65 percent, 19.96 percent, and 30.98 percent in 2019, 2020, and 2021, respectively. Because of this substantial statistical variation from quarter to quarter for such drugs, we believe it would be difficult to optimize the presentation of the drug to consistently minimize the discarded amounts to less than 10 percent given the small number of patients receiving the drug. We consider the higher percentage of unused and discarded amounts from such drugs as unavoidable loss due to both the low volume of unique beneficiaries receiving the drug contributing statistically higher variability in discarded amounts. Also, due to the low numbers of patients available to study for rare disease, it may be more difficult to determine the most efficient vial size for the patient population who receive the drug post-marketing. This is similar to the loss of product due to filtration described in section 1847A(8)(B)(ii) of the Act because the loss is unavoidable in both circumstances. In the case of filtration described in statute, the loss is unavoidable because certain amounts of product will be left within the filter and unavailable for administration; in the case of rarely utilized orphan drugs, the loss is unavoidable because of the variability of potential doses (and low number of patients receiving the drug) leading to an inability to develop a package size that will result in a consistent average percentage of discarded units (as evidenced in the analysis above in this section). In contrast, drugs administered to a larger number of beneficiaries per year do have a more consistent average percentage discarded from quarter to quarter, as evidenced by the lower standard deviation in our analysis, and we believe manufacturers are able to develop availability of the drug accordingly to minimize discarded amounts.

We propose that unique circumstances of rarely utilized orphan drugs have the following characteristics: (1) a drug designated under section 526 of the Federal Food, Drug, and Cosmetic Act (FD&C Act) as a drug for a rare disease or condition; and (2) that is furnished to fewer than 100 unique Medicare fee-for-service beneficiaries per calendar year. We propose that the number

of beneficiaries receiving such drug in the calendar year would correspond with the refund quarter. For example, for refund quarters in 2023, we would use the number of beneficiaries receiving the drug in the 2023 calendar year to determine if the unique circumstances and increased applicable percentage would apply. Data of number of beneficiaries would be analyzed at the same time as the JW modifier data for the given calendar quarters. To meet these unique circumstances, we propose that the drug be designated an orphan-drug under section 526 of the FD&C Act for a rare disease or condition (or diseases or conditions) and be approved by the FDA-only for one or more indications within such designated rare disease or condition (or diseases or conditions). That is, all FDA-labeled indications for the drug must be orphan indications. In addition, we propose that the drug would meet these unique circumstances and that the increased applicable percentage would apply for as long as the drug meets these conditions, even after any orphan-drug exclusivity end date.

The increased applicable percentage of 26 percent that we are proposing is appropriate because the standard deviation from the mean discarded drug percentage for rarely utilized orphan drugs is 2.64 times greater than that of the larger group of refundable drugs, and multiplying the applicable percentage referenced in paragraph (h)(3)(B)(i)(II) by how many times greater the variance is (in other words, 10 percent times 2.64) equals 26.4 percent, which we propose to round to the nearest percentage.

We propose that CMS would identify drugs that have unique circumstances of low volume doses and rarely utilized orphan drugs in the report sent to manufacturers and apply the proposed increased applicable percentages based on these categorical unique circumstances proposals. If a manufacturer believes that the incorrect applicable percentage was applied to the refund calculation, the manufacturer may submit a dispute regarding the calculation by submitting an error report (see § 414.940(e)).

We propose to codify these applicable percentages at § 414.940(d). Specifically, we propose to add applicable percentages for low volume doses by creating new paragraphs (d)(3) and (4); and we propose to add applicable percentage for orphan drugs administered to fewer than 100 unique beneficiaries per calendar year in new paragraph (d)(5). We propose that these applicable percentages apply beginning with the initial refund report that we propose to be sent no later than December 31, 2024.

We solicit comments on the proposed categorical unique circumstances. Specifically, we solicit comment on the proposed volume (mL) tiers for drugs with low volume doses along with the proposed increased applicable percentages and whether an additional percentage above 90 percent (but less than 100 percent) is warranted for drugs with low volume doses of 0.1 mL or less. We also solicit comment on the increased applicable percentage of 26 percent for rarely utilized orphan drugs.

(4) Proposed Application Process for Individual Drugs

In addition to the two proposed categorical unique circumstances, we propose to establish an application process through which manufacturers may request that we consider an individual drug to have unique circumstances for which an increased applicable percentage is appropriate. We believe manufacturers would benefit from a formal process through which they can provide information, including that which may not be publicly available, and therefore, not known to us, in order to request an increase in their refundable drug's applicable percentage and provide justification for why the drug has unique circumstances for which such an increase is appropriate, including in the case of a drug with an applicable percentage that has already been increased by virtue of its inclusion in categorical unique circumstances.

We propose that, to request CMS consider increasing the applicable percentage of a particular refundable drug, a manufacturer must submit the following: (1) a written request that a drug be considered for an increased applicable percentage based on its unique circumstances; (2)

FDA-approved labeling for the drug; (3) justification for the consideration of an increased applicable percentage based on such unique circumstances; and (4) justification for the requested increase in the applicable percentage. Such justification could include documents, such as (but not limited to) a minimum vial fill volume study or a dose preparation study. We propose that in evaluating requests for increased applicable percentages, we would review the documentation referenced above for evidence that amounts of drug identified in the FDA-approved package or labeling has similar loss of product as that described in paragraph section 1847A(8)(B)(ii) of the Act.

Section 1847(h)(3)(B)(ii) of the Act requires that any increase to applicable percentages for refundable drugs to be made through notice-and-comment rulemaking. Therefore, we propose that applications for individual applicable percentage increases be submitted in a form and manner specified by CMS by February 1 of the calendar year prior to the year the increased applicable percentage would apply (for example, applications for increased applicable percentages effective January 1, 2025 would be due to CMS by February 1, 2024). We propose to discuss our analyses of applications in the PFS rulemaking immediately following the application period, and to communicate in the proposed rule whether we consider the drug to have unique circumstances that warrant an increased applicable percentage. We would also include proposals, if any, for increased applicable percentages, along with a summary of any applications for which we determined not to propose an increase in the applicable percentage. We propose to codify this application process for individual unique circumstances in new paragraph § 414.940(e).

We do not consider the following to be unique circumstances warranting an increased applicable percentage at this time: weight-based doses, BSA-based doses, varying surface area of a wound, loading doses, escalation or titration doses, tapering doses, and dose adjustments for toxicity because we believe manufacturers can optimize the availability of products for these

circumstances to limit the percentage of discarded units for a drug, unlike the circumstances of manufacturers of drugs that require filtration during the preparation process, as described in section 1847A(h)(8)(B)(ii) of the Act. FDA draft guidance, titled “Optimizing the Dosage of Human Prescription Drugs and Biological Products for the Treatment of Oncologic Diseases”¹¹⁰, states: “Various dose strengths should be available to allow multiple dosages to be evaluated in clinical trials. Perceived difficulty in manufacturing multiple dose strengths is an insufficient rationale for not comparing multiple dosages in clinical trials.” Although optimization of dosage and available product formulations most often occurs prior to marketing a drug, we also observe several instances where the drug formulation availability has been changed and subsequently resulted in a decreased percentage of discarded amounts. For example, Kyprolis[®] (carfilzomib), which is cross-walked to the billing and payment code J9047, was available in only one 60-mg single-dose vial size when first approved in 2012¹¹¹. Subsequently, a second 30-mg vial size was approved in 2016¹¹², and a third 10-mg vial size was approved in June of 2018¹¹³. We observe in discarded drug data, based on the JW modifier, that the percentage of discarded units for J9047 was 14.27, 12.68, 5.95, 4, and 3.09 percent in 2017, 2018, 2019, 2020, and 2021, respectively. There is a sharp drop in the percent of discarded units after 2018, which correlates with the introduction of the 10-mg vial. The labeled dose of Kyprolis[®] is based on the patient’s BSA, there is a dose escalation, there are two different dosage schedules (once weekly and twice weekly) each with differing doses, there are dosage modifications for toxicity that involve dose reductions, and there is a dose reduction for patients with hepatic impairment. With these dose variations taken into consideration, the available vial

¹¹⁰ <https://www.fda.gov/regulatory-information/search-fda-guidance-documents/optimizing-dosage-human-prescription-drugs-and-biological-products-treatment-oncologic-diseases>.

¹¹¹ https://www.accessdata.fda.gov/drugsatfda_docs/label/2012/202714lbl.pdf.

¹¹² https://www.accessdata.fda.gov/drugsatfda_docs/label/2016/202714s012lbl.pdf.

¹¹³ https://www.accessdata.fda.gov/drugsatfda_docs/label/2018/202714s019lbl.pdf.

sizes of the drug allow for the percentage of discarded units to remain well below 10 percent after the introduction of the third vial size.

In addition, we observe that, based on the 2021 discarded drug data¹¹⁴, as the number of available package sizes increases, the percent discarded decreases (see Table 19). This example is indicative of ways in which manufacturers can optimize package sizes to reduce the percentage of discarded units in the circumstances listed above.

TABLE 19: 2021 Discarded Drug Data for Refundable Drugs and Number of Available Package Sizes

Percent Units Discarded	Number of Refundable Drugs	Percentage of Refundable Drugs with Only One Package Size
> 20%	7	100%
15—19.99%	6	83.33%
10—14.99%	20	75%
5—9.99%	22	45.45%
2—4.99%	47	29.79%

We solicit comments from interested parties on the application process for individual drug unique circumstances. Specifically, we solicit comment on what factors we should use in a framework for considering these applications, what factors we should use to assess appropriate increases to applicable percentages, as well as what types of additional or alternative documentation may help us analyze justifications for increased applicable circumstances.

e. Clarification for the Definition of Refundable Drug

As discussed in the CY 2023 PFS final rule (87 FR 69650 through 69655), CMS aims to create a consistent coding and payment approach for the suite of products currently referred to as skin substitutes. On January 18, 2023, we held a Town Hall to discuss this issue further and to provide an opportunity to further engage interested parties on this matter and is soliciting additional comments about skin substitutes in this proposed rule. We anticipate addressing coding and payment for skin substitutes in future rulemaking. While we consider making

¹¹⁴ <https://data.cms.gov/summary-statistics-on-use-and-payments/medicare-medicaid-spending-by-drug/medicare-part-b-discarded-drug-units>.

changes to the Medicare Part B payment policies for such products, we propose that billing and payment codes that describe products currently referred to as skin substitutes not be counted for purposes of identifying refundable drugs for calendar quarters during 2023 and 2024. We plan to revisit discarded drug refund obligations for skin substitutes in future rulemaking.

f. Clarification for the Determination of Discarded Amounts and Refund Amounts

Section 1847A(h) of the Act specifies that discarded amounts of refundable drugs are to be determined using a mechanism such as the JW modifier used as of the date of enactment of the Infrastructure Act or any successor modifier that includes such data as determined appropriate by the Secretary. In the CY 2023 PFS final rule (87 FR 69718 through 69719), we finalized our previously existing policy that required billing providers report the JW modifier for all separately payable drugs with discarded drug amounts from single use vials or single use packages payable under Part B, beginning January 1, 2023. Since the JW modifier, the mechanism described in section 1847A(h) of the Act, is not required in Medicare Advantage claims for drugs payable under Medicare Part B and there is not a similar mechanism to identify discarded units of such drugs that are billed to Medicare Advantage plans, we are clarifying that the JW modifier requirement does not apply to units billed to Medicare Advantage plans and that the refund amount calculations under section 1847A(h)(3) of the Act will not include units billed to Medicare Advantage plans.

g. Technical Changes

In the CY 2023 PFS final rule (87 FR 70227) we finalized the regulation text for the calculation of the manufacturer refund requirement. That text contained an error in two places, § 414.940(c)(3) and (d), which incorrectly referenced paragraph (c)(1)(ii) of that section in reference to the applicable percentage, rather than paragraph (c)(2). We propose to correct the textual reference in both paragraphs and make additional technical changes to streamline the text.

See section III.A.3.d.(1) of this proposed rule for discussion of additional proposed revisions to these provisions.

h. Use of the JW Modifier and JZ Modifier Policy

In the CY 2023 PFS final rule (87 FR 69723), we discussed the applicability of the JW and JZ modifier policy to drugs that are not administered by the billing supplier, including drugs furnished through a covered item of DME that may be administered by the beneficiary. In such cases, suppliers who dispense drugs payable under Medicare Part B do not actually administer the drug, as the claim is typically submitted prior to the administration of the drug, and the billing provider or supplier is not at the site of administration to measure discarded amounts. We stated that since we do not believe it would be appropriate to collect data about discarded amounts from beneficiaries, the reporting requirement does not apply to drugs that are self-administered by a patient or caregiver in the patient's home. In the updated FAQ for the JW/JZ modifier policy¹¹⁵ released on January 5, 2023, we reiterated that suppliers who dispense but do not actually administer a separately payable drug are not expected to report the JW modifier.

Beginning October 1, 2023, we will begin editing for correct use of both the JW and JZ modifiers for billing and payment codes for drugs from single-dose containers (87 FR 69719). However, because currently there is no claims modifier to designate that a drug was dispensed, but not administered, by the billing supplier, the policy finalized last year exempting self-administered drugs from the JW/JZ modifier policy may result in claims rejections absent a modification. Therefore, as we continue to believe it is unreasonable to collect discarded drug data from beneficiaries, we propose to require that drugs separately payable under Part B from single-dose containers that are furnished by a supplier who is not administering the drug be billed with the JZ modifier.

B. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

1. Background

a. RHC and FQHC Payment Methodologies

As provided in 42 CFR part 405, subpart X of our regulations, RHC and FQHC visits generally are defined as face-to-face encounters between a patient and one or more RHC or FQHC practitioners during which one or more RHC or FQHC qualifying services are furnished. RHC and FQHC practitioners are physicians, NPs, PAs, CNMs, clinical psychologists (CPs), and clinical social workers, and under certain conditions, a registered nurse or licensed practical nurse furnishing care to a homebound RHC or FQHC patient in an area verified as having shortage of home health agencies. We note, as discussed in section III.B.2.b. of this proposed rule, effective January 1, 2024 RHC and FQHC practitioners can also be licensed marriage and family therapists or mental health counselors. Transitional Care Management (TCM) services can also be paid by Medicare as an RHC or FQHC visit. In addition, Diabetes Self-Management Training (DSMT) or Medical Nutrition Therapy (MNT) sessions furnished by a certified DSMT or MNT program may also be considered FQHC visits for Medicare payment purposes. Only medically necessary medical, mental health, or qualified preventive health services that require the skill level of an RHC or FQHC practitioner are RHC or FQHC billable visits. Services furnished by auxiliary personnel (for example, nurses, medical assistants, or other clinical personnel acting under the supervision of the RHC or FQHC practitioner) are considered incident to the visit and are included in the per-visit payment.

RHCs generally are paid an all-inclusive rate (AIR) for all medically necessary medical and mental health services and qualified preventive health services furnished on the same day (with some exceptions). The AIR is subject to a payment limit, meaning that an RHC will not receive any payment beyond the specified limit amount. As of April 1, 2021, all RHCs are

subject to new payment limits on the AIR, and this limit will be determined for each RHC in accordance with section 1833(f) of the Act.

FQHCs were paid under the same AIR methodology until October 1, 2014. Beginning on that date, in accordance with section 1834(o) of the Act (as added by section 10501(i)(3) of the Patient Protection and Affordable Care Act (Pub. L. 111-148), FQHCs began to transition to the FQHC PPS system, in which they are paid based on the lesser of the FQHC PPS rate or their actual charges. The FQHC PPS rate is adjusted for geographic differences in the cost of services by the FQHC PPS geographic adjustment factor (GAF). The rate is increased by 34 percent when an FQHC furnishes care to a patient that is new to the FQHC, or to a beneficiary receiving an initial preventive physical examination (IPPE) or has an annual wellness visit (AWV).

Both the RHC AIR and FQHC PPS payment rates were designed to reflect the cost of all services and supplies that an RHC or FQHC furnishes to a patient in a single day. The rates are not adjusted at the individual level for the complexity of individual patient health care needs, the length of an individual visit, or the number or type of practitioners involved in the patient's care. Instead for RHCs, all costs for the facility over the course of the year are aggregated and an AIR is derived from these aggregate expenditures. The FQHC PPS base rate is updated annually by the percentage increase in the FQHC market basket less a productivity adjustment.

2. Implementation of the Consolidated Appropriations Act (CAA), 2023

a. Section 4113 of the Consolidated Appropriations Act, 2023

In the CY 2022 PFS final rule with comment (86 FR 65211), we revised the regulatory requirement that an RHC or FQHC mental health visit must be a face-to-face (that is, in person) encounter between an RHC or FQHC patient and an RHC or FQHC practitioner. We revised the regulations under § 405.2463 to state that an RHC or FQHC mental health visit can also include encounters furnished through interactive, real-time, audio/video telecommunications technology or audio-only interactions in cases where beneficiaries are not capable of, or do not consent to,

the use of devices that permit a two-way, audio/video interaction for the purposes of diagnosis, evaluation or treatment of a mental health disorder. We noted that these changes aligned with similar mental health services furnished under the PFS. We also noted that this change allows RHCs and FQHCs to report and be paid for mental health visits furnished via real-time, telecommunication technology in the same way they currently do when these services are furnished in-person. In addition, we revised the regulation under § 405.2463 to state that there must be an in-person mental health service furnished within 6 months prior to the furnishing of the telecommunications service and that an in-person mental health service (without the use of telecommunications technology) must be provided at least every 12 months while the beneficiary is receiving services furnished via telecommunications technology for diagnosis, evaluation, or treatment of mental health disorders, unless, for a particular 12-month period, the physician or practitioner and patient agree that the risks and burdens outweigh the benefits associated with furnishing the in-person item or service, and the practitioner documents the reasons for this decision in the patient's medical record (86 FR 65210 and 65211).

We also revised the regulation under § 405.2469, FQHC supplemental payments, to state that a supplemental payment required under this section is made to the FQHC when a covered face-to-face (that is, in-person) encounter or an encounter where services are furnished using interactive, real-time, telecommunications technology or audio-only interactions in cases where beneficiaries do not wish to use or do not have access to devices that permit a two-way, audio/video interaction for the purposes of diagnosis, evaluation or treatment of a mental health disorder occurs between a MA enrollee and a practitioner as set forth in § 405.2463. At § 405.2469, we also revised paragraph (d) to describe the same in-person visit requirement referenced in § 405.2463.

As discussed in the CY 2023 PFS final rule (87 FR 69738), the Consolidated Appropriations Act, 2022 (CAA, 2022) (Pub. L. 117-103, March 15, 2022) included the

extension of a number of Medicare telehealth flexibilities established during the public health emergency (PHE) for COVID-19 for a limited 151-day period beginning on the first day after the end of the PHE for COVID-19. Specifically, Division P, Title III, section 304 of the CAA, 2022, delayed the in-person requirements under Medicare for mental health services furnished through telehealth under the PFS and for mental health visits furnished by RHCs and FQHCs via telecommunications technology until the 152nd day after the end of the PHE for COVID-19. Therefore, in the CY 2023 PFS final rule (87 FR 69737), we revised the regulations under §§ 405.2463 and 405.2469 again to reflect these provisions.

The CAA, 2023 (Pub. L. 117-328, December 29, 2022) extends the Medicare telehealth flexibilities enacted in the CAA, 2022 for a period beginning on the first day after the end of the PHE for COVID-19 and ending on December 31, 2024, if the PHE ends prior to that date. Specifically related to RHCs and FQHCs, section 4113(c) of the CAA, 2023 amends section 1834(m)(8) of the Act to extend payment for telehealth services furnished by FQHCs and RHCs for the period beginning on the first day after the end of the COVID-19 PHE and ending on December 31, 2024 if the PHE ends prior to that date. Payment continues to be made under the methodology established for telehealth services furnished by FQHCs and RHCs during the PHE, which is based on payment rates that are similar to the national average payment rates for comparable telehealth services under the PFS. We do not believe it necessary to conform the regulation to this temporary provision. Rather, we used our authority in section 4113(h) of the CAA, 2023 to issue program instructions or other subregulatory guidance to effectuate this provision to ensure a smooth transition after the PHE¹¹⁶.

Section 4113(d) of the CAA, 2023 also continues to delay the in-person requirements under Medicare for mental health services furnished through telehealth under the PFS and for

¹¹⁶ <https://www.cms.gov/files/document/rural-health-clinics-and-federally-qualified-health-centers-cms-flexibilities-fight-covid-19.pdf>.

mental health visits furnished by RHCs and FQHCs via telecommunications technology. That is, for RHCs and FQHCs, in-person visits will not be required until January 1, 2025 or, if later, the first day after the end of the PHE for COVID-19. Therefore, we continue to apply the delay of the in-person requirements under Medicare for mental health services furnished by RHCs and FQHCs. We note, the Department of Health and Human Services declared an end to the Federal PHE for COVID-19 under section 319 of the Public Health Service Act on May 11, 2023.¹¹⁷

We are proposing to make conforming regulatory text changes based on CAA, 2023 to the applicable RHC and FQHC regulations in 42 CFR part 405, subpart X, specifically, at § 405.2463, “What constitutes a visit,” we are proposing to amend paragraph (b)(3) and, at § 405.2469 “FQHC supplemental payments,” we are proposing to amend paragraph (d) to include the delay of the in-person requirements for mental health visits furnished by RHCs and FQHCs through telecommunication technology under Medicare beginning January 1, 2025. We note that we are not revising the regulation text to reflect “or, if later, the first day after the end of the PHE for COVID-19” as the legislation states since the end of the PHE was May 11, 2023.

In the CY 2023 PFS final rule (87 FR 69738), we listed the several other provisions of the CAA, 2022 that apply to telehealth services (those that are not mental health visits) furnished by RHCs and FQHCs. For details on the other Medicare telehealth provisions in the CAA, 2022, see section II.D. of this proposed rule. The CAA, 2023 extends the telehealth policies mentioned above and enacted in the CAA, 2022 through December 31, 2024 if the PHE ends prior to that date.

b. Direct Supervision via Use of Two-way Audio/Video Communications Technology

As discussed in section II.D.2.a of this proposed rule, under Medicare Part B, certain types of services are required to be furnished under specific minimum levels of supervision by a physician or practitioner. For RHCs and FQHCs, services and supplies furnished incident to

¹¹⁷ <https://www.hhs.gov/coronavirus/covid-19-public-health-emergency/index.html>.

physician's services are limited to situations in which there is direct physician supervision of the person performing the service, except for certain care management services which may be furnished under general supervision (§ 405.2415(a)(5)). The "incident to" policy for RHCs and FQHCs is discussed in Pub. 100-02, chapter 13, section 120.1. Similar to physician services paid under the PFS, outside the circumstances of the PHE, direct supervision of RHC and FQHC services does not require the physician to be present in the same room. However, the physician must be in the RHC or FQHC and immediately available to provide assistance and direction throughout the time the incident to service or supply is being furnished to a beneficiary.

During the COVID-19 PHE, the modifications that we made to the regulatory definition of direct supervision for services paid under the PFS were also applicable to RHCs and FQHCs. We explained in the April 6, 2020 IFC that given the circumstances of the PHE for the COVID-19 pandemic, we recognized that in some cases, the physical proximity of the physician or practitioner might present additional exposure risks, especially for high risk patients isolated for their own protection or cases where the practitioner has been exposed to the virus but could otherwise safely supervise from another location using telecommunications technology. We believed that the same concerns existed for RHCs and FQHCs. In the April 6, 2020 IFC, we allowed the supervising professional to be immediately available through virtual presence using two-way, real time audio-visual technology, instead of requiring their physical presence (85 FR 19245 and 19246).¹¹⁸ When discussing direct supervision in RHCs and FQHCs, we noted that in general, CMS had modified the requirements for direct supervision to include the use of a virtual supervisory presence through the use of interactive audio and video telecommunications technology.¹¹⁹

¹¹⁸ <https://www.govinfo.gov/content/pkg/FR-2020-04-06/pdf/2020-06990.pdf>.

¹¹⁹ <https://www.cms.gov/files/document/03092020-covid-19-faqs-508.pdf>.

We believe that extending this definition of direct supervision for RHCs and FQHCs through December 31, 2024, would align the timeframe of this policy with many of the previously discussed PHE-related telehealth policies that were extended under provisions of the CAA, 2023 and we are concerned about an abrupt transition to the pre-PHE policy of requiring the physical presence of the supervising practitioner beginning after December 31, 2023, given that RHCs and FQHCs have established new patterns of practice during the PHE for COVID-19. We also believe that RHCs and FQHCs will need time to reorganize their practices established during the PHE to reimplement the pre-PHE approach to direct supervision without the use of audio/video technology. For RHCs and FQHCs, we are proposing to continue to define “immediate availability” as including real-time audio and visual interactive telecommunications through December 31, 2024.

In the absence of evidence that patient safety is compromised by virtual direct supervision, we believe that an immediate reversion to the pre-PHE definition of direct supervision may present a barrier to access services, such as those furnished incident-to a physician’s service. Therefore, we are soliciting comment on whether we should consider extending the definition of direct supervision to permit virtual presence beyond December 31, 2024. When compared to professionals paid under the PFS, RHCs and FQHCs have a different model of care and payment structure. Therefore, we seek comment from interested parties on potential patient safety or quality concerns when direct supervision occurs virtually in RHCs and FQHCs; for instance, if certain types of services are more or less likely to present patient safety concerns, or if this flexibility would be more appropriate when certain types of auxiliary personnel are performing the supervised service. We are also interested in potential program integrity concerns such as overutilization or fraud and abuse that interested parties may have in regard to this policy.

c. Section 4121 of the CAA, 2023

Section 1861(aa) of the Act provides authority under Medicare Part B to cover and pay for RHC and FQHC services. Section 1861(aa)(1) of the Act defines these services as those furnished by physicians, physician assistants, nurse practitioners, nurse-midwives, qualified clinical psychologists, clinical social workers, and services and supplies furnished incident to professional services of these practitioners. As discussed in section III.B.1.a. of this proposed rule, our conforming regulation text is provided in 42 CFR part 405, subpart X where we define RHC and FQHC visits as face-to-face encounters between a patient and one or more RHC or FQHC practitioners during which one or more RHC or FQHC qualifying services are furnished.

Before passage of CAA, 2023, there was no separate benefit category under the statute that recognized the professional services of licensed marriage and family therapists (MFTs) or mental health counselors (MHCs). As discussed in the CY 2023 PFS final rule (87 FR 69546), payment for MFTs was only made under the PFS indirectly when an MFT or MHC performed services as auxiliary personnel incident to the services of a physician or other practitioner and under general supervision. This is also true for RHCs and FQHCs, in that MFTs and MHCs were considered auxiliary personnel and the services they provided were considered incident to the services of the RHC or FQHC practitioner (§ 405.2413).

Section 4121 of Division FF, Title IV, Subtitle C of the CAA, 2023, entitled “Coverage of Marriage and Family Therapist Services and Mental Health Counselor Services under Part B of the Medicare Program”, amended section 1861(s)(2) of the Act to establish coverage of MFT and MHC services (section 1861(s)(2)(II) of the Act). We note that section II.J of this proposed rule provides a detailed discussion of the provisions in section 4121(a) of CAA, 2023 including the authority for coverage of MFT and MHC services, definitions of these professionals and their services, and payment under the PFS. Section 4121(b) of CAA, 2023 amended section 1861(aa)(1)(B) of the Act by extending the scope of RHC services to include those furnished by MFTs and MHCs as eligible for payment, which is incorporated into FQHC services through

section 1861(aa)(3)(A) of the Act. We are proposing to codify payment provisions for MFTs and MHCs under 42 CFR part 405, subpart X beginning January 1, 2024. That is, RHC and FQHCs would be paid under the RHC AIR and FQHC prospective payment system (PPS), respectively, when MFTs and MHCs furnished RHC and FQHC services defined in §§ 405.2411 and 405.2446. As eligible RHC and FQHC practitioners, MFTs and MHCs would follow the same policies and supervision requirements as a PA, NP, CNM, CP, and CSW.

In addition, as discussed in section II.J of this proposed rule, we are proposing to allow addiction counselors that meet all of the applicable requirements of clinical supervised experience in mental health counseling, and that are licensed or certified as MHCs, clinical professional counselors, or professional counselors by the State in which the services are furnished) to enroll in Medicare as MHCs. Therefore, to remain consistent with payment policies for professionals billing Medicare under the PFS, we propose that the definitions established for MFTs and MHCs under the PFS would also apply for RHCs and FQHCs. In the CY 2023 PFS final rule (87 FR 69735 through 69737), we discussed the coding and payment for HCPCS code G0323 which describes general BHI services performed by CPs and CSWs under the PFS. We noted CPs and CSWs are statutorily authorized to furnish services in RHCs and FQHCs under sections 1861(aa)(1) and (3) of the Act, respectively, and as described by § 405.2411(a)(6). We also explained, the payment rate for HCPCS code G0323 is based on the payment rate for the current general BHI code, 99484. Therefore, in the CY 2023 PFS final rule (87 FR 69737) we clarified that when CPs and CSWs provide the services described in HCPCS code G0323 in an RHC or FQHC, the RHC or FQHC can bill HCPCS code G0511. We further stated RHCs and FQHCs that furnish general BHI services are able to bill for this service using HCPCS code G0511, either alone or with other payable services on an RHC or FQHC claim for dates of service on or after January 1, 2023.

We note that in section II.J of this proposed rule, we are proposing to revise the code descriptor for HCPCS code G0323 in order to allow MFTs and MHCs, as well as CPs and CSWs, to be able to bill for this monthly care integration service. Since MFTs and MHCs are statutorily authorized to furnish services in RHCs and FQHCs effective January 1, 2024, we are proposing to clarify that when MFTs and MHCs provide the services described in HCPCS code G0323 in an RHC or FQHC, the RHC or FQHC can bill HCPCS code G0511. We believe that this policy aligns to our effort to be consistent with the new services that are proposed for practitioners billing under the PFS.

We propose to make several conforming regulatory changes to applicable RHC and FQHC regulations in 42 CFR part 405, subpart X, specifically:

- At § 405.2401, Scope and definitions, we propose to amend the section to add definitions for MFT and MHC;
- At § 405.2411, Scope of benefits, we propose to amend the section to include MFT and MHC where other RHC and FQHC practitioners are stated;
- At § 405.2415, Incident to services and direct supervision, we propose to amend the section to include MFT and MHC where other RHC and FQHC practitioners are stated;
- At § 405.2446, Scope of services, we propose to amend the section to include MFT and MHC services to the scope of services;
- At § 405.2448, Preventive primary services, we propose to amend the section to include MFT and MHC where other RHC and FQHC practitioners are stated;
- At § 405.2450, Clinical psychologist and clinical social worker services, we propose to amend the section title to add MFT and MHC and include MFT and MHC where other RHC and FQHC practitioners are stated;

- At § 405.2452, Services and supplies incident to clinical psychologist and clinical social worker services, we propose to amend the section title to add MFT and MHC and include MFT and MHC where other RHC and FQHC practitioners are stated;

- At § 405.2463, What constitutes a visit, we propose to amend the section to add MFT and MHC to the list of eligible practitioners; and

- At § 405.2468, Allowable costs, we propose to amend the section to add MFTs and MHCs where other RHC and FQHC practitioners are listed.

d. Section 4124 of the Consolidated Appropriations Act, 2023

Section 4124 of Division FF of the CAA, 2023 establishes coverage and payment under Medicare for the Intensive Outpatient Program (IOP) benefit, effective January 1, 2024. IOP may be furnished by hospitals, Community Mental Health Centers (CMHCs), FQHCs and RHCs. Payment for IOP services furnished by RHCs and FQHCs is to be made at the same payment rate as if it were furnished by a hospital.

In addition to existing mental health services furnished by RHCs and FQHCs, this new provision establishes coverage for IOP services furnished in RHCs and FQHCs and includes occupational therapy, family counseling, beneficiary education, diagnostic services and individual and group therapy.

Please see section VIII.F. of the CY 2024 Outpatient Prospective Payment System proposed rule for discussion of the new IOP scope of benefits, requirements, physician certification, and payment policies.

3. Updates to Supervision Requirements for Behavioral Health Services furnished at RHCs and FQHCs

In the CY 2023 PFS final rule (87 FR 69545 through 69548), we amended the direct supervision requirement under the “incident to” regulations for services payable under the PFS to allow behavioral health services to be furnished under the general supervision of a physician or

non-physician practitioner (NPP) when these services or supplies are provided by auxiliary personnel incident to the services of a physician or NPP. Several commenters expressed support for CMS allowing behavioral health services to be furnished under general supervision in the RHC and FQHC settings in addition to services paid under the PFS. In response to the public comments, we noted that for CY 2023, the proposed change to the level of supervision for “incident to” behavioral health services from direct to general was applicable only to services payable under the PFS, as services furnished in the RHC and FQHC settings were not addressed in the relevant proposal in the CY 2023 PFS proposed rule (87 FR 46062 through 46068). We stated we may consider changes to the regulations regarding services furnished at RHCs and FQHCs in the future.

Currently, behavioral health services furnished in the RHC and FQHC settings require direct supervision. However, in order to be more consistent with applicable policies under the PFS, for CY 2024, we are proposing to change the required level of supervision for behavioral health services furnished “incident to” a physician or NPP’s services at RHCs and FQHCs to allow general supervision, rather than direct supervision, consistent with the policies finalized under the PFS for CY 2023. Accordingly, we are proposing to revise the regulations at §§ 405.2413 and 405.2415 to reflect that behavioral health services can be furnished under general supervision of the physician (or other practitioner) when these services or supplies are provided by auxiliary personnel incident to the services of a physician (or another practitioner).

Additionally, as discussed in the CY 2023 PFS final rule (87 FR 69547), we note that at § 410.26(a)(1) we define “auxiliary personnel” as any individual who is acting under the supervision of a physician (or other practitioner), regardless of whether the individual is an employee, leased employee, or independent contractor of the physician (or other practitioner) or of the same entity that employs or contracts with the physician (or other practitioner), has not been excluded from the Medicare, Medicaid and all other Federally-funded health care programs

by the Office of Inspector General or had his or her Medicare enrollment revoked, and meets any applicable requirements to provide incident to services, including licensure, imposed by the State in which the services are being furnished.

4. General Care Management Services in RHCs and FQHCs

a. Background

We have been engaged in a multi-year examination of coordinated and collaborative care services in professional settings, and as a result established codes and separate payment in the PFS to independently recognize and pay for these important services. The care coordination included in services, such as office visits, do not always adequately describe the non-face-to-face care management work involved in primary care. Payment for office visits may not reflect all the services and resources required to furnish comprehensive, coordinated care management for certain categories of beneficiaries, such as those who are returning to a community setting following discharge from a hospital or skilled nursing facility (SNF) stay.

As we discussed in the CY 2016 PFS final rule (80 FR 71081 through 71088), to address the concern that the non-face-to-face care management work involved in furnishing comprehensive, coordinated care management for certain categories of beneficiaries is not adequately paid for as part of an office visit, beginning on January 1, 2015, practitioners billing under the PFS are paid separately for CCM services when CCM service requirements are met. We explained that RHCs and FQHCs cannot bill under the PFS for RHC or FQHC services and individual practitioners working at RHCs and FQHCs cannot bill under the PFS for RHC or FQHC services while working at the RHC or FQHC. Although many RHCs and FQHCs pay for coordination of services within their own facilities, and may sometimes help to coordinate services outside their facilities, the type of structured care management services that are now payable under the PFS for patients with multiple chronic conditions, particularly for those who are transitioning from a hospital or SNF back into their communities, are generally not included

in the RHC or FQHC payment. Therefore, separate payment was established in the CY 2016 PFS final rule (80 FR 71080 through 71088) for RHCs and FQHCs that furnish CCM services. We believe the non-face-to-face time required to coordinate care is not captured in the RHC AIR or the FQHC PPS payment, particularly for the rural and/or low-income populations served by RHCs and FQHCs. Allowing separate payment for CCM services in RHCs and FQHCs is intended to reflect the additional resources necessary for the unique components of CCM services.

In the CY 2018 PFS final rule (82 FR 53169 and 53180), we finalized revisions to the payment methodology for CCM services furnished by RHCs and FQHCs and established requirements for general Behavioral Health Integration (BHI) and psychiatric Collaborative Care Management (CoCM) services furnished in RHCs and FQHCs, beginning on January 1, 2018. We also initiated the use of HCPCS code G0511, a General Care Management code for use by RHCs or FQHCs when at least 20 minutes of qualified CCM or general BHI services are furnished to a patient in a calendar month. In the CY 2019 PFS final rule (83 FR 59683), we explained for CY 2018 the payment amount for HCPCS code G0511 was set at the average of the 3 national non-facility PFS payment rates for the CCM and general BHI codes and updated annually based on the PFS amounts. That is, for CY 2018 the 3 codes that comprised HCPCS code G0511 were CPT code 99490 (*20 minutes or more of CCM services*), CPT code 99487 (*60 minutes or more of complex CCM services*), and CPT code 99484 (*20 minutes or more of BHI services*).

We also explained that another CCM code was introduced for practitioners billing under the PFS, CPT code 99491, which would correspond to 30 minutes or more of CCM furnished by a physician or other qualified health care professional and is similar to CPT codes 99490 and 99487 (83 FR 56983). Therefore, for RHCs and FQHCs, we added CPT code 99491 as a general care management service and included it in the calculation of HCPCS code G0511. Starting on

January 1, 2019, RHCs and FQHCs were paid for HCPCS code G0511 based on the average of the national non-facility PFS payment rates for CPT codes 99490, 99487, 99484, and 99491 (83 FR 59687).

In the CY 2021 PFS final rule (85 FR 84697 through 84699), we explained that the requirements described by the codes for Principal Care Management (PCM) services were similar to the requirements for the services described by HCPCS code G0511; therefore, we added HCPCS codes G2064 and G2065 to HCPCS code G0511 as general care management services for RHCs and FQHCs. Consequently, effective January 1, 2021, RHCs and FQHCs are paid when a minimum of 30 minutes of qualifying PCM services are furnished during a calendar month. The payment rate for HCPCS code G0511 for CY 2021 was the average of the national non-facility PFS payment rate for the RHC and FQHC care management and general behavioral health codes (CPT codes 99490, 99487, 99484, and 99491), and PCM codes (HCPCS codes G2064 and G2065). We note that in the CY 2022 PFS final rule (86 FR 65118), HCPCS codes G2064 and G2065 were replaced by CPT codes 99424 and 99435. Therefore, for CY 2022 the payment rate for HCPCS code G0511 was the average of the national non-facility PFS payment rate for CPT codes 99490, 99487, 99484, 99491, 99424, and 99425).

Most recently, in the CY 2023 PFS final rule (87 FR 69735 through 69737), we included Chronic Pain Management (CPM) services described by HCPCS code G3002 in the general care management HCPCS code G0511 when at least 30 minutes of qualifying non-face-to-face CPM services are furnished during a calendar month. We explained since HCPCS code G3002 is valued using a crosswalk to the PCM CPT code 99424, which is currently one of the CPT codes that comprise HCPCS code G0511, there was no change made to the average used to calculate the HCPCS code G0511 payment rate to reflect CPM services.

Additional information on care management requirements is available on the CMS Care Management Web page at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service->

Payment/PhysicianFeeSched/Care-Management.html and on the CMS RHC and FQHC Web pages at <https://www.cms.gov/Center/Provider-Type/Rural-Health-Clinics-Center.html> and <https://www.cms.gov/Center/Provider-Type/Federally-Qualified-Health-Centers-FQHC-Center.html>.

b. Remote Physiologic Monitoring (RPM) and Remote Therapeutic Monitoring (RTM) Services Furnished in RHCs and FQHCs

In recent years under the PFS, we have finalized payment for five CPT codes in the RPM code family. RPM services include the collection, analysis, and interpretation of digitally collected physiologic data, followed by the development of a treatment plan, and the managing of a patient under the treatment plan (84 FR 62697). Within the suite of services that comprise RPM, there is a CPT code that describes the initial set-up and patient education on use of the equipment that stores the physiologic data.

After analyzing and interpreting a patient's remotely collected physiologic data, we noted that the next step in the process of RPM is the development of a treatment plan that is informed by the analysis and interpretation of the patient's data. It is at this point that the physician or other practitioner develops a treatment plan with the patient and/or caregiver (that is, develops a patient-centered plan of care) and then manages the plan until the targeted goals of the treatment plan are attained, which signals the end of the episode of care.

TABLE 20: RPM HCPCS Codes and Descriptors

HCPCS code	Short Description	Official Long Description
99453	Rem mntr physiol param setup	Remote monitoring of physiologic parameter(s) (e.g. Weight, blood pressure, pulse oximetry, respiratory flow rate) initial set-up and patient education on use of equipment
99454	Rem mntr physiol param dev	Remote monitoring of physiologic parameter(s) (e.g. Weight, blood pressure, pulse oximetry, respiratory flow rate) initial device(s) supply with daily recording(s) or programmed alert(s) transmission, each 30 days
99457	Rem physiol mntr 1 st 20 min	Remote physiologic monitoring treatment services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; first 20 minutes
99458	Rem physiol mntr ea addl 20	Remote physiologic monitoring treatment services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; each additional 20 minutes (list separately in addition to code for primary procedure)
99091	Collj & interpj data ea 30 d	Collection and interpretation of physiologic data (e.g. Blood pressure, glucose monitoring) digitally stored and/or transmitted by the patient and/or caregiver to the physician or other qualified health professional, qualified by education, training, licensure/regulation (when applicable) requiring a minimum of 30 minutes of time, each 30 days

Remote Therapeutic Monitoring (RTM) is a family of five codes finalized for Medicare payment in the CY 2022 PFS final rule (86 FR 65114 through 65117). The RTM codes include three practice expense (PE)-only codes and two professional work, treatment management codes. RTM services involve remote monitoring of respiratory system status, musculoskeletal status, therapy adherence, or therapy response. There is also a CPT code that describes the initial set-up and patient education on use of the equipment that stores the physiologic data within the suite of services that comprise RTM.

TABLE 21: RTM HCPCS Codes and Descriptors

HCPCS code	Short Description	Official Long Description
98975	Rem ther mntr 1st setup&edu	Remote therapeutic monitoring (e.g. therapy adherence, therapy response); initial set-up and patient education on use of equipment
98976	Rem ther mntr dev sply resp	Remote therapeutic monitoring (e.g. therapy adherence, therapy response); device(s) supply with scheduled (e.g. daily) recording(s) and/or programmed alert(s) transmission to monitor respiratory system, each 30 days
98977	Rem ther mntr dv sply mscskl	Remote therapeutic monitoring (e.g. therapy adherence, therapy response); device(s) supply with scheduled (e.g. daily) recording(s) and/or programmed alert(s) transmission to monitor musculoskeletal system, each 30 days
98980	Rem ther mntr 1st 20 min	Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient or caregiver during the calendar month; first 20 minutes
98981	Rem ther mntr ea addl 20 min	Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient or caregiver during the calendar month; each additional 20 minutes (list separately in addition to code for primary procedure)

Currently, RPM and RTM services are not stand-alone billable visits in RHCs and FQHCs. When these services are furnished incident to an RHC or FQHC visit, payment is included in the RHC’s AIR subject to a payment-limit or the per visit payment under the FQHC PPS which is the lesser of the PPS rate or the FQHC’s actual charges.

In recent years, we have updated RHC and FQHC policies to improve payment for care management and coordination. We have provided a separate payment to RHCs and FQHCs in addition to the billable visit in part for monthly care management and behavioral health integration codes, as described in the general care management code, HCPCS code G0511, because these are inherently non-face-to-face services that may not be accounted for in the per-visit payment for an in-person encounter.

RHCs and FQHCs have inquired about receiving a separate payment for RTM and RPM services. They have stated that CMS should expand HCPCS code G0511 to include RPM treatment management services to provide Medicare beneficiaries in rural and underserved areas access to these services or establish G-codes to reimburse RHCs and FQHCs for RPM set-up and patient education on use of equipment (CPT code 99453) and monthly data transmission (CPT

code 99554) and do not believe that these services are captured in the RHC AIR or FQHC PPS and as such are impeding access to these services.

Upon further review and in line with our thinking about non-face-to-face services previously, we are proposing to include the CPT codes that are associated with the suite of services that comprise RPM and RTM in the general care management HCPCS code G0511 when these services are furnished by RHCs and FQHCs since the requirements for RPM and RTM services are similar to the non-face-to-face requirements for the general care management services furnished in RHCs and FQHCs. Allowing a separate payment for RPM and RTM services in RHCs and FQHCs is intended to reflect the additional resources necessary for the unique components of these services.

The care coordination included in services, such as office visits, do not always adequately describe the non-face-to-face care management work involved in primary care. Payment for in-person encounters may not reflect all the services and resources required to furnish comprehensive, coordinated care management. As RPM and RTM services are described, particularly, collection and transmission of data and then further analysis and interpretation of the data are happening outside of the face-to-face visit. RPM and RTM also have principles which are consistent with other care management principles, such as, an established patient-physician relationship is required, patient consent is required at the time that RPM services are furnished, and services allow the monitoring of acute conditions and chronic conditions. However, we note that under this proposal, RPM and RTM services must be medically reasonable and necessary, meet all requirements, and not be duplicative of services paid to RHCs and FQHCs under the general care management code for an episode of care in a given calendar month. Therefore, we propose that RHCs and FQHCs that furnish RPM and RTM services would be able to bill these services using HCPCS code G0511, either alone or with other payable services on an RHC or FQHC claim for dates of service on or after January 1, 2024.

c. Services Addressing Health-Related Social Needs: Community Health Integration Services and Principal Illness Navigation Services

(1) Background

As discussed in section II.E.4.(27) of this proposed rule, in recent years, we have sought to recognize significant changes in health care practice and been engaged in an ongoing, incremental effort to identify gaps in appropriate coding and payment for care management/coordination and primary care services under the PFS. In congruence with services paid under the PFS, we have similarly provided separate payment for transitional care management services, chronic care management services, and behavioral health care management services (discussed above in section III.B.4.a. of the proposed rule) to improve payment accuracy to better recognize resources involved in care management and coordination for certain patient populations. In this effort to improve payment accuracy for care coordination in RHCs and FQHCs, we are exploring ways to better identify the resources for helping patients with serious illnesses navigate the healthcare system or removing health-related social barriers that are interfering with their ability to execute a medically necessary plan of care. RHCs and FQHCs sometimes obtain information about and help address, social determinants of health (SDOH) that significantly impact their ability to diagnose or treat a patient. The CPT E/M Guidelines defined SDOH as, “Economic and social conditions that influence the health of people and communities. Examples may include food or housing insecurity. Additionally, RHCs and FQHCs sometimes help newly diagnosed cancer patients and other patients with similarly serious, high-risk illnesses navigate their care, such as helping them understand and implement the plan of care, and locate and reach the right practitioners and providers to access recommended treatments and diagnostic services, considering the personal circumstances of each patient. Payment for these activities, to the extent they are reasonable and necessary for the diagnosis and treatment of the patient’s illness or injury, is currently included in the RHC AIR or

under the FQHC PPS payment amount for visits and some care management services. Medical practice has evolved to increasingly recognize the importance of these activities, and we believe RHCs and FQHCs are performing them more often.

However, this work is not explicitly identified in current coding, and as such, we believe it is underutilized and undervalued. Accordingly, we are proposing to create new coding to expressly identify and value these services for PFS payment, and distinguish them from current care management services. Therefore, we are considering the new coding for purposes of payment to RHCs and FQHCs.

(2) Payment for Community Health Integration (CHI) Services in RHCs and FQHCs

Consistent with the discussion in section II.E.4.(27).b. of this proposed rule, there are two new HCPCS codes proposed to describe CHI services performed by certified or trained auxiliary personnel, which may include a CHW, incident to the professional services and under the general supervision of the billing practitioner. The requirements for the proposed CHI services, as stated in section II.E.4.(27) of this proposed rule, are similar to the requirements for the general care management services furnished by RHCs and FQHCs. As such, we believe the level of care coordination resources required in addressing the particular SDOH need(s) that are interfering with, or presenting a barrier to, diagnosis or treatment of the patient's problem(s) addressed in the CHI initiating visit are not captured in the RHC AIR or the FQHC PPS payment, particularly for the rural and/or low-income populations served by RHCs and FQHCs. Payment for office visits may not reflect all the services and resources involved with CHI as described in the HCPCS code below, for example, coordination of care, facilitation of access to services, communication between settings.

***GXXXI** Community health integration services performed by certified or trained auxiliary personnel, including a community health worker, under the direction of a physician or other practitioner; 60 minutes per calendar month, in the following activities to address social*

determinants of health (SDOH) need(s) that are significantly limiting ability to diagnose or treat problem(s) addressed in an initiating E/M visit:

- *Person-centered assessment, performed to better understand the individualized context of the intersection between the SDOH need(s) and the problem(s) addressed in the initiating E/M visit.*

- ++ *Conducting a person-centered assessment to understand patient's life story, strengths, needs, goals, preferences and desired outcomes, including understanding cultural and linguistic factors.*

- ++ *Facilitating patient-driven goal-setting and establishing an action plan.*

- ++ *Providing tailored support to the patient as needed to accomplish the practitioner's treatment plan.*

- *Practitioner, Home-, and Community-Based Care Coordination*

- ++ *Coordinating receipt of needed services from healthcare practitioners, providers, and facilities; and from home- and community-based service providers, social service providers, and caregiver (if applicable).*

- ++ *Communication with practitioners, home- and community-based service providers, hospitals, and skilled nursing facilities (or other health care facilities) regarding the patient's psychosocial strengths and needs, functional deficits, goals, preferences, and desired outcomes, including cultural and linguistic factors.*

- ++ *Coordination of care transitions between and among health care practitioners and settings, including transitions involving referral to other clinicians; follow-up after an emergency department visit; or follow-up after discharges from hospitals, skilled nursing facilities or other health care facilities.*

- ++ *Facilitating access to community-based social services (e.g., housing, utilities, transportation, food assistance) to address the SDOH need(s).*

- *Health education- Helping the patient contextualize health education provided by the patient's treatment team with the patient's individual needs, goals, and preferences, in the context of the SDOH need(s), and educating the patient on how to best participate in medical decision-making.*

- *Building patient self-advocacy skills, so that the patient can interact with members of the health care team and related community-based services addressing the SDOH need(s), in ways that are more likely to promote personalized and effective diagnosis or treatment.*

- *Health care access / health system navigation*

- ++ *Helping the patient access healthcare, including identifying appropriate practitioners or providers for clinical care and helping secure appointments with them.*

- *Facilitating behavioral change as necessary for meeting diagnosis and treatment goals, including promoting patient motivation to participate in care and reach person-centered diagnosis or treatment goals.*

- *Facilitating and providing social and emotional support to help the patient cope with the problem(s) addressed in the initiating visit, the SDOH need(s), and adjust daily routines to better meet diagnosis and treatment goals.*

- *Leveraging lived experience when applicable to provide support, mentorship, or inspiration to meet treatment goals.*

GXXX2 – *Community health integration services, each additional 30 minutes per calendar month (List separately in addition to GXXX1).*

(3) Payment for Principal Illness Navigation (PIN) Services in RHCs and FQHCs

Consistent with the discussion in section II.E.4.(27).e. of this proposed rule, there are two new HCPCS codes proposed to describe PIN services. That is when certified or trained auxiliary personnel under the direction of a billing practitioner, which may include a patient navigator or certified peer specialist, are involved in the patient's health care navigation as part of the

treatment plan for a serious, high-risk disease expected to last at least 3 months, that places the patient at significant risk of hospitalization or nursing home placement, acute exacerbation/decompensation, functional decline, or death. The requirements for the proposed PIN services are also similar to the requirements for the general care management services furnished by RHCs and FQHCs.

As such, we believe the resources required to provide the level of care coordination needed for individualized help to the patient (and caregiver, if applicable) to identify appropriate practitioners and providers for care needs and support, and access necessary care timely are not captured in the RHC AIR or the FQHC PPS payment, particularly for the rural and/or low-income populations served by RHCs and FQHCs. Payment for office visits may not reflect all the services and resources involved with PIN as described in the HCPCS code below.

***GXXX3** Principal Illness Navigation services by certified or trained auxiliary personnel under the direction of a physician or other practitioner, including a patient navigator or certified peer specialist; 60 minutes per calendar month, in the following activities:*

- *Person-centered assessment, performed to better understand the individual context of the serious, high-risk condition.*

- ++ *Conducting a person-centered assessment to understand the patient's life story, strengths, needs, goals, preferences, and desired outcomes, including understanding cultural and linguistic factors.*

- ++ *Facilitating patient-driven goal setting and establishing an action plan.*

- ++ *Providing tailored support as needed to accomplish the practitioner's treatment plan.*

- *Identifying or referring patient (and caregiver or family, if applicable) to appropriate supportive services.*

- *Practitioner, Home, and Community-Based Care Coordination*

++ *Coordinating receipt of needed services from healthcare practitioners, providers, and facilities; home- and community-based service providers; and caregiver (if applicable).*

++ *Communication with practitioners, home-, and community-based service providers, hospitals, and skilled nursing facilities (or other health care facilities) regarding the patient's psychosocial strengths and needs, functional deficits, goals, preferences, and desired outcomes, including cultural and linguistic factors.*

++ *Coordination of care transitions between and among health care practitioners and settings, including transitions involving referral to other clinicians; follow-up after an emergency department visit; or follow-up after discharges from hospitals, skilled nursing facilities or other health care facilities.*

++ *Facilitating access to community-based social services (e.g., housing, utilities, transportation, food assistance) as needed to address SDOH need(s).*

- *Health education- Helping the patient contextualize health education provided by the patient's treatment team with the patient's individual needs, goals, preferences, and SDOH need(s), and educating the patient (and caregiver if applicable) on how to best participate in medical decision-making.*

- *Building patient self-advocacy skills, so that the patient can interact with members of the health care team and related community-based services (as needed), in ways that are more likely to promote personalized and effective treatment of their condition.*

- *Health care access / health system navigation.*

++ *Helping the patient access healthcare, including identifying appropriate practitioners or providers for clinical care, and helping secure appointments with them.*

++ *Providing the patient with information/resources to consider participation in clinical trials or clinical research as applicable.*

- *Facilitating behavioral change as necessary for meeting diagnosis and treatment goals, including promoting patient motivation to participate in care and reach person-centered diagnosis or treatment goals.*

- *Facilitating and providing social and emotional support to help the patient cope with the condition, SDOH need(s), and adjust daily routines to better meet diagnosis and treatment goals.*

- *Leverage knowledge of the serious, high-risk condition and/or lived experience when applicable to provide support, mentorship, or inspiration to meet treatment goals.*

GXXX4 – *Principal Illness Navigation services, additional 30 minutes per calendar month (List separately in addition to GXXX3).*

Allowing a separate payment for CHI and PIN services in RHCs and FQHCs is intended to reflect the additional time and resources necessary for the unique components of care coordination services. In an effort to be consistent with the new services that are being proposed for practitioners billing under the PFS, we are proposing to include PIN services in the general care management HCPCS code G0511 when these services are provided by RHCs and FQHCs.

We note that under the proposals to expand the billable services under HCPCS code G0511 to include CHI and PIN, each of these services must be medically reasonable and necessary, meet all requirements, and not be duplicative of services paid to RHCs and FQHCs under the general care management code for an episode of care in a given calendar month. We expect that our proposal to add the new codes for CHI and PIN to the general care management code would also support the CMS pillars¹²⁰ for equity, inclusion, and access to care for the Medicare population, and improve patient outcomes, including for underserved and low-income populations where there is a disparity in access to quality care.

¹²⁰ CMS Strategic Plan. <https://www.cms.gov/cms-strategic-plan>.

d. Proposed Revision to the Calculation of the Payment Amount for the General Care Management HCPCS Code G0511

Currently, HCPCS code G0511 is based on the PFS national average non-facility payment rate for each of the services identified as billable general care management services. Then we add each payment rate and divide by the total number of codes to arrive at the payment amount for HCPCS code G0511. This payment amount is a flat rate that is not subsequently adjusted for locality. As we noted in the CY 2023 PFS final rule (87 FR 69735), when determining which services are billable under HCPCS code G0511, we do not include the add-on HCPCS codes payable under the PFS because RHCs and FQHCs do not pay their practitioners based on additional minutes spent by practitioners. Instead we generally include the base codes.

In the CY 2023 PFS final rule (87 FR 69736), we mentioned that we may consider other approaches for calculating the payment rate for HCPCS code G0511 as the number of services included in the general care management code is growing each year and provided examples. We thought to consider in the future valuing HCPCS code G0511 using a weighted average of the services that comprise HCPCS code G0511 or using the national average of the top three services comprising HCPCS code G0511. We welcomed comments on potential methodologies, but noted we did not receive any comments.

As we discuss above, we have been engaged in a multi-year examination of coordinated and collaborative care services in professional settings, and as a result established codes and separate payment in the PFS to separately recognize and pay for these important services. The care coordination included in services, such as office visits, do not always adequately describe the non-face-to-face care management work involved in primary care. Payment for in-person encounters may not reflect all the services and resources required to furnish comprehensive, coordinated care management. Through the last few payment rules, we have expanded the

general care management services billable using the HCPCS code G0511 to be consistent with the policies implemented under the PFS.

In section III.B.4.b and c. of this proposed rule, we are proposing to expand the billable services under HCPCS code G0511 to include RPM, RTM, CHI, and PIN. If we continue to calculate HCPCS code G0511 using our current approach, we believe that the value may no longer be appropriate payment for those services since we are simply dividing by the number of codes that comprise HCPCS code G0511 and as that number of services with lower payment rates increases, the value diminishes. Therefore, we are proposing to revise our method for calculating HCPCS code G0511 so that payment for general care management is more appropriate. Below, we compare our current method to the proposed revised approach.

Based on the current methodology for HCPCS code G0511 as shown in Table 22, general care management services are paid at the average of the national non-facility PFS payment rates for CPT codes 99490, 99487, 99484, 99491, 99424 and 99426.

TABLE 22: CY 2023 National Non-Facility PFS Payment Rate for G0511

CPT Code	National Non-Facility PFS Payment Rate
99424	\$81.33
99426	\$61.34
99484	\$43.04
99487	\$133.18
99490	\$62.69
99491	\$85.06
G0511	\$77.94¹

¹ Noting when averaging the six codes, the total RVU for HCPCS code G0511 is 2.295. Multiplying that by the conversion factor of 33.8872 results in \$77.77. However, RVUs on the PFS file are expressed in two decimal places. Thus, we round the 2.295 average to 2.30 which yields $2.30 * 33.8872$, resulting in \$77.94, the current payment rate for HCPCS code G0511.

As shown in Table 23, when we include RPM and RTM services in the national non-facility average as discussed above, the payment rate for HCPCS code G0511 is reduced to \$64.13 based on the national non-facility PFS payment rates for CY 2023.

TABLE 23: CY 2023 National Non-Facility PFS Payment Rate for G0511 with RPM and RTM Base Codes

CPT Code	National Non-Facility PFS Payment Rate
99454	\$50.15
99457	\$48.80
99091	\$54.22
98976	\$50.15
98977	\$50.15
98980	\$49.48
99424	\$81.33
99426	\$61.34
99484	\$43.04
99487	\$133.18
99490	\$62.69
99491	\$85.06
G0511	\$64.13*

*Noting when averaging the 12 codes, the total RVU for HCPCS code G0511 is 2.30. Multiplying that by the conversion factor of 33.8872 results in \$64.13.

As demonstrated by comparing Table 22 to Table 23, using the current method of calculating the average of the non-facility rates but adding in RPM and RTM services base codes would result in a lower payment amount for HCPCS code G0511 compared to the current payment amount. We believe that while the policy may address providing a payment for furnishing non-face-to-face services, the magnitude of the value may not appropriately account for the costs. Therefore, we considered and are proposing a revised methodology for the calculation by looking at the actual utilization of the services. That is, we are proposing to use a weighted average of the services that comprise HCPCS code G0511. In order to use a weighted average, there needs to be data on the utilization of the services. We do not have data on utilization of the services that comprise HCPCS code G0511 for RHCs and FQHCs since HCPCS code G0511 accounts for a variety of services. Therefore, we would use the most recently available utilization data from the services paid under the PFS, that is, in the physician office setting. We believe that the physician office setting provides an appropriate proxy for utilization of these services in the absence of actual data because this setting most closely aligns with the types of services furnished in RHCs and FQHCs since they typically furnish primary care.

In order to analyze utilization for services paid under the PFS and to ensure we accounted for payments accurately, we would use CY 2021 claims data to look at utilization of the base code for the service and any applicable add-on codes used in the same month as well as any base codes reported alone in a month for all of the services encompassing general care management, that is the array of services that make up HCPCS code G0511. We believe we need to account for the payment associated with the base code along with an applicable add-on code in our calculation as this demonstrates a complete encounter. Until actual utilization becomes available, RHCs and FQHCs that furnish CPM, GBHI, CHI and PIN services would report HCPCS code G0511 when those services are furnished; however, they would not be included in the weighted average at this time. Once more data is available, we will revisit the valuation of HCPCS code G0511 to include CPM, GBHI, CHI, and PIN as necessary.

Table 24 shows the payment amount using this calculation. The national non-facility payment rate associated with each code that comprises HCPCS code G0511 can be found in Addendum B of this proposed rule. We note that the revised methodology does reduce the payment rate for HCPCS code G0511 from its current rate for CY 2023, although not significantly.

TABLE 24: Weighted Average Payment Rate for G0511 with RPM, RTM, CHI, and PIN Services Using CY 2023 Rates and Conversion Factor

CPT Code	2021 NF Utilization	Weighted Average
99454	931,411	46,710,262
99457	492,286	24,023,557
99457+99458	398,209	35,221,586
99474	1,581	24,110
99091	55,435	3,005,686
98976	93,141	4,671,028
98977	93,141	4,671,028
98980	14,112	698,243
98980+98981	119,463	10,647,711
99424	13,719	1,115,766

G0511		\$72.98

Therefore, we propose to take the weighted average of the base code and add-on code pairs, in addition to the individual base codes for all of the services that comprise HCPCS code G0511 by using the CY 2021 PFS utilization to calculate the payment rate for the general care management services furnished in RHCs and FQHCs on or after January 1, 2024. The number on the right side of Table 24 is a weighted average which grants more relative weight to the codes in proportion to their utilization in 2021 claims data. To calculate the weighted average, we multiple the non-facility payment rate times the non-facility utilization for each code, sum this total, then divide by the summed non-facility utilization for the codes included in the average. In an effort to be consistent with practitioners billing under the PFS and to account for the additional time spent in care coordination, we determined that this approach was more accurate representation of the payment. We would also update HCPCS code G0511 annually based on current data available in the PFS.

We propose revisions at § 405.2464(c) to reflect the revised methodology for calculating the payment amount for general care management services beginning January 1, 2024 which would be based on a weighted average of the services that comprise HCPCS code G0511 using the most recently available PFS utilization data. We welcome comments on this proposed methodology.

e. Chronic Care Management Services and Virtual Communication Services Requirement for Obtaining Beneficiary Consent

(1) Chronic Care Management Services

RHCs and FQHCs have been authorized to bill for Chronic Care Management (CCM) services since January 1, 2016. The RHC and FQHC requirements for billing CCM services have generally followed the requirements for practitioners billing under the PFS, with some adaptations based on the RHC and FQHC payment methodologies. In fact, in the CY 2017 PFS final rule (81 FR 80256-80257) to assure that CCM requirements for RHCs and FQHCs were not more burdensome than those for practitioners billing under the PFS, we finalized revisions to the requirements for CCM services furnished by RHCs and FQHCs similar to revisions to the requirements for CCM services finalized under the PFS (81 FR 80243 through 80251). Information regarding CCM services is available on the CMS Care Management Site.¹²¹

In the CY 2022 PFS proposed rule (86 FR 39175), we solicited public comment on the standard practice used by practitioners to obtain beneficiary consent for CCM services. We stated that we have received questions from interested parties regarding the consent requirements for CCM services. We explained that these questions may have arisen because of the many flexibilities allowed in response to the PHE for COVID–19. In particular, during the PHE for COVID–19, we allowed interested parties to obtain beneficiary consent for certain services under general supervision (85 FR 19230, April 6, 2020). We noted that before the PHE for

¹²¹ <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Care-Management>.

COVID–19, we required that beneficiary consent be obtained either by or under the direct supervision of the primary care practitioner. We noted that this requirement was consistent with the conditions of payment for this service under the PFS. We stated that as we consider what policies implemented during the PHE for COVID–19 should remain in effect beyond the PHE, we were interested in understanding how billing practitioners furnishing CCM at different service sites (for example, physician office settings, RHCs, FQHCs) have been obtaining beneficiary consent over the past year and how different levels of supervision impact this activity. We welcomed public comment on the issue, specifically on what levels of supervision are necessary to obtain beneficiary consent when furnishing CCM services and said that we will consider such comments in future rulemaking.

We received 52 comments regarding the standard practice used by practitioners to obtain beneficiary consent for CCM services from a variety of interested parties. For example, we received comments from hospitals, physicians, RHCs, FQHCs, software companies, care management companies.

All comments received expressed support for obtaining consent for care management under general supervision. Many commenters requested that CMS make this supervision level permanent after the expiration of the COVID-19 PHE. They stated that their practice would be unable to maintain its current CCM program without the assistance of a third-party partner. CCM vendors have trained enrollment staff which are vital to obtaining proper consent from their patients. Their staff are able to educate and inform our patients regarding the CCM program as they have been specifically trained to explain the benefits of CCM. They explained that vendors have the capacity to call patients and receive calls when it is convenient for the patient. They expressed concern that they could not replicate these services using only their employed staff and that allowing a third party to obtain consent from their patients for CCM under general supervision is vital to their CCM program.

One commenter explained that CCM programs are a challenging and heavy lift for all providers, regardless of size and available resources, and the providers that offer CCM services to their patient populations do so because they recognize and value CCM's capacity to improve patient outcomes. The commenter stated that they have seen the administrative burdens of successful and compliant CCM programs fall hardest upon RHCs and FQHCs and noted if CMS were to establish general supervision as the guideline for beneficiary consent, this would ease those burdens. The commenter noted that CCM codes describing clinical staff activities are assigned general supervision and if CMS were to carve out beneficiary consent from the rest of CCM and impose a heightened administrative burden by imposing direct supervisions, RHCs and FQHCs that service the most vulnerable and underserved patient populations, would encounter challenges that could have negative consequence for their existing CCM programs.

Several commenters stated that they believed an efficient Medicare system requires CCM services to leverage the potential of non-face-to-face modalities, such as EHR systems, patient portals, texting/SMS services, chatbot technologies, interactive mobile medical apps, and direct patient calls. The commenters explained that while they understood CMS' concerns, it is long past due that CMS do away with the requirement for a provider to directly obtain consent. Virtual modalities more than adequately enable a patient to gain an understanding of what they are consenting to at the same level or better than an in-person consent process, making the direct consent requirement outdated and overburdensome. The commenters strongly encouraged CMS to permanently allow providers to obtain beneficiary consent under general supervision.

We note that, for the purposes of CCM services furnished under the PFS, we require that practitioners obtain informed consent before furnishing a beneficiary with CCM services. During the COVID-19 PHE, CMS clarified its existing policy about how practitioners could obtain beneficiary consent. We explained that practitioners could obtain beneficiary consent either at the required initiating visit for CCM (many of which Medicare allows to be furnished

virtually), or at the same time that the CCM service is initiated by auxiliary staff who work to furnish the CCM services. When the beneficiary's consent is separately obtained, it may be obtained under the general supervision of the billing practitioner and may be verbal as long as it is documented in the medical record and includes notification of the required information. Now that the COVID-19 PHE has ended, we expect that practitioners will continue to appropriately obtain informed consent before they start furnishing CCM services to a beneficiary.

For purposes of CCM services furnished by RHCs and FQHCs, we are proposing to clarify the policy of how RHC and FQHC practitioners can obtain beneficiary consent. That is, while we have stated our intent since allowing RHCs and FQHCs to furnish CCM services, is to assure that CCM requirements for RHCs and FQHCs were not more burdensome than those for practitioners billing under the PFS, we believe our guidance could be clearer. After a review of commenters' concerns, we propose to clarify when, how and by whom beneficiary consent for CCM services can be obtained. Specifically, informed consent to receive CCM services must be obtained prior to the start of CCM services. Consent does not have to be obtained at the required initiating visit for CCM that must be performed by the RHC or FQHC practitioner, but it can be obtained at that time. Since the RHC or FQHC practitioner discusses CCM with the beneficiary during the initiating visit, if consent is separately obtained, it may be obtained under general supervision, and can be verbal as long as it is documented in the medical record and includes notification of the required information. That is, beneficiary consent can be obtained at the same time that the CCM service is initiated by auxiliary staff who work to furnish the CCM services. Further, there need not be an employment relationship between the person obtaining the consent and the RHC or FQHC practitioner. That is, the clinical staff obtaining the verbal or written consent can be under contract with the RHC or FQHC.

It is important to reiterate that the importance of obtaining advance beneficiary consent to receive CCM services is to ensure the beneficiary is informed, educated about CCM services,

and is aware of applicable cost sharing. In addition, querying the beneficiary about whether another practitioner is already providing CCM services helps to reduce the potential for duplicate provision or billing of the services. We require the beneficiary be informed on the availability of CCM services; that only one practitioner can furnish and be paid for these services during a calendar month; and of the right to stop the CCM services at any time (effective at the end of the calendar month). Again, we believe that it is important that the beneficiary grant the consent at the onset of CCM services to have the opportunity to understand what services are being billed and note it is important for CMS to take a balanced approach between administrative burden and potential program integrity concerns. That being said, we are clarifying that we understand that the sequencing and mode of consent can take various forms since the beneficiary is given notice and verbally consents.

(2) Virtual Communication Services

In the April 6, 2020 IFC (85 FR 19253 through 19254), we implemented on an interim final basis the expansion of services that can be included in the payment for virtual communications in RHCs and FQHCs. We explained that in order to minimize risks associated with exposure to COVID–19, and to provide the best care possible during the PHE for the COVID–19 pandemic, we believed that RHCs and FQHC practitioners, like many other health care providers, should explore the use of interactive communications technology in the place of services that would have otherwise been furnished in person and reported and paid under the established methodologies.

In order to ensure these services would be available to beneficiaries who otherwise would not have access to clinically appropriate in-person treatment, we placed in our interim final rule a provision stating that all virtual communication services billed by HCPCS code G0071 would be available to new patients not seen by the RHC or FQHC within the previous months and modified requirements regarding when patient consent was required for these services, in order

to promote timely provision of care. Specifically, we allowed consent to be obtained when the services were furnished instead of prior to the service being furnished and before the services were billed. Consent could also be acquired by staff under the general supervision of the RHC or FQHC practitioner for the virtual communication codes during the COVID–19 PHE.

We received several comments on these policies and subsequently finalized the provisions of the April 6, 2020 IFC without modification. However, we stated that when the COVID-19 PHE ended, beneficiary consent for these services would revert back to direct supervision and clarified this in the CY 2023 PFS final rule with comment period (87 FR 70127 through 70128).

Similar to the discussion above regarding obtaining consent for CCM, we believe the same philosophy applies to consent for virtual communications. In an effort to continue promoting access to timely, quality care for Medicare beneficiaries and to align with the PFS, we propose to clarify that the consent from the beneficiary to receive virtual communication services can be documented by auxiliary staff under general supervision, as well as by the billing practitioner. While we continue to believe that beneficiary consent is necessary so that the beneficiary is notified of cost sharing when receiving these services, we do not believe that the timing or manner in which beneficiary consent is acquired should interfere with the provision of one of these services.

C. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs) Conditions for Certification or Coverage (CfCs)

1. Summary of the Provisions

Section III.C. of this proposed rule outlines changes to the RHC and FQHC CfCs as required in section 4121 of division FF of the Consolidated Appropriations Act (Pub. L. 117-328, December 29, 2022) (CAA 2023). Specifically, we must implement provisions that would modify the existing RHC and FQHC CfCs at § 491.8(a)(3) to include marriage and family

therapists (MFTs) and mental health counselors (MHCs) as part of the collaborative team approach to provide services under Medicare Part B. We also propose to include definitions of other healthcare professionals who are already eligible to provide services at RHCs and FQHCs.

2. Proposed Changes to the RHC Conditions for Certification and FQHC Conditions for Coverage

a. Definitions (§ 491.2)

According to House Report No. 95-548 (Vol. I), the Rural Health Clinic Services Act of 1977 was established to address an inadequate supply of physicians available to serve Medicare and Medicaid beneficiaries in rural and shortage areas. The establishment of RHCs addressed this problem by allowing physicians and certain other practitioners in qualifying clinics in rural, medically underserved communities to furnish outpatient services to Medicare and Medicaid beneficiaries. The Rural Health Clinic Services Act of 1977 (Pub. L. 95–210, enacted December 13, 1977) enacted section 1861(aa) of the Act to extend Medicare entitlement and payment for primary care services furnished at an RHC by physicians and certain other practitioners and for services and supplies incidental to their services. Other practitioners included nurse practitioners (NPs) and physician assistants (PAs). Subsequent legislation extended the definition of covered RHC services to include the services of clinical psychologists (CPs), clinical social workers (CSWs), and certified nurse midwives (CNMs).

Section 4161(a)(2) of the Omnibus Budget Reconciliation Act (OBRA) of 1990 added the definition of “FQHC services” to section 1861(aa) of the Act as “services described in section 1861(aa)(1)(A) through (C) of the Act,” which, are RHC services generally provided by physicians, NPs, PAs, CPs, CSWs, and CNMs. FQHCs were established to provide primary care and preventive services in underserved rural or urban areas designated as either a shortage area or an area with a medically underserved population, regardless of the patient’s ability to pay.

Section 4121 of division FF of the CAA, 2023 amended section 1861 of the Act to add a new subsection (lll) and corresponding revisions to subsection (s)(2) of such section that establish a new benefit category for MFT services and MHC services. Section 4121(b)(1) of the CAA, 2023 amended section 1861(aa)(1)(B) of the Act to add MFT and MHC services as services that can be furnished by RHCs, which is incorporated into FQHC services through section 1861(aa)(3) of the Act.

Section 1861 of the Act authorizes the Secretary to establish the requirements that an RHC and FQHC must meet to participate in the Medicare Program. These requirements are codified in regulations at 42 CFR part 491. For an RHC and FQHC to receive Medicare payment for services, it must meet the requirements at part 491, which are intended to promote the health and safety of care provided to RHC and FQHC patients.

In order to reflect the statute, we propose adding conforming changes to the CfCs to include MFT and MHC services as proposed in section III.B. of this proposed rule to indicate that RHC and FQHCs can offer these services under their Medicare certification. At § 491.2, *Definitions*, we propose adding a definition of MFTs and MHCs by cross-referencing the definitions proposed at §§ 410.53 and 410.54.

Previously enacted laws extended the definition of covered RHC services to include the services of CPs (section 4077(a) of OBRA '87), CNMs (section 6213(a) of OBRA '89), and CSWs (section 6213(b) of OBRA '89). Note that the CfCs do not currently define CPs, CSWs, or CNMs whose services are covered when furnished in an RHC and FQHC, so we also propose to add these professionals to § 491.2, *Definitions*, and cross-reference the definitions established in the payment requirements at § 410.77(a), §410.71(d), §410.73(a) respectively.

We propose revising the existing “nurse practitioner” (NP) definition at § 491.2. The current definition sets forth education and certification requirements. The current requirement at § 491.2(1) states that an NP must be certified as a primary care NP by the American Nurses

Association and the National Board of Pediatric Nurse Practitioners and Associates. The National Board of Pediatric Nurse Practitioners and Associates has changed the organization's name since this requirement was first implemented. The American Association of Nurse Practitioners (AANP), examined NP graduates from 2019 to 2020 by certification exam and discovered that 88 percent of licensed NPs in the U.S. are educated and prepared in primary care.¹²² The AANP considers primary care providers with a population focus on family, adult gerontology primary care, psych mental health, pediatric primary care, and women's health. We believe that removing specific certifying boards from § 491.2(1) will ensure that the requirements reflect the breadth of currently available certifications. For awareness, examples of certifying boards that focus on an area the AANP considers primary care are the American Academy of Nurse Practitioners Certification Board (AANPCB), American Nurses Credentialing Center (ANCC) Certification Program, Pediatric Nursing Certification Board (PNCB), and the National Certification Corporation (NCC).¹²³ We propose revising the definition of NP at § 491.2(1) to require that an NP, be certified as a primary care nurse practitioner at the time of provision of services by a recognized national certifying body that has established standards for nurse practitioners and possess a master's degree in nursing or a Doctor of Nursing Practice (DNP) doctoral degree. We have proposed adding the education requirement to clause (1) of the definition because the American Nurses Association has stated that for someone to become an NP, one must be a registered nurse or have a bachelor of science in nursing (BSN), complete an NP-focused master's or doctoral nursing program, and pass the National NP Certification Board Exam.¹²⁴ We propose to retain paragraphs (2) and (3) of the

¹²² <https://www.aanp.org/advocacy/advocacy-resource/position-statements/nurse-practitioners-in-primary-care#:~:text=Millions%20of%20Americans%20choose%20a,of%20all%20ages%20and%20backgrounds.>

¹²³ [https://www.aanp.org/student-resources/np-certification.](https://www.aanp.org/student-resources/np-certification)

¹²⁴ *American Association of Nurse Practitioners (2020). The Path to Becoming a Nurse Practitioner (NP).* <https://www.aanp.org/news-feed/explore-the-variety-of-career-paths-for-nurse-practitioners#:~:text=To%20become%20an%20NP%2C%20one,national%20NP%20board%20certification%20exam.>

current NP definition, which provides alternative certification and education requirements an NP can meet to furnish services in an RHC or FQHC if (1) is not met.

We are soliciting comments regarding the current definition of NPs at § 491.2(1). Specifically, we are interested in feedback on whether the definition of NPs should specify that an NP's certification be in the area of primary care, or whether this distinction should be removed. This would allow all NPs who are certified by a national certifying body and meet other applicable requirements to furnish services in an RHC or FQHC. We recognize that NPs are one of the fastest-growing provider groups to provide primary care, and the number of Medicare beneficiaries who receive primary care services from NPs is increasing.^{125,126} According to the March 2023 Medicare Payment Policy report, a larger percentage of Medicare beneficiaries and privately insured persons living in rural or low-income areas have revealed that they rely on NPs or PAs for most, if not all, of their healthcare needs. This indicates that NPs and PAs play a crucial role in ensuring that underserved populations have access to quality healthcare services, despite the challenges of living in areas with limited healthcare professionals and resources. The latest report from AANP indicates that a significant proportion of NP graduates are currently certified in primary care; however, during the 2019-2020 academic year, approximately 12.9 percent or 45,795 NP graduates received certification in non-primary care specialties, including Adult Acute Care, Neonatal, and Pediatric Acute Care.¹²² The precise number of non-primary care-certified NPs who would furnish their services at RHCs and FQHCs if the primary care certification requirement was removed remains uncertain at this time.

With the increasing number of NPs and their crucial role in providing quality care, the Consensus Model was developed to tackle the issue of inconsistent standards in education, regulation, and practice for advanced practice RNs (APRNs) by providing guidance for states to

¹²⁵ <https://www.bls.gov/careeroutlook/2020/article/careers-for-nurses-opportunities-and-options.htm>.

¹²⁶ https://www.medpac.gov/wp-content/uploads/2022/03/Mar22_MedPAC_ReportToCongress_Ch4_v2_SEC.pdf.

adopt uniformity in the regulation of APRN roles, licensure, accreditation, certification and education. The aim of the Consensus Model is to promote patient safety while providing greater access to care by standardizing education, certification, accreditation and licensure requirements for APRNs, including NPs.¹²⁷ In order to practice in specialized nursing roles, individuals must possess specialized knowledge and skills. Therefore, the Consensus Model mandates that Advanced Practice Registered Nurses (APRNs) have congruent education, certification, and licensure in terms of population foci. NPs are required to select between two population foci tracks: adult-gerontology and pediatric foci. These foci are further distinguished as either primary care or acute care. Although the focus of practice centers around the patient's needs rather than the setting, NPs possess comprehensive educational training and practical experience to cater to patients in primary or acute care.¹²⁸ Primary care NPs are trained to offer comprehensive, continuous care for patients with most health needs, including chronic conditions. In contrast, acute care NPs are equipped to provide restorative care, which involves addressing rapidly changing clinical conditions in patients with unstable, chronic, and complex acute and critical conditions.

The NP scope of practice allows them to provide care to patients based on the acuity of the patient's needs, rather than the setting in which the services are administered. This implies that an acute care NP can offer their services to patients within their scope of practice in RHCs and FQHCs, and other settings. NPs increasingly provide services to Medicare beneficiaries; however, the scope of benefits between primary care and acute care may be different. We seek comments on whether the specification of requiring NPs to be certified in primary care should remain in the definition at § 491.2.

b. Staffing and staff responsibilities (§ 491.8)

¹²⁷ <https://www.ncbi.nlm.nih.gov/books/NBK209870/>.

¹²⁸ <https://www.aacn.org/~media/aacn-website/certification/advanced-practice/adultgeroacnpcompetencies.pdf>.

Section 1861(aa) of the Act extends Medicare and Medicaid entitlement and payment for primary and emergency care services furnished at an RHC by physicians and other practitioners and for services and supplies incidental to their services. Other practitioners include NPs, PAs, CPs, CSWs, and CNMs. Section 4121(b)(1) of the CAA, 2023, *Coverage of Certain Mental Health Services Provided in Certain Settings Rural Health Clinics and Federally Qualified Health Centers* amends section 1861(aa)(1)(B) of the Act by including MFT and MHCs to the list of other practitioners whose services, when provided in RHCs and FQHCs, are entitled to payment under the Medicare program. To implement these changes, we propose modifying our CfCs to include MFT and MHCs as recognized staff for RHC and FQHCs.

The current requirements at § 491.8, *Staffing and staff responsibilities*, establish staffing requirements for RHC and FQHCs, details of physician responsibilities, PA and NP responsibilities, and COVID-19 vaccination requirements for staff. We propose revising the requirements at § 491.8, *Staffing and staff responsibilities*. Currently, at § 491.8(a)(3), the PA, NP, CNM, CSW, or CP may be the owner, employee, or furnish services under contract with the clinic (RHC) or center (FQHC). In the case of a clinic, at least one PA or NP must be an employee of the clinic. At § 491.8(a)(3), we propose to add MFT and MHC to the list, allowing them to be the owner, employee, or furnish services under contract to the clinic or center. Additionally, § 491.8(a)(6) requires that a physician, PA, NP, CNM, CSW, or CP is available to furnish patient care services at all times the clinic or center operates. Furthermore, for RHCs, an NP, PA, or CNM is available to furnish patient care services at least 50 percent of the time the RHC operates. We propose adding MFTs and MHCs to the list of other practitioners who can provide services when the clinic or center is open and operating. We are also proposing to update § 491.8(a)(6) to include MFTs and MHCs to the list of other practitioners who are eligible to furnish services and who can provide services, within the scope of practice, when the clinic or center is open and operating.

Section 1861(aa)(2) and (4) of the Act require that RHC and FQHC staff include one or more physicians, and RHCs are also required to employ at least one PA or NP. There are no requirements for an RHC or FQHC to employ a CNM, CSW, CP, MHC, or MFT; however, we expect clinics and centers to ensure that the needs of the patient population they serve are met. We acknowledge that there are similarities and differences between CSWs, MHCs, and MFTs, ranging from offered services to experience to scope of practice. CSWs, MHCs, and MFTs have similar roles and responsibilities as they relate to counseling and can assist patients with the challenges they are facing; however, MHCs and MFTs may have a larger emphasis on human development and psychological approaches, whereas CSWs often focus on a person's overall social and socioeconomic circumstance. Some other services social workers can provide are psychosocial assessments, identifying and providing community resources to patients, and assisting with communicating with other members of their healthcare team. As rural areas are increasingly diverse, have significant strengths and unique challenges, and are essential in providing care to residents of medically underserved communities, RHCs and FQHCs play a key role in identifying the needs of their patients and employing mental health professionals. In November 2022, we published a framework for advancing health care in rural, tribal, and geographically isolated communities.¹²⁹ Priorities related to rural health included in the framework are advancing health equity by addressing health disparities, expanding access to care, and engaging with partners and communities. To reduce health disparities and achieve positive physical, mental, and behavioral health outcomes, providers must address access to affordable and quality food, education, employment, housing, and access to the physical and mental care they need.¹³⁰ People living in rural areas have less access to healthcare and social services, higher unemployment rates, and higher poverty rates than urban areas, which impacts a

¹²⁹ <https://www.cms.gov/files/document/cms-geographic-framework.pdf>.

¹³⁰ https://www.jstor.org/stable/pdf/26554276.pdf?refreqid=excelsior%3A3437750e2633ee53aa5c0afe8caae6ea&ab_segments=&origin=&initiator=&acceptTC=1.

person's physical and mental well-being.^{131,132,133} To meet an individual's medical, behavioral, and social service needs, it's important to have high-quality staff to address those issues.¹³⁴ A team of diverse professionals can address a patient's physical and mental health through counseling, case management, and provide resources and information to address social determinants of health.¹³⁵

Individuals living in rural areas face multiple barriers that prevent people from accessing physical and mental health services, including but not limited to provider shortages and transportation difficulties.¹³⁶ A study from 2015 surveyed mental health specialists in nonmetropolitan areas and found that rural counties had less than half as many mental health professionals as proportional to the population compared to urban areas.¹³⁷ The shortage of mental health providers in rural areas also puts a strain on generalist providers to diagnose and care for patients seeking care for mental health.¹³⁸ In 2017, general practice physicians (including NPs and PAs) were the predominant source for treating depression in adults living in rural communities.¹³⁹ Of the same population, less than 20 percent received treatment from mental health professionals, and 32 percent received no treatment. If MFTs and MHCs can provide reimbursable services under the Medicare program, the pool of mental health professionals who can help address practitioner shortages in rural communities can expand.

D. Clinical Laboratory Fee Schedule: Revised Data Reporting Period and Phase-in of Payment

Reductions

1. Background on the Clinical Laboratory Fee Schedule

¹³⁹ https://uknowledge.uky.edu/cgi/viewcontent.cgi?article=1013&context=rhrc_reports.

Prior to January 1, 2018, Medicare paid for clinical diagnostic laboratory tests (CDLTs) on the Clinical Laboratory Fee Schedule (CLFS) under section 1833(a), (b), and (h) of the Act. Under the previous payment system, CDLTs were paid based on the lesser of: (1) the amount billed; (2) the local fee schedule amount established by the Medicare Administrative Contractor (MAC); or (3) a national limitation amount (NLA), which is a percentage of the median of all the local fee schedule amounts (or 100 percent of the median for new tests furnished on or after January 1, 2001). In practice, most tests were paid at the NLA. Under the previous payment system, the CLFS amounts were updated for inflation based on the percentage change in the Consumer Price Index for All Urban Consumers (CPI-U), and reduced by a productivity adjustment and other statutory adjustments, but were not otherwise updated or changed. Coinsurance and deductibles generally do not apply to CDLTs paid under the CLFS.

Section 1834A of the Act, as established by section 216(a) of the Protecting Access to Medicare Act of 2014 (PAMA), required significant changes to how Medicare pays for CDLTs under the CLFS. In the June 23, 2016 **Federal Register** (81 FR 41036), we published a final rule entitled Medicare Clinical Diagnostic Laboratory Tests Payment System (CLFS final rule), that implemented section 1834A of the Act at 42 CFR part 414, subpart G.

Under the CLFS final rule, “reporting entities” must report to CMS during a “data reporting period” “applicable information” collected during a “data collection period” for their component “applicable laboratories.” The first data collection period occurred from January 1, 2016, through June 30, 2016. The first data reporting period occurred from January 1, 2017, through March 31, 2017. On March 30, 2017, we announced a 60-day period of enforcement discretion for the application of the Secretary’s potential assessment of civil monetary penalties for failure to report applicable information with respect to the initial data reporting period.¹⁴⁰

¹⁴⁰ <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ClinicalLabFeeSched/Downloads/2017-March-Announcement.pdf>.

In the CY 2018 PFS proposed rule (82 FR 34089 through 34090), we solicited public comments from applicable laboratories and reporting entities to better understand the applicable laboratories' experiences with data reporting, data collection, and other compliance requirements for the first data collection and reporting periods. We discussed these comments in the CY 2018 PFS final rule (82 FR 53181 through 53182) and stated that we would consider the comments for potential future rulemaking or guidance.

As part of the CY 2019 Medicare PFS rulemaking, we finalized two changes to the definition of "applicable laboratory" at § 414.502 (see 83 FR 59667 through 59681, 60074; 83 FR 35849 through 35850, 35855 through 35862). First, we excluded Medicare Advantage plan payments under Part C from the denominator of the Medicare revenues threshold calculation to broaden the types of laboratories qualifying as an applicable laboratory. Second, consistent with our goal of obtaining a broader representation of laboratories that could potentially qualify as an applicable laboratory and report data, we also amended the definition of applicable laboratory to include hospital outreach laboratories that bill Medicare Part B using the CMS-1450 14x Type of Bill.

2. Payment Requirements for Clinical Diagnostic Laboratory Tests

In general, under section 1834A of the Act, the payment amount for each CDLT on the CLFS furnished beginning January 1, 2018, is based on the applicable information collected during the data collection period and reported to CMS during the data reporting period and is equal to the weighted median of the private payor rates for the test. The weighted median is calculated by arraying the distribution of all private payor rates, weighted by the volume for each payor and each laboratory. The payment amounts established under the CLFS are not subject to any other adjustment, such as geographic, budget neutrality, or annual update, as required by section 1834A(b)(4)(B) of the Act. Additionally, section 1834A(b)(3) of the Act, implemented at § 414.507(d), provides for a phase-in of payment reductions, limiting the amounts the CLFS

rates for each CDLT (that is not a new advanced diagnostic laboratory test (ADLT) or new CDLT) can be reduced as compared to the payment rates for the preceding year. Under the original provisions enacted by section 216(a) of PAMA, for the first 3 years after implementation (CY 2018 through CY 2020), the reduction could not be more than 10 percent per year. For the next 3 years after implementation (CY 2021 through CY 2023), section 216(a) of PAMA stated that the reduction could not be more than 15 percent per year. Under sections 1834A(a)(1) and (b) of the Act, as enacted by PAMA, for CDLTs that are not ADLTs, the data collection period, data reporting period, and payment rate update were to occur every 3 years. As such, the second data collection period for CDLTs that are not ADLTs occurred from January 1, 2019, through June 30, 2019, and the next data reporting period was originally scheduled to take place from January 1, 2020, through March 31, 2020, with the next update to the Medicare payment rates for those tests based on that reported applicable information scheduled to take effect on January 1, 2021.

Section 216(a) of PAMA established a new subcategory of CDLTs known as ADLTs, with separate reporting and payment requirements under section 1834A of the Act. The definition of an ADLT is set forth in section 1834A(d)(5) of the Act and implemented at § 414.502. Generally, under section 1834A(d) of the Act, the Medicare payment rate for a new ADLT is equal to its actual list charge during an initial period of 3 calendar quarters. After the new ADLT initial period, ADLTs are paid using the same methodology based on the weighted median of private payor rates as other CDLTs. However, under section 1834A(d)(3) of the Act, updates to the Medicare payment rates for ADLTs occur annually instead of every 3 years.

Additional information on the private payor rate-based CLFS is detailed in the CLFS final rule (81 FR 41036 through 41101) and is available on the CMS website.¹⁴¹

¹⁴¹ <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ClinicalLabFeeSched/PAMA-regulations>.

3. Previous Statutory Revisions to the Data Reporting Period and Phase-In of Payment

Reductions

Beginning in 2019, Congress passed a series of legislation to modify the statutory requirements for the data reporting period and phase-in of payment reductions under the CLFS. First, section 105(a)(1) of the Further Consolidated Appropriations Act, 2020 (FCAA) (Pub. L. 116-94, December 20, 2019) (FCAA) amended the data reporting requirements in section 1834A(a) of the Act to delay the next data reporting period for CDLTs that are not ADLTs by 1 year so that data reporting would be required during the period of January 1, 2021, through March 31, 2021, instead of January 1, 2020, through March 30, 2020. The 3-year data reporting cycle for CDLTs that are not ADLTs would resume after that data reporting period. Section 105(a)(1) of the FCAA also specified that the data collection period that applied to the data reporting period of January 1, 2021, through March 30, 2021, would be the period of January 1, 2019, through June 30, 2019, which was the same data collection period that would have applied absent the amendments. In addition, section 105(a)(2) of the FCAA amended section 1834A(b)(3) of the Act regarding the phase-in of payment reductions to provide that payments may not be reduced by more than 10 percent as compared to the amount established for the preceding year through CY 2020, and for CYs 2021 through 2023, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year. These statutory changes were consistent with our regulations implementing the private payor rate-based CLFS at § 414.507(d) (81 FR 41036).

Subsequently, section 3718 of the Coronavirus Aid, Relief, and Economic Security Act, 2020 (CARES Act) (Pub. L. 116-136, March 27, 2020) further amended the data reporting requirements for CDLTs that are not ADLTs and the phase-in of payment reductions under the CLFS. Specifically, section 3718(a) of the CARES Act amended section 1834A(a)(1)(B) of the Act to delay the next data reporting period for CDLTs that are not ADLTs by one additional

year, to require data reporting during the period of January 1, 2022, through March 31, 2022.

The CARES Act did not modify the data collection period that applied to the next data reporting period for these tests. Thus, under section 1834A(a)(4)(B) of the Act, as amended by section 105(a)(1) of the FCAA, the next data reporting period for CDLTs that are not ADLTs would have been based on the data collection period of January 1, 2019 through June 30, 2019.

Section 3718(b) of the CARES Act further amended the provisions in section 1834A(b)(3) of the Act regarding the phase-in of payment reductions under the CLFS. First, it extended the statutory phase-in of payment reductions resulting from private payor rate implementation by an additional year, that is, through CY 2024 instead of CY 2023. It further amended section 1834A(b)(3)(B)(ii) of the Act to specify that the applicable percent for CY 2021 is 0 percent, meaning that the payment amount determined for a CDLT for CY 2021 shall not result in any reduction in payment as compared to the payment amount for that test for CY 2020. Section 3718(b) of the CARES Act further amended section 1834A(b)(3)(B)(iii) of the Act to state that the applicable percent of 15 percent would apply for CYs 2022 through 2024, instead of CYs 2021 through 2023. In the CY 2021 PFS rulemaking (85 FR 50210 through 50211; 85 FR 84693 through 84694), in accordance with section 105(a) of the FCAA and section 3718 of the CARES Act, we proposed and finalized conforming changes to the data reporting and payment requirements at 42 CFR part 414, subpart G.

Section 4 of the Protecting Medicare and American Farmers from Sequester Cuts Act (PMAFSCA) (Pub. L. 117-71, December 10, 2021) made additional revisions to the CLFS requirements for the next data reporting period for CDLTs that are not ADLTs and to the phase-in of payment reductions under section 1834A of the Act. Specifically, section 4(b) of PMAFSCA amended the data reporting requirements in section 1834A(a) of the Act to delay the next data reporting period for CDLTs that are not ADLTs by 1 year, so that data reporting would be required during the period of January 1, 2023, through March 31, 2023. The 3-year data

reporting cycle for CDLTs that are not ADLTs would resume after that data reporting period. As amended by section 4 of PMAFSCA, section 1834A(a)(1)(B) of the Act provided that in the case of reporting with respect to CDLTs that are not ADLTs, the Secretary shall revise the reporting period under subparagraph (A) such that—(i) no reporting is required during the period beginning January 1, 2020, and ending December 31, 2022; (ii) reporting is required during the period beginning January 1, 2023, and ending March 31, 2023; and (iii) reporting is required every 3 years after the period described in clause (ii).

Section 4 of PMAFSCA did not modify the data collection period that applies to the next data reporting period for these tests. Thus, under section 1834A(a)(4)(B) of the Act, as amended by section 105(a)(1) of the FCAA, the next data reporting period for CDLTs that are not ADLTs (January 1, 2023, through March 31, 2023) would continue to be based on the data collection period of January 1, 2019, through June 30, 2019, as defined in § 414.502.

Section 4 of PMAFSCA further amended the provisions in section 1834A(b)(3) of the Act regarding the phase-in of payment reductions under the CLFS. First, it extended the statutory phase-in of payment reductions resulting from private payor rate implementation by an additional year, that is, through CY 2025. It further amended section 1834A(b)(3)(B)(ii) of the Act to specify that the applicable percent for each of CY 2021 and 2022 is 0 percent, meaning that the payment amount determined for a CDLT for CY 2021 and 2022 shall not result in any reduction in payment as compared to the payment amount for that test for CY 2020. Section 4(a) of PMAFSCA further amended section 1834A(b)(3)(B)(iii) of the Act to state that the applicable percent of 15 percent would apply for CYs 2023 through 2025, instead of CYs 2022 through 2024.

In the CY 2023 PFS rulemaking (87 FR 46068 through 46070; 87 FR 69741 through 69744, 70225), in accordance with section 4 of PMAFSCA, we proposed and finalized conforming changes to the data reporting and payment requirements at 42 CFR part 414, subpart

G. Specifically, we finalized revisions to § 414.502 to update the definitions of both the data collection period and data reporting period, specifying that for the data reporting period of January 1, 2023, through March 31, 2023, the data collection period is January 1, 2019, through June 30, 2019. We also revised § 414.504(a)(1) to indicate that initially, data reporting begins January 1, 2017, and is required every 3 years beginning January 1, 2023. In addition, we finalized conforming changes to our requirements for the phase-in of payment reductions to reflect the PMAFSCA amendments. Specifically, we finalized revisions to § 414.507(d) to indicate that for CY 2022, payment may not be reduced by more than 0.0 percent as compared to the amount established for CY 2021, and for CYs 2023 through 2025, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year.

As a result of the statutory revisions under the FCAA, CARES Act, and PMAFSCA, there have only been two data collection periods for CDLTs that are not ADLTs to date. The first data collection period for these tests occurred from January 1, 2016, through June 30, 2016, and the second occurred from January 1, 2019, through June 30, 2019. Thus far, there has been only one data reporting period for these tests, which took place from January 1, 2017, through March 31, 2017. We have established CLFS payment rates for these tests using the methodology established in PAMA only one time, effective January 1, 2018, based on the applicable information collected by applicable laboratories during the 2016 data collection period and reported to CMS during the 2017 data reporting period.

Additionally, we have applied the phase-in of payment reductions for the first 3 years of PAMA implementation, CY 2018 through CY 2020, whereby reduction of payment rates could not be more than 10 percent per year as compared to the amount established the prior year. However, the phase-in of payment reductions set forth in PAMA for years 4 through 6 of PAMA implementation, whereby payment cannot exceed 15 percent per year as compared to the amount established the prior year, has not yet occurred.

4. Additional Statutory Revisions to the Data Reporting Period and Phase-In of Payment

Reductions

Section 4114 of the Consolidated Appropriations Act of 2023 (CAA, 2023) (Pub. L. 117-328, enacted December 29th, 2022) made further revisions to the CLFS requirements for the next data reporting period for CDLTs that are not ADLTs and to the phase-in of payment reductions under section 1834A of the Act. Specifically, section 4114(b) of the CAA, 2023 amended the data reporting requirements in section 1834A(a)(1)(B) of the Act to delay the next data reporting period for CDLTs that are not ADLTs by one year, so that data reporting would be required during the period of January 1, 2024, through March 31, 2024, instead of the data reporting period of January 1, 2023 through March 31, 2023 established under the PMAFSCA. The 3-year data reporting cycle for CDLTs that are not ADLTs would resume after that data reporting period. As amended by section 4114(b) of the CAA, 2023, section 1834A(a)(1)(B) of the Act now provides that in the case of reporting with respect to CDLTs that are not ADLTs, the Secretary shall revise the reporting period under subparagraph (A) such that—(i) no reporting is required during the period beginning January 1, 2020, and ending December 31, 2023; (ii) reporting is required during the period beginning January 1, 2024, and ending March 31, 2024; and (iii) reporting is required every 3 years after the period described in clause (ii).

Section 4114 of the CAA, 2023 does not modify the data collection period that applies to the next data reporting period for these tests. Thus, under section 1834A(a)(4)(B) of the Act, as amended by section 105(a)(1) of the FCAA, the next data reporting period for CDLTs that are not ADLTs (January 1, 2024, through March 31, 2024) will continue to be based on the data collection period of January 1, 2019, through June 30, 2019, as defined in § 414.502.

Section 4114(a) of the CAA, 2023 further amends the provisions in section 1834A(b)(3) of the Act regarding the phase-in of payment reductions under the CLFS. First, it extends the statutory phase-in of payment reductions resulting from private payor rate implementation by an

additional year, that is, through CY 2026. It further amends section 1834A(b)(3)(B)(ii) of the Act to specify that the applicable percent for CY 2023 is 0 percent, meaning that the payment amount determined for a CDLT for CY 2023 shall not result in any reduction in payment as compared to the payment amount for that test for CY 2022. Section 4114(a) of the CAA, 2023 further amends section 1834A(b)(3)(B)(iii) of the Act to state that the applicable percent of 15 percent will apply for CYs 2024 through 2026.

5. Proposed Conforming Regulatory Changes

In accordance with section 4114 of the CAA, 2023, we are proposing to make certain conforming changes to the data reporting and payment requirements at 42 CFR part 414, subpart G. Specifically, we are proposing to revise § 414.502 to update the definitions of both the “data collection period” and “data reporting period,” specifying that for the data reporting period of January 1, 2024, through March 31, 2024, the data collection period is January 1, 2019, through June 30, 2019. We are also proposing to revise § 414.504(a)(1) to indicate that initially, data reporting begins January 1, 2017, and is required every 3 years beginning January 2024. In addition, we are proposing to make conforming changes to our requirements for the phase-in of payment reductions to reflect the amendments in section 4114(a) of the CAA, 2023.

Specifically, we are proposing to revise § 414.507(d) to indicate that for CY 2023, payment may not be reduced by more than 0.0 percent as compared to the amount established for CY 2022, and for CYs 2024 through 2026, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year.

We note that the CYs 2023 and 2024 CLFS payment rates for CDLTs that are not ADLTs are based on applicable information collected in the data collection period of January 1, 2016, through June 30, 2016. Under current law, the CLFS payment rates for CY 2025 through CY 2027 will be based on applicable information collected during the data collection period of

January 1, 2019, through June 30, 2019, and reported to CMS during the data reporting period of January 1, 2024, through March 31, 2024.

E. Pulmonary Rehabilitation, Cardiac Rehabilitation and Intensive Cardiac Rehabilitation

Expansion of Supervising Practitioners

Conditions of coverage for pulmonary rehabilitation (PR), cardiac rehabilitation (CR) and intensive cardiac rehabilitation (ICR) are codified at 42 CFR 410.47 and 410.49. We are proposing revisions to the PR and CR/ICR regulations to codify the statutory changes made in section 51008 of the Bipartisan Budget Act of 2018 (Pub. L. 115-123, February 9, 2018) (BBA of 2018) which permit other specific practitioners to supervise the items and services effective January 1, 2024.

1. Statutory Authority

Section 144(a) of the Medicare Improvements for Patients and Providers Act of 2008 (Pub. L. 110-275, July 15, 2008) (MIPPA) amended title XVIII to add new section 1861(eee) of the Act to provide coverage of CR and ICR under Medicare part B, as well as new section 1861(fff) of the Act to provide coverage of PR under Medicare part B. The statute specified certain conditions for coverage of these services and an effective date of January 1, 2010. Conditions of coverage for PR, CR and ICR consistent with the statutory provisions of section 144(a) of the MIPPA were codified in §§ 410.47 and 410.49 respectively through the CY 2010 PFS final rule with comment period (74 FR 61872 through 61886 and 62002 through 62003 (PR) 62004 through 62005 (CR/ICR)). Section 51008 of the BBA of 2018, entitled “Allowing Physician Assistants, Nurse Practitioners, and Clinical Nurse Specialists to Supervise Cardiac, Intensive Cardiac and Pulmonary Rehabilitation Programs,” amended sections 1861(eee) and (fff) of the Act, effective January 1, 2024. The amendment directs us to add to the types of practitioners who may supervise PR, CR and ICR programs to also include a physician assistant (PA), nurse practitioner (NP), or clinical nurse specialist (CNS).

2. Background

Under § 410.47(b), Medicare part B covers PR for beneficiaries with moderate to very severe chronic obstructive pulmonary disease (COPD) (defined as GOLD classification II, III and IV), when referred by the physician treating the chronic respiratory disease and allows additional medical indications to be established through a national coverage determination (NCD). We have not added additional medical indications for PR using the NCD process; however, we used notice and comment rulemaking through the CY 2022 PFS final rule (86 FR 64996) to establish coverage of PR for beneficiaries who have had confirmed or suspected COVID-19 and experience persistent symptoms that include respiratory dysfunction for at least 4 weeks. In the same final rule, we also updated language to improve consistency and accuracy across PR and CR/ICR conditions of coverage and removed a PR requirement for direct physician-patient contact.

Under § 410.49(b), Medicare part B covers CR and ICR for beneficiaries who have experienced one or more of the following: (1) an acute myocardial infarction within the preceding 12 months; (2) a coronary artery bypass surgery; (3) current stable angina pectoris; (4) heart valve repair or replacement; (5) percutaneous transluminal coronary angioplasty (PTCA) or coronary stenting; (6) a heart or heart-lung transplant; (7) stable, chronic heart failure defined as patients with left ventricular ejection fraction of 35 percent or less and New York Heart Association (NYHA) class II to IV symptoms despite being on optimal heart failure therapy for at least 6 weeks, on or after February 18, 2014, for cardiac rehabilitation and on or after February 9, 2018, for intensive cardiac rehabilitation; or (8) other cardiac conditions as specified through an NCD. The NCD process may also be used to specify non-coverage of a cardiac condition for ICR if coverage is not supported by clinical evidence.

In 2014, we established coverage of CR through the NCD process (NCD 20.10.1, Cardiac Rehabilitation Programs for Chronic Heart Failure (Pub. 100-03) to beneficiaries with stable,

chronic heart failure. Section 51004 of the BBA of 2018, amended section 1861(eee)(4)(B) of the Act to expand coverage of ICR to include patients with stable, chronic heart failure. Section 410.49 was updated to codify this expansion through the CY 2020 PFS final rule (84 FR 62897 through 62899 and 63188). The CY 2022 PFS final rule (86 FR 64996) updated language in § 410.49 to improve consistency and accuracy across PR and CR/ICR conditions of coverage.

3. Proposals for Implementation

Consistent with the amendments made by section 51008 of the BBA of 2018 to section 1861(eee) and (fff) of the Act, we propose additions and revisions to language in §§ 410.47 and 410.49 as described below.

a. Definitions

We are proposing to add a new term, nonphysician practitioner (NPP), to §§ 410.47(a) and 410.49(a), which would be defined as a PA, NP, CNS as those terms are defined in section 1861(aa)(5)(A) of the Act.

We are proposing to amend the term supervising physician at §§ 410.47(a) and 410.49(a) to supervising practitioner and amend the definition to mean a physician or NPP.

Finally, we are proposing to amend the definition for pulmonary rehabilitation at § 410.47(a) and the definitions for cardiac rehabilitation and intensive cardiac rehabilitation (ICR) program at § 410.49(a) to specify that these are physician- or NPP-supervised programs.

b. Setting

We are proposing to amend § 410.47(b)(3)(ii)(A) and § 410.49(b)(3)(ii) to specify that all settings must have a physician or NPP immediately available and accessible for medical consultations and emergencies at all times when items and services are being furnished under the programs.

c. Supervising Practitioner Standards

We are proposing to amend language at §§ 410.47(d) and 410.49(e) by specifying that these sections include supervising practitioner standards, rather than just supervising physician standards. We are also removing the third standard in each section (§§ 410.47(d)(3) and 410.49(e)(3)) because specifying that a physician or NPP is licensed to practice medicine in the state where a PR/CR/ICR program is offered, or any corresponding reference to a NPP being licensed or authorized to practice, is redundant to the definition for each practitioner type in the Act. Since the physicians and NPPs that may supervise PR/CR/ICR are defined at §§ 410.47(a) and 410.49(a) by cross-reference to the Act, we believe repeating part of that definition in these sections is unnecessary.

4. Summary

We are proposing additions and revisions that are necessary to implement the amendments to section 1861(eee) and (fff) of the Act set forth in section 51008 of the BBA of 2018, which expand the types of practitioners that may supervise PR, CR and ICR. This includes changes to the regulatory language in the definitions, settings and supervising practitioner standards sections under §§ 410.47 and 410.49. We believe these proposed amendments to §§ 410.47 and 410.49 would serve to implement the provisions in the BBA of 2018 regarding the types of practitioners that may supervise PR, CR and ICR beginning January 1, 2024. All other provisions of these regulations would remain unchanged.

F. Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

1. Background

Section 2005 of the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment (SUPPORT) for Patients and Communities Act (SUPPORT Act) (Pub. L. 115-271, October 24, 2018) established a new Medicare Part B benefit for OUD treatment services furnished by OTPs during an episode of care beginning on or after January 1, 2020. In the CY

2020 PFS final rule (84 FR 62630 through 62677 and 84 FR 62919 through 62926), we implemented Medicare coverage and provider enrollment requirements and established a methodology for determining the bundled payments for episodes of care for the treatment of OUD furnished by OTPs. We also established in the CY 2020 PFS final rule new codes and finalized bundled payments for weekly episodes of care that include methadone, oral buprenorphine, implantable buprenorphine, injectable buprenorphine or naltrexone, and non-drug episodes of care, as well as add-on codes for intake and periodic assessments, take-home dosages for methadone and oral buprenorphine, and additional counseling. In the CY 2021 PFS final rule (85 FR 84683 through 84692), we adopted new add-on codes for take home supplies of nasal naloxone and injectable naloxone. In the CY 2022 PFS final rule (86 FR 65340 and 65341), we established a new add-on code and payment for a higher dose of nasal naloxone. We also revised paragraphs (iii) and (iv) in the definition of “Opioid disorder treatment service” at § 410.67(b) to allow OTPs to furnish individual and group therapy and substance use counseling using audio-only telephone calls rather than two-way interactive audio/video communication technology after the conclusion of the public health emergency (PHE) for COVID-19 in cases where audio/video communication technology is not available to the beneficiary, provided all other applicable requirements are met (86 FR 65342).

More recently, CMS made further modifications and expansions to covered services for the treatment of OUD by OTPs in the CY 2023 PFS final rule (87 FR 69768 through 69777). Specifically, we revised our methodology for pricing the drug component of the methadone weekly bundle and the add-on code for take-home supplies of methadone by using the payment amount for methadone for CY 2021 updated by the PPI for Pharmaceuticals for Human Use (Prescription) to better reflect the changes in methadone costs for OTPs over time. Additionally, we finalized a modification to the payment rate for individual therapy in the non-drug component of the bundled payment for an episode of care to base the payment rate on the rate for longer

therapy sessions that better account for the greater severity of needs for patients with an OUD and receiving treatment in the OTP setting. Moreover, for the purposes of the geographic adjustment, we clarified that services furnished via OTP mobile units will be treated as if the services were furnished in the physical location of the OTP for purposes of determining payments to OTPs under the Medicare OTP bundled payment codes and/or add-on codes to the extent that the services are medically reasonable and necessary and are furnished in accordance with Substance Abuse and Mental Health Services Administration (SAMHSA) and Drug Enforcement Administration (DEA) guidance. We believe that this policy enables OTPs to better serve Medicare beneficiaries living in underserved areas by providing access to many of the same OUD treatment services offered at the brick and mortar location of the OTP. We are continuing to monitor utilization of OUD treatment services furnished by OTPs to ensure that Medicare beneficiaries have appropriate access to care. For CY 2024, we are proposing several modifications to the policies governing Medicare coverage and payment for OUD treatment services furnished by OTPs.

2. Additional Flexibilities for Periodic Assessments furnished via Audio-only Telecommunications

We have finalized several flexibilities for OTPs regarding the use of telecommunications, both during the PHE for COVID-19 and outside of the PHE. In the CY 2020 PFS final rule, we finalized a policy allowing OTPs to furnish substance use counseling and individual and group therapy via two-way interactive audio-video communication technology. In the IFC entitled “Medicare and Medicaid Programs: Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency,” which appeared in the April 6, 2020 **Federal Register** (85 FR 19258), we revised paragraphs (iii) and (iv) in the definition of opioid use disorder treatment service at § 410.67(b) on an interim final basis to allow the therapy and counseling portions of the weekly bundles, as well as the add-on code for additional counseling or therapy,

to be furnished using audio-only telephone calls rather than via two-way interactive audio-video communication technology during the PHE for the COVID-19 if beneficiaries do not have access to two-way audio-video communications technology, provided all other applicable requirements are met. In the CY 2022 PFS final rule (86 FR 65341 through 65343), we finalized that after the conclusion of the PHE for COVID-19, OTPs are permitted to furnish substance use counseling and individual and group therapy via audio-only telephone calls when audio and video communication technology is not available to the beneficiary. As we explained in the CY 2022 PFS final rule (86 FR 65342), we interpret the requirement that audio/video technology is “not available to the beneficiary” to include circumstances in which the beneficiary is not capable of or has not consented to the use of devices that permit a two-way, audio/video interaction because in each of these instances audio/video communication technology is not able to be used in furnishing services to the beneficiary. More recently in the CY 2023 PFS final rule (87 FR 69775 through 69777), we further extended telecommunication flexibilities for the initiation of treatment with buprenorphine outside of the COVID-19 PHE. Specifically, we allowed the OTP intake add-on code to be furnished via two-way, audio-video communications technology when billed for the initiation of treatment with buprenorphine, to the extent that the use of audio-video telecommunications technology to initiate treatment with buprenorphine is authorized by DEA and SAMHSA at the time the service is furnished. We also permitted the use of audio-only communication technology to initiate treatment with buprenorphine in cases where audio-video technology is not available to the beneficiary, provided all other applicable requirements are met.

In the IFC entitled “Medicare and Medicaid Programs, Basic Health Program, and Exchanges; Additional Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency and Delay of Certain Reporting Requirements for the Skilled Nursing Facility Quality Reporting Program,” which appeared in the May 8, 2020 **Federal Register** (85 FR 27558), we revised paragraph (vii) in the definition of “Opioid use disorder treatment service” at

§ 410.67(b) on an interim final basis to allow periodic assessments to be furnished during the PHE for COVID-19 via two-way interactive audio-video telecommunication technology and, in cases where beneficiaries do not have access to two-way audio-video communication technology, to permit the periodic assessments to be furnished using audio-only telephone calls rather than via two-way interactive audio-video communication technology, provided all other applicable requirements are met. In the CY 2021 PFS final rule (85 FR 84690), we finalized our proposal to revise paragraph (vii) in the definition of “Opioid use disorder treatment service” at § 410.67(b) to provide that periodic assessments (HCPCS code G2077) must be furnished during a face-to-face encounter, which includes services furnished via two-way interactive audio-video communication technology, as clinically appropriate, provided all other applicable requirements are met, on a permanent basis.

Furthermore, in the CY 2023 PFS proposed rule (87 FR 46093), we sought comment on whether we should allow periodic assessments to continue to be furnished using audio-only communication technology following the end of the PHE for COVID-19 for patients who are receiving treatment via buprenorphine, and if this flexibility should also continue to apply to patients receiving methadone or naltrexone. In response, several commenters advocated for CMS to continue to allow periodic assessments to be furnished audio-only when video is not available after the end of the PHE. Commenters highlighted that making audio-only flexibilities permanent would further promote equity for individuals who are economically disadvantaged, live in rural areas, are racial and ethnic minorities, lack access to reliable broadband or internet access, or do not possess devices with video capability. Additionally, a commenter cited a 2020 HHS Issue Brief indicating higher utilization of audio-only visits for older adults. Specifically, evidence suggests that the proportion of telephonic audio-only visits increases with the age of the patient, with “17 percent of visits delivered via audio-only interaction for patients 41-60 years of age, 30

percent for patients 61-80 years of age, and 47 percent of visits for patients over 81.”¹⁴² One commenter stated that periodic assessments are no less complex than intake/initial assessments, and thus are equally appropriate for audio-video and audio-only care. Lastly, several commenters expressed support for the use of telecommunications in circumstances when the provider and patient have together determined that the patient would individually benefit from telehealth services and a high quality of care is maintained. They encouraged CMS to expand flexibilities to furnish substance use disorder (SUD) services via telecommunications to allow providers and patients to decide collaboratively the best modality for individualized care. After considering these comments, CMS determined that it would be appropriate to allow periodic assessments to be furnished audio-only when video is not available through the end of CY 2023, to the extent that it is authorized by SAMHSA and DEA at the time the service is furnished and, in a manner consistent with all applicable requirements. We stated our belief that this modification would allow continued beneficiary access to these services for the duration of CY 2023 in the event the PHE terminated before the end of 2023 and that it would also grant additional time for CMS to further consider telecommunication flexibilities associated with periodic assessments. Accordingly, we revised the requirements related to the periodic assessment services in paragraph (vii) in the definition of “Opioid use disorder treatment services” at § 410.67(b) of the regulations to reflect these changes.

Section 4113 of Division FF, Title IV, Subtitle A of the Consolidated Appropriations Act of 2023 (CAA, 2023) (Pub. L. 117-328, December 29, 2022) extended the telehealth flexibilities enacted in the Consolidated Appropriations Act of 2022 (CAA, 2022) (Pub. L. 117-103, March 15, 2022). Specifically, it amended sections 1834(m), 1834(o), and 1834(y) of the Act to delay the requirement for an in-person visit prior to furnishing certain mental health services via

¹⁴² HHS ASPE Issue Brief: Medicare beneficiary use of telehealth visits: Early Data from the Start of the COVID-19 Pandemic (July 27, 2020). <https://aspe.hhs.gov/reports/medicare-beneficiary-use-telehealth-visits-early-data-start-covid-19-pandemic>.

telecommunications technology by physicians and other practitioners, Rural Health Clinics (RHCs), and Federally Qualified Health Centers (FQHCs) until dates of service on or after January 1, 2025 if the COVID-19 PHE ends prior to that date. Additionally, it extended the flexibilities available during the PHE that allow for certain Medicare telehealth services defined in section 1834(m)(4)(F)(i) of the Act to be furnished via an audio-only telecommunications system through December 31, 2024 if the PHE for COVID-19 ends prior to that date. The PHE for COVID-19, which was declared under section 319 of the Public Health Service Act, expired at the end of the day on May 11, 2023, so the aforementioned flexibilities will be extended through the end of CY 2024 or CY 2025, as applicable.

To better align coverage for periodic assessments furnished by OTPs with the telehealth flexibilities described in section 4113 of the CAA, 2023, we are proposing to extend the audio-only flexibilities for periodic assessments furnished by OTPs through the end of CY 2024. Under this proposal, we would allow periodic assessments to be furnished audio-only when video is not available to the extent that use of audio-only communications technology is permitted under the applicable SAMHSA and DEA requirements at the time the service is furnished and all other applicable requirements are met. We believe extending this flexibility would promote continued beneficiary access to these services following the end of the PHE and for the duration of CY 2024. During the COVID-19 pandemic, substance use disorder treatment facilities increased telemedicine offerings by 143 percent, and as of 2021, almost 60 percent of SUD treatment facilities offer telehealth.¹⁴³ Notably, telephone-based (that is, audio-only) therapy and recovery support services provided by SUD programs have been found to be one of the most common modes of telehealth for treatment of opioid use disorder.¹⁴⁴ Therefore, extending these audio-only flexibilities for an additional year may minimize disruptions associated with the conclusion

¹⁴³ <https://pubmed.ncbi.nlm.nih.gov/34407631/>.

¹⁴⁴ <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC8250742/>.

of the PHE. Additionally, evidence has shown that Medicare beneficiaries who are older than 65 years-old, racial/ethnic minorities, dual-enrollees, or living in rural areas, or who experience low broadband access, low-income, and/or not speaking English as their primary language, are more likely to be offered and use audio-only telemedicine services than audio-video services.¹⁴⁵ Other evidence also suggests that while Tribal populations, including American Indian and Alaska Natives, have the highest rates of OUD prevalence among Medicare beneficiaries, one-third of these populations do not have adequate access to high-speed broadband and continue to rely on audio-only visits.¹⁴⁶ Therefore, minimizing disruptions to care for beneficiaries currently receiving audio-only periodic assessments may further promote health equity and minimize disparities in access to care. Lastly, extending these flexibilities another year will allow CMS time to further consider this issue, including whether periodic assessments should continue to be furnished using audio-only communication technology following the end of CY 2024 for patients who are receiving treatment via buprenorphine, methadone, and/or naltrexone at OTPs.

Accordingly, we are proposing to revise paragraph (vii) of the definition of “Opioid treatment services” at § 410.67(b) of the regulations to state that through the end of CY 2024, in cases where a beneficiary does not have access to two-way audio-video communications technology, periodic assessments can be furnished using audio-only telephone calls if all other applicable requirements are met.

3. Intensive Outpatient Program (IOP) Services Provided by OTPs

In the CY 2023 PFS proposed rule, we solicited comments on intensive outpatient mental health treatment (87 FR 45943 through 45944). Commenters emphasized the importance of ensuring access to intensive outpatient program (IOP) services in OTP settings and that these

¹⁴⁵ <https://pubmed.ncbi.nlm.nih.gov/33471458/>; <https://www.kff.org/medicare/issue-brief/medicare-and-telehealth-coverage-and-use-during-the-covid-19-pandemic-and-options-for-the-future/>; https://journals.lww.com/lww-medicalcare/Fulltext/2021/11000/Disparities_in_Audio_only_Telemedicine_Use_Among.10.aspx.

¹⁴⁶ <https://docs.fcc.gov/public/attachments/FCC-20-50A1.pdf>; <https://www.cms.gov/files/document/aian-telehealthwebinar.pdf>; <https://www.sciencedirect.com/science/article/pii/S0749379721000921?via%3Dihub>.

services are valuable to those with SUDs (for example, OUD), including individuals who cannot stabilize at a lower level of care or require more care than can be provided in office settings and individuals who have stabilized biomedical conditions and the need for close monitoring but no longer require a higher level of care for SUD treatment, such as partial hospitalization or inpatient care.

Please see the CY 2024 Outpatient Prospective Payment System proposed rule for the full policy discussion and additional details regarding Medicare payment for IOP services provided by OTPs.

G. Medicare Shared Savings Program

1. Executive Summary and Background

a. Purpose

Eligible groups of providers and suppliers, including physicians, hospitals, and other healthcare providers, may participate in the Medicare Shared Savings Program (Shared Savings Program) by forming or joining an accountable care organization (ACO) and in so doing agree to become accountable for the total cost and quality of care provided under Traditional Medicare to an assigned population of Medicare fee-for-service (FFS) beneficiaries. Under the Shared Savings Program, providers and suppliers that participate in an ACO continue to receive traditional Medicare FFS payments under Parts A and B, and the ACO may be eligible to receive a shared savings payment if it meets specified quality and savings requirements, and in some instances may be required to share in losses if it increases health care spending.

As of January 1, 2023, 10.9 million people with Medicare receive care from one of the 573,126 health care providers in the 456 ACOs participating in the Shared Savings Program, the largest value-based care program in the country.¹⁴⁷ While the Shared Savings Program

¹⁴⁷ Refer to CMS, Shared Savings Program Fast Facts – As of January 1, 2023, available at <https://www.cms.gov/files/document/2023-shared-savings-program-fast-facts.pdf>.

experienced a decrease in the number of ACOs and assigned beneficiaries for 2023, the policies finalized in the CY 2023 PFS final rule (87 FR 69777 through 69968) are expected to grow participation in the program for 2024 and beyond, when many of the new policies are set to go into effect. These policies are expected to drive growth in participation, particularly in rural and underserved areas, promote equity, advance alignment across accountable care initiatives, and increase the number of beneficiaries assigned to ACOs participating in the program by up to four million over the next several years.¹⁴⁸ Accordingly, we expect these recently finalized changes will support CMS in achieving its goal of having 100 percent of people with Original Medicare in a care relationship with accountability for quality and total cost of care by 2030.¹⁴⁹

Section III.G. of this proposed rule addresses changes to the Shared Savings Program regulations to further advance Medicare’s overall value-based care strategy of growth, alignment, and equity, and to respond to concerns raised by ACOs and other interested parties. We propose changes to the quality performance standard and reporting requirements under the Alternative Payment Model (APM) Performance Pathway (APP) within the Quality Payment Program (QPP) that would continue to move ACOs toward digital measurement of quality and align with the QPP. Further, the policy proposals would add a third step to the step-wise beneficiary assignment methodology under which we would use an expanded period of time to identify whether a beneficiary has met the requirement for having received a primary care service from a physician who is an ACO professional in the ACO to allow additional beneficiaries to be eligible for assignment, as well as to propose related changes to how we

¹⁴⁸ See CMS Press Release, “CMS Announces Increase in 2023 in Organizations and Beneficiaries Benefiting from Coordinated Care in Accountable Care Relationship”, January 17, 2023, available at <https://www.cms.gov/newsroom/press-releases/cms-announces-increase-2023-organizations-and-beneficiaries-benefiting-coordinated-care-accountable>.

¹⁴⁹ Ibid. See also, Seshamani M, Fowler E, Brooks-LaSure C. Building On The CMS Strategic Vision: Working Together For A Stronger Medicare. Health Affairs. January 11, 2022. Available at <https://www.healthaffairs.org/doi/10.1377/forefront.20220110.198444>. identify assignable beneficiaries used in certain Shared Savings Program calculations.

Additionally, we are proposing updates to the definition of primary care services used for purposes of beneficiary assignment to remain consistent with billing and coding guidelines. We also propose refinements to the financial benchmarking methodology for ACOs in agreement periods beginning on January 1, 2024, and in subsequent years to cap the risk score growth in an ACO's regional service area when calculating regional trends used to update the historical benchmark at the time of financial reconciliation for symmetry with the cap on ACO risk score growth; apply the same CMS-HCC risk adjustment methodology applicable to the calendar year corresponding to the performance year in calculating risk scores for Medicare FFS beneficiaries for each benchmark year; further mitigate the impact of the negative regional adjustment on the benchmark to encourage participation by ACOs caring for medically complex, high-cost beneficiaries; and specify the circumstances in which CMS would recalculate the prior savings adjustment for changes in values used in benchmark calculations due to compliance action taken to address avoidance of at-risk beneficiaries, or as a result of the issuance of a revised initial determination of financial performance for a previous performance year following a reopening of ACO shared savings and shared losses calculations. We are also proposing to refine our policies for the newly established advance investment payments (AIP) and make updates to other programmatic areas including the program's eligibility requirements and make timely technical changes to the regulations for clarity and consistency. Lastly, we seek comment on potential future developments to Shared Savings Program policies, including with respect to incorporating a new track that would offer a higher level of risk and potential reward than currently available under the ENHANCED track, refining the three-way blended benchmark update factor and the prior savings adjustment, and promoting ACO and community-based organization (CBO) collaboration.

b. Statutory and Regulatory Background on the Shared Savings Program

On March 23, 2010, the Patient Protection and Affordable Care Act (Pub. L. 111–148) was enacted, followed by enactment of the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152) on March 30, 2010, which amended certain provisions of the Patient Protection and Affordable Care Act (hereinafter collectively referred to as “the Affordable Care Act”). Section 3022 of the Affordable Care Act amended Title XVIII of the Act (42 U.S.C. 1395 et seq.) by adding section 1899 of the Act to establish the Medicare Shared Savings Program (Shared Savings Program) to facilitate coordination and cooperation among healthcare providers to improve the quality of care for Medicare FFS beneficiaries and reduce the rate of growth in expenditures under Medicare Parts A and B. (See 42 U.S.C. 1395jjj.)

Section 1899 of the Act has been amended through subsequent legislation. The requirements for assignment of Medicare FFS beneficiaries to ACOs participating under the program were amended by the 21st Century Cures Act (the CURES Act) (Pub. L. 114–255, December 13, 2016). The Bipartisan Budget Act of 2018 (Pub. L. 115–123, February 9, 2018), further amended section 1899 of the Act to provide for the following: expanded use of telehealth services by physicians or practitioners participating in an applicable ACO to furnish services to prospectively assigned beneficiaries; greater flexibility in the assignment of Medicare FFS beneficiaries to ACOs by allowing ACOs in tracks under retrospective beneficiary assignment a choice of prospective assignment for the agreement period; permitting Medicare FFS beneficiaries to voluntarily identify an ACO professional as their primary care provider and requiring that such beneficiaries be notified of the ability to make and change such identification, and mandating that any such voluntary identification will supersede claims-based assignment; and allowing ACOs under certain two-sided models to establish CMS-approved beneficiary incentive programs.

The Shared Savings Program regulations are codified at 42 CFR part 425. The final rule establishing the Shared Savings Program appeared in the November 2, 2011 **Federal Register** (Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations; final rule (76 FR 67802) (hereinafter referred to as the “November 2011 final rule”). A subsequent major update to the program rules appeared in the June 9, 2015 **Federal Register** (Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations; final rule (80 FR 32692) (hereinafter referred to as the “June 2015 final rule”). The final rule entitled, “Medicare Program; Medicare Shared Savings Program; Accountable Care Organizations—Revised Benchmark Rebased Methodology, Facilitating Transition to Performance-Based Risk, and Administrative Finality of Financial Calculations,” which addressed changes related to the program’s financial benchmark methodology, appeared in the June 10, 2016 **Federal Register** (81 FR 37950) (hereinafter referred to as the “June 2016 final rule”). A final rule, “Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2019; Medicare Shared Savings Program Requirements; Quality Payment Program; Medicaid Promoting Interoperability Program; Quality Payment Program—Extreme and Uncontrollable Circumstance Policy for the 2019 MIPS Payment Year; Provisions From the Medicare Shared Savings Program—Accountable Care Organizations—Pathways to Success; and Expanding the Use of Telehealth Services for the Treatment of Opioid Use Disorder Under the Substance Use-Disorder Prevention That Promotes Opioid Recovery and Treatment (SUPPORT) for Patients and Communities Act”, appeared in the November 23, 2018 **Federal Register** (83 FR 59452) (hereinafter referred to as the “November 2018 final rule” or the “CY 2019 PFS final rule”). In the November 2018 final rule, we finalized a voluntary 6-month extension for existing ACOs whose participation agreements would otherwise expire on December 31, 2018; allowed beneficiaries greater flexibility in designating their primary care provider and in the use of that designation for purposes of assigning the beneficiary to an ACO if

the clinician they align with is participating in an ACO; revised the definition of primary care services used in beneficiary assignment; provided relief for ACOs and their clinicians impacted by extreme and uncontrollable circumstances in performance year 2018 and subsequent years; established a new Certified Electronic Health Record Technology (CEHRT) use threshold requirement; and reduced the Shared Savings Program quality measure set from 31 to 23 measures (83 FR 59940 through 59990 and 59707 through 59715).

A final rule redesigning the Shared Savings Program appeared in the December 31, 2018 **Federal Register** (Medicare Program: Medicare Shared Savings Program; Accountable Care Organizations—Pathways to Success and Uncontrollable Circumstances Policies for Performance Year 2017; final rule (83 FR 67816) (hereinafter referred to as the “December 2018 final rule”). In the December 2018 final rule, we finalized a number of policies for the Shared Savings Program, including a redesign of the participation options available under the program to encourage ACOs to transition to two-sided models; new tools to support coordination of care across settings and strengthen beneficiary engagement; and revisions to ensure rigorous benchmarking.

In the interim final rule with comment period (IFC) entitled “Medicare and Medicaid Programs; Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency”, which was effective on the March 31, 2020 date of display and appeared in the April 6, 2020 **Federal Register** (85 FR 19230) (hereinafter referred to as the “March 31, 2020 COVID-19 IFC”), we removed the restriction that prevented the application of the Shared Savings Program extreme and uncontrollable circumstances policy for disasters that occur during the quality reporting period if the reporting period is extended to offer relief under the Shared Savings Program to all ACOs that may be unable to completely and accurately report quality data for 2019 due to the PHE for COVID-19 (85 FR 19267 and 19268).

In the IFC entitled “Medicare and Medicaid Programs; Basic Health Program, and Exchanges; Additional Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency and Delay of Certain Reporting Requirements for the Skilled Nursing Facility Quality Reporting Program” which was effective on May 8, 2020, and appeared in the May 8, 2020 **Federal Register** (85 FR 27573 through 27587) (hereinafter referred to as the “May 8, 2020 COVID-19 IFC”), we modified Shared Savings Program policies to: (1) allow ACOs whose agreement periods expired on December 31, 2020, the option to extend their existing agreement period by 1-year, and allow ACOs in the BASIC track’s glide path the option to elect to maintain their current level of participation for performance year 2021; (2) adjust program calculations to remove payment amounts for episodes of care for treatment of COVID-19; and (3) expand the definition of primary care services for purposes of determining beneficiary assignment to include telehealth codes for virtual check-ins, e-visits, and telephonic communication. We also clarified the applicability of the program’s extreme and uncontrollable circumstances policy to mitigate shared losses for the period of the PHE for COVID-19 starting in January 2020.

We have also made use of the annual CY PFS rules to address quality reporting for the Shared Savings Program and certain other issues. For summaries of certain policies finalized in prior PFS rules, refer to the CY 2020 PFS proposed rule (84 FR 40705), the CY 2021 PFS final rule (85 FR 84717), the CY 2022 PFS final rule (86 FR 65253 and 65254), and the CY 2023 PFS final rule (87 FR 69779 and 69780). In the CY 2023 PFS final rule (87 FR 69777 through 69968), we finalized changes to Shared Savings Program policies, including to: provide advance shared savings payments in the form of advance investment payments to certain new, low revenue ACOs that can be used to support their participation in the Shared Savings Program; provide greater flexibility in the progression to performance-based risk; establish a health equity adjustment to an ACO’s Merit-based Incentive Payment System (MIPS) quality performance

category score used to determine shared savings and losses to recognize high quality performance by ACOs serving a higher proportion of underserved populations; incorporate a sliding scale reflecting an ACO's quality performance for use in determining shared savings for ACOs, and revise the approach for determining shared losses for ENHANCED track ACOs; modify the benchmarking methodology to strengthen financial incentives for long term participation by reducing the impact of ACOs' performance and market penetration on their benchmarks, and to support the business case for ACOs serving high risk and high dually eligible populations to participate, as well as mitigate bias in regional expenditure calculations for ACOs electing prospective assignment; expand opportunities for certain low revenue ACOs participating in the BASIC track to share in savings; make changes to policies within other programmatic areas, including the program's beneficiary assignment methodology, requirements related to marketing material review and beneficiary notifications, the SNF 3-day rule waiver application, and data sharing requirements.

Policies applicable to Shared Savings Program ACOs for purposes of reporting for other programs have also continued to evolve based on changes in the statute. The Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, April 16, 2015) established the Quality Payment Program. In the CY 2017 Quality Payment Program final rule with comment period (81 FR 77008), we established regulations for the MIPS and Advanced APMs and related policies applicable to eligible clinicians who participate in APMs, including the Shared Savings Program. We have also made updates to policies under the Quality Payment Program through the annual CY PFS rules.

c. Summary of Shared Savings Program Proposals

In sections III.G.2. through III.G.7. of this proposed rule, we propose modifications to the Shared Savings Program's policies, and describe comment solicitations. As a general summary, we are proposing the following changes to Shared Savings Program policies to:

- Revise the quality reporting and the quality performance requirements (section III.G.2. of this proposed rule), including the following:

- ++ Allow Shared Savings Program ACOs the option to report quality measures under the APP on only their Medicare beneficiaries through Medicare CQMs (section III.G.2.b. of this proposed rule).

- ++ Update the APP measure set for Shared Savings Program ACOs (section III.G.2.c. of this proposed rule).

- ++ Revise the calculation of the health equity adjustment underserved multiplier (section III.G.2.d. of this proposed rule).

- ++ Use historical data to establish the 40th percentile MIPS Quality performance category score used for the quality performance standard (section III.G.2.e. of this proposed rule).

- ++ Apply a Shared Savings Program scoring policy for suppressed APP measures (section III.G.2.f. of this proposed rule).

- ++ Require Spanish language administration of the CAHPS for MIPS survey (section III.G.2.g. of this proposed rule).

- ++ Align CEHRT requirements for Shared Savings Program ACOs with MIPS (section III.G.2.h. of this proposed rule).

- ++ Solicit comments on MIPS Value Pathway reporting for specialists in Shared Savings Program ACOs (section III.G.2.i. of this proposed rule).

- ++ Revise the requirement to meet the case minimum requirement for quality performance standard determinations (section III.G.2.j. of this proposed rule).

- Revise the policies for determining beneficiary assignment (section III.G.3 of this proposed rule).

++ Modify the step-wise beneficiary assignment methodology and approach to identifying the assignable beneficiary population (section III.G.3.a of this proposed rule).

++ Update the definition of primary care services used in beneficiary assignment at § 425.400(c) (section III.G.3.b of this proposed rule).

- Revise the policies on the Shared Savings Program's benchmarking methodology (section III.G.4 of this proposed rule).

++ Modify the calculation of the regional update factor used to update the historical benchmark between benchmark year (BY) 3 and the performance year by capping an ACO's regional service area risk score growth through use of an adjustment factor to provide more equitable treatment for ACOs and for symmetry with the cap on ACO risk score growth (section III.G.4.b of this proposed rule).

++ Further mitigate the impact of the negative regional adjustment on the benchmark to encourage participation by ACOs caring for medically complex, high-cost beneficiaries (section III.G.4.c of this proposed rule).

++ Specify the circumstances in which CMS would recalculate the prior savings adjustment for changes in values used in benchmark calculations due to compliance action taken to address avoidance of at-risk beneficiaries, or as a result of the issuance of a revised initial determination of financial performance for a previous performance year (section III.G.4.d of this proposed rule).

++ Specify use of the CMS-HCC risk adjustment methodology applicable to the calendar year corresponding to the performance year in calculating prospective HCC risk scores for Medicare FFS beneficiaries for the performance year, and for each benchmark year of the ACO's agreement period (section III.G.4.e. of this proposed rule).

- Refine AIP policies, including the following (section III.G.5 of this proposed rule):

++ Modify AIP eligibility requirements to allow an ACO to elect to advance to a two-sided model level of the BASIC track's glide path beginning with the third performance year of the 5-year agreement period in which the ACO receives advance investment payments.

++ Modify AIP recoupment and recovery policies to forgo immediate collection of advance investment payments from an ACO that terminates its participation agreement early in order to early renew under a new participation agreement to continue their participation in the Shared Savings Program.

++ Modify termination policies to specify that CMS would immediately terminate advance investment payments to an ACO for future quarters if the ACO voluntarily terminates from the Shared Savings Program.

++ Modify ACO reporting requirements to require ACOs to submit spend plan updates to CMS in addition to publicly reporting spend plan updates.

++ Modify AIP requirements to permit ACOs to seek reconsideration review of all quarterly payment calculations.

- Update Shared Savings Program eligibility requirements, including the following (section III.G.6 of this proposed rule):

++ Remove the option for ACOs to request an exception to the shared governance requirement that 75 percent control of an ACO's governing body must be held by ACO participants.

++ Codify the existing Shared Savings Program operational approach to specify that CMS determines that an ACO participant TIN participated in a performance-based risk Medicare ACO initiative if it was included on a participant list used in financial reconciliation for a performance year under performance-based risk during the five most recent performance years.

- Make technical changes to references in Shared Savings Program regulations (section III.G.7 of this proposed rule), including to update assignment selection references to either

§ 425.226(a)(1) or § 425.400(a)(4)(ii) in subpart G of the regulations, correct typographical errors in the definitions in § 425.20, and update certain terminology used in § 425.702.

In addition, we are soliciting comment on potential future developments to Shared Savings Program policies (section III.G.8. of this proposed rule), including: incorporating a track with higher risk and potential reward than the ENHANCED track; modifying the amount of the prior savings adjustment through potential changes to the 50 percent scaling factor used in determining the adjustment, as well as considerations for potential modifications to the positive regional adjustment to reduce the possibility of inflating the benchmark; potential refinements to the ACPT and the three-way blended benchmark update factor over time to further mitigate potential ratchet effects within the update factor; and policies to promote ACO and CBO collaboration.

In combination, the Shared Savings Program proposals are anticipated to improve the incentive for ACOs to sustainably participate and earn shared savings in the program. On net, total program spending is estimated to decrease by \$330 million over the 10-year period 2024 through 2033. These changes are anticipated to support the goals outlined in the CY 2023 PFS final rule for growing the program with a particular focus on including underserved beneficiaries.

Certain policies, including both existing policies and the proposed new policies described in this proposed rule, rely upon the authority granted in section 1899(i)(3) of the Act to use other payment models that the Secretary determines will improve the quality and efficiency of items and services furnished under the Medicare program, and that do not result in program expenditures greater than those that would result under the statutory payment model. The following proposals require the use of our authority under section 1899(i) of the Act: the proposed modifications to the calculation of regional component of the three-way blended update factor to cap regional service area risk score growth for symmetry with the ACO risk score growth cap, as described in section III.G.4.b of this proposed rule and the refinements to AIP

policies as described in section III.G.5. of this proposed rule. Further, certain existing policies adopted under the authority of section 1899(i)(3) of the Act that depend on use of the assigned population and assignable beneficiary populations would be affected by the proposed addition of a new third step of the beneficiary assignment methodology and the proposed revisions to the definition of assignable beneficiary described in section III.G.3. of this proposed rule, including the following: the amount of advance investment payments; factors used in determining shared losses for ACOs under two-sided models (including calculation of the variable MSR/MLR based on the ACO's number of assigned beneficiaries, and the applicability of the extreme and uncontrollable circumstances policy for mitigating shared losses for two-sided model ACOs); and calculation of the ACPT, regional and national components of the three-way blended benchmark update factor. As described in the Regulatory Impact Analysis in section VII. and elsewhere in this proposed rule, these proposed changes to our payment methodology are expected to improve the quality and efficiency of care and are not expected to result in a situation in which the payment methodology under the Shared Savings Program, including all policies adopted under the authority of section 1899(i) of the Act, results in more spending under the program than would have resulted under the statutory payment methodology in section 1899(d) of the Act. We will continue to reexamine this projection in the future to ensure that the requirement under section 1899(i)(3)(B) of the Act that an alternative payment model not result in additional program expenditures continues to be satisfied. In the event that we later determine that the payment model that includes policies established under section 1899(i)(3) of the Act no longer meets this requirement, we would undertake additional notice and comment rulemaking to make adjustments to the payment model to assure continued compliance with the statutory requirements.

2. Quality Performance Standard and Other Reporting Requirements

a. Background

Section 1899(b)(3)(C) of the Act states that the Secretary shall establish quality performance standards to assess the quality of care furnished by ACOs and seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both for purposes of assessing such quality of care. As we stated in the November 2011 final rule establishing the Shared Savings Program (76 FR 67872), our principal goal in selecting quality measures for ACOs has been to identify measures of success in the delivery of high-quality health care at the individual and population levels. In the November 2011 final rule, we established a quality measure set spanning four domains: patient experience of care, care coordination/ patient safety, preventative health, and at-risk population (76 FR 67872 through 67891). We have subsequently updated the measures that comprise the quality performance measure set for the Shared Savings Program through rulemaking in the CY 2015, 2016, 2017, 2019, and 2023 PFS final rules (79 FR 67907 through 67921, 80 FR 71263 through 71269, 81 FR 80484 through 80488, 83 FR 59707 through 59715, 87 FR 69860 through 69763, respectively).

b. Proposal for Shared Savings Program ACOs to Report Medicare CQMs

(1) Background

In the CY 2021 PFS final rule, CMS finalized modifications to the Shared Savings Program quality reporting requirements and quality performance standard for performance year 2021 and subsequent performance years (85 FR 84720). For performance year 2021 and subsequent years, ACOs are required to report quality data via the Alternative Payment Model (APM) Performance Pathway (APP). Pursuant to policies finalized under the CY 2022 and CY 2023 PFS (86 FR 65685; 87 FR 69858), to meet the quality performance standard under the Shared Savings Program through performance year 2024, ACOs must report the ten CMS Web Interface measures or the three eCQMs/MIPS CQMs, and the CAHPS for MIPS survey. In

performance year 2025 and subsequent performance years, ACOs must report the three eCQMs/MIPS CQMs and the CAHPS for MIPS survey.

Since the CY 2021 PFS final rule was issued, interested parties have continued to express concerns about requiring ACOs to report all payer/all patient eCQMs/MIPS CQMs via the APP due to the cost of purchasing and implementing a system wide infrastructure to aggregate data from multiple ACO participant TINs and varying EHR systems (86 FR 65257). In the CY 2022 PFS, commenters supported our acknowledgement of the complexity of the transition to all payer/all patient eCQM/MIPS CQMs (86 FR 65259). Additionally, one commenter questioned how data completeness standards could be met, given the issues of de-duplication and patients adding or moving insurance coverage (87 FR 65260). In public comment to the CY 2023 PFS proposed rule, some commenters expressed multiple concerns regarding the requirement to report all payer/all patient eCQMs/MIPS CQMS beginning in performance year 2025, such as issues related to meeting all payer data requirements, data completeness requirements, data aggregation and deduplication issues, and interoperability issues among different EHRs (87 FR 69837). In the CY 2023 PFS final rule, we explained these comments went beyond the scope of our proposals. These comment letters included details of the commenters' concerns. Specifically, some commenters, which included ACOs, noted the financial burden of aggregating, deduplicating, and exporting eCQM data across multiple TINs and EHRs. Commenters, including ACOs, expressed concerns that the requirement to report all payer measures ties performance to patients that the ACO does not actively manage, increases the difficulty of meeting data completeness, and may negatively impact an ACO's performance by including patients seen by specialists. We also acknowledged that as the transition to reporting all-payer eCQMs/MIPS CQMs continues, the health equity adjustment which we finalized in the CY 2023 PFS final rule (87 FR 69842) will support ACOs that may experience challenges with the new quality reporting requirement and will provide an incentive for ACOs to serve underserved

populations during the transition to reporting eCQMs/MIPS CQMs. In the CY 2023 PFS final rule, we stated that we are continuing to monitor the impact of these policies as we gain more experience with ACOs reporting all payer/all patient eCQMs/MIPS CQMs and, further, that we are exploring how to address some of the concerns related to data aggregation and the all payer requirement and may revisit these and related issues in future rulemaking based on lessons learned (87 FR 69833).

Consistent with our goal to support ACOs in the transition to all payer/all patient eCQMs/MIPS CQMs, in the CY 2023 final rule we extended the eCQM/MIPS CQM reporting incentive through PY 2024 to provide an incentive to ACOs to report the eCQMs/MIPS CQMs, while allowing them time to gauge their performance on the eCQMs/MIPS CQMs before full reporting of these measures is required beginning in performance year 2025 (87 FR 69835).

Building on our goal to provide technical support to ACOs and to help ACOs build the skills necessary to aggregate and match patient data to report all payer/all patient eCQMs/MIPS CQMs, in December 2022, we hosted a webinar to support ACOs in the transition to reporting all payer/all patient eCQMs/MIPS CQMs and released a guidance document on the topic.

Resources from the “Reporting MIPS CQMs and eCQMs in the APM Performance Pathway” webinar are available at <https://qpp.cms.gov/resources/webinars>. The guidance document,

entitled “Medicare Shared Savings Program: Reporting MIPS CQMs and eCQMs in the Alternative Payment Model Performance Pathway (APP)” is available in the Quality Payment

Program Resource Library at <https://qpp-cm-prod->

[content.s3.amazonaws.com/uploads/2179/APP%20Guidance%20Document%20for%20ACOs.pdf](https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2179/APP%20Guidance%20Document%20for%20ACOs.pdf)

f. We are committed to continuing to support ACOs in the transition to all payer/all patient eCQMs/MIPS CQMs and in the transition to digital quality measurement reporting.

(2) Reporting the Medicare CQMs

In light of the concerns raised by ACOs and other interested parties and our commitment to supporting ACOs in the transition to digital quality measure reporting, for performance year 2024 and subsequent performance years as determined by CMS, we are proposing in section IV.A.4.f.(1)(b) of this proposed rule to establish the Medicare CQMs for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQMs) as a new collection type for Shared Savings Program ACOs reporting on the Medicare CQMs (reporting quality data on beneficiaries eligible for Medicare CQMs as defined at § 425.20) within the APP measure set and administering the CAHPS for MIPS Survey as required under the APP. Medicare CQMs would serve as a transition collection type to help some ACOs build the infrastructure, skills, knowledge, and expertise necessary to report all payer/all patient MIPS CQMs and eCQMs by defining a population of beneficiaries that exist within the all payer/all patient MIPS CQM Specifications and tethering that population to claims encounters with ACO professionals with specialties used in assignment. Specifically, we believe that Medicare CQMs would address the concern raised by ACOs that – for ACOs with a higher proportion of specialty practices and/or multiple EHR systems – the broader all payer/all patient eligible population would capture beneficiaries with no primary care relationship to the ACO. Further, we believe that ACOs, particularly ACOs with a higher proportion of specialty practices and/or multiple EHRs, would be able utilize Medicare Part A and B claims data to help identify the ACO’s eligible population and to validate the ACO’s patient matching and deduplication efforts. For these reasons, we believe that it is appropriate to establish Medicare CQMs as a new collection type for Shared Savings Program ACOs only.

We recognize that Medicare CQMs might not be the suitable collection type for some ACOs, particularly ACOs with a single-EHR platform, a high proportion of primary care practices, and/or ACOs composed of participants with experience reporting all payer/all patient measures in traditional MIPS. We encourage ACOs to evaluate all quality reporting options to

determine which collection type is most appropriate based on the ACO's unique composition and technical infrastructure. In addition to this proposal to report quality data utilizing the Medicare CQMs collection type, in performance year 2024, ACOs would have the option to report quality data utilizing the CMS Web Interface measures, eCQMs, and/or MIPS CQMs collection types. Under this proposal, in performance year 2025 and subsequent performance years as determined by CMS, ACOs would have the option to report quality data utilizing the eCQMs, MIPS CQMs, and/or Medicare CQMs collection types.

Our long-term goal continues to be to support ACOs in the adoption of all payer/all patient measures. We would monitor the reporting of quality data utilizing the Medicare CQMs collection type. For example, one indicator to evaluate Medicare CQMs would be to assess if there are any Medicare CQMs topped out as described at § 414.1380(b)(1)(iv). Therefore, in the 4th year the measure could be removed and would no longer be available for reporting during the performance period (83 FR 59761). Once the measure has reached an extremely topped out status (for example, a measure with an average mean performance within the 98th to 100th percentile range), we may propose the measure for removal in the next rulemaking cycle, regardless of whether or not it is in the midst of the topped out measure lifecycle, due to the extremely high and unvarying performance where meaningful distinctions and improvement in performance can no longer be made, after taking into account any other relevant factors (83 FR 59763). Separately, we may specify higher standards, new measures, or both – up to and including proposing to sunset the Medicare CQM collection type in future rulemaking – to ensure that Medicare CQMs conform to the intent of section 1899(b)(3)(C) of the Act and the priorities established in the CMS National Quality Strategy.

We also remain steadfast in our commitment to support providers in the transition from traditional MIPS to APMs and Advanced APMs. As mentioned above, we acknowledge that Medicare CQMs may not be the preferred collection type for all ACOs. ACOs that are

composed of participants with experience reporting all payer/all patient measures in traditional MIPS would continue to have the option to report all payer/all patient measures under this proposal. In supporting providers in the transition from traditional MIPS to APMs and Advanced APMs we also recognize the corresponding need to support ACOs in the transition to all payer/all patient reporting. In addition to the technical support we would continue to provide ACOs, we believe that the Medicare CQM collection type would aid some ACOs in the transition to all payer/all patient measures by allowing ACOs to focus patient matching and data aggregation efforts on ACO professionals with specialties used in assignment while the ACO builds the infrastructure necessary to report on a broader eligible population.

To facilitate the reporting of Medicare CQMs, we are proposing to amend the definition of “Collection Type” in section IV.A.4.f.(1)(b) of this proposed rule to include the Medicare CQM as an available collection type in MIPS for ACOs that participate in the Shared Savings Program. We note that the Medicare CQMs collection type would serve as a transition collection type and be available as determined by CMS. Additionally, we are proposing to establish data submission and completeness criteria pertaining to the Medicare CQMs for the MIPS quality performance category as discussed in sections IV.A.4.f.(1)(c)(i) and IV.A.4.f.(1)(d)(ii) of this proposed rule.

A Medicare CQM for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQM) is essentially a MIPS CQM reported by an ACO under the APP on only the ACO’s Medicare fee-for-service beneficiaries, instead of its all payer/all patient population. We are proposing to define a beneficiary eligible for Medicare CQM at § 425.20 as a beneficiary identified for purposes of reporting Medicare CQMs for ACOs participating in the Medicare Shared Savings Program (Medicare CQMs) who is either of the following:

- A Medicare fee-for-service beneficiary (as defined at § 425.20) who –

++ Meets the criteria for a beneficiary to be assigned to an ACO described at § 425.401(a); and

++ Had at least one claim with a date of service during the measurement period from an ACO professional who is a primary care physician or who has one of the specialty designations included in § 425.402(c), or who is a PA, NP, or CNS.

- A Medicare fee-for-service beneficiary who is assigned to an ACO in accordance with § 425.402(e) because the beneficiary designated an ACO professional participating in an ACO as responsible for coordinating their overall care.

While this definition refers to beneficiaries that have been assigned to an ACO, it nonetheless differs from our basic assignment methodology described under subpart E and from the concept of assignable beneficiary defined at § 425.20. Specifically, the use of the terms of “claim” (instead of primary care services) and “measurement period” (instead of assignment window) in the definition are synchronous with the application of all payer/all patient MIPS CQM Specifications in reporting Medicare CQMs. For example, we define primary care services as the set of services identified by the HCPCS and revenue center codes designated under § 425.400(c). Each all payer/all patient MIPS CQM Specification identifies eligible encounters that, in part, identify patients that should be included in the measure’s eligible population.

Our proposed definition for beneficiary eligible for Medicare CQMs is intended to create alignment with the all payer/all patient MIPS CQM Specifications. The HCPCS and revenue center codes designated under § 425.400(c) as primary care services for purposes of assignment under the Shared Savings Program only partially over-lap with the codes designated as eligible encounters used to identify the eligible population in all payer/all patient MIPS CQM Specifications. Applying primary care service codes or deferring to the basic assignment methodology under subpart E to identify the beneficiaries eligible for Medicare CQMs would

have the unintended result of limiting the codes used to identify eligible encounters in the Medicare CQM Specification to only the codes that overlap with primary care services. Similarly, we define the assignment window as the 12-month period used to assign beneficiaries to the ACO. In a manner that is identical to the all payer/all patient MIPS CQM Specifications, the Medicare CQM Specifications would identify the measurement period applicable to each measure. Applying the 12-month period used in assignment or deferring to the basic assignment methodology under Subpart E to identify the beneficiaries eligible for Medicare CQMs would have the unintended result of reducing the beneficiaries eligible for Medicare CQMs to only patients that had an eligible encounter during the overlap of the assignment window as defined at § 425.20 and the measurement period as defined in the Medicare CQM Specifications.

In section IV.A.4.f.(1)(d)(ii) of this proposed rule, we are proposing to establish the data completeness criteria threshold for the Medicare CQM collection type, in which a Shared Savings Program ACO that meets the reporting requirements under the APP would submit quality measure data for Medicare CQMs on the APM Entity's applicable beneficiaries eligible for the Medicare CQM, as proposed at § 425.20, who meet the measure's denominator criteria. In section IV.A.4.f.(1)(d)(ii) of this proposed rule, we are proposing the following data completeness criteria thresholds for Medicare CQMs:

- At least 75 percent for the CY 2024, CY 2025, and CY 2026 performance periods/2026, 2027, and 2028 MIPS payment years.
- At least 80 percent for the CY 2027 performance period/2029 MIPS payment year.

With the Medicare CQMs collection type serving as a transition collection type under the APP and would be available as determined by CMS, we are proposing to establish the aforementioned data completeness criteria thresholds in advance of the applicable performance periods. We recognize that it is advantageous to delineate the expectations for ACOs as they prepare to meet the quality reporting requirements for the Medicare CQMs collection type under

the APP. We will assess the availability of the Medicare CQM as a collection type under the APP during the initial years of implementation and determine the timeframe to sunset the Medicare CQM as a collection type in future rulemaking.

An ACO that reports Medicare CQMs in an applicable performance year would aggregate patient data for beneficiaries who are eligible for Medicare CQMs, as proposed at § 425.20, across all ACO participants. The ACO would then match the aggregated patient data with each Medicare CQM Specification to identify the eligible population for each measure. The ACO's aggregated ACO submission must account for 100 percent of the eligible and matched patient population across all ACO participants. Data completeness is calculated based on submitted data. We believe that the proposal to establish the Medicare CQM collection type would address the concerns from ACOs regarding the capability of meeting the data completeness requirement for all payer data. Specifically, our proposal to define Beneficiaries eligible for Medicare CQMs aims to focus ACOs' reporting efforts on beneficiaries with an encounter with an ACO professional with a specialty used in assignment and thereby reduce the potential for missing or un-matched patient data. It is important to note that ACOs that include or are composed solely of FQHCs or RHCs must report quality data on behalf of the FQHCs or RHCs that participate in the ACO. To clarify, while FQHCs and RHCs that provide services that are billed exclusively under FQHC or RHC payment methodologies are exempt from reporting traditional MIPS, FQHCs and RHCs that participate in APMs, such as the Shared Savings Program, are considered APM Entity groups described at § 414.1370.

To facilitate population-based activities related to improving health through quality measurement of Medicare CQMs and to aid ACOs in the process of patient matching and data aggregation necessary to report Medicare CQMs, we would provide ACOs a list of beneficiaries who are eligible for Medicare CQMs within the ACO. As set forth in our regulations at § 425.702, we share certain aggregate reports with ACOs under specific conditions, and this

information includes demographic data that represents the minimum data necessary for ACOs to conduct health care operations work, which includes demographic and diagnostic information necessary to report quality data. We anticipate the list of beneficiaries eligible for Medicare CQMs to be shared once annually, at the beginning of the quality data submission period. Since we would not have full run-out on performance year claims data prior to the start of the quality data submission period, the list of beneficiaries eligible for Medicare CQMs would not be a complete list of beneficiaries that should be included on an ACO's Medicare CQMs reporting. ACOs would have to ensure that all beneficiaries that meet the applicable Medicare CQM Specification and also meet the definition of a beneficiary eligible for Medicare CQMs proposed under § 425.20 are included in the ACO's eligible population/denominator for reporting each Medicare CQM. We are proposing to add new paragraph (c)(1)(iii) to § 425.702 as follows:

For performance year 2024 and subsequent performance years, at the beginning of the quality submission period, CMS, upon the ACO's request for the data for purposes of population-based activities relating to improving health or reducing growth in health care costs, protocol development, case management, and care coordination, provides the ACO with information about its fee-for-service population.

- The following information is made available to ACOs regarding beneficiaries eligible for Medicare CQMs as defined at § 425.20:

- ++ Beneficiary name.

- ++ Date of birth.

- ++ Beneficiary identifier.

- ++ Sex.

- Information in the following categories, which represents the minimum data necessary for ACOs to conduct health care operations work, is made available to ACOs regarding beneficiaries eligible for Medicare CQMs as defined at § 425.20:

++ Demographic data such as enrollment status.

++ Health status information such as risk profile and chronic condition subgroup.

++ Utilization rates of Medicare services such as the use of evaluation and management, hospital, emergency, and post-acute services, including the dates and place of service.

The list of beneficiaries eligible for Medicare CQMs shared by CMS would aim to help ACOs aggregate, and match and deduplicate patient data. We anticipate including the minimum data necessary to facilitate the reporting of Medicare CQMs including beneficiary identifier, gender, date of birth and death (if applicable), chronic condition subgroup, and the NPIs of the top three frequented providers in the ACO. We propose to include health status information such as risk profile and chronic condition subgroup to the extent that such data would aid ACOs in identifying patients that meet the denominator criteria for the Medicare CQM Specifications. We would also provide technical assistance to ACOs when reporting the Medicare CQMs, including providing technical resource documents. Our proposal to create Medicare CQMs is intended to support ACOs through the transition to reporting the all payer/all patient eCQMs/MIPS CQMs and to facilitate quality assessment improvement activities (as described in the definition of health care operations at 45 CFR 164.501) since we would provide ACOs with a list of beneficiaries eligible for Medicare CQM reporting to aid in patient matching and data deduplication.

In the CY 2021 PFS final rule (85 FR 84733), we finalized the following 3 all payer/all patient eCQMs/MIPS CQMs under the APP for performance year 2021 and subsequent performance years:

- Quality ID#: 001 Diabetes: Hemoglobin A1c (HbA1c) Poor Control;
- Quality ID#: 134 Preventive Care and Screening: Screening for Depression and Follow-Up Plan; and
- Quality ID#: 236 Controlling High Blood Pressure.

In section IV.A.4. e. of this proposed rule, we are proposing to add these measures as Medicare CQMs to the APP measure set for Shared Savings Program ACOs beginning with performance year 2024 and subsequent performance years. ACOs may report the 3 Medicare CQMs, or a combination of eCQMs/MIPS CQMs/Medicare CQMs, to meet the Shared Savings Program quality reporting requirement at § 425.510(b) and the quality performance standard at § 425.512(a)(5).

As a result, in order to meet the Shared Savings Program reporting requirements:

- For performance year 2024, an ACO would be required to report the 10 measures under the CMS web interface measures, or the 3 eCQMs/MIPS CQMs/Medicare CQMs. In addition, an ACO would be required to administer the CAHPS for MIPS Survey, and CMS will calculate the two claims-based measures.

- For performance year 2025 and subsequent performance years, an ACO would be required to report the 3 eCQMs/MIPS CQMs/Medicare CQMs. In addition, an ACO would be required to administer the CAHPS for MIPS Survey, and CMS will calculate the two claims-based measures.

ACOs may still report via the APP using the all payer/all patient eCQM/MIPS CQM collection types and may report different collection types for each measure.

In conjunction with the proposed changes to § 425.512(a)(2), as described in section III.G.2.j. of this proposed rule, we propose to incorporate Medicare CQMs into the existing quality performance standard policies for new ACOs at § 425.512(a)(2)(i), (ii), and (iii).

Accordingly, we propose that for the first performance year of an ACO's first agreement period under the Shared Savings Program, if the ACO reports data via the APP and meets MIPS data completeness requirement at § 414.1340 and receives a MIPS Quality performance category score under § 414.1380(b)(1), the ACO will meet the quality performance standard under the Shared Savings Program, if:

- For performance year 2024. The ACO reports the 10 CMS Web Interface measures or the 3 eCQMs/MIPS CQMs/Medicare CQMs, and administers a CAHPS for MIPS survey under the APP.

- For performance year 2025 and subsequent performance years. The ACO reports the 3 eCQMs/MIPS CQMs/Medicare CQMs and administers a CAHPS for MIPS survey under the APP.

Additionally, we propose to incorporate Medicare CQMs into the existing policies at § 425.512(a)(5)(iii) for when an ACO would not meet the quality performance standard or the alternative quality performance standard. Accordingly, we propose that an ACO would not meet the quality performance standard or the alternative quality performance standard if:

- For performance year 2024, if an ACO (1) does not report any of the 10 CMS Web Interface measures or any of the three eCQMs/MIPS CQMs/Medicare CQMs and (2) does not administer a CAHPS for MIPS survey under the APP.

- For performance year 2025 and subsequent performance years, if an ACO (1) does not report any of the three eCQMs/MIPS CQMs/Medicare CQMs and (2) does not administer a CAHPS for MIPS survey under the APP.

We are not proposing to add Medicare CQMs to the eCQM/MIPS CQM reporting incentive described at § 425.512(a)(5)(i)(A)(2) for performance year 2024. The eCQM/MIPS CQM reporting incentive intends to provide an incentive to ACOs to report the all payer/all patient eCQMs/MIPS CQMs while allowing them time to gauge their performance on the all payer/all patient eCQMs/MIPS CQMs before full reporting of these measures is required beginning in performance year 2025.

Under the goals of the CMS National Quality Strategy, CMS is moving towards a building-block approach to streamline quality measure across CMS quality programs for the adult and pediatric populations. This “Universal Foundation” of quality measure will focus

provider attention, reduce burden, identify disparities in care, prioritize development of interoperable, digital quality measures, allow for cross-comparisons across programs, and help identify measurement gaps. Following in the proposals under MIPS, we intend to propose future policies aligning the APP measure set for Sharing Savings Program ACOs with the quality measures under the “Universal Foundation” beginning in performance year 2025. These Universal Foundation measures are proposed to be adopted into the existing the Value in Primary Care MVP as discussed in Table B.11 of Appendix 3: MVP Inventory to this proposed rule. By creating alignment with the Universal Foundation in the Value in Primary Care MVP and the APP measure set by 2025, primary care clinicians would develop familiarity with the same quality measures that are reported in the APP while in MIPS. We expect this alignment would reduce the barriers to participation in the Shared Savings Program.

(3) Benchmarking Policy for Medicare CQMs

As the Shared Savings Program adopted the APP (see, for example, § 425.512(a)(3)(i)), benchmarks for quality measures used by the program are those established under the MIPS policies at § 414.1380(b)(1)(ii). We propose that new benchmarks for scoring ACOs on the Medicare CQMs under MIPS would be developed in alignment with MIPS benchmarking policies. As historical Medicare CQM data would not be available at the time this proposal is finalized (if this proposal is finalized), we propose for performance year 2024 and 2025 to score Medicare CQMs using performance period benchmarks. Similarly, as quality performance data are submitted via Medicare CQM and baseline period data become available to establish historical benchmarks, we propose for performance year 2026 and for subsequent performance years to transition to using historical benchmarks for Medicare CQMs when baseline period data are available to establish historical benchmarks in a manner that is consistent with the MIPS benchmarking policies at § 414.1380(b)(1)(ii).

(4) Expanding the Health Equity Adjustment to Medicare CQMs

In the CY 2023 PFS final rule (87 FR 69838 through 69858), for performance year 2023 and subsequent performance years, we finalized a health equity adjustment to upwardly adjust the MIPS Quality performance score for ACOs that report eCQMs/MIPS CQMs, are high performing on quality, and serve a higher proportion of underserved beneficiaries. As we stated in the CY 2023 PFS final rule, the goals of the health equity adjustment include rewarding ACOs serving a high proportion of underserved beneficiaries and supporting ACOs with the transition to eCQMs/MIPS CQMs (87 FR 69841).

Consistent with the goal of supporting ACOs in their transition to all payer/all patient eCQMs/MIPS CQMs, we are proposing that ACOs that report Medicare CQMs would be eligible for the health equity adjustment to their quality performance category score when calculating shared savings payments. We are proposing to revise § 425.512(b) to specify that, for performance years 2024 and subsequent performance years, we would calculate a health equity adjusted quality performance score for an ACO that reports the three Medicare CQMs or a combination of eCQMs/MIPS CQMs/Medicare CQMs in the APP measure set, meeting the data completeness requirement at § 414.1340 for each measure, and administers the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B)). This proposal would advance equity within the Shared Savings Program by supporting ACOs that deliver high quality care and serve a high proportion of underserved individuals. Applying the health equity adjustment to an ACO's quality performance category score when reporting Medicare CQMs would encourage ACOs to treat underserved populations.

(5) Summary of Proposals

In Table 25 of this proposed rule we summarize the proposed changes to the regulation at § 425.512(a)(4) and (5) to reflect the proposed changes to the quality reporting requirements and quality performance standard for performance year 2024 and subsequent performance years. Performance benchmarks for performance year 2024 used to determine the 10th, 30th, and 40th

percentiles for purposes of evaluating the eCQM/MIPS CQM reporting incentive described at § 425.512(a)(5)(i)(A)(2) will be posted on the Quality Payment Program Resource Library website at <https://qpp.cms.gov/resources/resource-library>. We direct readers to the MIPS measure benchmarking policies described at § 414.1380(b)(1)(ii) and to both the quality benchmark and performance period benchmark documentation posted on the Quality Payment Program Resource Library website at <https://qpp.cms.gov/resources/resource-library> for more details. Performance benchmarks differ by collection type (that is, eCQM, MIPS CQM, Medicare CQM (as proposed), CMS Web Interface) and are updated for each performance year.

TABLE 25: Proposed APP Reporting Requirements and Quality Performance Standard for Performance Year 2024 and Subsequent Performance Years

	Performance Year 2024	Performance year 2025 and Subsequent Performance Years*
Shared Savings Program ACO Quality Reporting requirements	ACOs are required to report the 10 measures under the CMS Web Interface or the 3 eCQMs/MIPS CQMs/Medicare CQMs and administer the CAHPS for MIPS survey. CMS will calculate the two claims-based measures.	ACOs are required to report on the 3 eCQMs/MIPS CQMs/Medicare CQMs and administer the CAHPS for MIPS survey. CMS will calculate the two claims-based measures.
Shared Savings Program ACO Quality Performance Standard	<p>Achieving a health equity adjusted quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility based-scoring, or</p> <p>Reporting the three eCQMs/MIPS CQMs in the APP measure set, meeting the data completeness requirement at § 414.1340 for all three eCQMs/MIPS CQMs and receives a MIPS Quality performance category score under § 414.1380(b)(1), achieving a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP measure set and a quality performance score equivalent to or higher than the 40th percentile of the performance benchmark on at least one of the remaining five measures in the APP measure set, or</p> <p>An ACO that fails to meet the criteria above but meets the alternative quality performance standard by achieving a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP measure would share in savings (if otherwise eligible) at a lower rate that is scaled by the ACO’s quality performance score.</p> <p>If an ACO (1) does not report any of the ten CMS Web Interface measures or any of the three eCQMs/MIPS CQMs/Medicare CQMs and (2) does not administer a CAHPS for MIPS survey under the APP, the ACO will not meet the quality performance standard or the alternative quality performance standard.</p>	<p>Achieving a health equity adjusted quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility based-scoring, or</p> <p>An ACO that fails to meet the criterion above but meets the alternative quality performance standard by achieving a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP measure set would share in savings (if otherwise eligible) at a lower rate that is scaled by the ACO’s quality performance score.</p> <p>If an ACO (1) does not report any of the three eCQMs/MIPS CQMs/Medicare CQMs and (2) does not administer a CAHPS for MIPS survey under the APP, the ACO will not meet the quality performance standard or the alternative quality performance standard.</p>

*The CMS Web Interface reporting option sunsets after performance year 2024 and is no longer available beginning with performance year 2025.

c. Proposed APP Measure Set

(1) Background

We refer readers to Table 26, which lists the measures included in the final APP measure set that will be reported by Shared Savings Program ACOs for performance year 2023 and subsequent performance years. These are the same measures finalized in the CY 2023 PFS final rule (87 FR 69862); however, we note that the Collection Type for each measure has been updated. As finalized in the CY 2023 PFS final rule (87 FR 69863), we included the measure type in Table 26 for each measure in the measure set to provide ACOs a list of the outcome measures for purposes of meeting the quality performance incentive for reporting eCQMs/MIPS CQMs. This information is also relevant to the alternative quality performance standard under which ACOs that fail to meet the quality performance standard to qualify for the maximum sharing rate, but that achieve a quality performance score at the 10th percentile on 1 of the 4 outcome measures in the APP measure set, may be eligible to share in savings on a sliding scale (87 FR 69861). We noted inclusion of this information does not change any of the measures in the measure set.

(2) Proposed Revisions

TABLE 26: Measures included in the APP Measure Set for Performance Year 2024 and Subsequent Performance Years ^a

Measure #	Measure Title	Collection Type	Submitter Type	Meaningful Measures 2.0 Area	Measure Type
Quality ID#: 321	CAHPS for MIPS	CAHPS for MIPS Survey	Third Party Intermediary	Person-Centered Care	PRO-PM*
Measure # 479	Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for MIPS Eligible Clinician Groups	Administrative Claims	N/A	Affordability and Efficiency	Outcome^
Measure # 484	Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions	Administrative Claims	N/A	Affordability and Efficiency	Outcome^
Quality ID#: 001	Diabetes: Hemoglobin A1c (HbA1c) Poor Control	eCQM/MIPS CQM/Medicare CQM/CMS Web Interface**	APM Entity/Third Party Intermediary	Chronic Conditions	Intermediate Outcome^
Quality ID#: 134	Preventive Care and Screening: Screening for Depression and Follow-up Plan	eCQM/MIPS CQM/Medicare CQM/CMS Web Interface**	APM Entity/Third Party Intermediary	Behavioral Health	Process
Quality ID#: 236	Controlling High Blood Pressure	eCQM/MIPS CQM/Medicare CQM/CMS Web Interface**	APM Entity/Third Party Intermediary	Chronic Conditions	Intermediate Outcome^
Quality ID#: 318	Falls: Screening for Future Fall Risk	CMS Web Interface**	APM Entity/Third Party Intermediary	Safety	Process
Quality ID#: 110	Preventive Care and Screening: Influenza Immunization	CMS Web Interface**	APM Entity/Third Party Intermediary	Wellness and Prevention	Process
Quality ID#: 226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention	CMS Web Interface**	APM Entity/Third Party Intermediary	Behavioral Health	Process
Quality ID#: 113	Colorectal Cancer Screening	CMS Web Interface**	APM Entity/Third Party Intermediary	Wellness and Prevention	Process
Quality ID#: 112	Breast Cancer Screening	CMS Web Interface**	APM Entity/Third Party Intermediary	Wellness and Prevention	Process
Quality ID#: 438	Statin Therapy for the Prevention and Treatment of Cardiovascular Disease	CMS Web Interface**	APM Entity/Third Party Intermediary	Chronic Conditions	Process
Quality ID#: 370	Depression Remission at Twelve Months***	CMS Web Interface**	APM Entity/Third Party Intermediary	Behavioral Health	Outcome^

^a We note that the CMS Web Interface measures: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease (Quality ID#: 438) and Depression Remission at Twelve Months (Quality ID: # 370) do not have benchmarks; and therefore, are not scored for performance year 2024; they are however required to be reported in order to complete the Web Interface data set.

^ Indicates this is an outcome measure.

* Patient-reported outcome-based performance measure (PRO-PM) is a performance measure that is based on patient-reported outcome measure (PROM) data aggregated for an accountable healthcare entity.

**ACOs will have the option to report via the CMS Web Interface for performance year 2024 only.

*** This measure is not included as one of the four outcome measures for purposes of the Quality Reporting Standard as this measure is not scored.

Table 27 includes the proposed eCQM/MIPS CQM measure set for performance year 2024 for the Shared Savings Program and outlines the measure types, which is relevant for ACOs that may elect to report on eCQM/MIPS CQMs in order to qualify for the incentive under § 425.512(a)(4)(i)(B).

TABLE 27: APP Measure Set for eCQM/MIPS CQM Reporting for Performance Year 2024*

Measure #	Measure Title	Measure Type	SSP Quality Performance Standard	
			MIPS Comparable Measure	Outcome Measure
Quality ID#: 321	CAHPS for MIPS	Patient-Reported Outcome	Yes	No
Measure # 479	Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for MIPS Eligible Clinician Groups	Outcome	Yes	Yes
Measure # 484	Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions	Outcome	Yes	Yes
Quality ID#: 001	Diabetes: Hemoglobin A1c (HbA1c) Poor Control	Intermediate Outcome	Yes	Yes
Quality ID#: 134	Preventive Care and Screening: Screening for Depression and Follow-up Plan	Process	Yes	No
Quality ID#: 236	Controlling High Blood Pressure	Intermediate Outcome	Yes	Yes

* We note that Medicare CQM is not one of the collection types included in the eCQM/MIPS CQM incentive under § 425.512(a)(4)(i)(B).

Table 28 identifies the preliminary measures for the Universal Foundation’s adult component.

TABLE 28: Preliminary Adult Universal Foundational Measures ^{a^}

Domain	Identification Number and Name
Wellness and prevention	139: Colorectal cancer screening 93: Breast cancer screening 26: Adult immunization status
Chronic conditions	167: Controlling high blood pressure 204: Hemoglobin A1c poor control (>9%)
Behavioral health	672: Screening for depression and follow-up plan 394: Initiation and engagement of substance use disorder treatment
Seamless care coordination	561 or 44: Plan all-cause readmissions or all- cause hospital readmissions
Person-centered care	158 (varies by program): Consumer Assessment of Healthcare Providers and Systems overall rating measures
Equity	Identification number undetermined: Screening for social drivers of health

^a Domains are from Meaningful Measures 2.0. Identification numbers are CMS Measures Inventory Tool measure family identification numbers; names reflect the descriptions associated with those numbers.

[^] Jacobs D, Schreiber M, Seshamani M, Tsai D, Fowler E, Fleisher L. Aligning Quality Measures across CMS – The Universal Foundation. New England Journal of Medicine, March 2, 2023, available at <https://www.nejm.org/doi/full/10.1056/NEJMp2215539>.

* Quality ID #487 Screening for social drivers of health is an available MIPS CQM for PY 2023; the MIPS CQM Specification is available at https://qpp.cms.gov/docs/QPP_quality_measure_specifications/CQM-Measures/2023_Measure_487_MIPSCQM.pdf.

The CMS Web Interface collection type under the APP includes 10 measures. We refer readers to Table Group E of Appendix 1 of this proposed rule for the proposed substantive changes to measure specifications for 9 out of 10 CMS Web Interface measures starting with performance year 2024. As proposed, the changes would update measures and align the CMS Web Interface measures with the practice workflows of the MIPS CQM collection type.

d. Proposals to Modify the Health Equity Adjustment Underserved Multiplier

(1) Background

Consistent with our goal of rewarding ACOs that include a higher proportion of underserved beneficiaries while delivering high quality care, we finalized in the CY 2023 PFS final rule (87 FR 69836 through 69857) the application of a health equity adjustment that adds up to 10 bonus points to an ACO’s MIPS Quality performance category score based on certain criteria. The health equity adjustment is applied to an ACO’s MIPS quality performance category score when the ACO reports the three all-payer eCQMs/MIPS CQMs in performance year 2023 and, as proposed in section III.G.2.b.(2) of this proposed rule, the three eCQMs/MIPS CQMs/Medicare CQMs starting in performance year 2024. To qualify for the health equity

adjustment, the ACO must also meet the data completeness requirement at § 414.1340 and administer the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B)). The health equity adjustment is conditional on (1) high quality measure performance and (2) providing care for a proportion of underserved populations greater than or equal to a predetermined floor.

The goal of the health equity adjustment is to reward ACOs with high performance scores on quality measures and that serve a high proportion of underserved beneficiaries.

Correspondingly, the health equity adjustment bonus points are calculated by multiplying the ACO's performance scaler by the ACO's underserved multiplier. An ACO's performance scaler is designed to identify top performance among ACOs reporting all-payer eCQMs/MIPS CQMs in performance year 2023 and, as proposed in section III.G.2.b.(2) of this proposed rule, eCQMs/MIPS CQMs/Medicare CQMs in performance year 2024. The performance scaler is an aggregated value across all eCQM/MIPS CQM measures and is determined based on if the ACO's measure performance was in the top, middle, or bottom third of ACO performance for that performance year. We refer readers to section III.G.4.b.(7).c of the CY 2023 PFS final (87 FR 69843 through 69845) for more details on the performance scaler calculation. The underserved multiplier is designed to identify ACOs serving high proportions of underserved beneficiaries. As described in the CY 2023 PFS final rule (87 FR 69845 through 69849), the underserved multiplier is a proportion ranging from zero to one of the ACO's assigned beneficiary population for the performance year that is considered underserved based on the highest of: (1) the proportion of the ACO's assigned beneficiaries residing in a census block group with an Area Deprivation Index (ADI) national percentile rank of at least 85; or (2) the proportion of the ACO's assigned beneficiaries who are enrolled in Medicare Part D low-income subsidy (LIS) or are dually eligible for Medicare and Medicaid. The use of both the ADI and Medicare and Medicaid dual eligibility or LIS status to assess underserved populations in the

health equity adjustment allows CMS to consider both broader neighborhood level characteristics and individual characteristics among CMS beneficiaries.

The CY 2023 PFS final rule did not state how CMS intended to compute the proportion of beneficiaries with an ADI national percentile rank of at least 85 with respect to beneficiaries for whom a numeric national percentile rank value is not available. We do not believe it is appropriate to assign a zero to the beneficiaries without an ADI national percentile rank in the calculation. Doing so would unfairly disadvantage ACOs with such beneficiaries vis-à-vis those ACOs with beneficiaries that all have an ADI national percentile rank by lowering their scores. The CY 2023 PFS final rule (87 FR 69846) stated that the proportion of the ACO's assigned beneficiaries residing in a census block group with an ADI national percentile rank of at least 85 is computed using the number of assigned beneficiaries. A footnote stated that in computing the proportion of beneficiaries dually eligible for Medicare and Medicaid, we would use for each beneficiary the fraction of the year (referred to as person years) in which they were eligible for the aged/dual eligible enrollment type or for which they were eligible for the ESRD or disabled enrollment type and dually eligible for Medicare and Medicaid. In response to public comment, we finalized the proposal to include LIS as a modification to the calculation of the underserved multiplier (87 FR 69849). In calculating the LIS proportion, CMS uses the same methodology it adopted for calculating dually eligible beneficiaries: person years.

(2) Proposed Revisions

We propose to revise the underserved multiplier calculation to specify the calculations in more detail and bring greater consistency between the calculation of the proportion of ACOs' assigned beneficiaries residing in a census block group with an ADI national percentile rank of at least 85 and the proportion of ACOs' assigned beneficiaries who are enrolled in Medicare Part D LIS or are dually eligible for Medicare and Medicaid. Specifically, we propose to remove beneficiaries who do not have a numeric national percentile rank available for ADI from the

health equity adjustment calculation for performance year 2023 and subsequent performance years. Beneficiaries without a national percentile ADI rank would appear neither in the numerator nor in the denominator of the proportion.

While we established a policy for the treatment of aligned beneficiaries for whom an ADI national percentile rank could not reasonably be calculated for use in the advance investment payments risk factors-based score (87 FR 69796 through 69797), we neither proposed nor finalized a policy for such beneficiaries with respect to the calculation of the health equity adjustment underserved multiplier—nor do we believe the policy we finalized for AIP is appropriate for calculating the health equity adjustment. In the CY 2023 PFS final rule (87 FR 69800), we finalized the use of imputing a value of 50 for the ADI national percentile rank if there is insufficient data to match a beneficiary to an ADI national percentile rank for calculating AIP risk factors-based scores. There are important differences in the implications of using an imputed value of 50 for calculating the AIP risk factors-based scores and for calculating the underserved multiplier. The imputed ADI ranking of 50 corresponds to the average national ADI ranking and would be the most neutral imputed value and would avoid biasing an ACO's payments in either direction for risk factor-based scores in the AIP calculation. The use of an ADI ranking of 50 in the underserved multiplier, however, would result in that beneficiary not counting in the numerator of the underserved multiplier proportion because only beneficiaries with an ADI of at least 85 are counted in the numerator. Therefore, we are proposing to exclude beneficiaries without a national percentile ADI rank from the health equity adjustment underserved multiplier. This approach is more equitable because it will remove a beneficiary without an ADI rank from the denominator and the numerator of the calculation of an ACO's underserved multiplier instead of penalizing ACOs that have such beneficiaries.

It is in the public interest to apply this change starting with performance period 2023. Section 1871(e)(1)(A)(ii) of the Act authorizes the Secretary to retroactively apply a substantive

change in Medicare regulations if the Secretary determines that failure to apply the change retroactively would be contrary to the public interest. Here, applying this change starting with performance period 2023 is in the public interest because, absent further specification of how to treat beneficiaries without a national percentile ADI rank current policy may unfairly penalize ACOs for reasons beyond their control. Current policy counts beneficiaries with missing ADI ranks in the underserved multiplier denominator and contributes zero to the numerator, thereby reducing the health equity adjustment for ACOs with such beneficiaries and harming their ability to meet the quality performance standard and receive shared savings.

Separately, we propose to modify the calculation of the proportion of assigned beneficiaries dually eligible for Medicare and Medicaid and the calculation of the proportion of assigned beneficiaries enrolled in LIS to use the number of beneficiaries rather than person years for calculating the proportion of the ACO's assigned beneficiaries who are enrolled in LIS or who are dually eligible for Medicare and Medicaid starting in performance year 2024. For example, when calculating the underserved multiplier component of the health equity adjustment to an ACO's quality performance score for ACOs that report the three eCQMs/MIPS CQMs/Medicare CQMs, the proportion would be equal to the number of assigned beneficiaries with any months enrolled in LIS or dually eligible for Medicare and Medicaid divided by total number of assigned beneficiaries. We are not proposing to alter the calculation of the proportion of beneficiaries residing in a census block group with an ADI national percentile rank of at least 85, which is already based on the number of assigned beneficiaries. Person years would continue to be used in financial calculations where beneficiary experience is stratified into by Medicare enrollment type (ESRD, disabled, aged/dual eligible, and aged non/dual eligible) and it is important to account for partial year enrollment to ensure accuracy. The proposed policy change would bring greater consistency between the two proportions used in determining the underserved multiplier. It also acknowledges that beneficiaries with partial year as compared to

full year LIS enrollment or dual eligibility are also socioeconomically vulnerable and strengthens incentives for ACOs to serve this population. Further, inclusion of beneficiaries with partial year LIS enrollment in the underserved multiplier provides increased incentive for ACOs to help facilitate LIS enrollment for beneficiaries who meet eligibility criteria.

We seek comment on these proposals.

e. Proposal to Use Historical Data to Establish the 40th Percentile MIPS Quality Performance Category Score

(1) Background

In the CY 2023 PFS final rule (87 FR 69858), we finalized that beginning performance year 2024, one of the ways for an ACO to meet the Shared Savings Program quality performance standard and share in savings at the maximum rate under its track (or payment model within a track) is for the ACO to achieve a health equity adjusted quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility based-scoring.

In the CY 2022 PFS proposed and final rules (86 FR 39274 and 86 FR 65271), we stated that, for a given performance year, the 30th or 40th percentile across all MIPS Quality performance category scores would be calculated after MIPS final scoring is complete based on the distribution across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring. Therefore, we are not able to provide performance rate information prior to or during the performance year. Nevertheless, we stated that we believe that publicly displaying prior year performance scores that equate to the 30th and 40th percentile across all MIPS Quality performance category scores for the applicable performance year would still provide helpful information for ACOs to determine what level of quality performance they would need to meet in order to satisfy the quality performance standard

under the Shared Savings Program. We stated that we would release this historical information on the Shared Savings Program website when it becomes available.

In the CY 2022 PFS proposed rule (86 FR 39274), we also explained that interested parties have expressed concerns regarding the lack of information on the level of quality performance that would equate to the 30th or 40th percentile MIPS Quality performance category score and that would enable an ACO to be eligible to share in savings or to avoid maximum shared losses, if applicable. We noted that interested parties have expressed concern that these data are not publicly available prior to the start of a performance year and that they do not believe that ACOs have a way of determining what quality score they would need to achieve to meet the quality performance standard.

In the CY 2022 PFS proposed rule (86 FR 39274), we also solicited comment on whether publicly displaying prior year performance scores that equate to the 30th or 40th MIPS Quality performance category scores would help to address ACOs' concerns regarding the lack of advance information regarding the quality performance score they must meet in order to satisfy the quality performance standard under the Shared Savings Program. Several commenters supported publicly displaying prior year performance scores that equate to the 30th or 40th percentile across all MIPS Quality category performance scores, and one commenter expressed concern that publicly displaying prior year performance scores is not the optimal way to address concerns of interested parties and indicated that performance is volatile and the 30th (or 40th) percentile may change significantly from year to year depending upon changes in quality performance in MIPS (86 FR 65271).

We clarified in the CY 2023 PFS proposed rule (87 FR 46148) and final rule (87 FR 69867) that we use the submission-level MIPS Quality performance category scores (unweighted distribution of scores) to determine the 30th percentile and 40th percentile MIPS Quality performance category scores for purposes of establishing the applicable quality performance

standard under the Shared Savings Program. In light of public comments and concerns about the predictability of the 40th percentile MIPS Quality performance category score due to changes in MIPS scoring policies over time – including MIPS scoring changes impacting measures that lack a benchmark or case minimum as described at § 414.1380(b)(1)(i)(A), measure achievement points as described at paragraph (b)(1)(i), new measures (years 1 and 2 of a measure’s use) as described at paragraph (b)(1)(i)(C), new sub-group reporting option as described at § 414.1318(a), and MIPS High Priority and End to End Bonus Points as described at § 414.1380(b)(1)(v) – and as a result of the concerns expressed by ACOs and other interested parties and as we gain experience with aligning Shared Savings Program reporting and scoring policies with MIPS, we believe that a revised methodology is needed to calculate the 40th percentile MIPS Quality performance category score for the quality performance standard for performance year 2024 and subsequent performance years.

As MIPS scoring policies evolve over time, changes in MIPS scoring policy have the potential to adjust the year-to-year comparability of MIPS Quality performance category scores. Between performance years 2022 and 2023, there were MIPS policy changes to measures that lack a benchmark or case minimum as described at § 414.1380(b)(1)(i)(A), measure achievement points as described at paragraph (b)(1)(i), new measures (years 1 and 2 of a measure’s use) as described at paragraph (b)(1)(i)(C), and a new sub-group reporting option as described at § 414.1318(a). Additionally, MIPS High Priority and End to End Bonus Points were sunset in performance year 2022 as described at § 414.1380(b)(1)(v). The projected 40th percentile MIPS Quality performance category score for performance year 2023 does not reflect these proposed methodological changes. To minimize reliance on a single year of performance data, the use of multiple years of historical data could be used to “smooth” out the impact of MIPS scoring policy changes on the quality performance standard in any one year. At the same time, using too

many years of data to average scores might include a greater number of years that don't reflect current policies.

(2) Proposed Revisions

For performance year 2024 and subsequent performance years, we propose to use historical submission-level MIPS Quality performance category scores to calculate the 40th percentile MIPS Quality performance category score. Specifically, we propose to use a rolling 3-performance year average with a lag of 1 performance year (for example, the 40th percentile MIPS Quality performance category score used for the quality performance standard for performance year 2024 would be based on averaging the 40th percentile MIPS Quality performance category scores from performance years 2020 through 2022). We believe that our proposal to use a 3-year historical average is consistent with the proposal under section IV.A.4.h.(2) of this proposed rule that would permit, for purposes of establishing a performance threshold as identified in § 414.1405(b), a time span of up to three consecutive performance periods for performance year 2024 and subsequent performance years.

We would provide ACOs with the performance score that equates to the 40th percentile MIPS Quality performance category score that would be used as the quality performance standard for a given performance year prior to the start of the performance year (for example, the 40th percentile MIPS Quality performance category score based on historical data and applicable for performance year 2024 would be released on the Shared Savings Program website in December 2023).

The use of 3 historical base years would mitigate issues that may arise from using a single year historical reference such as scoring, policy, and/or performance anomalies, such as a pandemic, specific to the historical base year. Additionally, the use of historical data would allow additional time for data availability and limit the potential impact of MIPS Targeted Review as described at § 414.1385 and other MIPS scoring corrections. This approach is also

responsive to the concerns ACOs, and other interested parties have with the predictability of the current method of calculating the 40th percentile MIPS Quality performance category score. However, we acknowledge that by using historical benchmarks, the benchmark would not reflect the most recent policies, measure specifications, and scores. For example, the historical base years are 2-4 years removed from the performance year and could reflect data that may have anomalies specific to the base year that would render those data inconsistent with the performance year's quality performance. Additionally, changes to measure specifications for measures included in the APP measure set may result in the historical base period including measures that are different than the corresponding measures that were applicable during the performance year. This could further reduce the comparability of historic base year data with the performance year's quality performance data.

Table 29 shows the 40th percentile MIPS Quality performance category scores for performance years 2018 through 2021 based on the current methodology as published in the CY 2023 PFS final rule (87 FR 69868). The proposed methodology would be effective for performance year 2024 and subsequent performance years. We have added to Table 29 the projected 40th percentile MIPS Quality performance category scores for performance years 2022 and 2023 based on the proposed methodology for illustrative purposes. The projected 40th percentile MIPS Quality performance category score used for the quality performance standard for performance year 2022 is based on the average of the 40th percentile MIPS Quality performance category scores from performance years 2018 through 2020, and the projected 40th percentile MIPS Quality performance category score used for the quality performance standard for performance year 2023 is based on the average of the 40th percentile MIPS Quality performance category scores from performance years 2019 through 2021. The years are averaged at equal weights. For example, we would calculate the projected 40th percentile MIPS Quality performance category score used for the quality performance standard for performance

year 2022 by first summing the 2018 (70.80), 2019 (70.82), and 2020 (75.59) 40th percentile Quality performance category score values to arrive at a value of 217.21 [70.80+70.82+75.59=217.21]. We would then divide the value of 217.21 by three (the number of years included in the historical reference period) to arrive at a projected 40th percentile MIPS Quality performance category score of 72.40 for 2022 [217.21 ÷ 3=72.40]. Note that this example illustrates averaging the 2018, 2019, and 2020 40th percentile MIPS Quality performance category score values.

TABLE 29: 40th Percentile MIPS Quality Performance Category Scores Using Current and Proposed Methodology

Performance Year	40 th percentile MIPS Quality performance category score*
2018	70.80*
2019	70.82*
2020	75.59*
2021	77.83*
2022 (projected)	72.40^
2023 (projected)	74.75^

* As published in Table 64 of the CY 2023 PFS final rule (87 FR 69868). The 40th percentile MIPS Quality performance category score was calculated by taking the 40th percentile of all submission-level MIPS Quality performance category scores (the unweighted distribution of scores), excluding entities/providers eligible for facility-based scoring.

^ As projected based on the proposed methodology. The performance year 2022 projected 40th percentile MIPS Quality performance category score for the quality performance standard is based on the average of the 2018, 2019, and 2020 40th percentile MIPS Quality performance category scores. The performance year 2023 projected 40th percentile MIPS Quality performance category score for the quality performance standard is based on the average of the 2019, 2020, and 2021 40th percentile MIPS Quality performance category scores.

We seek comment on our proposal to use a 3-performance year rolling average with a lag of 1-performance year to calculate the 40th percentile MIPS Quality performance category score used for the quality performance standard for performance year 2024 and subsequent performance years. Using a 1-year lag would help ensure the availability of base period data by limiting the possibility that data availability is negatively impacted by scoring, policy, and/or performance anomalies from the prior performance year. In the development of our proposal to use a 3-performance year rolling average with a lag of 1-performance year to calculate the 40th percentile MIPS Quality performance category score used for the quality performance standard for performance year 2024 and subsequent performance years, we considered another alternative

methodology, which was to establish a historical quality performance standard based on the year immediately prior to the performance year's quality performance score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring. We also seek comment on other alternative methodologies we should consider to calculate the 40th percentile MIPS Quality performance category score for the quality performance standard.

f. Proposal to Apply a Shared Savings Program Scoring Policy for Excluded APP Measures

(1) Background

In the CY 2021 PFS final rule (85 FR 84720 through 84734), we finalized an approach that aligns the Shared Savings Program quality performance scoring methodology with the MIPS scoring methodology. We also stated that for each quality measure that an ACO submits that has significant changes, the total available measure achievement points are reduced by 10 points under the APP under current MIPS scoring policy (§ 414.1380(b)(1)(vii)(A)) (85 FR 84725)). In the CY 2021 PFS final rule (85 FR 84901), we finalized policies at § 414.1380(b)(1)(vii)(A) to provide that for each measure under MIPS that is submitted, if applicable, and impacted by significant changes, performance is based on data for 9 consecutive months of the applicable CY performance period. If such data are not available or may result in patient harm or misleading results, the measure is excluded from a MIPS eligible clinician's total measure achievement points and total available measure achievement points. We stated that “significant changes” means changes to a measure that are outside the control of the clinician and its agents and may result in patient harm or misleading results. Significant changes include, but are not limited to, changes to codes (such as ICD-10, CPT, or HCPCS codes), clinical guidelines, or measure specifications. As described at § 414.1380(b)(1)(vii)(A), measures that are excluded due to significant changes are excluded from a MIPS eligible clinician's total measure achievement points and total available measure achievement points.

In performance year 2022, two of the eQMs/MIPS CQMs that are part of the APP measure set were excluded from MIPS measure achievement points and total available measure achievement points for the MIPS Quality performance category under § 414.1380(b)(1)(vii)(A). Specifically, the eCQM version of the Preventive Care and Screening: Screening for Depression and Follow-up Plan measure (Quality ID #134) and the Controlling High Blood Pressure measure (Quality ID #236) were excluded. Thus, under MIPS scoring policies, ACOs reporting one or both of these measures had their total measure achievement points and total available measure achievement points reduced by 10 (for reporting one measure) or 20 (for reporting both measures) points, respectively. Under the APP, these ACOs were still required to report all 6 measures; however, their performance year 2022 MIPS Quality performance category score was based on the 4 or 5 non-excluded measures (depending on whether the ACO reported one or both excluded measures) in the APP measure set. Consequently, the resulting MIPS Quality performance category score for an ACO that would have performed well on the excluded quality measures would be lower than it otherwise would have been if those measures were not excluded. Alternatively, if an ACO would have performed poorly on the excluded quality measures, then the resulting MIPS Quality performance category score would be higher than it otherwise would have been if those measures were not excluded. In either scenario, an ACO is required to report quality performance for all measures under the APP and has no control over whether and which measures are excluded.

(2) Proposed Revisions

Given that the Shared Savings Program does not determine which quality measures are excluded and that ACOs do not have a choice of measures they can report under the APP, we do not want to adversely impact shared savings determinations for events outside the ACOs' control, such as in the event a measure is excluded. Therefore, we are proposing that, for performance year 2024 and subsequent performance years, if (1) an ACO reports all required

measures under the APP and meets the data completeness requirement at § 414.1340 for all required measures and receives a MIPS Quality performance category score under § 414.1380(b)(1), and (2) the ACO's total available measure achievement points used to calculate the ACO's MIPS Quality performance category score for the performance year is reduced due to measure exclusion under § 414.1380(b)(1)(vii)(A), then we would use the higher of the ACO's health equity adjusted quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, to determine whether the ACO meets the quality performance standard required to share in savings at the maximum rate under its track (or payment model within a track), for the relevant performance year. This policy aims to alleviate the potential adverse impacts to shared savings determinations that may arise in the event that one or more of the quality measures required under the APP is excluded. We are also proposing to make conforming changes to the regulation text § 425.512 by revising paragraph (a)(5)(i) and adding paragraph (a)(7).

We finalized in the CY 2023 PFS final rule (87 FR 69845) that unscored measures are removed from the calculation of an ACO's health equity adjustment, effectively receiving a performance scaler of 0 for those measures. However, we inadvertently did not codify this policy in the Code of Federal Regulations. Therefore, in this proposed rule, we are proposing to codify this policy by revising § 425.512(b)(3)(ii)(B) to state that CMS assigns a value of 0 for each measure that CMS does not evaluate because the measure is unscored. We propose that the regulation text changes would be effective for performance year 2023 and subsequent performance years as the policy was finalized in the CY 2023 PFS final rule to calculate the health equity adjustment for performance year 2023 and subsequent performance years.

We are also proposing that quality measures impacted by the MIPS policy at § 414.1380(b)(1)(vii)(A) are unscored measures for the purposes of calculating the health equity

adjustment; therefore, excluded measures would not render an ACO ineligible for the health equity adjustment as long as the ACO reports all required measures under the APP and meets the data completeness requirement at § 414.1340 for all required measures and receives a MIPS Quality performance category score under § 414.1380(b)(1).

As discussed in section IV.A.4.g.(1)(c)(i) of this proposed rule, we are proposing a change to the MIPS policy to remove the 10 percent threshold for changes to codes, clinical guidelines, or measure specifications for all measure types. We believe that our proposal to apply a floor to an ACO's Quality performance category score in determining the ACO's quality performance standard in the event that the ACO's total available measure achievement points used to calculate the ACO's MIPS Quality performance category score for the performance year is reduced under § 414.1380(b)(1)(vii)(A) functions in concert with our proposal under section IV.A.4.g.(1)(c)(i) of this proposed rule. We refer readers to section IV.A.4.g.(1)(c)(i) of this proposed rule for further discussion of our proposal to change the MIPS scoring policy.

g. Proposal to Require Spanish Language Administration of the CAHPS for MIPS Survey

(1) Background

CMS has created official translations of the CAHPS for MIPS survey in 7 languages, including Spanish, Cantonese, Korean, Mandarin, Portuguese, Russian, and Vietnamese (81 FR 77386), in addition to the required administration of English survey. However, use of these translations is mostly voluntary, with the exception of a requirement to administer the Spanish translation of the CAHPS for MIPS Survey for patients residing in Puerto Rico. Organizations (groups, virtual groups, subgroups, and APM entities) that elect CAHPS for MIPS must contract with a CMS-approved survey vendor to administer the survey and must request survey translations for the vendor to administer the survey in an optional language. Generally, the use of survey translations adds additional survey administration cost to the organization.

(2) Proposed Revisions

As discussed in section IV.A.4.f.(1)(c)(ii) of this proposed rule, we are proposing to require Spanish language administration of the CAHPS for MIPS survey for MIPS eligible clinicians reporting MIPS. Specifically, we are proposing to require MIPS eligible clinicians to contract with a CMS-approved survey vendor that, in addition to administering the survey in English, will administer the Spanish survey translation to Spanish-preferring patients using the procedures detailed in the CAHPS for MIPS Quality Assurance Guidelines beginning with 2024 survey administration. This should better ensure that we are assessing the experience of patients who are Spanish-speaking and with limited English proficiency, and is part of our efforts to advance health equity. We refer readers to section IV.A.4.f.(1)(c)(ii) of this proposed rule for further discussion of our proposal related to the CAHPS for MIPS survey. In addition, we are interested in gathering information directly from organizations that administer the CAHPS for MIPS Survey on whether they consider to request the vendor to administer the survey in one or more of the available survey translations based on the language preferences of patients. We are also interested in learning about the factors that more or less likely affect the administration of survey translations where there is need for one or more of the available translations.

h. Proposals to Align CEHRT Requirements for Shared Savings Program ACOs with MIPS

(1) Background

Many of our programs require the use of certified electronic health record (EHR) technology (CEHRT), including the Quality Payment Program, Shared Savings Program, and other value-based payment initiatives. With respect to the Shared Savings Program, section 1899(b)(2)(G) of the Act requires participating ACOs to define processes to report on quality measures and coordinate care, such as through the use of telehealth, remote patient monitoring, and other such enabling technologies. In addition, section 1899(b)(3)(D) of the Act authorizes the Secretary to incorporate reporting requirements and incentive payments from section 1848 of

the Act into the Shared Savings Program, such as requirements and payments related to electronic prescribing and electronic health records, including using alternative criteria for determining whether to make such incentive payments. Pursuant to these authorities, we have incorporated reporting requirements related to the adoption and use of CEHRT in our regulations, including specifically cross-referencing the Quality Payment Program's definition of CEHRT (42 CFR § 414.1305) in our regulatory definition of CEHRT at § 425.20. For the Shared Savings Program and Quality Payment Program, CEHRT currently is defined at § 414.1305 as EHR technology (which could include multiple technologies) certified by the Office of the National Coordinator for Health Information Technology (ONC) under the ONC Health IT Certification Program as meeting the 2015 Edition Base EHR definition, set forth at 45 CFR 170.102, and a designated set of the 2015 Edition health information technology (IT) certification criteria as further provided therein.

The Health Information Technology for Economic and Clinical Health Act (HITECH Act), sections 13001 through 13424 of the American Recovery and Reinvestment Act of 2009 (ARRA) (Pub. L. 111-5, February 17, 2009), established ONC under the Department of Health and Human Services, authorizing ONC to adopt standards for certifying health IT. ONC has codified its standards, implementation specifications, certification criteria, and certification program for health IT under 45 CFR part 170. Specifically, ONC has codified its certification criteria for health IT, including EHRs, at 45 CFR 170.315. Currently referred to as the "2015 Edition health IT certification criteria." For more information regarding ONC's current policies, standards, and certification requirements for health IT, please refer to 45 CFR part 170, particularly § 170.315, and the ONC Certification of Health IT website at:

<https://www.healthit.gov/topic/certification-ehrs/certification-health-it>

In the CY 2019 PFS final rule (83 FR 59982 through 59988), we adopted three key requirements related to ACOs use of CEHRT, beginning with the performance years starting on January 1, 2019.

First, ACOs must certify annually, at the end of each performance year, that the percentage of eligible clinicians participating in the ACO who use CEHRT to document and communicate clinical care to their patients or other health care providers meets or exceeds the applicable percentage during the current performance year. The ACO's eligible clinicians must use CEHRT that meets the definition in our regulation at § 425.20, which provides that CEHRT has the same meaning as under the Quality Payment Program at § 414.1305. Specifically, we updated our regulations at § 425.506(f) to reflect that, beginning with the performance years starting on January 1, 2019:

- ACOs in a track that does not meet the financial risk standard to be an Advanced APM, which includes ACOs participating under BASIC track Levels A through D, must certify annually that at least 50 percent of the eligible clinicians participating in the ACO use CEHRT to document and communicate clinical care to their patients or other health care providers.

- ACOs in a track that meets the financial risk standard to be an Advanced APM, which includes ACOs participating under BASIC track Level E or the ENHANCED track, must certify annually that the percentage of eligible clinicians participating in the ACO that use CEHRT to document and communicate clinical care to their patients or other health care providers meets or exceeds the threshold established under the Quality Payment Program at § 414.1415(a)(1)(i). Under this requirement, for Performance Periods beginning in 2019, 75 percent of eligible clinicians must use CEHRT to document and communicate clinical care to their patients or health care providers.

Second, we also revised the Shared Savings Program requirements for data submission and certifications at § 425.302(a)(3)(iii) to require the ACO to certify at the end of each

performance year, that the percentage of eligible clinicians participating in the ACO that use CEHRT to document and communicate clinical care to their patients or other health care providers meets or exceeds the applicable percentage specified by CMS at § 425.506(f).

Finally, we updated our regulations at § 425.20 to incorporate the definition of CEHRT at § 414.1305 that applies under the Quality Payment Program. The Quality Payment Program's regulation at § 414.1305 defines CEHRT as EHR technology (which could include multiple technologies) certified under the ONC Health IT Certification Program that meets the 2015 Edition Base EHR definition at 45 CFR 170.102 and has been certified as meeting certain other criteria set forth in ONC's 2015 Edition health IT certification criteria at 45 CFR 170.315 as further described in § 414.1305. Applying the Shared Savings Program's definition at § 425.20, ACOs under the Shared Savings Program must use EHR technology meeting the Quality Payment Program's definition of CEHRT at § 414.1305 to meet the requirements set forth in our regulation at § 425.506(f). As discussed in section III.R. of this proposed rule, in the Health Data, Technology, and Interoperability: Certification Program Updates, Algorithm Transparency, and Information Sharing proposed rule (88 FR 23758), which appeared in the April 18, 2023 **Federal Register**, ONC has proposed to discontinue the year-themed "editions," which ONC first adopted in 2012, to distinguish between sets of health IT certification criteria finalized in different rules. ONC is proposing to instead maintain a single set of "ONC Certification Criteria for Health IT," which would be updated in an incremental fashion in closer alignment to standards development cycles and regular health information technology (IT) development timelines (88 FR 23750). As further discussed in section III.R. of this proposed rule, we are proposing to modify the Quality Payment Program's definition of CEHRT at § 414.1305 to flexibly incorporate any changes by ONC to its definition of Base EHR and its certification criteria for Health IT.

(2) Removing CEHRT Use Threshold Requirements and Requiring Reporting of the MIPS Promoting Interoperability Performance Category

In order to streamline CEHRT threshold requirements for ACOs and align with the Quality Reporting Program's Merit-Based Incentive Payment System (MIPS), we propose to sunset the Shared Savings Program CEHRT threshold requirements and modify our regulations at § 425.506(f) to indicate that they will be applicable only through performance year 2023. We further propose, for performance years beginning on or after January 1, 2024, unless otherwise excluded, to require that all MIPS eligible clinicians, Qualifying APM Participants (QPs), and Partial Qualifying APM Participants (Partial QPs) (each as defined at § 414.1305 of this subchapter) participating in the ACO, regardless of track, satisfy all of the following:

- Report the MIPS Promoting Interoperability (PI) performance category measures and requirements to MIPS according to 42 CFR part 414 subpart O as either of the following --

- ++ All MIPS eligible clinicians, QPs, and partial QPs participating in the ACO as an individual, group, or virtual group; or

- ++ The ACO as an APM entity.

- Earn a MIPS performance category score for the MIPS Promoting Interoperability performance category at the individual, group, virtual group, or APM entity level.

A MIPS eligible clinician, QP, Partial QP, or ACO as an APM entity may be excluded from the requirements proposed at § 425.507(a) if the MIPS eligible clinician, QP, Partial QP, or ACO as an APM entity --

- Does not exceed the low volume threshold set forth at § 414.1310(b)(1)(iii);

- Is an eligible clinician as defined at § 414.1305 who is not a MIPS eligible clinician and has opted to voluntarily report measures and activities for MIPS as set forth in § 414.1310(b)(2); or

- Has not earned a performance category score for the MIPS Promoting Interoperability performance category because the MIPS Promoting Interoperability performance category has been reweighted in accordance with applicable policies set forth at § 414.1380(c)(2).

We propose to codify this new requirement at § 425.507.

Specifically, we propose that any requirements applicable to MIPS eligible clinicians reporting on objectives and measures specified by CMS for the MIPS PI category would apply to MIPS eligible clinicians, QPs, and Partial QPs participating in an ACO at § 425.507(a). We further propose that if any of these requirements for a MIPS eligible clinician reporting for the MIPS PI category, including objectives and measures, are amended through rulemaking (such as adoption, modification, or removal of an objective or measure), then the new or modified requirements will also be applicable to MIPS eligible clinicians, QPs, and Partial QPs participating in an ACO under § 425.507. For instance, in section IV.A.4.f.(4) of this proposed rule, we are proposing several modifications to the MIPS PI performance category's requirements, including modifying the performance period at § 414.1320 as well as specific measures such as the High Priority Safety Assurance Factors for EHR Resilience (SAFER) Guides measure. To the extent these or other policies are finalized through rulemaking, then these requirements would also be applicable to ACO participants as provided by our proposal here.

To further align with applicable requirements for the MIPS Promoting Interoperability performance category, we are proposing that MIPS eligible clinicians, QPs, Partial QPs, and ACOs as APM entities may be exempt from our proposed regulation at § 425.507(a) if the MIPS eligible clinician, QP, Partial QP, or ACO as an APM entity: (1) does not exceed the low volume threshold set forth at § 414.1310(b)(1)(iii); (2) is an eligible clinician as defined at § 414.1305 who is not a MIPS eligible clinician and has opted to voluntarily report measures and activities for MIPS as set forth in § 414.1310(b)(2); or (3) has not earned a performance category score for

the MIPS Promoting Interoperability performance category because the MIPS Promoting Interoperability performance category has been reweighted in accordance with applicable policies set forth at § 414.1380(c)(2). However, if such MIPS eligible clinicians, QPs, and Partial QPs do report the MIPS PI performance category as an individual, group, or virtual group or the ACO reports MIPS PI performance category as an APM entity, the MIPS eligible clinicians, QPs, and Partial QP the exemption would not apply for purposes of satisfying our proposed regulation at § 425.507.

Exclusions to MIPS eligible clinicians described at § 414.1310(b)(1)(iii) include eligible clinicians who do not exceed the MIPS low volume threshold. Eligible clinicians who are not MIPS eligible clinicians have the option to voluntarily report measures and activities for MIPS as described at § 414.1310(b)(2). Federally Qualified Health Centers (FQHC) or Rural Health Clinics (RHC) who provide services that are billed exclusively under the FQHC or RHC payment methodologies may voluntarily report the MIPS PI performance category as a group, virtual group, or APM entity. MIPS eligible clinicians, QPs, and Partial QPs practicing in FQHCs or RHCs who provide services that are billed exclusively under FQHC or RHC payment methodologies may voluntarily report the MIPS PI performance category as an individual, group, virtual group, or APM entity. It is important to note that exclusions to MIPS eligible clinicians as described at § 414.1310(b)(1)(i) and (ii) are not applicable to our proposal at § 425.507 because QPs and Partial QPs are required to report MIPS PI performance category for purposes of satisfying the Shared Savings Program proposal at § 425.507. Examples of applicable exclusions under § 414.1380(c)(2) for reweighting of the MIPS PI performance category include, but are not limited to, the following:

- MIPS eligible clinicians, QPs, and Partial QPs participating in the ACO who are granted a hardship exception under § 414.1380(c)(2)(i)(C) at the individual, group, virtual group, or APM entity level.

- MIPS eligible clinicians, QPs, and Partial QPs that are eligible for reweighting of the PI performance category at the individual, group, virtual group, or APM entity level as described at § 414.1380(c)(2)(i)(A)(4).

- MIPS eligible clinicians, QPs, and Partial QPs that are eligible for reweighting of the PI performance category as described at § 414.1380(c)(2)(i)(A)(4).

We believe that incorporating MIPS PI performance category's requirements into the Shared Savings Program will alleviate the burden that the current policy creates for ACOs. Because the Shared Savings Program CEHRT attestation requirement and the MIPS PI category requirements are not the same, ACOs have the burden of managing compliance with two different CEHRT program requirements. In finalizing the Shared Savings Program CEHRT attestation in the CY 2019 PFS, we stated our desire to continue to promote and encourage CEHRT use by ACOs and their ACO participants and ACO providers/suppliers, and our desire to better align with the goals of the Quality Payment Program and the criteria for participation in certain alternative payment models tested by the Innovation Center (83 FR 59983). Given our unified goal and vision for the use of CEHRT, we believe our proposal at § 425.507 will allow ACOs to focus on a unified set of program requirements for the use of CEHRT and reduce the administrative burden of managing compliance with a different set of program requirements with the same aim.

While ACOs would be able to report the MIPS PI category at the individual, group, virtual group, or APM entity level for purposes of satisfy our proposal at § 425.507, we encourage ACOs to evaluate reporting the MIPS PI performance category at the APM entity level for purposes of satisfying the Shared Savings Program regulation proposed at § 425.507. In the CY 2023 PFS final rule, we finalized a policy to introduce a voluntary reporting option for APM entities to report the MIPS PI performance category at the APM entity level beginning with the CY 2023 performance period (87 FR 70033). For purposes of MIPS scoring and

payment adjustments, if the ACO reports the MIPS PI performance category at the APM entity level, the APM entity PI performance category score would be used to generate the APM entity level score for purposes of scoring the MIPS PI performance category. If the ACO does not report PI at APM entity level, the ACO's individual and group scores would be calculated as a weighted average up to the APM entity level to generate the APM entity level score for purposes of scoring the MIPS PI performance category. If an eligible clinician reports PI at the individual or group level under traditional MIPS or the APM Performance Pathway (APP) in addition to reporting the MIPS PI performance at the APM entity level via the APP, for purposes of MIPS scoring and payment adjustments, that eligible clinician would receive the higher of their individual, group, or APM entity PI performance category score. For more information about reporting the PI performance category at the APM entity level, we direct readers to the MIPS Promoting Interoperability User Guide, which is updated each performance year, in the QPP Resource library <https://qpp.cms.gov/resources/resource-library>. We anticipate releasing sub-regulatory guidance for ACOs that participate in the Shared Savings Program about voluntarily reporting the MIPS PI performance category at the APM entity level in future performance years.

We are seeking public comment on our proposal that, for performance years beginning on or after January 1, 2024, unless otherwise excluded, to require that all MIPS eligible clinicians, Qualifying APM Participants (QPs), and Partial Qualifying APM Participants (Partial QPs) (each as defined at § 414.1305) participating in the ACO, regardless of track, satisfy all of the following:

- Report the MIPS Promoting Interoperability (PI) performance category measures and requirements to MIPS according to 42 CFR part 414 subpart O as either of the following --
 - ++ All MIPS eligible clinicians, QPs, and partial QPs participating in the ACO as an individual, group, or virtual group; or

++ The ACO as an APM entity.

- Earn a MIPS performance category score for the MIPS Promoting Interoperability performance category at the individual, group, virtual group, or APM entity level.

A MIPS eligible clinician, QP, Partial QP, or ACO as an APM entity may be excluded from the requirements proposed at § 425.507(a) if the MIPS eligible clinician, QP, Partial QP, or ACO as an APM entity --

- Does not exceed the low volume threshold set forth at § 414.1310(b)(1)(iii);
- Is an eligible clinician as defined at § 414.1305 who is not a MIPS eligible clinician and has opted to voluntarily report measures and activities for MIPS as set forth in § 414.1310(b)(2); or
- Has not earned a performance category score for the MIPS Promoting Interoperability performance category because the MIPS Promoting Interoperability performance category has been reweighted in accordance with applicable policies set forth at § 414.1380(c)(2).

We propose to codify this new requirement at § 425.507.

We are also seeking public comment on an alternative proposal to narrow the proposal to require that ACOs to report the measures and requirements under the MIPS PI performance category, in accordance with our regulations at 42 CFR part 414 subpart O, at the APM entity level. This alternative proposal would remove the option for MIPS eligible clinicians, Qualifying APM Participants (QPs), and Partial Qualifying APM Participants (Partial QPs) (each as defined at § 414.1305) participating in the ACO to report the MIPS PI performance category at the individual, group, or virtual group level for purposes of satisfying our proposal at § 425.507.

(3) Updating Public Reporting Requirements

As described in the CY 2019 final rule (80 FR 32813 through 32815), we believe that one important aspect of patient-centered care is patient engagement and transparency, which can be achieved by the public reporting of ACO quality and cost performance. Public reporting helps to

hold ACOs accountable and may improve a beneficiary's ability to make informed health care choices as well as facilitate an ACO's ability to improve the quality and efficiency of its care. To ensure our public reporting requirements reflect our proposal to require reporting of objectives, measures, and activities under the MIPS PI performance category as discussed above, we also are proposing to require ACOs to publicly report the number of MIPS eligible clinicians, Qualifying APM Participants (QPs), and Partial Qualifying APM Participants (Partial QPs) (each as defined at § 414.1305) participating in the ACO that earn a MIPS performance category score for the MIPS Promoting Interoperability performance category at the individual, group, virtual group, or APM entity level as proposed at § 425.507. We are proposing to codify this requirement at § 425.308(b)(9).

We are proposing that MIPS eligible clinicians, QPs, and Partial QPs who would be excluded from reporting under the proposed regulation at § 425.507(b) as discussed previously may be excluded from the number of MIPS eligible clinicians, QPs, or Partial QPs that the ACO publicly reports under our proposed regulation at § 425.308(b)(9). However, if such MIPS eligible clinicians, QPs, and Partial QPs do report the MIPS PI performance category as an individual, group, or virtual group or the ACO reports the MIPS PI performance category as an APM entity, the MIPS eligible clinicians, QPs, and Partial QPs should be included in the number of MIPS eligible clinicians, QPs, and Partial QPs that the ACO publicly reports under our proposed regulation at § 425.308(b)(9).

(4) Updating Annual Certification Requirements

As noted in section III.G.2.h.(2) of this proposed rule, we believe that incorporating MIPS PI performance category's requirements will alleviate confusion for ACOs and the use of CEHRT under the Shared Savings Program. Additionally, we find that the MIPS PI performance category's reporting requirements are more comprehensive and better address the key functions that facilitate better care coordination and quality measurement for ACOs. This change would

further align the Shared Savings Program with the MIPS program and allow for greater insight into CEHRT use among ACO clinicians.

Currently, under § 425.302(a)(3)(iii), at the end of each performance year, ACOs must certify that the percentage of eligible clinicians participating in the ACO that use CEHRT to document and communicate clinical care to their patients or other health care providers meets or exceeds the applicable CEHRT threshold percentage specified at § 425.506(f). As discussed in section III.G.2.h.(4). of this proposed rule, we are proposing to sunset the Shared Savings Program CEHRT threshold requirements and modify § 425.506(f) to indicate that they will end with performance year 2023.

To ensure our certification requirements align with our proposal in section III.G.2.h.(2) of this proposed rule, we also propose to revise our regulation at § 425.302(a)(3)(iii) to make the current Shared Savings Program Annual Certification requirement applicable for only performance years 2019 through 2023. That is, we are proposing to sunset the CEHRT certification requirement in the Shared Savings Program by amending regulations to no longer require ACO clinicians to report the percentage of eligible clinicians participating in the ACO that use CEHRT to document and communicate clinical care to their patients or other health care providers meets or exceeds the applicable percentage specified at § 425.506(f).

We are seeking public comment on our proposal to sunset the CEHRT certification requirement in the Shared Savings Program at §§ 425.302(a)(3)(iii) and 425.506(f) and to add new requirements at § 425.507, for performance years beginning on or after January 1, 2024, unless otherwise excluded, to require that all MIPS eligible clinicians, Qualifying APM Participants (QPs), and Partial Qualifying APM Participants (Partial QPs) (each as defined at § 414.1305) participating in the ACO, regardless of track, satisfy all of the following:

- Report the MIPS Promoting Interoperability (PI) performance category measures and requirements to MIPS according to 42 CFR part 414 subpart O as either of the following --

++ All MIPS eligible clinicians, QPs, and partial QPs participating in the ACO as an individual, group, or virtual group; or

++ The ACO as an APM entity.

- Earn a MIPS performance category score for the MIPS Promoting Interoperability performance category at the individual, group, virtual group, or APM entity level.

A MIPS eligible clinician, QP, Partial QP, or ACO as an APM entity may be excluded from the requirements proposed at § 425.507(a) if the MIPS eligible clinician, QP, Partial QP, or ACO as an APM entity --

- Does not exceed the low volume threshold set forth at § 414.1310(b)(1)(iii);
- Is an eligible clinician as defined at § 414.1305 who is not a MIPS eligible clinician and has opted to voluntarily report measures and activities for MIPS as set forth in §

414.1310(b)(2); or

- Has not earned a performance category score for the MIPS Promoting Interoperability performance category because the MIPS Promoting Interoperability performance category has been reweighted in accordance with applicable policies set forth at § 414.1380(c)(2).

We also seek comment on our proposal to add a new requirement for public reporting in § 425.308(b)(9), requiring that the ACO must publicly report the number of MIPS eligible clinicians, Qualifying APM Participants (QPs), and Partial Qualifying APM Participants (Partial QPs) (each as defined at § 414.1305) participating in the ACO that earn a MIPS performance category score for the MIPS Promoting Interoperability performance category at the individual, group, virtual group, or APM entity level as proposed at § 425.507.

i. MIPS Value Pathway (MVP) Reporting for Specialists in Shared Savings Program ACOs - Request for Information (RFI)

In the CY 2021 PFS proposed rule (85 FR 50232 and 50233), we proposed that for performance year 2021 and subsequent performance years, ACOs would be assessed on a

measure set under the APP for Shared Savings Program ACOs. As part of finalizing the APP measure set (85 FR 34727), we stated that the transition to the APP measure set was intended to reduce reporting burden and eliminate differences in the way ACOs are scored compared to their MIPS eligible clinicians, while also moving toward a more outcome-based, primary care focused measure set. Additionally, we stated that we selected the measures to be included because they are broadly applicable for the primary care population and population health goals that are associated with the Shared Savings Program.

We received public comments raising concerns about the challenges and applicability of these measures to specialists that are part of their ACOs (85 FR 34727). Commenters provided feedback that: reducing the number of ACO quality measures would make specialists less likely to participate in the Shared Savings Program; the proposed measures are not relevant to ophthalmology specialty practices and suggested that the same measure sets used in MIPS be permitted for reporting through the APP or a protocol be put in place to determine if the measures are relevant to the clinicians reporting under the APP; CMS should work with interested parties to refine the current set of measures to make it more appropriate for ACOs, which are responsible for total cost of care for the populations they serve; CMS should clarify if the outcome measures selected are representative of all of the different types of populations that ACOs treat and recommended that CMS take patient compliance and case mix into consideration when selecting measures because some patients may take longer to achieve health goals and ACOs may not have the same relative volume of patients with diagnoses such as diabetes and hypertension.

In the CY 2022 PFS proposed rule (86 FR 39270), we solicited comments on reporting options for specialist providers within an ACO. Specifically, we stated that we have heard from interested parties that the population health/primary care focused measures in the APP are not

applicable for specialist providers within an ACO. We noted in the final rule that we may consider feedback we received to inform future rulemaking (86 FR 65264).

In the CY 2022 PFS final rule (86 FR 65376), MVPs were finalized to be available for reporting beginning with the CY 2023 performance period of MIPS, with the notion that MVPs will be implemented through notice and comment rulemaking over the next few years to offer clinically relevant quality reporting for specialists and more granular specialty data (through subgroup reporting) for patients to make informed decisions about the care they receive. In the CY 2022 PFS final rule (86 FR 65376), MVPs were finalized to be available for reporting beginning with the CY 2023 performance period of MIPS, with the notion that MVPs will be implemented through notice and comment rulemaking over the next few years to offer clinically relevant quality reporting for specialists and more granular specialty data (through subgroup reporting) for patients to make informed decisions about the care they receive. Building upon our commitment to align quality measures across CMS¹⁵⁰, we direct readers to section IV.A.4.a. of this proposed rule where we propose to create a primary care MVP. We note that the primary care MVP would create continuity between the primary care measures assessed under MIPS and the measures providers would be accountable for in the Medicare Shared Savings Program.

In light of the public comments described above and the finalization and continued development of the MVPs, we believe we need incentives for specialists in Shared Savings Program ACOs to report clinically relevant quality measures and to allow patients, referring clinicians, and ACOs to have more information regarding specialists involved in patient care. We believe that encouraging specialists to report on MVPs will lead to increased specialty engagement in the Shared Savings Program, thereby holding specialists accountable for quality improvement.

¹⁵⁰ Jacobs D, Schreiber M, Seshamani M, Tsai D, Fowler E, Fleisher L. Aligning Quality Measures across CMS – The Universal Foundation. *New England Journal of Medicine*, March 2, 2023, available at <https://www.nejm.org/doi/full/10.1056/NEJMp2215539>.

Beginning in CY 2023, specialists that report under MIPS, including specialists that participate in Shared Savings Program ACOs, have the option to register to report MVPs for the applicable CY performance period as described at § 414.1365(b) as a group, subgroup, or individual and to report on relevant MVP quality measures as described at § 414.1365(c). In this proposed rule, we are soliciting comments on scoring incentives that would be applied to an ACO's health equity adjusted quality performance score beginning in performance year 2025 when specialists who participate in the ACO report quality MVPs as described at § 414.1365(c)(1).

Similar to the health equity adjustment finalized in the CY 2023 PFS final rule (87 FR 69838), we are considering bonus points for ACOs with specialists reporting quality MVPs as described at § 414.1365(c)(1) that would be applied after MIPS scoring is complete. ACOs may receive up to a maximum of 10 additional points added to their ACO's health equity adjusted quality performance score if they meet the data completeness requirement at § 414.1340 and receives a MIPS Quality performance category score under § 414.1380(b)(1), in addition to administering the CAHPS for MIPS survey. In addition to specialists that participate in the ACO reporting quality MVPs described at § 414.1365(c)(1), an ACO would be required to report all measures in the APP measure set, meet the data completeness requirement at § 414.1340 and receives a MIPS Quality performance category score under § 414.1380(b)(1) to be eligible for bonus points.

Our overarching intent is to have specialists participate in ACOs in a meaningful way and to collect quality data that is comparable to data reported by other specialty providers in quality MVPs. We are seeking feedback on our overall approach to align quality measures in the Adult Universal Foundation with measures used for evaluation in the Medicare Shared Savings Program. We are also seeking feedback on the following aspects of MVP reporting for specialists in Shared Savings Program ACOs:

- In order to highlight specialty clinical practice within ACOs, how should we encourage specialist reporting of MVPs?

- How should we encourage the reporting of MVPs to collect quality data that is comparable to data reported by other specialty providers in quality MVPs and to address clinician concerns over measure appropriateness?

- How should we consider encouraging specialists to report the MVP that is most relevant to their clinical practice?

- How should we distinguish bonus points for ACOs that report on a larger volume of patients through MVPs?

- How should we provide ACOs with bonus points to their health equity adjusted quality performance score when an ACO's specialty clinicians report MVPs?

- What concerns and considerations should we be aware of when assessing ACOs for quality performance based on reporting quality measures within MVPs?

- Would incentivizing specialty MVPs create a disincentive for ACOs to report primary care focused APP and/or MVP measures?

- In the event that MIPS quality measures in MVPs are excluded under § 414.1380(b)(1)(vii)(A), should we apply the proposed Shared Savings Program scoring policy for excluded APP measures as described in section III.G.2.f. of this proposed rule?

- As noted above, providing ACOs with bonus points to their health equity adjusted quality performance score when ACOs' specialty clinicians report MVPs serves to encourage reporting of MVPs. Therefore, we do not intend to establish bonus points as a permanent policy. We seek comment on how long we should have bonus points in place in order to incentivize MVP reporting.

- Once specialists are reporting MVPs, overall aggregate specialty performance within an ACO could be assessed. We seek comment on if and how CMS should consider assessing overall specialty performance as part of the APP in the future.

We note that in section IV.A.1.b.(2) of this proposed rule, we included an RFI on how we can leverage MIPS policies to enable more Medicare beneficiaries to benefit from accountable care relationships within APMs and provide rigorous performance standards for those clinicians who report MVPs and remain in MIPS.

j. Proposal to Revise the Requirement to Meet the Case Minimum Requirement for Quality Performance Standard Determinations

(1) Background

We require ACOs to meet the case minimum requirement at § 414.1380 to determine the quality performance standard for ACOs in the first performance year of their first agreement period, for the eCQM/MIPS CQM incentive for performance year 2024, and for the extreme and uncontrollable circumstances policy (§ 425.512(a)(2), (a)(5)(i)(A)(2), (c)(3)).

Section 414.1380 includes policies related to all of MIPS scoring and is not specific to the Quality performance category. Further, the phrase “case minimum” is mentioned in multiple paragraphs at § 414.1380. The broad reference to § 414.1380 under § 425.512(a)(2), (a)(5)(i)(A)(2), and (c)(3) does not specify which paragraph at § 414.1380 is applicable when applying case minimum for purposes of determining an ACO’s quality performance standard. We believe that the references to meeting the case minimum requirement at § 414.1380 in the context of determining an ACO’s quality performance standard under § 425.512(a)(2), (a)(5)(i)(A)(2), and (c)(3) is not sufficient in describing our policy’s intent, which is to apply the MIPS Quality performance category scoring policies as described at § 414.1380(b)(1) in determining the ACO quality performance standard.

(2) Proposed Revisions

In order to alleviate confusion regarding the reference to case minimum in determining the ACO quality performance standard, for performance year 2024 and subsequent performance years, we propose to replace the references to meeting the case minimum requirement at § 414.1380 from § 425.512(a)(2), (a)(5)(i)(A)(2), and (c)(3) with the requirement that the ACO must receive a MIPS Quality performance category score under § 414.1380(b)(1) in order to meet the quality performance standard. This proposal would correct the purpose of our reference to case minimums by incorporating all of the applications of case minimums in the MIPS Quality performance category scoring policies in our policies to determine an ACO's quality performance standard under the Shared Savings Program. For example, under current policy at § 414.1380(b)(1)(i)(A)(2)(ii) in performance year 2024, if an ACO does not meet the case minimum requirement on an administrative claims-based measure, that measure would be excluded from the ACO's MIPS Quality performance category measure achievement points (numerator) and total available measure achievement points (denominator). If the ACO in this example meets the data completeness requirement at § 414.1340 for the ten CMS Web Interface measures or the three eCQMs/MIPS CQMs/Medicare CQMs and administers a CAHPS for MIPS survey, the ACO would receive a MIPS Quality performance category score. The resulting MIPS Quality performance category score in this example would be used to determine the ACO's quality performance standard under the Shared Savings Program.

All ACOs that participated in the Shared Savings Program were affected by an extreme and uncontrollable circumstance as described at § 425.512(c)(1) for performance years 2021, 2022, and 2023 due to the COVID-19 public health emergency. We believe that any unintended impact of meeting the case minimum requirement at § 414.1380 in evaluating an ACO's quality performance standard for performance years 2021, 2022, and 2023 was mitigated by the application of the extreme and uncontrollable circumstance policy. Specifically, it is not our

intent to exclude an ACO who received a MIPS Quality performance category score, but reported less than 20 cases on any measure(s) in the APP measure set from achieving the quality performance standard under § 425.512(a)(2), (a)(5)(i)(A)(2), and (c)(3), if that ACO is otherwise eligible to meet the quality performance standard.

Separately, we propose to address a gap in the current rule regarding the “minimum beneficiary sampling requirement” at § 414.1380(b)(1)(vii)(B). This provision provides for a 10-point reduction in the total available measure achievement points for MIPS eligible clinicians that submit five measures or fewer and register for the CAHPS for MIPS survey but do not meet the minimum beneficiary sampling requirement. As the case minimum is not applicable to the CAHPS for MIPS survey, we did not intend to preclude ACOs that do not meet the minimum beneficiary sampling requirement to field a CAHPS for MIPS survey from meeting the Shared Savings Program quality performance standard or the alternative quality performance standard. We propose revisions to the following regulation text sections:

- At § 425.512(a)(2)(ii) and (iii), we propose to replace the phrase “case minimum requirement at § 414.1380 of this subchapter” with the phrase “receives a MIPS Quality performance category score under § 414.1380(b)(1) of this subchapter.”

Additionally, we propose to replace the phrase “CAHPS for MIPS survey” with the phrase “CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter).” To read as follows: For the first performance year of an ACO's first agreement period under the Shared Savings Program, the ACO would meet the quality performance standard under the Shared Savings Program, if:

++ For performance year 2024, the ACO reports data via the APP and meets the data completeness requirement at § 414.1340 of this subchapter on the ten CMS Web Interface measures or the three eCQMs/MIPS CQMs/Medicare CQMs, and the CAHPS for MIPS survey

(except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter), and receives a MIPS Quality performance category score under § 414.1380(b)(1) of this subchapter.

++ For performance year 2025 and subsequent performance years, the ACO reports data via the APP and meets the data completeness requirement at § 414.1340 of this subchapter on the three eCQMs/MIPS CQMs/Medicare CQMs and the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter), and receives a MIPS Quality performance category score under § 414.1380(b)(1) of this subchapter

- At § 425.512(a)(5)(i)(A)(2), we propose to remove the phrase “and the case minimum requirement at § 414.1380 of this subchapter.” As follows: For performance year 2024, under the eCQM/MIPS CQM reporting incentive, the ACO would meet the quality performance standard used to determine eligibility for shared savings and to avoid maximum shared losses, as applicable, if the ACO: (1) meets the data completeness requirement at § 414.1340 for all three eCQMs/MIPS CQMs; (2) achieves a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP measure set and (3) achieves a quality performance score equivalent to or higher than the 40th percentile of the performance benchmark on at least one of the remaining five measures in the APP measure set.

++ We are not including a requirement under § 425.512(a)(5)(i)(A)(2) for the ACO to receive a MIPS Quality performance category score under § 414.1380(b)(1). As described at § 414.1380(b)(1)(vii), the MIPS Quality performance category score is the sum of all the measure achievement points divided by the sum of total available measure achievement points for the quality performance category. Therefore, we do not believe that it would be appropriate to require an ACO to receive a MIPS Quality performance category score in determining whether the ACO met the Shared Savings Program quality performance standard based on measure-level performance (such as in the case of the eCQM/MIPS CQM reporting incentive).

- At § 425.512(c)(3), we propose to remove the phrase “case minimum” for performance 2024 and subsequent performance years and replace with the phrase “receives a MIPS Quality performance category score under § 414.1380(b)(1) of this subchapter.” To read as follows: Under the extreme and uncontrollable circumstances policy, for performance year 2024 and subsequent performance years, if the ACO reports quality data via the APP and meets the data completeness requirement at § 414.1340 of this subchapter and receives a MIPS Quality performance category score under § 414.1380(b)(1) of this subchapter, CMS would use the higher of the ACO's health equity adjusted quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

We are proposing to revise § 425.512(a)(5)(iii)(A) and (B) to read as follows:

- For performance year 2024, the ACO does not report any of the ten CMS Web Interface measures, any of the three eCQMs/MIPS CQMs/Medicare CQMs and does not administer a CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter) under the APP.

- For performance year 2025 and subsequent years, the ACO does not report any of the three eCQMs/MIPS CQMs/Medicare CQMs and does not administer a CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter) under the APP.

Additionally, we propose to add clarifying language to the proposed redesignated paragraph (b)(2) of § 425.512 on calculating an ACO's health equity adjusted quality performance score as follows:

- For performance year 2024 and subsequent performance years, CMS will calculate the ACO's health equity adjusted quality performance score as the sum of: the ACO's MIPS Quality performance category score for all measures in the APP measure set, and the ACO's health

equity adjustment bonus points calculated in accordance with paragraph (b)(3) of this section, to which the sum of these values may not exceed 100 percent, if the following requirements are met: (1) The ACO reports the three eCQMs/MIPS CQMs/ Medicare CQMs in the APP measure set; (2) meets the data completeness requirement at § 414.1340 for the three eCQMs/MIPS CQMs/Medicare CQMs; and (3) administers the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B)).

3. Determining Beneficiary Assignment Under the Shared Savings Program

a. Proposed Modifications to the Step-wise Assignment Methodology and Approach to Identifying the Assignable Beneficiary Population

(1) Background

(a) Background on Assignment Methodology

Section 1899(c)(1) of the Act, as amended by the CURES Act and the Bipartisan Budget Act of 2018, provides that the Secretary shall determine an appropriate method to assign Medicare FFS beneficiaries to an ACO based on their utilization of primary care services provided by physicians in the ACO and, in the case of performance years beginning on or after January 1, 2019, services provided by a FQHC or RHC. As we have explained in earlier rulemaking, the term “assignment” for purposes of the Shared Savings Program in no way implies any limits, restrictions, or diminishment of the rights of Medicare FFS beneficiaries to exercise freedom of choice in the physicians and other health care practitioners from whom they receive covered services. In the context of the Shared Savings Program, “assignment” refers to an operational process by which Medicare will determine whether a beneficiary has chosen to receive a sufficient level of certain primary care services from physicians and other health care practitioners associated with a specific ACO so that the ACO may be appropriately designated as exercising basic responsibility for that beneficiary’s care.¹⁵¹

¹⁵¹ See for example, 76 FR 67851, and 83 FR 67863.

The regulations governing the assignment methodology under the Shared Savings Program are in 42 CFR part 425, subpart E. Under claims-based assignment, we determine a Medicare FFS beneficiary is assigned to an ACO if the beneficiary meets the criteria in § 425.401(a) to be eligible for assignment to an ACO, and the beneficiary's utilization of primary care services meets the criteria established under the assignment methodology specified in §§ 425.402 and 425.404. Section 425.402 specifies a step-wise assignment methodology for determining an ACO's assigned beneficiary population based on beneficiaries' use of primary care services. In accordance with § 425.402(b)(1), as a "pre-step" in the two-step claims-based assignment process, CMS identifies all beneficiaries who had at least one primary care service furnished by a physician who is an ACO professional in the ACO and who is a primary care physician as defined under § 425.20 or has one of the primary specialty designations specified in § 425.402(c). This pre-step is designed to satisfy the statutory requirement under section 1899(c)(1) of the Act that beneficiaries be assigned to an ACO based on their use of primary care services furnished by physicians participating in the ACO. Beneficiaries who meet the pre-step requirement are then assigned to an ACO through either one of two steps specified in § 425.402(b)(3) and (b)(4).

Under the first step of the assignment process, a beneficiary who is eligible for assignment and meets the pre-step requirement is assigned to an ACO if the allowed charges for primary care services furnished to the beneficiary during the assignment window by primary care physicians, nurse practitioners, physician assistants, and clinical nurse specialists who are ACO professionals in the ACO are greater than the allowed charges for primary care services furnished during the assignment window by primary care physicians, nurse practitioners, physician assistants, or clinical nurse specialists who are ACO professionals in any other ACO, or not affiliated with any ACO and identified by a Medicare-enrolled billing TIN. The second step of the assignment methodology applies to the remainder of the beneficiaries who are eligible

for assignment and meet the pre-step requirement, who have not had a primary care service rendered during the assignment window by any primary care physician, nurse practitioner, physician assistant, or clinical nurse specialist, either inside or outside the ACO. The beneficiary will be assigned to an ACO if the allowed charges for primary care services furnished to the beneficiary during the assignment window by physicians who are ACO professionals with specialty designations specified in § 425.402(c) are greater than the allowed charges for primary care services furnished during the assignment window by physicians with such specialty designations who are ACO professionals in any other ACO, or who are unaffiliated with an ACO and are identified by a Medicare-enrolled billing TIN.

The Shared Savings Program step-wise assignment process is offered in two similar, but distinct, claims-based assignment methodologies, prospective assignment and preliminary prospective assignment with retrospective reconciliation. Consistent with the requirements of section 1899(c)(2)(A) of the Act, we offer all Shared Savings Program ACOs the opportunity to select their assignment methodology annually, starting with agreement periods beginning on July 1, 2019. We use the same step-wise assignment methodology under § 425.402 to assign beneficiaries to ACOs under prospective assignment and ACOs under preliminary prospective assignment with retrospective reconciliation.

In the June 2015 final rule (80 FR 32699) we finalized the definition of “assignment window” under § 425.20 to mean the 12-month period used to assign beneficiaries to an ACO. As described in the December 2018 final rule, the assignment window for ACOs under prospective assignment is a 12-month period offset from the calendar year (for example, October through September preceding the calendar year), while for ACOs under preliminary prospective assignment with retrospective reconciliation, the assignment window is the 12-month period based on the calendar year (83 FR 67861). Operationally, in determining beneficiary assignment for each performance year and benchmark year, we identify allowed charges for services billed

under the HCPCS and CPT codes included in the applicable definition of primary care services under § 425.400(c), and according to the step-wise assignment methodology specified in subpart E of the Shared Savings Program's regulations, during all months of the 12-month period of the assignment window.

The step-wise assignment methodology was initially established with the November 2011 final rule and was modified through subsequent rulemaking. For instance, with the June 2015 final rule, we modified the approach to include claims for primary care services furnished by non-physician practitioners (nurse practitioners, physician assistants, and clinical nurse specialists) in step one of the assignment methodology rather than in step two, and to exclude services provided by certain physician specialties from step two of the assignment process. We refer readers to the November 2011 final rule and the June 2015 final rule for a discussion of the relevant background and related considerations (see 76 FR 67853 through 67858, and 80 FR 32748 through 32755). Generally, as we have previously explained in rulemaking, the step-wise assignment methodology maintains the statutory requirement to conduct claims-based beneficiary assignment based on beneficiaries' utilization of physician primary care services, recognizing the necessary and appropriate role of certain specialists in providing primary care services, such as in areas with primary care physician shortages (see, for example, 76 FR 67853 through 67855; see also 80 FR 32748 and 32754). Further, including services furnished by nurse practitioners, physician assistants, and clinical nurse specialists in determining where a beneficiary has received the plurality of primary care services in step one of the assignment methodology helps ensure that a beneficiary is assigned to the ACO whose ACO participants are actually providing the plurality of primary care for that beneficiary, and thus, should be responsible for managing the patient's overall care, or is not assigned to any ACO if the plurality of the beneficiary's primary care is furnished by practitioners in a non-ACO entity (see, for example, 80 FR 32748).

Various Shared Savings Program operations are based on the ACO's assigned population, or consider the size of the ACO's assigned population, which are summarized as follows:

- Within the Shared Savings Program's financial methodology:

- ++ CMS determines benchmark and performance year expenditures based on the ACO's assigned population as specified under subpart G of the regulations.

- ++ CMS determines the counties to include in the ACO's regional service area based on the ACO's assigned population (refer to definition of ACO's regional service area in § 425.20), and uses the ACO's assigned population in determining the share of assignable beneficiaries in the ACO's regional service area that are assigned to the ACO (see §§ 425.601(a)(5)(v) and 425.652(a)(5)(v)) which is applied in calculating the two-way blend of national and regional growth rates used to trend forward BY1 and BY2 expenditures to BY3 according to §§ 425.601(a)(5)(iv) and 425.652(a)(5)(iv) and as part of the blended growth rates used to update the benchmark according to §§ 425.601(b) and 425.652(b)(2). CMS also uses the ACO's regional service area to determine the regional adjustment to the ACO's historical benchmark according to § 425.656.

- ++ CMS considers the proportion of the ACO's assigned beneficiary population that is dually eligible for Medicare and Medicaid and the difference between the ACO's weighted average prospective HCC risk score for BY3 taken across the four Medicare enrollment types and when calculating the offset factor applied to negative regional adjustments (see § 425.656(c)(4)).

- ++ CMS considers the size of the ACO's assigned population in calculating the proration factor when determining the ACO's eligibility for the prior savings adjustment (see § 425.658(b)(3)) as well as in determining the minimum savings rate (MSR) / minimum loss rate (MLR) for ACOs that select the option to have their MSR/MLR calculated based on the number

of beneficiaries assigned to the ACO (refer to § 425.605(b)(2)(i)(C) (BASIC track) and § 425.610(b)(1)(iii) (ENHANCED track)).

++ CMS determines average prospective HCC risk scores for assigned beneficiaries for purposes of adjusting assigned beneficiary expenditures for severity and case mix (refer to §§ 425.601(a)(3), 425.601(a)(10), 425.605(a)(1), 425.610(a)(2), 425.652(a)(3), and 425.652(a)(10)), adjusting for differences in severity and case mix between the ACO's assigned beneficiary population and the assignable beneficiary population for the ACO's regional service area according to §§ 425.601(a)(8)(i)(C) and 425.656(b)(3), and adjusting the flat dollar amount ACPT for differences in severity and case mix between the ACO's BY3 assigned beneficiary population and the national assignable FFS population according to § 425.660(b)(4).

- In determinations related to an ACO's eligibility for participation for the Shared Savings Program:

++ CMS determines expenditures based on the ACO's assigned population when identifying if the ACO is a high revenue or low revenue ACO (as defined under § 425.20).

++ CMS considers whether an ACO meets the requirement to have at least 5,000 Medicare FFS assigned beneficiaries (see § 425.110).

++ CMS uses the ACO's number of assigned beneficiaries in calculating and recalculating the amount of the repayment mechanism required for ACOs participating under a two-sided model (see § 425.204(f)).

- For ACOs eligible to receive advance investment payments (see § 425.630(b)), CMS considers the size of the ACO's assigned population and the risk factors-based score of those beneficiaries in determining the quarterly payment amount (see § 425.630(f)).

- For ACOs that meet the reporting requirements for receiving a health equity adjusted quality performance score (see § 425.512(b)), CMS considers the proportion of the ACO's

assigned beneficiary population that is underserved in determining the ACO's health equity adjustment bonus points (see § 425.512(b)(2)(iv)).

- For ACOs affected by an extreme and uncontrollable circumstance, CMS considers the proportion of the ACO's assigned beneficiaries residing in an area identified under the Quality Payment Program as being affected by an extreme and uncontrollable circumstance in determining the ACO's quality score (see § 425.512(c)(1)(i)). CMS considers the percentage of the ACO's performance year assigned beneficiary population affected by an extreme and uncontrollable circumstance in determining the amount of shared losses owed by ACOs under a two-sided model (refer to §§ 425.605(f)(1) and 425.610(i)(1)).

- For ACOs that have established a beneficiary incentive program, beneficiaries assigned to an ACO who receive a qualifying service are eligible to receive an incentive payment (see § 425.304(c)(3)(ii) through (iv)).

- In accordance with the Shared Savings Program regulations under subpart H, CMS provides ACOs with certain aggregate reports and beneficiary-identifiable claims data on the ACO's assigned beneficiary population.

Further, a non-claims-based process for voluntary alignment applies to all Shared Savings Program ACOs and is used to supplement claims-based assignment. Section 1899(c) of the Act, as amended by section 50331 of the Bipartisan Budget Act of 2018, requires the Secretary to permit a Medicare FFS beneficiary to voluntarily identify an ACO professional as their primary care provider for purposes of assignment to an ACO. In the November 2018 final rule (83 FR 59959 through 59964), we finalized changes to the beneficiary voluntary alignment policies CMS previously established to implement the requirements under section 1899(c)(2)(B) of the Act (refer to § 425.402(e), as revised). In the November 2018 final rule (83 FR 59964), we revised the requirements related to primary care services and practitioner specialties previously established for the voluntary alignment process. As a result of this change, a voluntarily aligned

beneficiary is no longer required to receive a primary care service from an ACO professional to be assigned to the ACO in which the beneficiary's designated primary care clinician is participating. Additionally, the revision established that a beneficiary can be voluntarily aligned to an ACO based on their selection of any ACO professional as their primary clinician, regardless of the ACO professional's specialty and including nurse practitioners, physician assistants, and clinical nurse specialists. As specified in § 425.402(e)(1), and subject to § 425.402(e)(2), assignment under voluntary alignment supersedes any assignment that otherwise may have occurred under claims-based assignment.

(b) Background on Identification and Uses of the Assignable Beneficiary Population under the Shared Savings Program

To identify the assignable beneficiary population, which is used in program financial calculations, we apply a similar logic as is used to identify the Medicare beneficiaries who can be assigned to an ACO in the pre-step to the claims-based assignment methodology (see, for example, 81 FR 5843, and 81 FR 37985). In the June 2016 final rule (81 FR 37950), we finalized policies to use the assignable beneficiary population (a subset of the larger population of Medicare FFS beneficiaries) as the basis of certain calculations that had previously been based on the overall Medicare FFS population, including expenditures used to trend and update ACOs' historical benchmarks and to establish the truncation thresholds used in expenditure calculations. In the June 2016 final rule, we finalized the definition of "assignable beneficiary" under § 425.20 to mean a Medicare FFS beneficiary who receives at least one primary care service with a date of service during a specified 12-month assignment window from a Medicare-enrolled physician who is a primary care physician or who has one of the specialty designations included in § 425.402(c). We specified that the assignable population used to calculate national and regional benchmarking factors was to be identified using the 12-month calendar year assignment window corresponding to the benchmark or performance year for all ACOs, regardless of assignment

methodology which applied to the ACO, which at that time was determined by an ACO's track (see 81 FR 37985 through 37988). We explained our belief that using assignable beneficiaries across all program calculations based on national and regional FFS expenditures would result in factors that are generally more comparable to ACO expenditures than factors based on the overall Medicare FFS population, which can include non-utilizers of health care services and other beneficiaries not eligible for assignment (see, for example, 81 FR 5843 and 5844).

In the CY 2023 PFS final rule (87 FR 69929 through 69932), we finalized a modification to this policy, applicable for agreement periods beginning on January 1, 2024, and in subsequent years, to calculate risk-adjusted regional expenditures and the share of assignable beneficiaries assigned to an ACO using county-level values based on the assignable population identified using an assignment window that is consistent with the ACO's assignment methodology selection for the applicable performance year. (Refer to §§ 425.652(a)(5)(v)(A) and (b)(2)(iv)(A), and 425.654(a)(1)(i).) Under this approach, for ACOs selecting prospective assignment, we will use an assignable population of beneficiaries that is identified based on the offset assignment window (for example, October through September preceding the calendar year) and for ACOs selecting preliminary prospective assignment with retrospective reconciliation, we will use an assignable population of beneficiaries identified based on the calendar year assignment window (87 FR 69930). We also specified in the CY 2023 PFS final rule that we would continue to compute all factors used in calculations that are based on the national assignable FFS population using an assignable population identified based on the calendar year assignment window. (Refer to 87 FR 69931.) For ACOs participating under agreement periods beginning on or after July 1, 2019, and before January 1, 2024, we will continue to identify the assignable population that is the basis for calculating national and regional factors using the 12-month period based on a calendar year, which aligns with the assignment window for preliminary prospective assignment with retrospective reconciliation,

regardless of the ACO's assignment methodology. (See § 425.601. See also, 87 FR 69929, for a description of relevant background.)

The assignable beneficiary population is used in various calculations under the Shared Savings Program, including the following:

- CMS determines the 99th percentile of national Medicare fee-for-service expenditures for assignable beneficiaries for purposes of truncating beneficiary expenditures in order to minimize variation from catastrophically large claims (see §§ 425.601(a)(4) and (c)(3), 425.605(a)(3), 425.610(a)(4)(ii), 425.652(a)(4), and 425.654(a)(3)).

- CMS determines average county fee-for-service expenditures based on expenditures for the assignable population of beneficiaries in each county of an ACO's regional service area (see §§ 425.601(c) and 425.654(a)) for purposes of calculating the ACO's regional fee-for-service expenditures (see §§ 425.601(d) and 425.654(b)). CMS also determines the share of assignable beneficiaries in the ACO's regional service area that are assigned to the ACO (see §§ 425.601(a)(5)(v) and 425.652(a)(5)(v)). The ACO's regional fee-for-service expenditures and the share of assignable beneficiaries in the ACO's regional service area that are assigned to the ACO are used in the following calculations:

- ++ Trend forward BY1 and BY2 expenditures to BY3 according to §§ 425.601(a)(5) and 425.652(a)(5).

- ++ Determine the blended growth rates used to update the benchmark according to §§ 425.601(b) and 425.652(b)(2).

- ++ Determine the adjustment to the ACO's benchmark according to §§ 425.601(a)(8) and 425.652(a)(8).

- CMS determines national per capita fee-for-service expenditures for assignable beneficiaries for purposes of capping the regional adjustment to the ACO's historical benchmark according to §§ 425.601(a)(8)(ii)(C) and 425.656(c)(3), capping the prior savings adjustment

according to § 425.652(a)(8)(iv), and determining a flat dollar amount ACPT according to § 425.660(b)(3).

- CMS determines national growth rates for assignable beneficiaries that are used to trend forward BY1 and BY2 expenditures to BY3 according to §§ 425.601(a)(5)(ii) and 425.652(a)(5)(ii) and to determine the blended growth rates used update the benchmark according to §§ 425.601(b)(2) and 425.652(b)(2)(i).

- CMS determines average prospective HCC risk scores for assignable beneficiaries for purposes of adjusting county fee-for-service expenditures for severity and case mix of assignable beneficiaries in the county according to §§ 425.601(c)(4) and 425.654(a)(4), calculating the regional adjustment to the historical benchmark by adjusting for differences in severity and case mix between the ACO's assigned beneficiary population and the assignable beneficiary population for the ACO's regional service area according to §§ 425.601(a)(8)(i)(C) and 425.656(b)(3), and adjusting the flat dollar amount ACPT for differences in severity and case mix between the ACO's BY3 assigned beneficiary population and the national assignable FFS population according to § 425.660(b)(4).

(c) Concerns about Beneficiaries Excluded from the Current Assignment Methodology Based on the Pre-Step Requirement and Definition of an Assignable Beneficiary

CMS has established a goal that 100 percent of beneficiaries enrolled in Original Medicare be involved in a care relationship with accountability for quality and total cost of care by 2030.¹⁵² CMS has also established health equity as a top priority through our CMS Framework for Health Equity (2022-2032).¹⁵³ However, CMS believes that the assignment pre-step and definition of assignable beneficiary may create barriers for some beneficiaries otherwise

¹⁵² Seshamani M, Fowler E, Brooks-LaSure C. Building On The CMS Strategic Vision: Working Together For A Stronger Medicare. Health Affairs. January 11, 2022. Available at <https://www.healthaffairs.org/doi/10.1377/forefront.20220110.198444>.

¹⁵³ Centers for Medicare & Medicaid Services, *The CMS Framework for Health Equity 2022-2032* (April 2022), available at <https://www.cms.gov/files/document/cms-framework-health-equity.pdf>.

eligible for assignment to be assigned to ACOs. Revising the pre-step and definition of assignable beneficiary thus represents an opportunity to expand the assigned and assignable populations.

ACOs and other interested parties have also raised concerns that the current pre-step and definition of assignable beneficiary create barriers for some beneficiaries to be assigned to ACOs. For example, in previous proposed rules, we have received input from commenters that the pre-step requirement, as implemented in the current assignment methodology, systematically excludes from assignment beneficiaries who only received primary care from nurse practitioners, physician assistants, and clinical nurse specialists. In response to the CY 2023 PFS proposed rule, a commenter noted that the current claims-based assignment methodology creates a barrier for nurse practitioners and their patients to participate in ACOs.¹⁵⁴

Additional analysis by CMS has found that expanding the assignment methodology to allow more opportunities for beneficiaries to be assignable based on their receipt of primary care services provided by nurse practitioners, physician assistants, or clinical nurse specialists would reduce the barriers for underserved beneficiaries to be assigned to ACOs. As described in section III.G.3.a.(2)(d) of this proposed rule, we have observed from initial modeling of expanding the definition of an assignable beneficiary that such an approach could add to the national assignable population identified under current Shared Savings Program policies a population of beneficiaries that are more likely to be disabled, be enrolled in the Medicare Part D low-income subsidy (LIS), and reside in areas with higher ADI scores. The newly assignable population of beneficiaries also had a lower average prospective HCC risk score, lower total per capita-year spending, higher hospice utilization, and a higher mortality rate than the national assignable population under the current definition of an assignable beneficiary. Therefore, we believe that

¹⁵⁴ See comment letter from American Association of Nurse Practitioners, to Chiquita Brooks-LaSure, Administrator, CMS (September 6, 2022), available at <https://www.regulations.gov/comment/CMS-2022-0113-21927>.

adjusting the assignment methodology within the flexibility available under the statute so that additional beneficiaries can be included in the population of beneficiaries assigned to ACOs participating in the Shared Savings Program, and modifying the definition of assignable beneficiary to include a broader population, would make meaningful steps toward greater health equity and align with priorities recently emphasized in our CMS Framework for Health Equity (2022-2032).¹⁵⁵

(2) Proposed Revisions

(a) Overview of Proposed Revisions to Incorporate Use of an Expanded Window for Assignment

Section 1899(c)(1)(A) of the Act requires that claims-based assignment to ACOs be based on beneficiaries' utilization of primary care services furnished by ACO professionals who are physicians. We are proposing to use an expanded window for assignment in a new step three to the claims-based assignment process to identify additional beneficiaries for ACO assignment (described in section III.G.3.a.(2)(b). of this proposed rule), and we are proposing to modify the definition of "assignable beneficiary" to be consistent with this use of an expanded window for assignment to identify additional beneficiaries to include in the assignable population after application of the existing methodology (described in section III.G.3.a.(2)(c). of this proposed rule). We propose to add a new definition of "Expanded window for assignment" in § 425.20 to mean the 24-month period used to assign beneficiaries to an ACO, or to identify assignable beneficiaries, or both that includes the applicable 12-month assignment window (as defined under § 425.20) and the preceding 12 months.

To follow is a brief summary of the proposed uses of the expanded window for assignment, described in greater detail elsewhere within this section of this proposed rule. First, the proposed addition of a step three to the beneficiary assignment methodology would occur

¹⁵⁵ Centers for Medicare & Medicaid Services, *The CMS Framework for Health Equity 2022-2032* (April 2022), available at <https://www.cms.gov/files/document/cms-framework-health-equity.pdf>.

after the current steps one and two and would apply only to beneficiaries who do not meet the pre-step requirement but who received at least one primary care service during the proposed expanded window for assignment with an ACO professional who is a primary care physician or a physician who has one of the specialty designations included in § 425.402(c). Beneficiaries qualifying for step three would be assigned based on the plurality of allowed charges for primary care services during this expanded window for assignment. Second, the proposed revision to the definition of an assignable beneficiary would similarly include beneficiaries who receive at least one primary care service during the proposed expanded window for assignment from a Medicare-enrolled physician who is a primary care physician or who has one of the specialty designations included in § 425.402(c). In combination with using the expanded window for assignment for identifying beneficiaries who received at least one primary care service from a primary care physician or a physician whose specialty designation is used in assignment, under both the proposed step three for assignment and proposed revised definition of an assignable beneficiary, we would continue to consider whether beneficiaries received at least one primary care service during the 12-month assignment window. We propose that these changes would be effective for the performance year beginning on January 1, 2025, and subsequent performance years.

A number of factors informed our consideration of the duration of the expanded window for assignment. We believe that a 24-month expanded window for assignment, as opposed to a longer period, would prioritize primary care services that were provided more recently. Through the proposed modifications to the assignment methodology and the definition of assignable beneficiary, we seek to better account for beneficiaries who may be receiving their primary care predominantly from non-physician practitioners during the 12-month assignment window, but who received care from a physician in the preceding 12 months, in recognition of the statutory requirement in section 1899(c) of the Act that claims-based assignment be based on receipt of

primary care services from physicians who are ACO professionals. We believe that primary care services furnished by nurse practitioners, physician assistants, and clinical nurse specialists during the 12-month assignment window could reflect their work in clinical teams in collaboration with and under the supervision of physicians, and thereby represent a continuation of the beneficiary’s primary care relationship with a physician from the previous year. Furthermore, use of a 24-month expanded window for assignment would build on experience we have gained and lessons learned from testing Medicare ACO initiatives by the Center for Medicare and Medicaid Innovation (Innovation Center), specifically from the use of a two-year beneficiary alignment period in the ACO Realizing Equity, Access, and Community Health (REACH) Model and the Next Generation ACO (NGACO) Model.¹⁵⁶

We also believe it is timely to propose modifications to the definition of “assignment window” under § 425.20 for improved clarity and consistency with the programmatic applications of the assignment window. Under the existing definition, assignment window means the 12-month period used to assign beneficiaries to an ACO. However, under existing Shared Savings Program policies and under the proposed changes described in this section of this proposed rule, we use the term assignment window in referencing our identification of assignable beneficiaries. Therefore, we are proposing to modify the definition of assignment window to mean the 12-month period used to assign beneficiaries to an ACO, or to identify assignable beneficiaries, or both.

¹⁵⁶ See, for example, CMS, Center for Medicare & Medicaid Innovation, ACO Realizing Equity, Access, and Community Health (REACH) Model, PY2023 Financial Operating Guide: Overview, available at <https://innovation.cms.gov/media/document/aco-reach-py2023-financial-op-guide> (refer to Appendix B, Beneficiary Alignment Procedures). See also, CMS, Center for Medicare & Medicaid Innovation, Next Generation ACO Model Benchmarking Methods (December 15, 2015), available at <https://innovation.cms.gov/files/x/nextgenaco-methodology.pdf> (refer to Appendix A, Next Generation ACO Model Alignment Procedures). In summary, under the ACO REACH Model and NGACO Model the alignment period consists of two alignment years. The first alignment year is the 12- month period ending 18 months prior to the start of the relevant performance year or base year. The second alignment year is the 12-month period ending 6 months prior to the start of the relevant performance year or base year.

We seek comment on proposed modifications to § 425.20, to revise the definition of “assignable beneficiary,” “assignment window,” and add a new definition of “expanded window for assignment”.

(b) Proposed Revisions to Add a Step Three to the Beneficiary Assignment Methodology

For the performance year beginning on January 1, 2025, and subsequent performance years, we propose to revise the step-wise beneficiary assignment methodology, as described in § 425.402, to include a step three, which would utilize the proposed expanded window for assignment to identify additional beneficiaries for assignment among Medicare FFS beneficiaries who were not identified under the existing pre-step. Specifically, step three would identify all such beneficiaries not identified by the pre-step criterion specified in § 425.402(b)(1), who also meet the following criteria:

(1) Received at least one primary care service with a non-physician ACO professional (nurse practitioner, physician assistant, or clinical nurse specialist) in the ACO during the applicable 12-month assignment window.

(2) Received at least one primary care service with a physician who is an ACO professional in the ACO and who is a primary care physician as defined under § 425.20 or who has one of the primary specialty designations included in § 425.402(c) during the applicable 24-month expanded window for assignment.

A beneficiary meeting the aforementioned criteria would then be assigned to the ACO if the allowed charges for primary care services furnished to the beneficiary by ACO professionals in the ACO who are primary care physicians, non-physician ACO professionals, or physicians with specialty designations included in § 425.402(c) during the applicable expanded window for assignment are greater than the allowed charges for primary care services furnished by primary care physicians, physicians with specialty designations included in § 425.402(c), nurse practitioners (as defined at § 410.75(b)), physician assistants (as defined at § 410.74(a)(2)), and

clinical nurse specialists (as defined at § 410.76(b)) who are ACO professionals in any other ACO or not affiliated with any ACO and identified by a Medicare-enrolled billing TIN.

Further, in order to be assigned to an ACO through the step-wise assignment methodology, a Medicare FFS beneficiary would continue to need to meet the eligibility criteria in § 425.401(a) for the 12-month assignment window, regardless of whether the beneficiary is assigned to an ACO in step one or two, or proposed step three. Under the proposed approach, beneficiaries who do not receive any primary care services during the assignment window would continue to be excluded from claims-based assignment as they are under the current assignment methodology. Beneficiaries who meet the pre-step based on a 12-month assignment window (as specified in § 425.402(b)(1)) but are not assigned to an ACO in steps one or two would also continue to not be assigned to an ACO as these beneficiaries would not be considered for assignment in step three. The proposed changes also would not change beneficiary voluntary alignment, which would continue to supersede claims-based assignment, as specified in § 425.402(e).

As specified in § 425.400(a)(3)(ii), beneficiaries who are prospectively assigned to an ACO will remain assigned to the ACO at the end of the benchmark or performance year, unless they meet any of the exclusion criteria under § 425.401(b). As a result, under claims-based assignment, a beneficiary prospectively assigned to an ACO is not eligible for assignment to a different ACO for the same benchmark or performance year.¹⁵⁷ We propose to continue to apply this approach for beneficiaries prospectively assigned at step one, step two, or proposed step three. In other words, a beneficiary who is assigned to an ACO based on prospective assignment through step one or two or proposed step three would remain assigned to that ACO for the

¹⁵⁷ See, for example, Medicare Shared Savings Program, Shared Savings and Losses, Assignment and Quality Performance Standard Methodology Specifications (version #11, January 2023), available at <https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf>-2 (see section 2.3.2.2, “Prospective Assignment”).

benchmark or performance year (unless they meet any of the exclusion criteria under § 425.401(b)). Under this approach, a beneficiary prospectively assigned to an ACO for a benchmark or performance year would not be assigned to another ACO under prospective assignment or to an ACO under preliminary prospective assignment with retrospective reconciliation, even if the other ACO provides the plurality of the beneficiary's primary care services during the relevant benchmark or performance year.

The use of a 24-month expanded window for assignment would also require changes to the timeframe for which we recognize additional primary care service codes related to the COVID-19 Public Health Emergency (PHE), as outlined in § 425.400(c)(2). Under § 425.400(c)(2), we use certain additional primary care service codes in determining beneficiary assignment under § 425.400(c)(1) when the assignment window for a benchmark or performance year includes any month(s) during the COVID-19 PHE (as defined in § 400.200). In accordance with § 425.400(c)(2)(ii), the additional primary care service codes are applicable to all months of the assignment window, when the assignment window includes any month(s) during the COVID-19 PHE, with the exception of certain additional CPT codes (99441, 99442, and 99443) which we use in determining assignment until they are longer payable under Medicare FFS payment policies (as specified under § 425.400(c)(2)(i)(A)(2)). We refer readers to discussions in earlier rulemaking for the development of this policy, including 85 FR 84748 through 84755, 85 FR 84791 through 84793, and 86 FR 65276. We propose to modify the regulations at § 425.400(c)(2)(i) and (ii) to incorporate references to the expanded window for assignment, such that we would apply the additional primary care service codes to all months of the assignment window or applicable expanded window for assignment when the assignment window or applicable expanded window for assignment includes any month(s) during the COVID-19 PHE. These proposed changes are necessary to capture the additional codes related to

the COVID-19 PHE when using the expanded window for assignment in determining assignment for a benchmark or performance year.¹⁵⁸

The proposed use of an expanded window for assignment in an enhanced step-wise assignment methodology would result in a greater overall number of beneficiaries assigned to ACOs. All beneficiaries who are assigned to an ACO under the current methodology would continue to be assigned to an ACO under the proposed methodology. Under the proposed methodology, a beneficiary who does not meet the current pre-step requirement would also be eligible to be assigned to an ACO if they (a) received at least one primary care service from a nurse practitioner, physician assistant, or clinical nurse specialist who is an ACO professional in the ACO during the applicable assignment window and (b) received at least one primary care service from a primary care physician or physician with a specialty used in assignment who is an ACO professional in the ACO during the applicable expanded window for assignment.

Under proposed changes, the 12-month assignment window would continue to represent the period used to identify allowed charges for primary care services received from ACO professionals and analogous practitioners not participating in an ACO, for purposes of claims-based beneficiary assignment during steps one and two. Thus, most beneficiaries currently assigned to an ACO under the existing assignment methodology would continue to be assigned to the same ACO under the proposed changes. We anticipate that only a very small share of beneficiaries would be assigned to a different ACO under the proposed assignment methodology, and any change in ACO assignment would be due to the operational order in which assignment is run and the precedence of prospective assignment over preliminary prospective assignment with

¹⁵⁸ See, for example, HHS Secretary Xavier Becerra Statement on End of the COVID-19 Public Health Emergency (May 11, 2023), available at <https://www.hhs.gov/about/news/2023/05/11/hhs-secretary-xavier-becerra-statement-on-end-of-the-covid-19-public-health-emergency.html>. See also Letter to U.S. Governors from HHS Secretary Xavier Becerra on renewing COVID-19 Public Health Emergency (PHE), available at <https://www.hhs.gov/about/news/2023/02/09/letter-us-governors-hhs-secretary-xavier-becerra-renewing-covid-19-public-health-emergency.html> (specifying the U.S. Department of Health and Human Services is planning for the COVID-19 PHE to end on May 11, 2023).

retrospective reconciliation. Specifically, there may be a small share of beneficiaries who would be prospectively assigned to an ACO under the proposed step three for prospective assignment that differs from the retrospective ACO the beneficiary is currently assigned to under steps one or two for preliminary prospective assignment with retrospective reconciliation. This precedence of prospective assignment follows the current assignment methodology, which currently assigns beneficiaries via steps one and two of prospective assignment to an ACO that may be different than the ACO to which the beneficiary would have been assigned via steps one or two if assigned to an ACO under preliminary prospective assignment with retrospective reconciliation. For the average retrospective ACO, the share of assigned beneficiaries affected by this precedence of prospective assignment has historically been very small, approximately 1.3 percent from 2018 through 2021.

The proposed addition of step three would add a population of otherwise omitted beneficiaries by using the expanded window for assignment to identify the required physician visit with an ACO professional and to determine the plurality of allowed charges for primary care services. Functionally, the beneficiaries who would be newly assigned are beneficiaries who received a primary care service from an ACO professional who is a primary care physician (as defined under § 425.20) or who has one of the specialty designations included in § 425.402(c) in the 12-month period prior to the assignment window and received a primary care service from a nurse practitioner (as defined at § 410.75(b)), a physician assistant (as defined at § 410.74(a)(2)), or a clinical nurse specialist (as defined at § 410.76(b)) during the assignment window. Notably, the proposed step 3 would continue to be consistent with section 1899(c)(1)(A) of the Act, because a beneficiary would have to have received a primary care service from a primary care physician or physician with a specialty used in assignment who is an ACO professional in the ACO during the expanded window for assignment to be eligible for assignment to the ACO.

Similar to any other change that affects beneficiary assignment, the proposed use of an expanded window for assignment in a step three could impact downstream aspects of the Shared Savings Program that rely on the assigned population, including the following potential effects:

- Larger populations of assigned beneficiaries could contribute to more ACOs meeting minimum size requirements to participate in the program.
- A larger assigned population would result in lower minimum savings rates for ACOs subject to a variable minimum savings rate (that is, ACOs in a one-sided risk model on the BASIC track's glide path or ACOs in a two-sided risk model that elected a variable minimum savings rate). Lower minimum savings rates reflect a lower threshold for ACOs to meet in order to share in savings. Similarly, a larger assigned population would result in a lower minimum loss rate for ACOs in a two-sided risk model with a variable minimum loss rate, which reflects a lower threshold for two-sided risk ACOs to meet before they must share in losses.
- A larger assigned population would enable higher performance payment limits, which are based on a percentage of an ACO's total benchmark expenditures. As an ACO's assigned beneficiary population increases, so too do the ACO's total benchmark expenditures. Because the maximum shared savings an ACO can earn is determined as a percentage of total benchmark expenditures, a larger assigned population would result in a higher performance payment limit. Similarly, a larger assigned population would result in larger loss sharing limit for ACOs in two-sided risk models because loss sharing limits are also determined as a percentage of aggregate benchmarks.
- A larger assigned population could affect an ACO's revenue status as the ACO's ACO participants' total Medicare Parts A and B fee-for-service (FFS) revenue would not change but the ACO's assigned beneficiary population's total Medicare Parts A and B FFS expenditures would increase. In other words, revenue-to-expenditure ratios would decrease for ACOs that receive a larger assigned beneficiary population. Compared to the current assignment

methodology, the proposed assignment methodology change could result in some ACOs being identified as low revenue instead of high revenue. As a result, other program elements tied to revenue status could then be affected by the proposed changes, specifically an ACO's eligibility for Advance Investment Payments.

- Changes in the assigned population could directly affect ACOs' average risk scores, mix of beneficiaries across enrollment types, regional service area, and total expenditures during benchmark and performance years.

Expected impacts on several other program elements would depend on differences in the changes observed for beneficiaries added to the assignable population versus beneficiaries added to the ACO's assigned beneficiaries. For example, the impact of the proposed change to the assignment methodology on ACO performance would depend in part on the difference in spending levels and trends between those beneficiaries added to the assignable population, nationally and within an ACO's regional service area, versus those beneficiaries added to the ACO's assigned beneficiary population. The data shared with ACOs on their assignable and assigned beneficiaries would change under the proposed policy as the population of assignable and assigned beneficiaries changes.

We propose modifications to subpart E of the Shared Savings Program regulations to specify the revised beneficiary assignment methodology. We propose to specify the new step three in a new provision at § 425.402(b)(5). We also propose technical and conforming changes to incorporate the revised methodology. We propose to amend § 425.402(b)(1), describing the existing pre-step of the assignment methodology that would remain applicable for step one and step two, to refer to the identification of all beneficiaries who had "at least one primary care service *during the applicable assignment window* with a physician who is an ACO professional in the ACO and who is a primary care physician as defined under § 425.20 or who has one of the primary specialty designations included in [§ 425.402(c)]" (emphasis added to reflect revised

text). In § 425.402(c), which indicates the primary specialty designations used in assignment, we propose to specify that the listed specialties would be considered for ACO professionals in step two (as described in § 425.402(b)(4)) and the proposed step three (which would become a new provision at § 425.402(b)(5)) of the assignment methodology. In § 425.400(a)(2)(ii), which generally describes quarterly updates to preliminary prospective assignment with retrospective reconciliation, we propose to specify that assignment would be updated quarterly based on the most recent 12 or 24 months of data, as applicable, under the methodology described in §§ 425.402 and 425.404. Lastly, in § 425.400(a)(3)(i), which generally describes prospective assignment of beneficiaries to ACOs at the beginning of each benchmark or performance year, we propose to amend the reference that specifies that we base prospective assignment on the beneficiary's use of primary care services in the most recent 12 months for which data are available, to specify instead the beneficiary's use of primary care services in the most recent 12 months or 24 months, as applicable, for which data are available, using the assignment methodology described in §§ 425.402 and 425.404.

(c) Proposed Revisions to the Definition of an Assignable Beneficiary

Consistent with the previously described proposal to use an expanded window for assignment in an enhanced step-wise assignment methodology, we are proposing to revise the definition of Assignable beneficiary in § 425.20 to include additional beneficiaries who would be identified using the expanded window for assignment. Under this proposal, we would continue to utilize the criterion in the existing definition, under which assignable beneficiary means a Medicare FFS beneficiary who receives at least one primary care service with a date of service during a specified 12-month assignment window from a Medicare-enrolled physician who is a primary care physician or who has one of the specialty designations included in § 425.402(c). Further, for the performance year beginning January 1, 2025 and subsequent performance years,

we propose that a Medicare fee-for-service beneficiary who does not meet this requirement but who meets both of the following criteria would also be considered an assignable beneficiary:

- Receives at least one primary care service with a date of service during a specified 24-month expanded window for assignment from a Medicare-enrolled physician who is a primary care physician or who has one of the specialty designations included in § 425.402(c).
- Receives at least one primary care service with a date of service during a specified 12-month assignment window from a Medicare-enrolled practitioner who is a nurse practitioner (as defined at § 410.75(b)), physician assistant (as defined at § 410.74(a)(2)), or a clinical nurse specialist (as defined at § 410.76(b)).

The proposed use of an expanded window for assignment would result in a greater number of beneficiaries included in the assignable population. All beneficiaries who are currently assignable would continue to be assignable under the proposed revisions to the definition of an assignable beneficiary. Under the proposed definition, beneficiaries who do not receive any primary care services during the assignment window would continue to be excluded from the population of assignable beneficiaries, just as they are excluded in the current definition of an assignable beneficiary. In other words, the 12-month assignment window would continue to represent the timeframe within which beneficiaries must receive at least one primary care service to be identified as an assignable beneficiary. Moreover, to identify a broader assignable population under this proposed approach, we believe it is important to consider the criterion for the beneficiary to have received a primary care service during the 12-month assignment window to be met through a service furnished from a non-physician practitioner (nurse practitioner, physician assistant, and clinical nurse specialist), or from a primary care physician or a physician who has one of the specialty designations included in § 425.402(c) (as is required under the current definition).

The proposed approach to expanding the assignable beneficiary population could impact downstream aspects of the Shared Savings Program that rely on the assignable population, including the following effects:

- Changes in the distribution of expenditures among the national assignable population could affect the thresholds used to truncate expenditures.
- Changes in average per capita expenditures and risk scores among assignable beneficiaries in a given benchmark year could affect the average risk-adjusted spending within ACOs' regional service areas, which could affect regional adjustments.
- Differential changes in average per capita expenditures and risk scores over time could affect trend and update factors that are based on changes in expenditures for the national assignable population and in the risk-adjusted expenditures for the population of assignable beneficiaries in an ACO's regional service area.
- Changes in average prospective HCC risk scores for the national assignable population could affect the factors used to renormalize risk scores each benchmark and performance year and to risk-adjust the flat-dollar ACPT amounts.
- Changes in the number of assignable beneficiaries across ACO regional service areas could affect ACOs' market shares, which determine the weights used for blending the national and regional benchmark trend and update factors.
- Changes in the level of national fee-for-service expenditures for the assignable population could affect the caps applied to the regional adjustment and prior savings adjustment to the historical benchmark and the calculation of the flat-dollar ACPT amount.

Under the current regulations, the time period we use to identify the assignable population that will be used to calculate different factors used in program financial calculations depends on whether it is a national or regional factor, the start date of an ACO's agreement period and, in some cases, an ACO's selected assignment methodology. Under the proposed

revised definition of assignable beneficiary, for all ACOs (regardless of agreement period start date), for the performance year beginning on January 1, 2025, and subsequent performance years, for benchmark year and performance year factors based on the national assignable population, we would identify the assignable population using the 24-month expanded window for assignment comprised of the 12-month calendar year assignment window, which aligns with the assignment window for preliminary prospective assignment with retrospective reconciliation, and the preceding 12 months. We note that under this proposal we would also use the 24-month expanded window for assignment comprised of the 12-month calendar year assignment window and the preceding 12 months when identifying the assignable population for regional factors for performance year 2025 and subsequent years for use in calculations for ACOs that are continuing in agreement periods that began before January 1, 2024.

For ACOs participating in agreement periods beginning on January 1, 2024, and in subsequent years, for performance year 2025 and in subsequent years for regional factors, we would identify the assignable population using the 24-month expanded window for assignment that is consistent with the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii). That is, for ACOs selecting preliminary prospective assignment with retrospective reconciliation, we would use the 24-month expanded window for assignment comprised of the 12-month calendar year assignment window and the preceding 12 months. For ACOs selecting prospective assignment, the 24-month expanded window for assignment would be comprised of the 12-month, offset assignment window plus the preceding 12 months. For example, we would use October 1, 2022, to September 30, 2024, as the 24-month expanded window for assignment to identify the assignable population for performance year 2025 for ACOs under prospective assignment.

We propose technical and conforming changes to provisions in subpart G of the Shared Savings Program regulations that refer to the assignment window used to identify the assignable

beneficiary population in order to incorporate references to the proposed approach to using an expanded window for assignment in identifying the assignable population for performance year 2025 and in subsequent years. The regulations establishing the benchmarking methodology for ACOs with agreement periods beginning before January 1, 2024, do not directly reference the assignment window, and thus would not require conforming changes. However, there are benchmarking methodology provisions for ACOs with agreement periods beginning on January 1, 2024, and in subsequent years that directly refer to the assignment window. Thus, we propose to amend these provisions to specify that the assignable population would be identified for the relevant benchmark year or the performance year (as applicable) using the assignment window or expanded window for assignment that is consistent with the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii):

- In §§ 425.652(a)(5)(v)(A) and (b)(2)(iv)(A), provisions on calculating the county-level share of assignable beneficiaries who are assigned to the ACO for each county in the ACO's regional service area for purposes of calculating the blended national-regional growth rates used in trending and updating the benchmark (respectively).
- In the provision on redetermination of the regional adjustment for the second or each subsequent performance year during the term of the agreement period in § 425.652(a)(9)(ii).
- In the provision on the calculation of average county FFS expenditures for assignable beneficiaries in each county in the ACO's regional service area in § 425.654(a)(1)(i).
- In the provision on adjusting for differences in severity and case mix between the ACO's assigned beneficiary population for BY3 and the assignable beneficiary population for the ACO's regional service area for BY3, in calculating average per capita expenditures for the ACO's regional service area, in § 425.656(b)(3).

Similarly, we also propose to specify in the proposed new provision at § 425.655(b)(1) that the assignable population that would be used to calculate average county prospective HCC

and demographic risk scores for purposes of calculating the proposed regional risk score growth cap adjustment factor (refer to section III.G.4.b. of this proposed rule) would be identified for the relevant benchmark year or the performance year (as applicable) using the assignment window or expanded window for assignment that is consistent with the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii).

We seek comment on our proposed modifications to the definition of assignable beneficiary in § 425.20. We also seek comment on our proposed technical and conforming changes to references to the identification of assignable beneficiaries in subpart G of the Shared Savings Program regulations, as well as in the proposed new regulation at § 425.655 (on calculating the regional risk score growth cap adjustment factor), to incorporate the use of the assignment window or expanded window for assignment in identification of the assignable beneficiary population.

(d) Simulations to Understand the Potential Effect of Proposed Changes

To understand the potential impact of using an expanded window for assignment in a proposed step 3 of the claims-based assignment methodology, we simulated using the proposed definition for an assignable beneficiary and proposed step 3 using the set of ACOs and data for performance year (PY) 2021. To simplify the analysis, this simulation used CY 2021 as the assignment window. Thus, the expanded window for assignment spanned from January 1, 2020, through December 31, 2021. We used a calendar year basis because we do not expect the impact of the proposed changes to meaningfully differ between retrospective and prospective assignment windows, the latter of which uses an offset window. In this analysis, the national assignable population included a total of 26.2 million beneficiaries based on the current methodology. The simulation applying the proposed policies then added 762,156 newly assignable beneficiaries, growing the national assignable population by about 2.9 percent. For additional analysis on estimated impacts, we also refer commenters to the Regulatory Impact

Analysis in section VII.E. of this proposed rule. We seek comment on the proposed approach discussed in this proposed rule and the potential effects of the proposed approach, including its effects modeled in the aforementioned simulation and its effects in other scenarios that might be considered by commenters. We anticipate continuing additional simulations on the effect of the proposed changes to the assignment methodology to further inform our understanding of the potential impacts of the proposal, and we are planning to publish results from such additional simulations in the final rule.

Simulation results suggest that an expanded window for assignment may increase access to accountable care for underserved beneficiaries. Relative to the national assignable population as determined under the current assignment methodology, the group of added beneficiaries from the expanded window for assignment simulation had a larger share of beneficiaries with disabled Medicare enrollment type, resided in areas with slightly higher average Area Deprivation Index (ADI) national percentile rank (a measure of neighborhood socioeconomic disadvantage), and had a larger share with any months of Medicare Part D LIS enrollment (refer to Table 30).

TABLE 30: Selected Characteristics of Beneficiaries Added to the National Assignable Population for PY 2021 through the Expanded Window for Assignment Simulation

	National Assignable Population Under Current Assignment Methods	Added to the National Assignable Population in the Simulation	National Assignable Population Under the Simulation
Total Beneficiaries	26,169,153	762,156	26,931,309
Total Person Years¹	24,900,013	694,132	25,594,145
Share of Person Years by Medicare Enrollment Type			
End Stage Renal Disease (ESRD)	0.9%	1.0%	0.9%
Disabled	11.1%	15.2%	11.2%
Aged/Dual	8.5%	7.6%	8.5%
Aged/Non-Dual	79.5%	76.3%	79.4%
Mean ADI National Percentile Rank²	43.2	46.5	43.3
Share of beneficiaries with at least one month of Medicare Part D LIS Enrollment	20.4%	24.0%	20.5%

¹ This approach is consistent with calculation of ACO assigned beneficiary person years as described in the Medicare Shared Savings Program, Shared Savings and Losses, Assignment and Quality Performance Standard Methodology Specifications (version # 11, January 2023) available at <https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf-2>. Note that calculations of person years exclude months associated with episodes of care for treatment of COVID-19. Refer to Medicare Shared Savings Program, Shared Savings and Losses and Assignment Methodology Specifications of Policies to Address the Public Health Emergency for COVID-19 (December 2020) available at: <https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf>.

² Mean ADI National Percentile Rank was calculated as a weighted mean, weighted by person years, among beneficiaries with non-missing ADI percentile.

Simulation results also suggest that using a 24-month expanded window for assignment in proposed step 3 of the claims-based assignment methodology would increase access to accountable care among beneficiaries with Medicare coverage for part of a year (such as beneficiaries who die during the performance year). The group of added assignable beneficiaries in the simulation previously described had a lower average prospective HCC risk score, lower total per capita spending in CY 2021, higher hospice utilization, and a higher mortality rate when compared to assignable beneficiaries determined using the current definition of assignable beneficiary and assignment methodology. These results suggest that beneficiaries who would be added to the assignable population under the proposed changes may benefit from greater care coordination through ACOs.

(e) Implementation of Proposed Revisions

We are proposing that the expanded window for assignment and revised step-wise assignment methodology would be applicable to all ACOs for the performance year beginning on January 1, 2025, and in subsequent years. For example, for a calendar year assignment window that runs from January 1, 2025, through December 31, 2025, the expanded window for assignment would run from January 1, 2024, through December 31, 2025. For an offset assignment window that runs from October 1, 2023, through September 30, 2024, the expanded window for assignment would run from October 1, 2022, through September 30, 2024. Consistent with how we have implemented previous changes to the Shared Savings Program assignment methodology, we would use the new methodology each time assignment is determined for a given benchmark or performance year and, as applicable, to determine the eligibility of ACOs applying to enter into or renew participation in the Shared Savings Program. For example, applicant eligibility for PY 2024 will be determined during CY 2023. We would not be able to review public comments and decide whether to finalize the proposed changes in sufficient time to apply the expanded window for assignment and revised methodology for PY 2024 applications. Additionally, we anticipate that the proposed revised approach, if finalized, would require significant operational changes to the Shared Savings Program assignment methodology, which would take time to prepare in advance of initial use of the approach during the application process. For these reasons, we would not be able to apply the expanded window for assignment and revised step-wise beneficiary assignment methodology for the performance year starting on January 1, 2024, and we are proposing to apply this change beginning with the performance year starting on January 1, 2025.

We would apply the proposed revised approach to determining beneficiary assignment and the revised definition of assignable beneficiary in establishing, adjusting, updating, and resetting historical benchmarks for ACOs entering new agreement periods beginning on January

1, 2025, and subsequent years. Also consistent with how we have implemented previous changes to the assignment methodology, we would adjust benchmarks for all ACOs in agreement periods for which performance year 2025 is a second or subsequent performance year at the start of performance year 2025, so that the ACO benchmarks reflect the use of the same assignment rules and definition of assignable beneficiary as would apply in the performance year (refer to §§ 425.601(a)(9) and 425.652(a)(9)). We believe that the expanded window for assignment and proposed step three represent a valuable change that would fill an important gap in the current assignment methodology. CMS has outlined a renewed vision and strategy for driving health system transformation to achieve equitable outcomes through high-quality, affordable, person-centered care for all beneficiaries.¹⁵⁹ In a January 2022 article, CMS stated our goal that 100 percent of people with Original Medicare will be in a care relationship with accountability for quality and total cost of care by 2030.¹⁶⁰ Many Medicare FFS beneficiaries are currently excluded from the assignable and Shared Savings Program assigned populations despite receiving primary care from ACO professional nurse practitioners, physician assistants, and clinical nurse specialists during the existing 12-month assignment window, and these excluded beneficiaries tend to come from populations characterized by greater social risk factors. Specifically, beneficiaries likely to be added to the assignable population are more likely to be disabled, be enrolled in the Medicare Part D LIS, and reside in areas with higher ADI scores (as described in section III.G.3.a.(2)(d) of this proposed rule). The proposed change to the assignment methodology represents an opportunity to not only grow the share of Medicare beneficiaries involved in accountable care relationships but to also support efforts to improve health equity in the Medicare program.

¹⁵⁹ See, for example, CMS Innovation Center “Strategic Direction” webpage, at <https://innovation.cms.gov/strategic-direction>. See also, CMS, Innovation Center Strategy Refresh, available at <https://innovation.cms.gov/strategic-direction-whitepaper>.

¹⁶⁰ Seshamani M, Fowler E, Brooks-LaSure C. Building On The CMS Strategic Vision: Working Together For A Stronger Medicare. Health Affairs. January 11, 2022. Available at <https://www.healthaffairs.org/doi/10.1377/forefront.20220110.198444>.

In summary, we seek comment on the proposed changes to establish a new defined term in § 425.20, expanded window for assignment, for use in a proposed additional step three in the beneficiary assignment methodology and in identifying the assignable beneficiary population, revisions to the definition of assignable beneficiary, as well as proposed technical and conforming changes to provisions of the Shared Savings Program regulations, including the definition of assignment window under § 425.20, and provisions within subpart E and subpart G. If finalized, the proposed changes would be applicable for the performance year beginning on January 1, 2025, and subsequent performance years. We welcome comments on any aspects of the proposed changes, including the length of the expanded window for assignment. We also seek comment on additional policies that CMS should consider for potential future rulemaking on our assignment methodology, with the goal of increasing the number of Original Medicare fee-for-service beneficiaries assigned to an ACO, particularly in underserved communities.

b. Proposed Revisions to the Definition of Primary Care Services used in Shared Savings Program Beneficiary Assignment

(1) Background

Section 1899(c)(1) of the Act, as amended by the CURES Act and the Bipartisan Budget Act of 2018, provides that for performance years beginning on or after January 1, 2019, the Secretary shall assign beneficiaries to an ACO based on their utilization of primary care services provided by a physician who is an ACO professional and all services furnished by Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs). However, the statute does not specify a list of services considered to be primary care services for purposes of beneficiary assignment.

In the November 2011 final rule (76 FR 67853), we established the initial list of services, identified by Current Procedural Terminology (CPT) and Healthcare Common Procedure Coding System (HCPCS) codes, that we considered to be primary care services. In that final rule, we

indicated that we intended to monitor CPT and HCPCS codes and would consider making changes to the definition of primary care services to add or delete codes used to identify primary care services if there were sufficient evidence that revisions were warranted. We have updated the list of primary care service codes in subsequent rulemaking (refer to 80 FR 32746 through 32748; 80 FR 71270 through 71273; 82 FR 53212 and 53213; 83 FR 59964 through 59968; 85 FR 27582 through 27586; 85 FR 84747 through 84756; 85 FR 84785 through 84793; 86 FR 65273 through 65279; 87 FR 69821 through 69825) to reflect additions or modifications to the codes that have been recognized for payment under the PFS and to incorporate other changes to the definition of primary care services for purposes of the Shared Savings Program.

For the performance year beginning on January 1, 2023, and subsequent performance years, we defined primary care services in § 425.400(c)(1)(vii) for purposes of assigning beneficiaries to ACOs under § 425.402 as the set of services identified by the following HCPCS/CPT codes:

- *CPT codes:*

- ++ 96160 and 96161 (codes for administration of health risk assessment).

- ++ 99201 through 99215 (codes for office or other outpatient visit for the evaluation and management of a patient).

- ++ 99304 through 99318 (codes for professional services furnished in a nursing facility; professional services or services reported on an FQHC or RHC claim identified by these codes are excluded when furnished in a SNF).

- ++ 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit).

- ++ 99341 through 99350 (codes for evaluation and management services furnished in a patient's home).

++ 99354 and 99355 (add-on codes, for prolonged evaluation and management or psychotherapy services beyond the typical service time of the primary procedure; when the base code is also a primary care service code under this paragraph (c)(1)(vi)).

++ 99421, 99422, and 99423 (codes for online digital evaluation and management).

++ 99424, 99425, 99426, and 99427 (codes for principal care management services).

++ 99437, 99487, 99489, 99490 and 99491 (codes for chronic care management).

++ 99439 (code for non-complex chronic care management).

++ 99483 (code for assessment of and care planning for patients with cognitive impairment).

++ 99484, 99492, 99493 and 99494 (codes for behavioral health integration services).

++ 99495 and 99496 (codes for transitional care management services).

++ 99497 and 99498 (codes for advance care planning; services identified by these codes furnished in an inpatient setting are excluded).

● *HCPCS codes:*

++ G0402 (code for the Welcome to Medicare visit).

++ G0438 and G0439 (codes for the annual wellness visits).

++ G0442 (code for alcohol misuse screening service).

++ G0443 (code for alcohol misuse counseling service).

++ G0444 (code for annual depression screening service).

++ G0463 (code for services furnished in ETA hospitals).

++ G0506 (code for chronic care management).

++ G2010 (code for the remote evaluation of patient video/images).

++ G2012 and G2252 (codes for virtual check-in).

++ G2058 (code for non-complex chronic care management).

++ G2064 and G2065 (codes for principal care management services).

++ G0317, G0318, and G2212 (code for prolonged office or other outpatient visit for the evaluation and management of a patient).

++ G2214 (code for psychiatric collaborative care model).

++ G3002 and G3003 (codes for chronic pain management).

- Primary care service codes include any CPT code identified by CMS that directly replaces a CPT code specified in paragraph (c)(1)(vi)(A) of § 425.400 or a HCPCS code specified in paragraph (c)(1)(vi)(B) of § 425.400, when the assignment window (as defined in § 425.20) for a benchmark or performance year includes any day on or after the effective date of the replacement code for payment purposes under FFS Medicare.

(2) Proposed Revisions

Based on feedback from ACOs and our further review of the HCPCS and CPT codes that are currently recognized for payment under the PFS or that we are proposing to recognize for payment starting in CY 2024, we believe it would be appropriate to amend the definition of primary care services used in the Shared Savings Program assignment methodology to include certain additional codes and to make other technical changes to the definition of primary care services for use in determining beneficiary assignment for the performance year starting on January 1, 2024, and subsequent performance years, in order to remain consistent with billing and coding under the PFS.

We propose to revise the definition of primary care services used for assignment in the Shared Savings Program regulations to include the following additions: (1) Smoking and Tobacco-use Cessation Counseling Services CPT codes 99406 and 99407; (2) Remote Physiologic Monitoring CPT codes 99457 and 99458; (3) Cervical or Vaginal Cancer Screening HCPCS code G0101; (4) Office-Based Opioid Use Disorder Services HCPCS codes G2086, G2087, and G2088; (5) Complex Evaluation and Management Services Add-on HCPCS code G2211, if finalized under Medicare FFS payment policy; (6) Community Health Integration

services HCPCS codes GXXX1 and GXXX2, if finalized under Medicare FFS payment policy; (7) Principal Illness Navigation (PIN) services HCPCS codes GXXX3 and GXXX4, if finalized under Medicare FFS payment policy; (8) SDOH Risk Assessment HCPCS code GXXX5, if finalized under Medicare FFS payment policy; (9) Caregiver Behavior Management Training CPT Codes 96202 and 96203, if finalized under Medicare FFS payment policy; and (10) Caregiver Training Services CPT codes 9X015, 9X016, and 9X017, if finalized under Medicare FFS payment policy. The following provides additional information about the HCPCS codes that we are proposing to add to the definition of primary care services used for purposes of beneficiary assignment:

- *Smoking and tobacco-use cessation counseling services CPT codes 99406 and 99407:* Effective January 1, 2008, CPT codes 99406 (*Smoking and tobacco-use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes*) and 99407 (*Smoking and tobacco-use cessation counseling visit; intensive, greater than 10 minutes*) were implemented for billing for smoking and tobacco-use cessation counseling services. As described in Medicare National Coverage Determinations (NCD) Manual, Publication 100-3, chapter 1, section 210.4.1, tobacco use remains the leading cause of preventable morbidity and mortality in the U.S. and is a major contributor to the nation’s increasing medical costs. Despite the growing list of adverse health effects associated with smoking, more than 45 million U.S. adults continue to smoke and approximately 1,200 die prematurely each day from tobacco-related diseases. Since these are recognized as preventive services,¹⁶¹ similar to other preventive services such as alcohol misuse screening and counseling (HCPCS codes G0442 and G0443) which are currently included in the definition of primary care services for purposes of beneficiary assignment, we believe it

¹⁶¹ Medicare Learning Network (MLN006559, May 2023) Medicare Preventive Services Quick Reference Chart, available at: <https://www.cms.gov/Medicare/Prevention/PrevntionGenInfo/medicare-preventive-services/MPS-QuickReferenceChart-1.html#TOBACCO>.

appropriate to include CPT codes that identify counseling to prevent tobacco use in the definition of primary care services for purposes of beneficiary assignment.

- *Remote Physiologic Monitoring CPT codes 99457 and 99458*: Chronic care remote physiologic monitoring (RPM) services involve the collection, analysis, and interpretation of digitally collected physiologic data, followed by the development of a treatment plan, and the managing of a patient under the treatment plan. In the CY 2020 PFS final rule (84 FR 62697) we finalized a revised CPT code 99457 (*Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; initial 20 minutes*) and added CPT code 99458 (*Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; additional 20 minutes*) to adopt the CPT Editorial Panel revised structure for CPT code 99457. The new code structure retained CPT code 99457 as a base code that describes the first 20 minutes of the treatment management services, and uses a new add-on code to describe subsequent 20-minute intervals of the service. We further designated CPT codes 99457 and 99458 as care management services because care management services include establishing, implementing, revising, or monitoring treatment plans, as well as providing support services, and because RPM services include establishing, implementing, revising, and monitoring a specific treatment plan for a patient related to one or more chronic conditions that are monitored remotely. Because these remote therapeutic monitoring services are designated as care management services¹⁶² and because we broadly include care management services (for example, CPT codes 99437, 99487, 99489, 99490 and 99491) in the Shared Savings Program definition of

¹⁶² Medicare Physician Fee Schedule Care Management Services Information, available at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Care-Management>.

primary care services for purposes of beneficiary assignment, we believe CPT codes 99457 and 99458 should also be included in the definition of primary care services for purposes of beneficiary assignment.

- *Cervical or Vaginal Cancer Screening Code HCPCS code G0101*: Section 4102 of the Balanced Budget Act of 1997 provides for coverage of screening pelvic examinations (including a clinical breast examination) for all female beneficiaries, subject to certain frequency and other limitations.¹⁶³ Cervical and vaginal cancer screening and clinical breast examination are important preventive health care services intended to detect early cancer, precancers and sexually transmitted infections. HCPCS code G0101 (*Cervical or vaginal cancer screening; pelvic and clinical breast examination*) can be reimbursed by Medicare Part B every 2 years. For patients who are considered high risk, it is allowed on an annual basis. Obstetrics/gynecology and gynecology/oncology are identified as physician specialty designations for purposes of identifying primary care services furnished to beneficiaries used in assignment operations according to § 425.402(c), so we believe it appropriate to use wellness and preventive care visits provided by these specialists in our definition of primary care services used in assignment. CMS considers these to be a preventive health service that can be provided in a primary care setting¹⁶⁴ similar to the annual wellness visit HCPCS codes G0438 and G0439, which are already included in the Shared Savings Program definition of primary care services used in assignment, so we believe that they should be included in the definition of primary care services for purposes of beneficiary assignment.

¹⁶³ Medicare National Coverage Determination for Screening Pap Smears and Pelvic Examinations for Early Detection of Cervical or Vaginal Cancers (Pub. No. 100-3, Manual Section 210.2), available at: <https://www.cms.gov/medicare-coverage-database/view/ncd.aspx?NCID=185#:~:text=Section%204102%20of%20the%20Balanced%20Budget%20Act%20of,beneficiaries%2C%20subject%20to%20certain%20frequency%20and%20other%20limitations.>

¹⁶⁴ Medicare Learning Network (MLN006559, May 2023) Medicare Preventive Services Quick Reference Chart, available at: [https://www.cms.gov/Medicare/Prevention/PrevntionGenInfo/medicare-preventive-services/MPS-QuickReferenceChart-1.html#PELVIC.](https://www.cms.gov/Medicare/Prevention/PrevntionGenInfo/medicare-preventive-services/MPS-QuickReferenceChart-1.html#PELVIC)

- *Office-Based Opioid Use Disorder Services HCPCS Codes G2086, G2087, and G2088*: In the CY 2020 PFS final rule (84 FR 62568) we finalized our proposal to establish bundled payments for the overall treatment of Opioid Use Disorder (OUD), including management, care coordination, psychotherapy, and counseling activities HCPCS codes G2086 (*Office-based treatment for opioid use disorder, including development of the treatment plan, care coordination, individual therapy and group therapy and counseling; at least 70 minutes in the first calendar month*), G2087 (*Office-based treatment for opioid use disorder, including care coordination, individual therapy and group therapy and counseling; at least 60 minutes in a subsequent calendar month*), and G2088 (*Office-based treatment for opioid use disorder, including care coordination, individual therapy and group therapy and counseling; each additional 30 minutes beyond the first 120 minutes (List separately in addition to code for primary procedure)*). Refer to the CY 2020 PFS final rule (84 FR 62673) for detailed, technical discussion regarding the description, payment and utilization of these HCPCS codes.

The bundled payment under the PFS for office-based treatment for OUD was intended to create an avenue for physicians and other health professionals to bill for a bundle of services that is similar to the bundled OUD treatment services benefit, but not furnished by an Opioid Treatment Program (OTP). By creating a separate bundled payment for these services under the PFS, we hoped to incentivize increased provision of counseling and care coordination for patients with OUD in the office setting, thereby expanding access to OUD care. We note that use of these codes is limited to only beneficiaries diagnosed with OUD and these codes should not be billed for beneficiaries who are receiving treatment at an OTP, as we believe that would be duplicative since the bundled payments made to OTPs cover similar services for the treatment of OUD.

Because the separately reportable initiating visit requirement for the OUD bundle HCPCS codes G2086, G2087 and G2088 is similar to the separately reportable initiating visit

requirements for chronic care management (CCM) services, and behavioral health integration services (BHI), as they include overall management and care coordination activities, we believe these services should be considered primary care services for purposes of beneficiary assignment.¹⁶⁵ Additionally, we anticipate that the billing clinician, likely an addiction medicine specialist, would manage the patient's overall OUD care, as well as supervise any other individuals participating in the treatment, such as those billing incident to services of the billing physician or other practitioner, which is similar to the requirements related to the furnishing of psychiatric collaborative care model (CoCM) services. CCM, BHI, CoCM, and alcohol misuse screening and counseling services are included in our definition of primary care services, so we believe that HCPCS codes G2086, G2087 and G2088 are appropriate to be included in the definition of primary care services for purposes of beneficiary assignment. For additional clarity, incident to services are services rendered to a patient by a provider other than the physician treating the patient more broadly, that are an integral, although incidental, part of the patient's normal course of diagnosis or treatment of an injury or illness. These services are billed as Medicare Part B services, as if the original physician personally provided the care using that physician's NPI number. We anticipate that these services would often be billed by addiction specialty practitioners but note that these codes are not limited to use by any particular physician or non-physician practitioner specialty. Further, since addiction medicine is identified as one of the physician specialty designations for purposes of identifying primary care services used in assignment operations according to § 425.402(c)(13), we believe it would be appropriate to include care coordination services provided by these specialists in our definition of primary care services used for purposes of beneficiary assignment.

¹⁶⁵ Medicare Physician Fee Schedule Office-Based Opioid Use Disorder (OUD) Treatment Billing Information, available at: <https://www.cms.gov/medicare/physician-fee-schedule/office-based-opioid-use-disorder-oud-treatment-billing>.

We further recognize that OUD bundle HCPCS codes G2086, G2087 and G2088 are identified as codes for alcohol and substance abuse-related diagnoses that are excluded from Shared Savings Program Claim and Claim Line Feeds. Given this, we want to make transparent that ACOs will not be able to see the claims that may have been used in assignment for beneficiaries receiving OUD services, and possibly not be able to identify why certain beneficiaries were assigned to their ACO related to these codes.

- *Complex Evaluation and Management Services Add-on HCPCS Code G2211, if finalized under Medicare FFS payment policy:* As discussed in section II.F. of this proposed rule, HCPCS add-on code G2211 (*Visit complexity inherent to evaluation and management associated with medical care services that serve as the continuing focal point for all needed health care services and/or with medical care services that are part of ongoing care related to a patient's single, serious condition or a complex condition. (Add-on code, list separately in addition to office/outpatient evaluation and management visit, new or established)*) can be reported in conjunction with office/outpatient (O/O) evaluation and management (E/M) visits to better account for additional resources associated with primary care, or similarly ongoing medical care related to a patient's single, serious condition, or complex condition (84 FR 62854 through 62856, 85 FR 84571). Section 113 of Division CC of the Consolidated Appropriations Act, 2021 (Pub. L. 116-260, December 27, 2020) imposed a moratorium on Medicare payment for this service by prohibiting CMS from making payment under the PFS for inherently complex E/M visits described by HCPCS code G2211 (or any successor or substantially similar code) before January 1, 2024. The moratorium on Medicare payment under the PFS for HCPCS code G2211 will end on December 31, 2023, therefore we are proposing to make HCPCS code G2211 separately payable effective January 1, 2024. Refer to section II.F. of this proposed rule for detailed, technical discussion regarding the description, payment, and utilization of these HCPCS codes.

Since G2211 is an add on code used in conjunction with O/O E/M services and such services are included in our definition of primary care services, we believe that the proposed inclusion of HCPCS code G2211 is consistent with our intent to encompass primary care and wellness services in the definition of primary care services used for purposes of beneficiary assignment.

- *Community Health Integration Services HCPCS Codes GXXX1 and GXXX2, if finalized under Medicare FFS payment policies:* In section II.E. of this proposed rule, separate coding, payment, service elements and documentation requirements for the following Community Health Integration (CHI) services are being proposed:

***GXXX1** Community health integration (CHI) services performed by certified or trained auxiliary personnel including a community health worker, under the direction of a physician or other practitioner; 60 minutes per calendar month, in the following activities to address social determinants of health (SDOH) need(s) that are significantly limiting ability to diagnose or treat problem(s) addressed in an initiating E/M visit:*

- *Person-centered assessment, performed to better understand the individualized context of the intersection between the SDOH need(s) and problem(s) addressed in the initiating E/M visit.*

- ++ *Conducting a person-centered assessment to understand patient's life story, strengths, needs, goals, preferences and desired outcomes, including understanding cultural and linguistic factors.*

- ++ *Facilitating patient-driven goal-setting and establishing an action plan.*

- ++ *Providing tailored support to the patient as needed to accomplish the practitioner's treatment plan.*

- *Practitioner, Home, and Community-Based Care Coordination*

++ *Coordination with practitioner; home, and community-based service providers; and caregiver (if applicable).*

++ *Communication with practitioners, home- and community-based service providers, hospitals, and skilled nursing facilities (or other health care facilities) regarding the patient's psychosocial strengths and needs, functional deficits, goals, preferences, and desired outcomes, including cultural and linguistic factors.*

++ *Coordination of care transitions between and among health care practitioners and settings, including transitions involving referrals to other clinicians; follow-up after an emergency department visit; or follow-up after discharges from hospitals, skilled nursing facilities or other health care facilities.*

++ *Facilitating access to community-based social services (e.g., housing, utilities, transportation, food assistance) to address SDOH need(s).*

- *Health education- Helping the patient contextualize health education provided by the patient's treatment team with the patient's individual needs, goals, and preferences, in the context of the SDOH need(s), and educating the patient on how to best participate in medical decision-making.*

- *Building patient self-advocacy skills, so that the patient can interact with members of the health care team and related community-based services addressing the SDOH need(s), in ways that are more likely to promote personalized and effective diagnosis and treatment.*

- *Health care access / health system navigation:*

++ *Helping the patient access care, including identifying appropriate practitioners or providers for clinical care and helping secure appointments with them.*

- *Facilitating behavioral change as necessary for meeting diagnosis and treatment goals, including promoting patient motivation to participate in care and reach person-centered diagnosis or treatment goals.*

- *Facilitating and providing social and emotional support to help the patient cope with the problem(s) addressed in the initiating visit, the SDOH need(s), and adjust daily routines to better meet diagnosis and treatment goals.*

GXXX2 – *Community health integration services, each additional 30 minutes per calendar month (List separately in addition to GXXXI).*

As proposed in section II.E. of this proposed rule, all auxiliary personnel who provide CHI services must be certified or trained to perform all included service elements and authorized to perform them under applicable State laws and regulations. Under § 410.26(a)(1) of our regulations, auxiliary personnel must meet any applicable requirements to provide incident to services, including licensure, imposed by the State in which the services are being furnished.¹⁶⁶ A billing practitioner may arrange to have CHI services provided by auxiliary personnel external to, and under contract with, the practitioner or their practice, such as through a community-based organization (CBO) that employs CHWs, if all of the “incident to” and other requirements and conditions for payment of CHI services are met. The payment policy proposal explains that we would expect the auxiliary personnel performing the CHI services to communicate regularly with the billing practitioner to ensure that CHI services are appropriately documented in the medical record, and to continue to involve the billing practitioner in evaluating the continuing need for CHI services to address the SDOH need(s) that limit the practitioner’s ability to diagnose and treat the problem(s) addressed in the initiating visit. Refer to section II.E. of this proposed rule for detailed, technical discussion regarding the proposed description, payment and utilization of these HCPCS codes.

Since the proposal described in section II.E. of this proposed rule proposes to designate CHI services as care management services that may be furnished under general supervision under § 410.26(b)(5) and because we broadly include care management services in the definition

¹⁶⁶ CHW Roles As Outlined In The C3 Project available at: <https://chwtraining.org/c3-project-chw-skills/>.

of primary care services used for purposes of beneficiary assignment, we believe it would be similarly appropriate to include CHI services in the list of primary care services used for purposes of beneficiary assignment. Additionally, since CHI services require an initiating E/M visit and these services can be billed as incident to by the billing practitioner who bills for the CHI initiating E/M visit, and E/M services are currently included in the list of primary care services used for purposes of beneficiary assignment, we believe it would be similarly appropriate to include CHI services in the list of primary care services used for purposes of beneficiary assignment.

- *Principal Illness Navigation (PIN) Services HCPCS codes GXXX3 and GXXX4, if finalized under Medicare FFS payment policies:* In section II.E. of this proposed rule, new coding for Principal Illness Navigation (PIN) services is being proposed. In considering the appropriate patient population to receive these services, we considered the patient population eligible for principal care management service codes (CPT codes 99424 through 99427), as well as clinical definitions of “serious illness.” For example, one peer-review study defined “serious illness” as a health condition that carries a high risk of mortality and either negatively impacts a person’s daily function or quality of life, or excessively strains their caregivers.¹⁶⁷ Another study describes a serious illness as a health condition that carries a high risk of mortality and commonly affects a patient for several years, while some measure serious illness by the amount of urgent health care use (911 calls, emergency department visits, repeated hospitalizations) and polypharmacy.¹⁶⁸ The navigation services such patients need are similar to CHI services, but Social Determinants of Health (SDOH) need(s) may be fewer or not present. Accordingly, a parallel set of services focused on patients with a serious, high-risk illness who may not

¹⁶⁷ Kelley AS, Bollens-Lund E. Identifying the Population with Serious Illness: The "Denominator" Challenge. *J Palliat Med.* 2018 Mar;21(S2):S7-S16. doi: 10.1089/jpm.2017.0548. Epub 2017 Nov 10. PMID: 29125784; PMCID: PMC5756466. available at <https://pubmed.ncbi.nlm.nih.gov/29125784/>.

¹⁶⁸ Silver, Alison. Serious Illness: A High Priority for Accountable Care. *The American Journal of Accountable Care.* 2020;8(2):32-33. available at <https://www.ajmc.com/view/serious-illness-a-high-priority-for-accountable-care>.

necessarily have SDOH-related needs is being proposed. PIN services could be furnished following an initiating E/M visit addressing a single high-risk disease.

The following codes would be reported for PIN services:

GXXX3 *Principal Illness Navigation services by certified or trained auxiliary personnel under the direction of a physician or other practitioner, including a patient navigator or certified peer specialist; 60 minutes per calendar month, in the following activities:*

- *Person-centered assessment, performed to better understand the individualized context of the serious, high-risk condition.*

- ++ *Conducting a person-centered assessment to understand the patient's life story, needs, goals, preferences, and desired outcomes, including understanding cultural and linguistic factors.*

- ++ *Facilitating patient-driven goal setting and creating an action plan.*

- ++ *Providing tailored support as needed to accomplish the practitioner's treatment plan.*

- *Identifying or referring patient (and caregiver or family, if applicable) to appropriate supportive services.*

- **Practitioner, Home, and Community-Based Care Coordination**

- ++ *Coordinating receipt of needed services from healthcare practitioners, providers and facilities; home-, and community-based service providers; and caregiver (if applicable).*

- ++ *Communication with practitioners, home-, and community-based service providers, hospitals, and skilled nursing facilities (or other health care facilities) regarding the patient's psychosocial strengths and needs, functional deficits, goals, and preferences, including cultural and linguistic factors.*

- ++ *Coordination of care transitions between and among health care practitioners and settings, including transitions involving referrals to other clinicians; follow-up after an*

emergency department visit; or follow-up after discharges from hospitals, skilled nursing facilities or other health care facilities.

++ Facilitating access to community-based social services (e.g., housing, utilities, transportation, food assistance) as needed to address SDOH need(s).

- *Health education- Helping the patients contextualize health education provided by the patient's treatment team with the patient's individual needs, goals, preferences, and SDOH need(s), and educating the patient (and caregiver, if applicable) on how to best participate in medical decision-making.*

- *Building patient self-advocacy skills, so that the patient can interact with members of the health care team and related community-based services (as needed), in ways that are more likely to promote personalized and effective treatment of their condition.*

- *Health care access / health system navigation.*

++ Helping the patient access healthcare, identifying appropriate practitioners or providers for clinical care and helping secure appointments with them.

- *Facilitating behavioral change necessary for meeting diagnosis and treatment goals, including promoting patient motivation to participate in care and reach person-centered diagnosis or treatment goals.*

- *Facilitating and providing social and emotional support for the patient to help the patient cope with the condition, SDOH need(s), and adjust daily routines to better meet diagnosis or treatment goals.*

- *Leverage knowledge of the serious, high-risk condition and/or lived experience when applicable to provide support, mentorship, or inspiration to meet treatment goals.*

GXXX4 – *Principal Illness Navigation services, additional 30 minutes per calendar month (List separately in addition to GXXX3).*

As discussed in section II.E. of this proposed rule, a billing practitioner may arrange to have PIN services provided by auxiliary personnel who are external to, and under contract with, the practitioner or their practice, such as through a community-based organization (CBO) that employs CHWs, if all of the “incident to” and other requirements and conditions for payment of PIN services are met. We would expect the auxiliary personnel performing the PIN services to communicate regularly with the billing practitioner to ensure that PIN services are appropriately documented in the medical record, and to continue to involve the billing practitioner in evaluating the continuing need for PIN services to address the serious, high-risk condition. Refer to section II.E. of this proposed rule for detailed, technical discussion regarding the description, payment and utilization of these HCPCS codes.

Since the proposal described in section II.E. of this proposed rule proposes to designate PIN services as care management services that may be furnished under general supervision under § 410.26(b)(5) and because we broadly include care management services in the list of primary care services used for purposes of beneficiary assignment, we believe it would be similarly appropriate to include PIN services in the list of primary care services used for purposes of beneficiary assignment. Additionally, since these services are meant to provide assistance to the beneficiary through communication and coordination with practitioners, providers, including referrals to other clinicians and follow-up after emergency or inpatient care, we believe that these services can further the ACO’s goal of care coordination and the provision of value-based care and should, therefore, be included in the definition of primary care services for purposes of beneficiary assignment. Further, since PIN services require an initiating E/M visit and these services can be billed as incident to by the billing practitioner who bills for the PIN initiating E/M visit, and E/M services are currently included in the list of primary care services used for purposes of beneficiary assignment, we believe it would be similarly appropriate to include PIN services in the list of primary care services used for purposes of beneficiary assignment.

- *SDOH Risk Assessment HCPCS code GXXX5, if finalized under Medicare FFS*

payment policies: In section II.E. of this proposed rule, a new stand-alone G code, GXXX5 (*administration of a standardized, evidence-based Social Determinants of Health Risk Assessment tool, 5-15 minutes, at most every 6 months.*) is being proposed to identify and value the work involved in the utilization of SDOH risk assessment as part of a comprehensive social history when medically reasonable and necessary in relation to an E/M visit. SDOH risk assessment through a standardized, evidence-based tool can more effectively and consistently identify unmet SDOH needs and enables comparisons across populations. The SDOH risk assessment must be furnished by the practitioner on the same date they furnish an E/M visit, as the SDOH assessment would be reasonable and necessary when used to inform the patient's treatment plan that is established during the visit. Required elements are described in detail in the payment policy proposal described in section II.E.

Under the proposal described in section II.E. of this proposed rule, the practitioner billing or furnishing the SDOH risk assessment would be required to have the ability to furnish CHI or other care management services. Given the multifaceted nature of SDOH needs, ensuring adequate referral to appropriate services and supports is critical for addressing both the SDOH need and the impact of that need on the patient's health. Refer to section II.E. of this proposed rule for detailed, technical discussion regarding the description, payment and utilization of these HCPCS codes.

Additionally, the proposal detailed in section III.T of this proposed rule proposes to add elements to the Annual Wellness Visit (AWV) by adding a new SDOH Risk Assessment as an optional, additional element with an additional payment. Under this proposal, the SDOH Risk Assessment would be separately payable with no beneficiary cost sharing when furnished as part of the same visit with the same date of service as the AWV, and would inform the care the

patient is receiving during the visit, including taking a medical and social history, applying health assessments, and conducting prevention services education and planning.

Since the proposals described in sections II.E. and III.T. of this proposed rule propose that these services would be provided in conjunction with professional services, such as E/M visits, which can be provided in a primary care setting, we believe it would be appropriate to include these services in the definition of primary care services for purposes of beneficiary assignment. Additionally, since these are separately payable services when provided with an AWV and the AWV is included in the Shared Savings Program definition of primary care services for purposes of beneficiary assignment, we believe it would be appropriate to include SDOH risk assessment in the definition of primary care services for purposes of beneficiary assignment. Further, since these services precede the utilization of CHI, PIN, and Care Management services, which are either currently included or proposed to be included in the definition of primary care services for purposes of assignment, we believe the inclusion of the new SDOH risk assessment HCPCS code would be appropriate as well.

- *Caregiver Behavior Management Training CPT Codes 96202 and 96203, if finalized under Medicare FFS payment policy: CPT code 96202 (Multiple-family group behavior management/modification training for guardians/caregivers of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of guardians/caregivers; initial 60 minutes) and its add-on code, CPT code 96203 (Multiple-family group behavior management/modification training for guardians/caregivers of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of guardians/caregivers; each additional 15 minutes (List separately in addition to code for primary service)) are two new codes created by the CPT Editorial Panel during its February 2021 meeting used to report the total duration of face-to-face*

time spent by the physician or other qualified health professional providing group training to guardians or caregivers of patients. Although the patient does not attend the group trainings, the goals and outcomes of the sessions focus on interventions aimed at improving the patient's daily life.

In section II.E. of this proposed rule, an active payment status for CPT codes 96202 and 96203 (caregiver behavior management/modification training services) is being proposed for CY 2024. These codes allow treating practitioners to report training furnished to a caregiver, in tandem with the diagnostic and treatment services furnished directly to the patient, in strategies and specific activities to assist the patient to carry out the treatment plan. Caregiver behavior management/modification training services may be reasonable and necessary when they are integral to a patient's overall treatment and furnished after the treatment plan (or therapy plan of care) is established. The caregiver behavior management/modification training services themselves need to be congruent with the treatment plan in order to effectuate the desired patient outcomes.

For purposes of caregiver behavior management/modification training services, the proposal requires that a caregiver receiving behavior management/modification training services is a family member, friend, or neighbor who provides unpaid assistance to the patient, assisting or acting as a proxy for a patient with an illness or condition of short or long-term duration (not necessarily chronic or disabling). In this context, caregivers would be trained by the treating practitioner in strategies and specific activities that improve symptoms, functioning, adherence to treatment, and/or general welfare related to the patient's primary clinical diagnoses. Under this proposal, caregiver behavior management/modification training services may be furnished directly by the treating practitioner or provided by auxiliary personnel incident to the treating practitioner's professional services as specified in 42 CFR 410.26, as applicable for the types of practitioners whose covered services include "incident to" services. Refer to section II.E. of this

proposed rule for detailed, technical discussion regarding the description, payment and utilization of these HCPCS codes.

Since the proposal described in section II.E. of this proposed rule proposes that these services can be billed as incident to by the billing practitioner who could be a primary care physician who also bills for an E/M visit, and these services cannot duplicate services provided in conjunction with transitional care management, chronic care management, behavioral health integration services, and virtual check-in services which are currently included in the list of primary care services used for purposes of beneficiary assignment, we believe that these services should be included in the definition of primary care services for purposes of beneficiary assignment in support of the Shared Savings mission to give coordinated, high quality care to an ACO's Medicare beneficiaries.

- *Caregiver Training Services CPT codes 9X015, 9X016, and 9X017, if finalized under Medicare FFS payment policy: CPT codes 9X015 (Caregiver training in strategies and techniques to facilitate the patient's functional performance in the home or community (eg, activities of daily living [ADLs], instrumental ADLs [IADLs], transfers, mobility, communication, swallowing, feeding, problem solving, safety practices) (without the patient present), face-to-face; initial 30 minutes), add-on code, CPT code 9X016 (each additional 15 minutes (List separately in addition to code for primary service) (Use 9X016 in conjunction with 9X015)), and 9X017 (Group caregiver training in strategies and techniques to facilitate the patient's functional performance in the home or community (eg, activities of daily living [ADLs], instrumental ADLs [IADLs], transfers, mobility, communication, swallowing, feeding, problem solving, safety practices) (without the patient present), face-to-face with multiple sets of caregivers) are new codes created by the CPT Editorial Panel during its October 2022 meeting. The three codes are to be used to report the total duration of face-to-face time spent by the physician or other qualified health professional providing individual or group training to*

caregivers of patients. Although the patient does not attend the trainings, the goals and outcomes of the sessions focus on interventions aimed at improving the patient's ability to successfully perform activities of daily living (ADLs). Activities of daily living generally include ambulating, feeding, dressing, personal hygiene, continence, and toileting.

These codes allow treating practitioners to report the training furnished to a caregiver, in tandem with the diagnostic and treatment services furnished directly to the patient, in strategies and specific activities to assist the patient to carry out the treatment plan. As discussed above, we believe training furnished to a caregiver may be reasonable and necessary when it is integral to a patient's overall treatment and furnished after the treatment plan (or therapy plan of care) is established. The Caregiver Training Services (CTS) themselves need to be congruent with the treatment plan in order to effectuate the desired patient outcomes, especially in medical treatment scenarios where the caregiver receiving CTS is necessary to ensure a successful treatment outcome for the patient.

In section II.E., an active payment status for CPT codes 9X015, 9X016, and 9X017 for CY 2024 under the PFS is proposed. CTS may be furnished directly by the treating practitioner or provided by auxiliary personnel incident to the treating practitioner's professional services as specified in 42 CFR 410.26, as applicable for the types of practitioners whose covered services include "incident to" services. Under this proposal, 9X015, 9X016, and 9X017 are designated as "sometimes therapy". This means that the services represented by these codes are always furnished under a therapy plan of care when provided by PTs, OTs, and SLPs; but, in cases where they are appropriately furnished by physicians and NPPs outside a therapy plan of care (that is, where the services are not integral to a therapy plan of care), they can be furnished under a treatment plan by physicians and NPPs. Refer to section II.E. of this proposed rule for detailed, technical discussion regarding the description, payment and utilization of these HCPCS codes.

Since the proposal described in section II.E. of this proposed rule proposes that these services can be billed as incident to by the billing practitioner who could be a primary care physician who also bills for an E/M visit, and these services cannot duplicate services provided in conjunction with transitional care management, chronic care management, behavioral health integration services, and virtual check-in services which are currently included in the list of primary care services used for purposes of beneficiary assignment, and we believe that these services are reported to Medicare only when furnished in conjunction with treatment for particular conditions and reflected in a plan of care, we believe they should be included in the definition of primary care services for purposes of beneficiary assignment in support of the Shared Savings Program mission to give coordinated, high quality care to an ACO's Medicare beneficiaries.

We propose to specify a revised definition of primary care services in a new provision of the Shared Savings Program regulations at § 425.400(c)(1)(viii) to include the list of HCPCS and CPT codes specified in § 425.400(c)(1)(vii) along with the proposed additional CPT codes 99406 and 99407, and 99457 and 99458, 96202 and 96203, if finalized under Medicare FFS payment policy; and 9X015, 9X016, and 9X017, if finalized under Medicare FFS payment policy and HCPCS codes G0101; G2086, G2087, and G2088; G2211, if finalized under Medicare FFS payment policy; GXXX1 and GXXX2, if finalized under Medicare FFS payment policy; GXXX3 and GXXX4, if finalized under Medicare FFS payment policy; and GXXX5, if finalized under Medicare FFS payment policy; as discussed in the preceding paragraphs. We propose that the new provision at § 425.400(c)(1)(viii) would be applicable for use in determining beneficiary assignment for the performance year starting on January 1, 2024, and subsequent performance years.

We seek comment on these proposed changes to the definition of primary care services used for assigning beneficiaries to Shared Savings Program ACOs for the performance year

starting on January 1, 2024, and subsequent performance years. We also welcome comments on any other existing HCPCS or CPT codes and new HCPCS or CPT codes proposed elsewhere in this proposed rule that we should consider adding to the definition of primary care services for purposes of assignment in future rulemaking.

4. Benchmarking Methodology

a. Overview

In this section of the proposed rule, we are proposing modifications to the benchmarking methodology under the Shared Savings Program. We propose a combination of modifications to the Shared Savings Program's benchmarking methodology to encourage sustained participation by ACOs in the program. Specifically, we are proposing to revise the benchmarking methodology by modifying the existing calculation of the regional update factor used to update the historical benchmark between benchmark year (BY) 3 and the performance year (section III.G.4.b. of this proposed rule). We are additionally proposing to further mitigate the impact of the negative regional adjustment to the historical benchmark (section III.G.4.c. of this proposed rule). We are also proposing refinements to the prior savings adjustment calculation methodology (section III.G.4.d. of this proposed rule), that would apply in the establishment of benchmarks for renewing ACOs and re-entering ACOs entering an agreement period beginning on January 1, 2024, and in subsequent years, to account for the following: a change in savings earned by the ACO in a benchmark year due to compliance action taken to address avoidance of at-risk beneficiaries or a change in the amount of savings or losses for a benchmark year as a result of issuance of revised initial determination under § 425.315. Finally, we propose to specify in the regulations an approach to calculating prospective HCC risk scores used in Shared Savings Program benchmark calculations, applicable for agreement periods beginning on January 1, 2024, and in subsequent years, in which we would use the CMS-HCC risk adjustment model(s) applicable to the calendar year corresponding to the performance year to calculate a Medicare

FFS beneficiary's prospective HCC risk score for the performance year, and for each benchmark year of the ACO's agreement period (section III.G.4.e. of this proposed rule). Our specific proposals are discussed in detail in the following sections.

b. Proposal to Cap Regional Service Area Risk Score Growth for Symmetry with ACO Risk Score Cap

(1) Background

In the June 2016 final rule (81 FR 37977 through 37981), we established a policy of utilizing a regional growth rate to update the benchmark annually. In that rule, we finalized a policy that, for ACOs in their second or subsequent agreement period whose rebased historical benchmark incorporates an adjustment to reflect regional expenditures, the annual update to the benchmark would be calculated as a growth rate that reflects growth in risk adjusted regional per beneficiary FFS spending for the ACO's regional service area, for each of the following populations of beneficiaries: ESRD, disabled, aged/dual eligible, aged/non-dual eligible (refer to § 425.603(d)).

In proposing and finalizing the regional growth rate policy, we explained that incorporating regional expenditures in the benchmark would make the ACO's cost target more independent of its historical expenditures and more reflective of FFS spending in its region. We also explained that the use of regional trend factors to trend forward BY1 and BY2 to BY3 in resetting ACO benchmarks and regional growth rates used to update the historical benchmark to the performance year annually would likely result in relatively higher benchmarks for ACOs that are low growth relative to their region compared to benchmarks for ACOs that are high growth relative to their region (refer to 81 FR 37955).

In the December 2018 final rule (83 FR 68013 through 68031), we finalized a proposal to use a blend of national and regional trend factors to trend forward BY1 and BY2 to BY3 when determining the historical benchmark and a blend of national and regional update factors to

update the historical benchmark to the performance year for all agreement periods beginning on or after July 1, 2019 (refer to § 425.601(a) and (b)). Under this policy, the national component of the blended trend and update factors receives a weight equal to the share of assignable beneficiaries in the regional service area that are assigned to the ACO, computed by taking a weighted average of county-level shares. The regional component of the blended trend and update factors receives a weight equal to 1 minus the national weight. Calculations are made separately for each Medicare enrollment type. In the December 2018 final rule (83 FR 68024), we acknowledged that, for an ACO that serves a high proportion of beneficiaries in select counties making up its regional service area (referred to herein as having “high market share”), a purely regional trend would be more influenced by the ACO’s own expenditure patterns, making it more difficult for the ACO to outperform its benchmark and conflicting with our goal to move ACOs away from benchmarks based solely on their own historical costs. Incorporating national trends that are more independent of an ACO’s own performance was therefore intended to reduce the influence of the ACO's assigned beneficiaries on the ultimate blended trend and update factors applied.

In the CY 2023 PFS final rule (87 FR 69881 through 69899), we finalized a policy for agreement periods starting on or after January 1, 2024, under which we will update the historical benchmark between BY3 and the performance year for each year of the agreement period using a three-way blend calculated as a weighted average of a two-way blend of national and regional growth rates determined after the end of each performance year and a fixed projected growth rate determined at the beginning of the ACO’s agreement period called the Accountable Care Prospective Trend (ACPT) (refer to § 425.652(b)). Under this policy, we will make separate calculations for expenditure categories for each Medicare enrollment type. We explained that incorporating this prospective trend in the update to the benchmark would insulate a portion of the annual update from any savings occurring as a result of the actions of ACOs participating in

the Shared Savings Program and address the impact of increasing market penetration by ACOs in a regional service area on the existing blended national-regional growth factor.

For ACOs in agreement periods beginning on July 1, 2019, and in subsequent years, we account for changes in severity and case mix of the ACO's assigned beneficiary population when establishing the benchmark for an agreement period and also in adjusting the benchmark for each performance year during the agreement period. In accordance with § 425.601(a)(3) and § 425.652(a)(3), in establishing the benchmark, we adjust expenditures for changes in severity and case mix using CMS Hierarchical Condition Category (CMS-HCC) prospective risk scores (herein referred to as prospective HCC risk scores). Pursuant to § 425.601(a)(10) and § 425.652(a)(10), we further adjust the ACO's historical benchmark at the time of reconciliation for a performance year to account for changes in severity and case mix for the ACO's assigned beneficiary population between BY3 and the performance year (refer to § 425.605(a)(1), (a)(2); § 425.610(a)(2), (a)(3)). In performing this risk adjustment, we make separate adjustments for the population of assigned beneficiaries in each Medicare enrollment type used in the Shared Savings Program (ESRD, disabled, aged/dual eligible, aged/non-dual eligible).

As finalized in the CY 2023 PFS final rule (87 FR 69932 through 69946), for agreement periods beginning on or after January 1, 2024, we will use prospective HCC risk scores to adjust the historical benchmark for changes in severity and case mix for all assigned beneficiaries between BY3 and the performance year, with positive adjustments subject to a cap equal to the ACO's aggregate growth in demographic risk scores between BY3 and the performance year plus 3 percentage points (herein referred to as the "aggregate demographics plus 3 percent cap") (refer to § 425.605(a)(1)(ii); § 425.610(a)(2)(ii)). This cap applies only if the ACO's aggregate growth in prospective HCC risk scores between BY3 and the performance year across all of the Medicare enrollment types (ESRD, disabled, aged/dual eligible, aged/non-dual eligible) exceeds this cap. If the cap is determined to apply, the value of the cap is the maximum increase in

prospective HCC risk scores (expressed as a ratio of the ACO's performance year risk score to the ACO's BY3 risk score) for the applicable performance year, such that any positive adjustment between BY3 and the performance year cannot be larger than the value of the aggregate demographics plus 3 percent cap for any of the Medicare enrollment types. This cap is applied separately for the population of beneficiaries in each Medicare enrollment type.

In the CY 2023 PFS final rule, we further explained that we were finalizing the aggregate demographics plus 3 percent cap to address concerns with the prior approach to risk adjustment, which used prospective HCC risk scores to adjust the historical benchmark for changes in severity and case mix for all assigned beneficiaries between BY3 and the performance year, subject to a cap of positive 3 percent for the agreement period that was applied separately by Medicare enrollment type (referred to herein as the "3 percent cap") (refer to § 425.605(a)(1)(i); § 425.610(a)(2)(i)). The 3 percent cap was finalized through the December 2018 final rule (83 FR 68013) and is applicable to ACOs in agreement periods beginning on or after July 1, 2019, and prior to January 1, 2024.

We believe that the aggregate demographics plus 3 percent cap addresses several concerns raised by interested parties¹⁶⁹ about the 3 percent cap by: accounting for higher volatility in prospective HCC risk scores for certain Medicare enrollment types due to smaller sample sizes; allowing for higher benchmarks than the prior risk adjustment methodology for ACOs that care for larger proportions of beneficiaries in aged/dual eligible, disabled and ESRD enrollment types (which are frequently subject to the 3 percent cap); and continuing to safeguard the Trust Funds by limiting returns from coding initiatives. However, the demographics plus 3 percent cap does not address concerns from certain interested parties that the current policy places a cap on an ACO's risk score growth between BY3 and the performance year but does not

¹⁶⁹ For summaries of these concerns of interested parties, refer to the CY 2022 PFS final rule (86 FR 65302 through 65306), CY 2023 PFS final rule (87 FR 69932 through 69934).

place a cap on the regional prospective HCC risk score growth between BY3 and the performance year, which is reflected in the regional growth rate used to calculate the update factor (pursuant to § 425.652(b)(2)(ii)).¹⁷⁰

Under the methodology finalized in CY 2023 PFS final rule, as described in § 425.652(b), we express the regional update factor, used to update the historical benchmark to the performance year, as the ratio of an ACO's performance year regional service area risk adjusted expenditures to its BY3 regional service area risk adjusted expenditures for each Medicare enrollment type. Table 31 provides a numeric example of the current methodology for calculating the regional update factor for the ESRD Medicare enrollment type for a hypothetical ACO with a regional service area that includes counties A, B, C, and D.

Pursuant to § 425.654, an ACO's regional expenditures are calculated using risk adjusted county FFS expenditures. The counties included in the ACO's regional service area are based on the ACO's assigned beneficiary population for the applicable benchmark or performance year. We determine average county FFS expenditures based on expenditures for the assignable population¹⁷¹ of beneficiaries in each county in the ACO's regional service area. We make separate calculations for each Medicare enrollment type. We adjust these county-level FFS expenditures (refer to Table 31, rows [A] and [F]) for severity and case mix of assignable beneficiaries in the county using county-level prospective HCC risk scores (refer to Table 31,

¹⁷⁰ For summaries of these concerns of interested parties, refer to the CY 2021 PFS final rule (85 FR 84783 through 84785), the CY 2022 PFS final rule (86 FR 65302 through 65306), and the CY 2023 PFS final rule (87 FR 66942 and 69943).

¹⁷¹ Assignable beneficiary expenditures are calculated using the payment amounts included in Parts A and B FFS claims with dates of service in the 12-month calendar year that corresponds to the relevant benchmark or performance year, using a 3-month claims run out with a completion factor. These expenditure calculations exclude IME and DSH payments, and the supplemental payment for IHS/Tribal hospitals and Puerto Rico hospitals; and consider individually beneficiary identifiable final payments made under a demonstration, pilot or time limited program. Refer to § 425.654(a)(2). The assignable population of beneficiaries is identified for the assignment window corresponding to the relevant benchmark or performance year that is consistent with the assignment window that applies under the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii). Refer to § 425.654(a)(1)(i). We refer readers to the discussion of the proposed changes to the methodology for identifying the assignable beneficiary population in section III.G.3.a of this proposed rule.

rows [B] and [G]). The adjustment is made by dividing the county-level FFS expenditures for the Medicare enrollment type by county-level prospective HCC risk scores for the Medicare enrollment type, resulting in risk adjusted county-level FFS expenditures shown in Table 31 rows [C] and [H].

We then calculate an ACO's regional expenditures for each Medicare enrollment type by weighting these risk adjusted county-level FFS expenditures according to the ACO's proportion of assigned beneficiaries¹⁷² in the county for that Medicare enrollment type (refer to Table 31, rows [D] and [I]), determined by the number of the ACO's assigned beneficiaries in the applicable population (according to Medicare enrollment type) residing in the county in relation to the ACO's total number of assigned beneficiaries in the applicable population (according to Medicare enrollment type) for the relevant benchmark or performance year. We then aggregate those values for each population of beneficiaries (according to Medicare enrollment type) across all counties within the ACO's regional service area¹⁷³ (refer to Table 31, rows [E] and [J]).

We then calculate the regional update factor as the ratio of an ACO's performance year expenditures to BY3 regional expenditures. This calculation is performed separately for each Medicare enrollment type. Refer to Table 31, row [K] for an example of how the regional update factor would be calculated for the ESRD Medicare enrollment type. This calculation would then be repeated for each of the other Medicare enrollment types.

¹⁷² Proportions are calculated using beneficiary person years.

¹⁷³ Refer to the Medicare Shared Savings Program, Shared Savings and Losses, Assignment and Quality Performance Standard Methodology Specifications (version #11, January 2023), sections 4.1.1 "Determining Regional FFS Expenditures" and 4.1.4 "Risk Adjusting and Updating the Historical Benchmark", available at <https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf-2>.

TABLE 31: Example Calculation of the Regional Update Factor for the ESRD Medicare Enrollment Type for a Hypothetical ACO

	County A	County B	County C	County D	Regional
BY3 ESRD Calculations					
[A] County FFS Expenditures	72,000	108,000	86,400	79,200

ESRD Regional Update Factor Calculation					
[K] ESRD Regional Update Factor, [J]/[E]					0.976

While the regional expenditures for BY3 and the performance year are risk adjusted, as described previously in this section, there is currently no cap on prospective HCC risk score growth in an ACO’s regional service area between BY3 and the performance year. As discussed previously in this section, ACOs and other interested parties have expressed concerns that the program’s current cap on ACO risk score growth between BY3 and the performance year does not account for risk score growth in the ACO’s regional service area and that there is not an equivalent cap on regional risk score growth. High prospective HCC risk score growth in an ACO’s regional service area between BY3 and the performance year has the effect of decreasing the regional update factor, resulting in a lower updated benchmark for the ACO than if the regional risk score growth were capped (assuming that the risk score growth was high enough to be capped). In past rulemaking, some commenters have encouraged CMS to adopt a policy of applying a cap on ACO risk score growth after accounting for regional increase in risk scores.¹⁷⁴

¹⁷⁴ Refer to CY 2021 PFS final rule (85 FR 84784).

Others have suggested more generally that CMS align the use of a risk adjustment cap for the ACO and its region by applying a consistent capping policy to both.¹⁷⁵

In the CY 2022 PFS proposed rule (86 FR 39294 through 39295), we sought comment on an alternate approach to capping ACO prospective HCC risk score growth between BY3 and the performance year in relation to the prospective HCC risk score growth in the ACO's regional service area. The option we presented was to allow an ACO's risk score growth cap to increase above 3 percent by a percentage of the difference between the 3 percent cap and risk score growth in the AC's regional service area for a given Medicare enrollment type. In this alternate approach (herein referred to as the "3 percent cap plus regional difference"), the percentage applied would be equal to 1 minus the ACO's regional market share for the Medicare enrollment type. For example, if regional risk score growth for a particular Medicare enrollment type was 5 percent and the ACO's regional market share was 20 percent, we would increase the cap on the ACO's risk score growth for that Medicare enrollment type by an amount equal to the difference between the regional risk score growth and the 3 percent cap (2 percent) multiplied by one minus the ACO's regional market share (80 percent). Thus, the ACO would face a cap for this Medicare enrollment type equal to 4.6 percent instead of 3 percent (3 percent + (2 percent × 80 percent)). This approach would raise the 3 percent cap while limiting the ability for ACOs with high market share to increase their cap by engaging in coding intensity initiatives that raise the regional prospective HCC risk score. As discussed in the CY 2022 PFS final rule, a few commenters noted their support for this 3 percent cap plus regional difference methodology.¹⁷⁶ MedPAC, however, expressed concern that increasing the cap beyond 3 percent could effectively

¹⁷⁵ Refer to CY 2021 PFS final rule (85 FR 84784) and CY 2023 PFS final rule (87 FR 69943).

¹⁷⁶ Refer to 86 FR 65304.

reward ACOs for greater coding intensity in their region, particularly for those with higher market share.^{177,178}

In the CY 2023 PFS final rule (87 FR 69932 through 69946), we indicated that we had considered the 3 percent cap plus regional difference methodology described in the CY 2022 PFS proposed rule. However, we opted not to propose this policy and instead proposed, and ultimately finalized, the aggregate demographics plus 3 percent cap. One reason we did not propose the 3 percent cap plus regional difference was that a relatively small share of ACOs affected by the 3 percent cap operated in regional service areas where regional risk score growth was greater than 3 percent, indicating that this was not a widespread issue impacting ACO performance. Additionally, we explained that we still had concerns that allowing the cap on an ACO's risk score growth to increase with regional risk score growth could incentivize ACOs, particularly those with high market share, to engage in coding behavior that would increase their cap, even if this incentive would be mitigated to some degree by limiting the allowable increase in the cap based on the ACO's market share. Under the 3 percent cap, ACOs with high market share have a disincentive to engage in coding initiatives, as it could increase risk score growth in their regional service area and potentially decrease the value of the regional component of their update factor. We noted that raising the 3 percent cap based on risk score growth in an ACO's regional service area could change these incentives and encourage ACOs to engage in coding initiatives. In addition to finalizing the aggregate demographics plus 3 percent cap, in the CY 2023 PFS final rule, we noted that we declined to consider an approach that would impose a direct cap on risk score growth in an ACO's regional service area (87 FR 69932 through 69947). As with the 3 percent cap plus regional difference, we were concerned that such an approach

¹⁷⁷ Refer to 86 FR 65303 through 65305.

¹⁷⁸ Refer to Letter from MedPAC to Chiquita Brooks-LaSure, Administrator, CMS (September 9, 2021), regarding File code CMS-1751-P (pages 16-18 "Risk adjustment methodology"), available at https://www.medpac.gov/wp-content/uploads/2021/10/09092021_PartB_CMS1751_MedPAC_Comment_V2_SEC.pdf.

would create adverse incentives for coding behavior, especially for ACOs with high market share.

In response to the discussion of the cap on prospective HCC risk score growth in the CY 2023 PFS proposed rule, commenters took the opportunity to reiterate their concerns that the program's current cap on ACO risk score growth between BY3 and the performance year does not account for risk score growth in the ACO's regional service area and suggested ways to incorporate a cap on regional risk score growth. A couple of commenters requested that the risk score cap be allowed to further increase for ACOs in regions where risk score growth exceeds the cap, with one stating that a flat percentage cap will always disadvantage ACOs in regions where risk score growth exceeds the cap and another stating that this additional flexibility would ensure ACOs are not disadvantaged by operating in underserved communities. Additionally, many commenters supported capping regional risk score growth in addition to capping ACO risk score growth. Several of those commenters stated that it was critical that, whatever policy CMS adopted for capping ACOs' risk score growth, the same policy must also apply to regional risk score growth. Several commenters noted that CMS should not apply adjustments to only one side of the equation, that is, capping ACO risk ratios without capping regional risk ratios, with many commenters saying this would lead to unintended consequences and another commenter saying it would have inequitable results. Several commenters stated that not capping increases in regional risk scores would stifle growth in exactly the areas CMS wants growth the most. A few commenters explained that lack of regional risk score growth caps incentivizes ACOs not to grow in places with certain types of populations, such as those with increasing health burdens, higher needs, or higher numbers of aged/dual and disabled enrollees.¹⁷⁹ In response to these comments, we indicated that we would continue to monitor the impacts of regional risk score

¹⁷⁹ Refer to 87 FR 69942 through 69943.

growth and may propose further refinements to our risk adjustment policies in future rulemaking.¹⁸⁰

(2) Proposed Revisions

Since the publication of the CY 2023 PFS final rule, we have performed further analysis on prospective HCC risk score growth in ACOs' regional service area between BY3 and the performance year and considered ways in which we could reduce impacts to ACOs in regions with high risk score growth, particularly when such growth is not due to the ACO's own complete and accurate coding, while also limiting the impact from coding initiatives, particularly among ACOs with high market share. Based on this additional analysis, which is detailed later in this section, we are proposing to modify the calculation of the regional update factor used to update the historical benchmark between BY3 and the performance year. The proposed approach would cap prospective HCC risk score growth in an ACO's regional service area between BY3 and the performance year by applying an adjustment factor to the regional update factor. This cap on regional risk score growth would be applied independently of the cap on an ACO's own prospective HCC risk score growth between BY3 and the performance year, meaning that this proposed cap on prospective HCC risk score growth in an ACO's regional service area would be applied whether or not the ACO's prospective risk score growth was capped when updating the benchmark between BY3 and the performance year. Applying these caps independently would be more equitable to ACOs serving high risk patients in regions with high risk score growth, and avoid creating incentives for ACOs to avoid high risk and more medically complex patients. Adjusting the regional service area risk score growth cap based on the percentage of original Medicare fee-for-service beneficiaries the ACO serves in the region would help to mitigate the impact an ACO's own coding initiatives have on risk score growth in the ACO's regional service

¹⁸⁰ Refer to 87 FR 69943.

area, particularly when the ACO has a greater influence on its regional service area risk score growth rate.

To determine the cap on prospective HCC risk score growth in an ACO's regional service area we propose to follow a similar methodology as the one adopted in the CY 2023 PFS final rule¹⁸¹ for capping ACO risk score growth, codified at § 425.605(a)(1)(ii) and § 425.610(a)(2)(ii), while additionally accounting for an ACO's aggregate market share. The effect of the regional risk score growth cap would be to increase the regional component of the update factor for ACOs in regions with aggregate regional prospective HCC risk score growth above the cap, with ACOs with higher aggregate market shares seeing smaller increases, all else being equal. ACOs in regions with aggregate regional prospective HCC risk score growth below the cap would not be affected by the proposed policy.

By symmetrically limiting risk score growth within both an ACO's assigned beneficiary population and its region, this proposed approach is expected to improve the accuracy of the regional update factors for ACOs operating in regional service areas with high risk score growth, particularly in later years of the 5-year agreement period where the difference between an ACO's BY3 and performance year regional risk scores is expected to be the greatest. We believe capping regional risk score growth will strengthen incentives for ACOs to form or continue to operate in regions with high risk score growth and thereby incentivize ACOs to care for higher risk beneficiaries. This approach would also offer an incentive for potential applicant ACOs that may be examining recent risk score growth in their region and making the decision whether to participate in the Shared Savings Program. Additionally, by adjusting the regional risk score growth cap based on ACO market share, this proposal would also maintain a disincentive against coding intensity for ACOs with high market share.

¹⁸¹ 87 FR 69932 through 69946.

To implement the new cap on regional risk score growth, we would multiply the original regional update factor used to update the historical benchmark between BY3 and the performance year (determined in accordance with § 425.652(b)(2)(ii)) by a regional risk score growth cap adjustment factor. The regional risk score growth cap adjustment factor would be calculated as follows:

- *Step 1: Calculate county-level risk scores.* We would calculate county-level prospective HCC and demographic risk scores by Medicare enrollment type for both BY3 and the performance year. To do this for a given benchmark or performance year, we would first determine the renormalized, prospective HCC and demographic risk score for each assignable beneficiary¹⁸² in each county in the ACO's regional service area. For both HCC and demographic risk scores, we would then compute the weighted average risk score for each county for each Medicare enrollment type by multiplying each assignable beneficiary's risk score for that Medicare enrollment type by the beneficiary's person years enrolled in that Medicare enrollment type, summing these weighted risk scores across all assignable beneficiaries for that Medicare enrollment type in the county, and then dividing by total person years for that Medicare enrollment type among assignable beneficiaries in the county. Note that this approach would be similar to the approach that is currently used to determine county-level prospective HCC risk scores as an intermediate step in calculating risk adjusted regional expenditures under the current methodology.¹⁸³

¹⁸² Consistent with our proposal to revise the definition of an assignable beneficiary (refer to section III.G.3.a of this proposed rule), we propose that the assignable population of beneficiaries for a benchmark or performance year would be identified using the assignment window or expanded window for assignment that is consistent with the beneficiary assignment methodology selected by the ACO for the applicable performance year according to § 425.400(a)(4)(ii).

¹⁸³ Refer to the Medicare Shared Savings Program, Shared Savings and Losses, Assignment and Quality Performance Standard Methodology Specifications (version #11, January 2023), section 4.1.1 "Determining Regional FFS Expenditures", available at <https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf-2>.

- *Step 2:* Calculate regional risk scores. We would calculate regional-level BY3 and performance year prospective HCC and demographic risk scores as a weighted average of county-level HCC and demographic risk scores for the Medicare enrollment type (calculated in step 1), with weights reflecting the proportion of the ACO's assigned beneficiaries¹⁸⁴ in the county. This proportion is determined by the number of the ACO's assigned beneficiaries (by Medicare enrollment type) residing in each county in relation to the ACO's total number of assigned beneficiaries for that Medicare enrollment type for the relevant benchmark or performance year. These would be the same weights as used to calculate regional expenditures under § 425.654(b).

- *Step 3:* Determine aggregate growth in regional risk scores. To calculate aggregate growth in regional risk scores, we would first calculate growth in prospective HCC and demographic risk scores between BY3 and the performance year for each Medicare enrollment type, expressed as the ratio of the performance year regional risk score for a Medicare enrollment type (calculated in step 2) to the BY3 regional risk score for that enrollment type (calculated in step 2). We would next take a weighted average of the regional prospective HCC or demographic risk ratios, as applicable, across the four Medicare enrollment types, where the weight applied to the growth in risk scores for each Medicare enrollment type would be the ACO's performance year assigned beneficiary person years for the Medicare enrollment type multiplied by the ACO's regionally adjusted historical benchmark expenditures for the Medicare enrollment type.¹⁸⁵

- *Step 4:* Determine the cap on regional risk score growth. We would first calculate the non-market share adjusted cap on the ACO's regional risk score growth as the sum of the

¹⁸⁴ Proportions are calculated using beneficiary person years.

¹⁸⁵ These are the same weights that are to be used when calculating weighted average ACO prospective HCC and demographic risk ratios under the risk adjustment methodology adopted in the CY 2023 PFS final rule (87 FR 69932 through 69946) and codified in §§ 425.605(a)(1)(ii)(C) and 425.610(a)(2)(ii)(C).

aggregate growth in regional demographic risk scores (calculated in step 3) and 3 percentage points.¹⁸⁶

We would next adjust the cap to reflect the ACO's aggregate market share. We would calculate an ACO's aggregate market share as a weighted average of the ACO's market share across the four Medicare enrollment types. An ACO's market share for each Medicare enrollment type would be equal to the weight that is applied to the national component of the blended update factor in the two-way blend that is calculated as the share of assignable beneficiaries in the ACO's regional service area that are assigned to the ACO for the applicable performance year (refer to § 425.652(b)(2)(iv)). The weights for each Medicare enrollment type used to compute the weighted average would be the ACO's performance year assigned person years for the Medicare enrollment type.

We would adjust the cap on regional risk score growth to reflect the ACO's aggregate market share by adding to the non-market share adjusted cap the product of:

- ++ The ACO's aggregate market share, and
- ++ The difference (subject to a floor of zero) between:
 - The aggregate regional prospective HCC risk score growth (calculated in step 3), and
 - The non-market share adjusted cap (calculated first in this step).

This adjustment of the cap on regional risk score growth using the ACO's aggregate market share creates a sliding scale. Assuming that an ACO has aggregate regional prospective HCC risk score growth above the non-market share adjusted cap, an ACO with close to 0 percent aggregate market share would receive a market share adjusted cap on regional risk score growth close to the aggregate growth in regional demographic risk scores plus 3 percentage points and an ACO with 100 percent aggregate market share would receive a market share adjusted cap on

¹⁸⁶ This is similar to the calculation of the cap on ACO prospective HCC risk score growth finalized in the CY 2023 PFS (87 FR 69932 through 69946) and codified in §§ 425.605(a)(1)(ii)(A) and 425.610(a)(2)(ii)(A).

regional risk score growth equal to the aggregate regional prospective HCC risk score growth calculated in step 3 (which is effectively no cap at all). Under this approach, as an ACO's aggregate market share increases, so does the cap on the ACO's regional risk score growth, ultimately limiting the potential increase to the regional update factor for ACOs with high market share.

- *Step 5:* Determine the regional risk score growth cap adjustment factor. First, we would determine if the ACO's regional risk score growth is subject to a cap by comparing the ACO's aggregate regional prospective HCC risk score growth (calculated in step 3) to the market share adjusted cap on regional risk score growth (calculated in step 4).

- ++ If the aggregate regional prospective HCC risk score growth does not exceed the cap on regional risk score growth, the ACO's regional risk score growth would not be subject to the cap. For these ACOs we would set the risk score growth cap adjustment factor equal to 1 for each Medicare enrollment type (which is effectively no adjustment).

- ++ If the aggregate regional prospective HCC risk score growth exceeds the market share adjusted cap, the ACO's regional risk score growth is subject to the cap. For these ACOs we would next determine whether the cap on regional risk score growth applies for each Medicare enrollment type. To do this, we would compare regional prospective HCC risk score growth for each Medicare enrollment type (calculated in step 3) with the market share adjusted cap (calculated in step 4). If the regional risk score growth for a Medicare enrollment type does not exceed the cap, the enrollment type is not subject to the cap and the regional risk score growth cap adjustment factor for that Medicare enrollment type is set equal to 1 (effectively no adjustment). Otherwise, the Medicare enrollment type is subject to the cap and we would set the adjustment factor for the Medicare enrollment type equal to the regional prospective HCC risk score growth for the Medicare enrollment type (calculated in step 3) divided by the market share adjusted cap calculated in step 4. In this case, the adjustment factor for the Medicare enrollment

type would represent a measure of how far above the cap the regional prospective HCC risk score growth is.

Table 32 provides a numeric example of the calculation of the regional risk score growth cap adjustment factor for a hypothetical ACO that is determined to be subject to the market share adjusted cap. Table 32 begins at the end of step 2 of the calculation, and therefore only reflects regional-level calculations and does not include the county-level calculations:

TABLE 32: Example of Calculation of the Regional Risk Score Growth Cap Adjustment Factor for a Hypothetical ACO

Regional Level Measure	ESRD	Disabled	Aged/dual	Aged/non-dual	Weighted Average
Results of Step 2 (Regional Risk Scores (Calculation not shown))					
[A] BY3 Prospective HCC Risk Scores	1.027	1.016	1.037	1.006	
[B] PY Prospective HCC Risk Scores	1.075	1.049	1.043	1.053	
[C] BY3 Demographic Risk Scores	1.016	0.996	1.047	1.007	
[D] PY Demographic Risk Scores	0.962	1.012	1.054	0.983	
Step 3 (Determine growth in aggregate risk scores)					
[E] Prospective HCC Risk Ratio, [B] / [A]	1.047	1.032	1.006	1.047	
[F] Demographic Risk Ratio, [D] / [C]	0.947	1.016	1.006	0.977	
[G] Risk Score Weights (ACO performance year assigned person years multiplied by regionally adjusted historical benchmark expenditures, as a proportion)	0.010	0.090	0.150	0.750	
[H] Weighted Average HCC Risk Ratio, weighted average of [E] using weights [G]					1.039
[I] Weighted Average Demographic Risk Ratio, weighted average of [F] using weights [G]					0.984
Step 4 (Determine the cap on regional risk score growth)					
[J] Non-market Share Adjusted Cap, [I] + 0.030					1.014
[K] Market Share Weights (ACO performance year assigned person years, as a proportion)	0.007	0.085	0.120	0.788	
[L] ACO Market Share	0.150	0.200	0.180	0.300	
[M] Weighted Average Market Share, weighted average of [L] using weights [K]					0.276
[N] Market Share Adjusted Cap, [J]+([M]*([H]-[J])), Note that [H]-[J] is subject to a floor of 0					1.021
Step 5 (Determine the regional risk score growth cap adjustment factor)					
[O] Is the ACO Subject to Cap? [H] > [N]?					Yes
[P] Is the Enrollment Type Subject to Cap, If [O] = Yes, is [E]>[N]? If [O] = No, then No	Yes	Yes	No	Yes	
[Q] Regional Risk Score Growth Cap Adjustment Factor, If [P] =Yes, then [E]/[N], else 1	1.025	1.011	1.000	1.025	

Table Note: This numeric example shows only three decimal places and so attempting to replicate the calculations may result in slight differences due to rounding. In actual calculations all decimal places would be used.

In this example, the hypothetical ACO was in a regional service area with aggregate prospective HCC risk score growth (a weighted average risk ratio of 1.039, refer to row [H]) above the market share adjusted cap of 1.021 (refer to row [N]). The ACO's regional prospective

HCC risk score growth (shown in row [E]) was above this cap for three of the four Medicare enrollment types (all but the aged/dual eligible Medicare enrollment type). Therefore, the regional risk score growth cap adjustment factor (refer to row [Q]) calculated for those three capped Medicare enrollment types was above one, and the regional risk score growth cap adjustment factor calculated for the one uncapped Medicare enrollment type was equal to one. Once the regional risk score growth cap adjustment factors are multiplied by the original regional update factors used to update the historical benchmark between BY3 and the performance year, the regional update factor would increase for the three capped Medicare enrollment types. For example, if the original regional update factor for the ESRD Medicare enrollment type was 0.976, then the final regional ESRD update factor after the application of the regional risk score growth cap adjustment factor would be 1.000 (the product of 0.976 and the regional risk score growth cap adjustment factor of 1.025). There would be no change to the original regional update factor for the uncapped aged/dual eligible Medicare enrollment type as it would be multiplied by one. Because of the increase in original regional update factor for the three capped Medicare enrollment types, this hypothetical ACO would have a higher updated benchmark under this proposed policy than under current policy.

However, if an ACO was in a regional service area with aggregate prospective HCC risk score growth that was not above the regional risk score growth cap, the regional risk score growth cap adjustment factor for all Medicare enrollment types would be equal to one, thus resulting in no change to the original regional update factor for any Medicare enrollment type and therefore no change to the ACO's updated benchmark compared to current policy.

We believe this proposed policy would help increase the accuracy of the regional update factor for ACOs operating in regional service areas with high risk score growth, including those serving more medically complex beneficiaries, therefore increasing incentives for ACOs to form or continue participation in such areas. At the same time, we believe that incorporating the market share adjustment helps to mitigate concerns related to coding intensity for ACOs with high market share and thus a relatively high level of influence over risk scores in the ACOs regional service area as discussed in section III.G.4.b.(1) of this proposed rule and would therefore protect the Trust Funds by continuing to limit incentives for this behavior.

We simulated the impact of the proposed policy using PY 2021 financial reconciliation data for ACOs in agreement periods beginning on or after July 1, 2019. This simulation found that 38 of the 332 ACOs (11 percent) would have been subject to the cap on regional risk score growth determined in step 4 of the proposed methodology and therefore would have had a higher regional update factor than under current policy for at least one Medicare enrollment type. Thirty-six of those 38 ACOs were subject to the 3 percent cap on their own risk score growth for at least one enrollment type in actual PY 2021 results. Table 33 shows the percentage of ACOs determined to be subject to the cap on regional risk score growth for each Medicare enrollment type and the average increase in the regional update factor for that enrollment type among those ACOs.

TABLE 33: Share of ACOs Subject to Regional Risk Score Growth Cap and Average Increase in Regional Update Factor among those ACOs by Medicare Enrollment Type

	ESRD	Disabled	Aged/Dual	Aged/Non-Dual
Share of ACOs Capped in Simulation	2%	5%	10%	11%
Average Change in Regional Update Factor	0.011	0.015	0.035	0.016

While this modeling shows that only a small proportion of ACOs would have benefitted from this policy in PY 2021, our analyses have also shown that this proportion is predicted to increase as more ACOs advance farther into their 5-year agreement period. This is supported by

the finding that ACOs in the simulation were significantly more likely to be impacted if their agreement period started in 2019 with a BY3 of 2018 (16 percent) than if their agreement period started in 2020 with a BY3 of 2019 (6 percent).¹⁸⁷ Because the analysis of PY 2021 data demonstrates that circumstances like the PHE for COVID-19 and progression along a 5-year agreement period can interact to increase the share of ACOs in regional service areas with aggregate regional risk score growth above the cap, we have determined that our initial concerns about creating adverse incentives for coding behavior by capping regional risk score growth, as discussed in section III.G.4.b.(1) of this proposed rule, are outweighed by the potential harm to ACOs in regions with high risk score growth, particularly when such growth is not due to the ACO's own coding activities. Additionally, we believe the market share adjustment to the cap on regional risk score growth will limit overly advantaging ACOs with high market share if they participate in coding initiatives.

Table 34 displays information on the impact of the market share adjustment on the cap on regional risk score growth within our simulation of the proposed policy in PY 2021 for the ACOs with the minimum, median, and maximum aggregate market share that were found to be subject to the cap on regional risk score growth.

¹⁸⁷ While analysis of average FFS risk score changes at the hospital referral region (HRR) level further supports the assumption that more ACOs would be impacted toward the end of their 5-year agreement period, such analysis also indicates that variation from the PHE for COVID-19 likely accentuated this phenomenon in the simulation on PY2021 data. For this reason, the finding in the PY2021 simulation that 16 percent of 2019 starters were impacted is likely indicative of an upper bound for the share of ACOs potentially impacted by PY5 in agreement periods that start in 2024 or later (that is, where the impact of the PHE for COVID-19 is minimal in BY3 relative to the BY3s in this simulation).

TABLE 34: Aggregate Market Share and Impact of Market Share Adjustment on Cap on Regional Risk Score Growth among ACOs Subject to Regional Risk Score Growth Cap (N=38)

	Aggregate Market Share (proportion)	Non-Market Share Adjusted Cap	Market Share Adjusted Cap	Difference between Market Share Adjusted and Non-Market Share Adjusted Cap
Minimum	0.009	1.036	1.036	<0.001
Median	0.127	1.034	1.034	0.001
Maximum	0.536	1.008	1.028	0.020

Note: The minimum, median, and maximum refer to the minimum, median and maximum aggregate market share. The non-market share adjusted cap, market share adjusted cap, and difference between market share adjusted and non-market share adjusted cap represent data from the ACOs with the minimum, median, and maximum market shares. Because there are an even number of impacted ACOs, there are two ACOs comprising the median of 0.127. These two ACOs have the same non-market share adjusted and market share adjusted caps and have been combined into a single row for simplicity.

Based on this data in Table 34, the majority of ACOs found to be impacted in this simulation had a relatively small aggregate market share, with a median of about 13 percent. Because of this, the median increase to the cap on regional risk score growth from the market share adjustment was small (0.001). (This is both the median increase among all 38 impacted ACOs and the increase for the impacted ACO with the median market share). Further analysis showed that results were similar among both rural and urban ACOs. Of the 38 impacted ACOs, 34 were classified as urban and had a median aggregate market share of about 12 percent. The remaining four impacted ACOs were rural ACOs with a median aggregate market share of about 24 percent. While the market share was higher on average among rural ACOs, average market share for both types of ACOs was under 25 percent and both groups had only a small median increase to the cap on regional risk score growth from the market share adjustment of 0.001.¹⁸⁸

ACOs with a larger aggregate market share received a larger increase in the cap on regional risk score growth due to the market share adjustment. For example, in Table 34, the ACO with the highest market share of 53.6 percent (an ACO that has a regional service area in

¹⁸⁸ For this analysis, ACOs were classified as rural if the plurality of their assigned beneficiaries resided in either micropolitan or noncore counties and urban if the plurality of their assigned beneficiaries resided in either large central metro, large fringe metro, medium metro, or small metro counties as defined by The United States Census Bureau and the Office of Management and Budget (OMB).

an urban area), had a 20 percent increase in its cap from the market share adjustment, going from a non-market share adjusted cap of 1.008 to an adjusted cap of 1.028. We believe that, while the impact of the market share adjustment on the cap on regional risk score growth will be small for the majority of ACOs, this market share adjustment is important to address both our own concerns related to incentives for coding intensity and the similar concerns raised by MedPAC in the CY 2023 PFS final rule, as discussed in section III.G.4.b.(1) of this proposed rule. The market share adjustment to the cap limits the adverse coding incentives that can arise when allowing larger benchmark increases when an ACO increases its coding, especially for ACOs with high market share. Specifically, ACOs with high market share will still have a disincentive to engage in coding initiatives, as these initiatives could increase risk score growth in their regional service area and potentially decrease the value of the regional component of their update factor.

Apart from the market share adjustment, the calculation of the proposed cap on regional risk score growth between BY3 and the performance year is calculated in the same way as the aggregate demographics plus 3 percent cap on ACO risk score growth under §§ 425.605(a)(1)(ii)(A) and 425.610(a)(2)(ii)(A). Specifically, the cap is calculated as the aggregate growth in regional demographic risk scores between BY3 and the performance year plus 3 percentage points, prior to application of the market share adjustment. Additionally, as a result of incorporating the risk adjustment into the regional update factor at the county level, the current methodology does not directly calculate a regional risk ratio that can be directly modified. The proposed approach of modifying the regional update factor by multiplying by an adjustment factor achieves the goal of reducing the impact of regional risk score growth while leaving the existing methodology for calculating risk-adjusted regional expenditures intact.

As we have explained in earlier rulemaking (see 87 FR 69887 and 69888), we have used our authority under section 1899(i)(3) of the Act to adopt a three-way blended benchmark update

factor (weighted one-third ACPT, and two-thirds national-regional blend) for agreement periods beginning on January 1, 2024, and in subsequent years, in place of an update factor based on the projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original FFS program as called for in section 1899(d)(1)(B)(ii) of the Act. Therefore, the proposed changes to the regional component of the three-way blended update factor described in this section of this proposed rule would similarly require continued use of our statutory authority under section 1899(i)(3) of the Act. Section 1899(i)(3) of the Act grants the Secretary the authority to use other payment models, including payment models that use alternative benchmarking methodologies, if the Secretary determines that doing so would improve the quality and efficiency of items and services furnished under the Medicare program and program expenditures under the alternative methodology would be equal to or lower than those that would result under the statutory payment model. We believe the changes to the methodology for updating the benchmark that we are proposing pursuant to section 1899(i)(3) of the Act would improve the quality and efficiency of items and services furnished under the Medicare Program. More specifically, we believe that the proposed changes to the regional component of the update factor would – in the context of the downward effects on the benchmark resulting from elevated variation in regional average prospective HCC risk score growth as shown in the PY 2021 analysis – reinforce the incentive for ACOs to enter and remain in the Shared Savings Program, particularly in regions with changing populations. Moreover, we believe that the proposed approach, by encouraging ACOs to enter and continue participation in the Shared Savings Program, would lead to improvement in the quality of care furnished to Medicare FFS beneficiaries because participating ACOs have an incentive to perform well on quality measures in order to maximize the shared savings they may receive. In addition, as discussed in the Regulatory Impact Analysis (section VII.E.10. of this proposed rule), we believe the proposed changes to the regional component of the three-way blended update factor, in

combination with the other proposals for which we must use our authority under section 1899(i)(3) of the Act, would result in a marginal impact that is estimated to result in \$330 million in lower net spending over the 10-year projection window, which supports our finding that the relatively minor changes to program spending resulting from these proposed changes would not violate the requirements of section 1899(i)(3)(B) of the Act. We will continue to reexamine this projection in the future to ensure that the requirement under section 1899(i)(3)(B) of the Act that an alternative payment model not result in additional program expenditures continues to be satisfied. In the event that we later determine that the payment model established under section 1899(i)(3) of the Act no longer meets this requirement, we would undertake additional notice and comment rulemaking to make adjustments to the payment model to assure continued compliance with the statutory requirements.

We propose to revise the Shared Savings Program regulations governing the calculation of the regional growth rate when updating the historical benchmark between BY3 and the performance year at § 425.652(c) to incorporate a regional risk score growth cap adjustment factor. We also propose to add a new section to the regulations at § 425.655 to describe the calculation of the adjustment factor.

We seek comment on the proposed changes to calculation of the regional component of the update factor for agreement periods beginning on or after January 1, 2024.

c. Mitigating the Impact of the Negative Regional Adjustment on the Benchmark to Encourage Participation by ACOs Caring for Medically Complex, High-Cost Beneficiaries

(1) Background

In earlier rulemaking we have discussed our use of the Secretary's discretion under section 1899(d)(1)(B)(ii) of the Act to adjust the historical benchmark by "such other factors as the Secretary determines appropriate" in order to adjust ACO historical benchmarks to reflect FFS expenditures in the ACO's regional service area (81 FR 37962). We initially established a

regional adjustment in a benchmark rebasing methodology that applied to ACOs entering a second agreement period beginning on January 1, 2017, January 1, 2018, or January 1, 2019 (§ 425.603(c) through (g)), before modifying our policy to apply this adjustment program wide beginning with agreement periods starting on July 1, 2019, and in subsequent years (§ 425.601(a)(8)). In the CY 2023 PFS final rule (87 FR 69915 through 69923) we modified the way we would calculate the regional adjustment for ACOs in agreement periods starting on January 1, 2024, and in subsequent years (§ 425.656). We also finalized a policy that would modify the way we would apply the regional adjustment to the benchmark that would also take into account a new adjustment for prior savings that would be available to eligible ACOs (§ 425.652(a)(8)).

In accordance with § 425.601(a)(8), for ACOs in agreement periods beginning on or after July 1, 2019 and before January 1, 2024, we adjust historical benchmark expenditures by Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries) by a percentage of the difference between the average per capita expenditure amount for the ACO's regional service area and the average per capita amount of the ACO's historical benchmark (referred to herein as the "regional adjustment"). The percentage applied in calculating the regional adjustment depends on whether the ACO has lower or higher spending compared to the ACO's regional service area and the agreement period for which the ACO is subject to the regional adjustment, according to the phase-in schedule of applicable weights. We cap the per capita dollar amount of the regional adjustment for each Medicare enrollment type at a dollar amount equal to positive or negative 5 percent of national per capita FFS expenditures for Parts A and B services under the original Medicare FFS program in benchmark year (BY) 3 for assignable beneficiaries (as defined in § 425.20) in that Medicare enrollment type identified for the 12-month calendar year corresponding to BY3 (§ 425.601(a)(8)(ii)(C)) (referred to herein as positive or negative 5

percent of national per capita FFS expenditures for assignable beneficiaries, and as the “symmetrical cap,” terms which we consider to be synonymous). We then apply the capped regional adjustment for each Medicare enrollment type by adding it to the historical benchmark expenditure for that enrollment type. A positive regional adjustment for a given Medicare enrollment type increases the benchmark for that enrollment type, whereas a negative regional adjustment decreases the benchmark for that enrollment type.

With the policies finalized in the CY 2023 PFS final rule (87 FR 69915 through 69923), we sought to reduce the impact of negative regional adjustments in several ways for agreement periods beginning on January 1, 2024, and subsequent years. First, we finalized a policy that replaced the negative 5 percent cap on the negative regional adjustment with a negative 1.5 percent cap. Under this policy, we would continue to cap positive adjustments for each Medicare enrollment type at a dollar amount equal to 5 percent of national per capita FFS expenditures for assignable beneficiaries for that enrollment type but would cap negative adjustments for each enrollment type at a dollar amount equal to negative 1.5 percent of national per capita FFS expenditures for assignable beneficiaries for that enrollment type. Additionally, after applying the negative 1.5 percent cap, we would apply an offset factor that would gradually decrease the negative regional adjustment amount for a given Medicare enrollment type as an ACO’s proportion of dually eligible Medicare and Medicaid beneficiaries increases or its weighted average prospective HCC risk score increases. Finally, for an ACO eligible for the prior savings adjustment for which the regional adjustment expressed as a single value (based on taking a person year weighted average across the four Medicare enrollment types) is negative, we would further offset the regional adjustment by the prior savings adjustment. In the CY 2023 PFS final rule (87 FR 69919) we expressed our belief that by reducing the impact of negative regional adjustments, these policies would incentivize ACOs that serve high-cost beneficiaries to join or continue to participate in the Shared Savings Program.

These policies to reduce the impact of negative regional adjustments are reflected in several new sections of the regulations. Section 425.652 is the main provision that describes the methodology for establishing, adjusting, and updating the benchmark for agreement periods beginning on January 1, 2024, and in subsequent years, including the interaction of the regional adjustment and the prior savings adjustment. Sections 425.656 and 425.658 provide additional detail on the calculations of the regional adjustment and the prior savings adjustment, respectively.

Table 35 illustrates how the caps to the regional adjustment would be calculated and applied to positive and negative regional adjustments at the Medicare enrollment type level under the policy finalized in the CY 2023 PFS final rule. Note that the uncapped regional adjustment values would be calculated using the applicable percentage phase-in weight based on whether the ACO has lower or higher spending as compared to its regional service area and the ACO's agreement period subject to a regional adjustment as described in § 425.656(d). For example, if an ACO is considered to have lower spending compared to the ACO's regional service area, and it is the ACO's first agreement period subject to the regional adjustment, we would use a weight of 35 percent when applying the regional adjustment. If an ACO is considered to have higher spending compared to the ACO's regional service area, and it is the ACO's first agreement period subject to the regional adjustment, we would use a weight of 15 percent when applying the regional adjustment.

TABLE 35: Hypothetical Example of Cap on Regional Adjustment

Medicare Enrollment Type	Medicare Enrollment Type Proportion	Uncapped Regional Adjustment (\$)	Positive Regional Adjustment Cap: - 5% of National Assignable Per Capita Expenditures (\$)	Negative Regional Adjustment Cap: -1.5% of National Assignable Per Capita Expenditures (\$)	Capped Regional Adjustment (\$)
ESRD	0.015	932	4,437	-1,331	932
Disabled	0.190	-185	639	-192	-185
Aged/dual	0.100	258	974	-292	258
Aged/non-dual	0.695	-307	553	-166	-166
Weighted Average		-209			-111

The hypothetical ACO in this example has a mix of positive and negative regional adjustments across the four enrollment types. The ACO’s uncapped aged/non-dual eligible adjustment is outside the negative 1.5 percent cap and thus changes from -\$307 to -\$166 when the cap is applied. The ACO’s adjustments for the other three enrollment types are all within the applicable positive or negative caps and are thus unaffected. The ACO’s overall weighted average regional adjustment (calculated by multiplying the adjustment for each enrollment type by the corresponding enrollment type proportion and then summing across the four enrollment types) changes from -\$209 to -\$111 when the negative regional adjustment cap is applied, reducing the per capita impact of the negative regional adjustment by \$98.

Under the methodology adopted in the CY 2023 PFS final rule (87 FR 69917 and 69920), after we apply the caps, we next apply an offset factor to any negative regional adjustments at the enrollment type level. The offset factor is based on the following: [A] the ACO’s overall proportion of BY3 assigned beneficiaries that are dually eligible for Medicare and Medicaid (including dually eligible ESRD, disabled, and aged beneficiaries)¹⁸⁹ and [B] the ACO’s weighted average prospective HCC risk score for BY3 taken across the four Medicare

¹⁸⁹ In computing this proportion, we use for each beneficiary the fraction of the year (referred to as person years) in which they were eligible for the aged/dual eligible enrollment type or for which they were eligible for the ESRD or disabled enrollment type and dually eligible for Medicare and Medicaid.

enrollment types.¹⁹⁰ Before taking this weighted average, the risk score for each enrollment type is first renormalized by dividing by the national mean risk score for the assignable FFS population for that enrollment type identified for the calendar year corresponding to BY3.

Specifically, the offset factor is calculated as:

$$\text{Offset factor} = [A] + ([B] - 1)$$

We apply the offset factor, which is subject to a minimum of zero and a maximum of one, by subtracting its value from 1 and multiplying this difference by the negative regional adjustment for each Medicare enrollment type, calculated as:

$$\text{Final regional adjustment} = \text{Negative regional adjustment} \times (1 - \text{Offset factor})$$

The higher an ACO's proportion of dually eligible beneficiaries or the higher its risk score, the larger the offset factor would be and the larger the reduction to the overall negative regional adjustment. If the offset factor is equal to the maximum value of one, the ACO would not receive a negative regional adjustment for any enrollment type, because each negative adjustment would be multiplied by a value of 1 minus the offset factor, or 0. For these ACOs, the overall weighted average regional adjustment would either be 0 (if the ACO had negative adjustments for all four enrollment types prior to the application of the offset factor) or positive (if the ACO had a mix of positive and negative adjustments at the enrollment type level prior to the application of the offset factor). If the offset factor is equal to the minimum value of zero, the ACO would receive no benefit from the offset factor.

To illustrate how the offset factor would be calculated and applied, assume that the hypothetical ACO from Table 35 had a proportion of dually eligible beneficiaries of 0.130 and a weighted average prospective HCC risk score for BY3 of 1.240. The offset factor for this ACO would be calculated as:

¹⁹⁰ In computing this weighted average, we apply a weight to the risk score for BY3 for an enrollment type that is equal to the product of the ACO's BY3 per capita expenditures for that enrollment type and the ACO's BY3 person years for that enrollment type.

$$\text{Offset factor} = 0.130 + (1.240 - 1) = 0.370$$

This factor would be applied as illustrated in Table 36 by multiplying the negative regional adjustment for each applicable Medicare enrollment type by 1 minus the offset factor or 0.630.

TABLE 36: Hypothetical Example of Offset Factor Applied to Negative Regional Adjustments

Medicare Enrollment Type	Enrollment Proportion	Capped Regional Adjustment (Before Offset) (\$)	Offset Factor	1 – Offset Factor	Final Regional Adjustment (\$)
ESRD	0.015	932	N/A	N/A	932
Disabled	0.190	-185	0.370	0.630	-117
Aged/dual	0.100	258	N/A	N/A	258
Aged/non-dual	0.695	-166	0.370	0.630	-105
Weighted Average		-111			-55

Here, the offset factor is applied to the regional adjustments for the disabled and aged/non-dual eligible populations, as both are negative, but not to the regional adjustments for the ESRD and aged/dual eligible populations, which are both positive. Taking the weighted average across the enrollment types following application of the offset factor shows that the ACO’s overall weighted regional adjustment changes from -\$111 before the offset to -\$55 after the offset, further reducing the per capita impact of the negative regional adjustment by \$56. The overall per capita impact of both the cap and offset factor for this ACO would be \$154.

In the CY 2023 PFS final rule (87 FR 69918 and 69921) we presented simulations of the combined impact of the cap and offset factor relative to the symmetrical positive and negative 5 percent cap then in place for ACOs in agreement periods beginning on July 1, 2019, and in subsequent years. The results of these simulations, which used data from PY 2020 historical benchmarks for ACOs in agreement periods starting on or after July 1, 2019, and from PY 2022 historical benchmarks for ACOs starting an agreement period on January 1, 2022, found the negative regional adjustment for almost every ACO that had an overall negative regional adjustment in the PY 2020 and PY 2022 data under the symmetrical cap would have been

reduced (or eliminated), with an average per capita impact of approximately \$114 for PY 2020 and \$48 for PY 2022. ACOs with higher weighted average BY3 prospective HCC risk scores and higher proportions of dually eligible Medicare and Medicaid beneficiaries had overall greater reductions in their negative regional adjustments. Four ACOs in the PY 2020 simulation and one in the PY 2022 simulation had an offset factor of 1, meaning they would have received a full offset to their negative regional adjustments.

Under a separate policy also finalized in the CY 2023 PFS final rule, an ACO beginning an agreement period on January 1, 2024, and in subsequent years that is a renewing or re-entering ACO may be eligible to receive an adjustment to its benchmark to account for savings generated in performance years that correspond to the benchmark years of its new agreement period. A full discussion of this policy can be found in that earlier rulemaking (87 FR 69899 through 69915). The policy was designed such that an eligible ACO would receive the higher of its overall positive regional adjustment or its prior savings adjustment, or a combination of the two if its overall regional adjustment is negative and it had prior savings. ACOs ineligible for the prior savings adjustment would receive the regional adjustment (computed as described earlier in this section applying a 5 percent cap on positive regional adjustments and a -1.5 percent cap and offset factor on negative regional adjustments). Specifically, if the regional adjustment, expressed as a single value, is positive, the ACO would receive a final adjustment equal to the higher of the regional adjustment or an adjustment based on the ACO's prior savings (see § 425.652(a)(8)(iii)(B)). If the regional adjustment, expressed as a single value, is negative, we would calculate the final adjustment as described in § 425.652(a)(8)(iii)(A), with the ACO receiving either a smaller negative regional adjustment or a positive adjustment for prior savings depending on the relative size of the negative regional adjustment and the ACO's pro-rated prior savings.

Based on further consideration, we believe it is important and timely to revisit the policy that allows for negative adjustments to be applied in establishing the benchmark for ACOs. While we did not consider eliminating negative regional adjustments program-wide in CY 2023 PFS rulemaking, one commenter noted that there is an argument for doing so. We believe further mitigating the impact of the negative regional adjustment for ACOs with high-cost populations, thereby resulting in higher benchmarks for ACOs compared to the recently finalized methodology, could further bolster the business case for Shared Savings Program participation by such ACOs.

As we discussed in the CY 2023 PFS proposed rule (87 FR 46161), there is evidence that certain aspects of the program's benchmarking methodology, notably the regional adjustment to the benchmark, may deter participation among ACOs with spending above their regional service area including those serving medically complex, high-cost populations. High-cost ACOs are underrepresented in the Shared Savings Program, with around 86 percent of all participating ACOs receiving an overall positive regional adjustment in PY 2022 indicating that a majority of ACOs are lower spending than their regional service area. We also observed that ACOs that received an overall negative regional adjustment for PY 2022 were less likely to continue participation in the program in PY 2023 than were ACOs that received an overall positive regional adjustment, with 22 percent of ACOs with a negative overall adjustment leaving the program compared to 12 percent of ACOs with a positive overall adjustment. Since PY 2017 the overall annual average share of ACOs that leave the program has been 12 percent. A recent academic study also found evidence suggesting selective participation among ACOs in response to the original adoption of a regional adjustment in 2017, with the composition of ACOs between 2017 to 2019 increasingly shifting to providers with lower preexisting levels of spending.¹⁹¹ The

¹⁹¹ Lyu P, Chernew M, McWilliams J. Benchmarking Changes And Selective Participation In The Medicare Shared Savings Program. *Health Affairs*. May 1, 2023. Available at <https://www.healthaffairs.org/doi/10.1377/hlthaff.2022.01061>.

authors attributed these changes to a combination of the entry of new ACOs with lower baseline spending, the exit of higher-spending ACOs, and the reconfiguration of ACO participant lists to favor lower-spending practices among ACOs continuing participation in the program.

Relatedly, we have observed that negative regional adjustments may make it more difficult for ACOs to succeed in the program financially. Between PY 2017, when regional adjustments were first introduced in the Shared Savings Program, and PY 2021, ACOs that received negative regional adjustments have been consistently less likely to share in savings than ACOs that received positive regional adjustments. For example, in PY 2021 we observed that 37 percent of ACOs that received a negative regional adjustment shared in savings compared to 63 percent among those with a positive adjustment.

We believe that eliminating the possibility that an ACO will receive an overall negative regional adjustment to its benchmark in combination with the other elements of the benchmarking methodology finalized in the CY 2023 PFS final rule, would work together to further our efforts to ensure sustainability of the benchmarking methodology. More specifically, we believe this policy change would further encourage continued participation among high-cost ACOs that serve medically complex beneficiaries by eliminating the potential of a lower benchmark due to an overall negative regional adjustment. It may also encourage ACOs serving such populations that may have otherwise been discouraged from participating in the Shared Savings Program by the idea of a lower benchmark to join. The implementation of this policy would allow ACOs to serve the most vulnerable populations while lessening the concern of how this may affect their performance in the program. We believe that program participation by ACOs serving these populations has the potential, over time, to produce cost savings for the Medicare Trust funds by improving care coordination and quality of care for such beneficiaries.

Additionally, we believe that eliminating overall negative regional adjustments could further incentivize greater participation among ACOs whose ACO participants have historically

been less efficient than other providers and suppliers in their regions. Such ACOs may have the greatest potential to generate cost savings for the Medicare Trust Funds by adopting more efficient practices, therefore we believe that their participation in the program should not be discouraged.

(2) Proposed Revisions

In light of these considerations, we are proposing to modify the policies we adopted in the CY 2023 PFS final rule so as to prevent any ACO from receiving an adjustment that would cause its benchmark to be lower than it would have been in the absence of a regional adjustment. Specifically, we are proposing the following approach to calculate and apply the regional adjustment, or the regional adjustment in combination with the prior savings adjustment, if applicable, for ACOs in agreement periods starting on January 1, 2024, and in subsequent years:

- We would continue to calculate the original uncapped regional adjustment by Medicare enrollment type using the applicable percentage phase-in weight based on whether the ACO has lower or higher spending compared to its regional service area and the ACO's agreement period subject to a regional adjustment as described in § 425.656(d).

- We would continue to apply the 5 percent cap on positive regional adjustments and the -1.5 percent cap and offset factor on negative regional adjustments at the enrollment type level, as finalized in the CY 2023 PFS final rule and described in § 425.656(c). For the performance year beginning on January 1, 2025, and subsequent performance years, the national assignable fee-for-service population used to calculate the caps would reflect the revised definition of assignable beneficiary that incorporates the expanded window for assignment as proposed in section III.G.3.a of this proposed rule, if finalized.

- After applying the cap and offset factor (if applicable), we would express the regional adjustment as a single per capita value by calculating a person year weighted average of the Medicare enrollment type-specific regional adjustment values.

- If the ACO's regional adjustment amount (expressed as a single per capita value) is positive, the ACO would receive a regional adjustment, according to the approach we finalized in the CY 2023 PFS final rule. That is, we would apply the enrollment type-specific regional adjustment amounts separately to the historical benchmark expenditures for each Medicare enrollment type. If the ACO is also eligible for a prior savings adjustment, the ACO would receive the higher of the two adjustments. If the regional adjustment amount (expressed as a single per capita value) is higher, we would apply the enrollment type-specific regional adjustment amounts separately to the historical benchmark expenditures for each Medicare enrollment type. If the prior savings adjustment is higher, we would apply the adjustment in the manner finalized in the CY 2023 PFS final rule as a flat dollar amount applied separately to the historical benchmark expenditures for each Medicare enrollment type.

- If the ACO's regional adjustment amount (expressed as a single per capita value) is negative, the ACO would receive no regional adjustment to its benchmark for any enrollment type. If the ACO is eligible for a prior savings adjustment, it would receive the prior savings adjustment as its final adjustment, without any offsetting reduction for the negative regional adjustment.

Under the proposed approach, ACOs that would face a negative overall adjustment to their benchmark based on the methodology adopted in the CY 2023 PFS final rule would benefit, as they would now receive no downward adjustment. Additionally, ACOs that have a negative regional adjustment amount (expressed as a single value) and are eligible for prior savings adjustment under the policy adopted in the CY 2023 PFS final rule (§ 425.658) would also be expected to benefit from the proposed policy. Specifically, these ACOs could receive a larger positive adjustment to their benchmark or a positive adjustment instead of a negative adjustment, as we would no longer offset the prior savings amount by the negative regional adjustment amount when determining the final adjustment that would apply to the ACO's benchmark as

described in the current regulations in § 425.652(a)(8)(iii)(A).¹⁹² We believe that by increasing the potential benefit of the prior savings adjustment in this manner, our proposed policy would be responsive to the comments discussed in the CY 2023 PFS final rule recommending that CMS make the prior savings adjustment more favorable, particularly for ACOs serving high-risk populations (see 87 FR 69910 through 69914).

Importantly, no ACO would be made worse off under the proposed policy. ACOs that have an overall positive regional adjustment amount would continue to receive the same adjustment to their benchmark as they would under the methodology finalized in the CY 2023 PFS final rule calculated and applied as described in the current regulations at §§ 425.656 and 425.652(a)(8), respectively. For these ACOs, the regional adjustment would continue to reflect the percentage phase-in weight based on whether the ACO has lower or higher spending compared to its regional service area and the ACO's agreement period subject to a regional adjustment as described in § 425.656(d) and we would continue to allow negative adjustments to be applied at the enrollment type level for those ACOs that receive a positive overall regional adjustment. We believe this is appropriate because these ACOs would continue to receive a positive overall adjustment to their benchmark and thus should already have greater incentive to join or continue participation in the program than ACOs that might otherwise face an adjustment that reduces their benchmark.

Tables 37 and 38 present hypothetical examples to demonstrate how we would determine the final adjustment to an ACO's benchmark under the proposed policy. Both tables include two hypothetical ACOs. The first ACO, ACO A, is the same hypothetical ACO as illustrated in Tables 35 and 36 within this section and has an overall negative regional adjustment. The second

¹⁹² For examples of the calculation of the final adjustment when an ACO is eligible for a prior savings adjustment and the overall regional adjustment is negative under the policy adopted in the CY 2023 PFS final rule, please refer to Tables 65 and 66 of the CY 2023 PFS final rule (87 FR 69904 and 69905). In Table 65 the hypothetical ACO receives a positive final adjustment and in Table 66 a negative final adjustment.

ACO, ACO B, has an overall positive regional adjustment. Table 37 assumes that both ACOs are ineligible for a prior savings adjustment, whereas Table 38 shows how the calculation would change if both ACOs were eligible for such an adjustment.

TABLE 37: Hypothetical Examples of the Determination of the Final Adjustment to the Benchmark Assuming ACOs are Not Eligible for a Prior Savings Adjustment

Calculation Step	ACO A: Negative Regional Adjustment	ACO B: Positive Regional Adjustment
Historical benchmark expenditures by enrollment type, before adjustment (\$) [A]:		
ESRD	90,000	101,000
Disabled	16,000	12,000
Aged/dual	18,000	19,000
Aged/non-dual	10,000	9,000
Enrollment proportion [B]		
ESRD	0.015	0.005
Disabled	0.190	0.100
Aged/dual	0.100	0.050
Aged/non-dual	0.695	0.845
Regional adjustment by enrollment type, reflecting the applicable phase-in weight and after cap and offset (if applicable) (\$) [C]:		
ESRD	932	-1,331
Disabled	-117	158
Aged/dual	258	-210
Aged/non-dual	-105	179
Regional adjustment (expressed as single value) (\$) [D] = Sum of [B] x [C]	-55	150
Final adjustment (\$) [E]= N/A if [D] is negative, otherwise [D]	N/A	150
Historical benchmark expenditures by enrollment type, after adjustment (\$) [F] = [A] if [E] is N/A, otherwise [A] + [C]		
ESRD	90,000	99,669
Disabled	16,000	12,158
Aged/dual	18,000	18,790
Aged/non-dual	10,000	9,179

In Table 37, because ACO A had an overall negative regional adjustment and was not eligible for a prior savings adjustment, the ACO ultimately receives no adjustment, upward or downward, to its benchmark. For ACO B, whose overall regional adjustment is positive, the final adjustment is the regional adjustment, which is applied by adding the regional adjustment specific to each enrollment type (reflecting the percentage weight determined for the ACO and

after the application of the cap and offset factor, if applicable) to the ACO’s pre-adjustment historical benchmark expenditures for that enrollment type.

TABLE 38: Hypothetical Examples of the Determination of the Final Adjustment to the Benchmark Assuming ACOs are Eligible for a Prior Savings Adjustment

	ACO A: Negative Regional Adjustment	ACO B: Positive Regional Adjustment
Historical benchmark expenditures by enrollment type, before adjustment (\$) [A]:		
ESRD	90,000	101,000
Disabled	16,000	12,000
Aged/dual	18,000	19,000
Aged/non-dual	10,000	9,000
Enrollment type proportions [B]		
ESRD	0.015	0.005
Disabled	0.190	0.100
Aged/dual	0.100	0.050
Aged/non-dual	0.695	0.845
Regional adjustment by enrollment type, reflecting the applicable phase-in weight and after cap and offset (if applicable) (\$) [C]:		
ESRD	932	-1,331
Disabled	-117	158
Aged/dual	258	-210
Aged/non-dual	-105	179
Regional adjustment (expressed as single value) [D] = Sum of [B] x [C]	-55	150
Prior savings adjustment* (\$) [E]	58	239
Final adjustment (\$) [F]= [E] if [D] is negative, otherwise higher of [D] or [E]	58	239
Historical benchmark expenditures by enrollment type, after adjustment [G] = [A] + [C] if [E] = [D], otherwise [A] + [E] for each enrollment type		
ESRD	90,058	101,239
Disabled	16,058	12,239
Aged/dual	18,058	19,239
Aged/non-dual	10,058	9,239

*As provided in the proposed new provision at § 425.658(c)(1) of the regulations, the prior savings adjustment would be calculated as the lesser of 50 percent of the pro-rated positive average per capita savings amount, calculated as described in § 425.658(b)(3)(ii), and a cap equal to 5 percent of the national per capita expenditures for assignable beneficiaries in BY3 expressed as a single value by taking a person-year weighted average of the Medicare enrollment-type specific values.

In Table 38, both ACO A and ACO B are eligible for a prior savings adjustment. Because ACO A has a negative overall regional adjustment, its final adjustment is automatically set equal to the prior savings adjustment of \$58. The adjustment is applied as flat dollar amount by adding the \$58 to the ACO’s historical benchmark expenditures (row [A]) for each enrollment type. For

ACO B, by contrast, the final adjustment is determined by comparing the regional adjustment amount (expressed as a single value) to the prior savings adjustment amount and using the higher of the two. In this case the ACO would receive a final adjustment equal to the prior savings adjustment of \$239. Like with ACO A, this would be applied to the ACO's historical benchmark expenditures for each enrollment type as a flat dollar amount.

In revisiting simulations done with PY 2020 data described earlier in this section, there were 36 ACOs (of the 43 ACOs with a negative regional adjustment under the policy with the symmetrical cap) simulated to have a negative overall regional adjustment after the application of the cap and offset factor. Among these, 31 would not have been eligible for a prior savings adjustment and would have had this negative regional adjustment applied to their benchmark under the policy adopted in the CY 2023 PFS final rule. Under the new proposed policy, these ACOs would receive no adjustment to their benchmark. The average per capita benefit of eliminating the downward adjustment would be \$30.

The remaining five ACOs would have been eligible for the prior savings adjustment. These ACOs would have received a positive final adjustment to their benchmark under the methodology adopted in the CY 2023 PFS final rule but would receive a larger positive adjustment under the new proposed policy, with an average per capita increase of \$26. This is because we would no longer be offsetting the prior savings amount by the negative regional adjustment as part of determining the final adjustment to the ACO's benchmark as would happen under the methodology finalized in the CY 2023 PFS final rule and codified at § 425.652(a)(8)(iii)(A).

In the PY 2022 simulation described earlier in this section, there were 26 ACOs (of the 27 ACOs with a negative regional adjustment under the policy with the symmetrical cap) that would have had a negative regional adjustment, expressed as a single per capita value, after the application of the policy adopted in the CY 2023 PFS final rule. Among these, 14 ACOs would

not have been eligible for a prior savings adjustment and would have their full negative regional adjustment eliminated under the new proposed policy, with an average impact of \$66. The remaining 12 ACOs that would have been eligible for a prior savings adjustment would see a larger positive adjustment under the proposed policy, with an average increase of \$14.

Overall, we believe that the proposed changes to the calculation and application of the regional adjustment, including its interaction with the prior savings adjustment, would strengthen incentives for participation among ACOs that might otherwise be subject to a downward adjustment to their benchmark due to the negative regional adjustment. The proposed policy, if finalized, would not adversely impact any ACO's benchmark relative to the policy that was finalized in CY 2023 PFS final rule, all else being equal, but would tend to increase benchmarks for ACOs that have historically had higher spending than their regional service area. Based on our simulations using data from PY 2020 and PY 2022, the estimated average increase to the overall benchmark would be between 0.2 and 0.4 percent but could be larger in future years when more ACOs would be subject to higher phase-in weights for calculating the negative regional adjustment that would apply (alone or in combination with the prior savings adjustment) under the policy adopted in the CY 2023 PFS final rule. ACOs that would benefit from the proposed policy are likely to include those that serve high-cost, medically complex patients or those whose ACO participants have historically been less efficient than their regional counterparts but may have the potential to generate the greatest savings to Medicare through their participation in the Shared Savings Program.

We propose to implement the changes described in this section through revisions to §§ 425.652, 425.656, and 425.658. Specifically, within § 425.652, which is the section that sets forth the methodology for establishing, adjusting, and updating the benchmark for agreement periods beginning on January 1, 2024, and in subsequent years, we propose revisions to § 425.652(a)(8). As revised, this provision would describe how we would determine and apply the

adjustment to an ACO's benchmark depending on whether the ACO is eligible for a prior savings adjustment and whether the ACO's regional adjustment, expressed as a single value, is positive or negative. This provision would also establish that if an ACO is not eligible to receive a prior savings adjustment and has a regional adjustment, expressed as a single value that is negative or zero, the ACO will not receive an adjustment to its benchmark.

We propose to revise § 425.656 (which describes the calculation of the regional adjustment) and § 425.658 (which describes the calculation of the prior savings adjustment) to include certain elements of each calculation that were previously described in § 425.652(a)(8). Specifically, we propose to revise § 425.656 to redesignate paragraphs (d) and (e) as paragraphs (e) and (f) (respectively) and to specify in a new paragraph (d) that we would express the regional adjustment as a single value, and use this value in determining whether a regional adjustment or a prior savings adjustment would be applied to the ACO's benchmark in accordance with § 425.652(a)(8) (as revised under this proposed rule). We also propose modifications to update certain cross-references within § 425.656 for accuracy and consistency with the proposed revisions to the section.

We propose to revise § 425.658 to redesignate paragraph (c) as paragraph (d). We propose to add a new paragraph (c) under § 425.658 specifying that we would calculate the per capita savings adjustment as the lesser of 50 percent of the pro-rated average per capita savings amount (computed as described in § 425.658(b)(3)(ii)) and the cap equal to 5 percent of national per capita FFS expenditures for assignable beneficiaries for BY3 expressed as a single value by taking a person-year weighted average of the Medicare enrollment-type specific values. We propose to revise newly redesignated paragraph (d) of § 425.658 to specify CMS would compare the per capita prior savings adjustment with the regional adjustment, expressed as a single value as described in § 425.656(d), to determine the adjustment, if any, that would be applied to the ACO's benchmark in accordance with § 425.652(a)(8).

Additionally, we propose to make the following conforming changes:

- In § 425.600(f)(4)(ii), we propose to remove the reference “425.656(d)” and add in its place the reference “425.656(e)”.
- In § 425.611(c)(2)(iii), we propose to remove the reference “§ 425.652(a)(8)(iv)” and add in its place the reference “§ 425.658(c)(1)(ii)”.
- In § 425.652(a)(9)(v), we propose to remove the wording that references CMS redetermining the adjustment to the benchmark based on “a combination of” the redetermined regional adjustment and the prior savings adjustment.
- In § 425.658(b)(3)(i), which specifies that the ACO is not eligible to receive an adjustment for prior savings if the average per capita amount computed in § 425.658(b)(2) is less than or equal to zero, we propose to remove the sentence: “The ACO will receive the regional adjustment to its benchmark as described in § 425.656.”

We seek comment on these proposed changes.

d. Proposal to Modify the Prior Savings Adjustment

(1) Background

Under section 1899(d)(1)(B)(ii) of the Act, an ACO’s benchmark must be reset at the start of each agreement period using the most recent available 3 years of expenditures for Parts A and B services for beneficiaries assigned to the ACO. Section 1899(d)(1)(B)(ii) of the Act provides the Secretary with discretion to adjust the historical benchmark by “such other factors as the Secretary determines appropriate.” Pursuant to this authority, as described in the CY 2023 PFS final rule (87 FR 69898 through 69915), we established a prior savings adjustment that will apply when establishing the benchmark for ACOs entering a second agreement period beginning on January 1, 2024, or in subsequent years, to account for the average per capita amount of savings generated during the ACO’s prior agreement period.

The prior savings adjustment adopted in the CY 2023 PFS final rule is designed to adjust an ACO's benchmark to account for the average per capita amount of savings generated by the ACO across the 3 performance years prior to the start of its current agreement period for new and renewing ACOs. In the final rule, we explained that reinstating a prior savings adjustment would be broadly in line with our interest in addressing dynamics to ensure sustainability of the benchmarking methodology. Specifically, such an adjustment would help to mitigate the rebasing ratchet effect on an ACO's benchmark by returning to an ACO's benchmark an amount that reflects its success in lowering growth in expenditures while meeting the program's quality performance standard in the performance years corresponding to the benchmark years for the ACO's new agreement period. We also explained our belief that a prior savings adjustment could help address an ACO's effects on expenditures in its regional service area that result in reducing the regional adjustment added to the historical benchmark.

In the CY 2023 PFS final rule, we explained that, in order to mitigate the potential for rebased benchmarks for ACOs that are lower-spending compared with their regional service area and that achieved savings in the benchmark period to become overinflated, we believed that adjusting an ACO's benchmark based on the higher of either the prior savings adjustment or the ACO's positive regional adjustment would be appropriate. Additionally, we believed it would be appropriate to use a prior savings adjustment to offset negative regional adjustments for ACOs that are higher spending compared to their regional service area. We noted that this would permit ACOs that are subject to a negative regional adjustment, but that have generated savings in prior years, to receive a relatively higher benchmark.

Under the methodology finalized in the CY 2023 PFS final rule and codified at § 425.658 of the regulations, the prior savings adjustment that will apply in the establishment of benchmarks for renewing ACOs and re-entering ACOs entering an agreement period beginning on January 1, 2024, and in subsequent years, is calculated as follows:

● Step 1: Calculate total per capita savings or losses in each performance year that constitutes a benchmark year for the current agreement period. For each performance year we will determine an average per capita amount reflecting the quotient of the ACO's total updated benchmark expenditures minus total performance year expenditures divided by performance year assigned beneficiary person years. CMS will apply the following requirements in determining the amount of per capita savings or losses for each performance year:

++ The per capita savings or losses will be set to zero for a performance year if the ACO was not reconciled for the performance year.

++ If an ACO generated savings for a performance year but was not eligible to receive a shared savings payment for that year due to noncompliance with Shared Savings Program requirements, the per capita savings for that year will be set to zero.

++ For a new ACO that is identified as a re-entering ACO, per capita savings or losses will be determined based on the per capita savings or losses of the ACO in which the majority of the ACO participants in the re-entering ACO were participating.

● Step 2: Calculate average per capita savings. Calculate an average per capita amount of savings by taking a simple average of the values for each of the 3 performance years as determined in Step 1, including values of zero, if applicable. CMS will use the average per capita amount of savings to determine the ACO's eligibility for the prior savings adjustment as follows:

++ If the average per capita value is less than or equal to zero, the ACO will not be eligible for a prior savings adjustment. The ACO will receive the regional adjustment to its benchmark.

++ If the average per capita value is positive, the ACO will be eligible for a prior savings adjustment.

● Step 3: Apply a proration factor to the per capita savings calculated in Step 2 equal to the ratio of the average person years for the 3 performance years that immediately precede the

start of the ACO's current agreement period (regardless of whether these 3 performance years fall in one or more prior agreement periods), and the average person years in benchmark years for the ACO's current agreement period, capped at 1. If the ACO was not reconciled for one or more of the 3 years preceding the start of the ACO's current agreement period, the person years from that year (or years) will be excluded from the averages in the numerator and the denominator of this ratio. For a new ACO that is identified as a re-entering ACO, the person years of the ACO in which the majority of the ACO participants of the re-entering ACO were participating will be used in the numerator of the calculation. This ratio will be redetermined for each performance year during the agreement period in the event of any changes to the number of average person years in the benchmark years as a result of changes to the ACO's certified ACO participant list, a change to the ACO's beneficiary assignment methodology selection, or changes to the beneficiary assignment methodology.

- Step 4: Determine final adjustment to benchmark. Compare the pro-rated positive average per capita savings from Step 3 with the ACO's regional adjustment, determined as specified in the regulation at § 425.656, expressed as a single per capita value by taking a person-year weighted average of the Medicare enrollment type-specific regional adjustment values.

++ If the regional adjustment, expressed as a single value, is negative or zero, calculate the sum of the regional adjustment value and the pro-rated positive average per capita savings value and determine the final adjustment as follows:

-- If the sum is positive, the ACO will receive a prior savings adjustment in place of the negative regional adjustment equal to the lesser of 50 percent of the sum of the pro-rated average per capita savings and the regional adjustment and 5 percent of national per capita FFS expenditures for Parts A and B services under the original Medicare FFS program in BY3 for assignable beneficiaries identified for the 12-month calendar year corresponding to BY3. The

adjustment will be applied as a flat dollar amount to the historical benchmark expenditures for each of the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

-- If this sum is negative, this will constitute the amount of the negative regional adjustment applied to the ACO's historical benchmark. The adjustment will be applied as a flat dollar amount to the historical benchmark expenditures for the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

++ If the regional adjustment, expressed as a single value, is positive, the ACO will receive an adjustment to the benchmark equal to the higher of the following:

-- The positive regional adjustment amount. The adjustment will be applied separately to the historical benchmark expenditures for each of the following populations of beneficiaries in accordance with § 425.656(c): ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

-- A prior savings adjustment equal to the lesser of 50 percent of the pro-rated positive average per capita savings value and 5 percent of national per capita FFS expenditures for Parts A and B services in BY3 for assignable beneficiaries identified for the 12-month calendar year corresponding to BY3. The adjustment will be applied as a flat dollar amount to the historical benchmark expenditures for each of the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

As we explained in the CY 2023 PFS final rule (87 FR 69900) in calculating an ACO's average per capita prior savings over the 3 performance years immediately preceding the start of its agreement period, we believe that a safeguard is needed to ensure that ACOs that achieved savings for a performance year that serves as a benchmark year for the current agreement period,

but were ineligible to receive a shared savings payment due to noncompliance with Shared Savings Program requirements, are not subsequently eligible to have a portion of those savings included in their historical benchmark. Without such a safeguard, we would be rewarding an ACO, despite its noncompliance, through a higher benchmark in its subsequent agreement period. This would conflict with the sanction imposed on the ACO for its noncompliance during the performance year(s) of its prior agreement period. Accordingly, under the prior savings adjustment policy we finalized in the CY 2023 PFS final rule, if an ACO was ineligible to share in savings for any performance year in the 3 performance years immediately preceding the start of its agreement period due to noncompliance with Shared Savings Program requirements, we will set at zero the per capita amount of savings for the affected performance year(s) when calculating the prior savings adjustment.

There are a variety of reasons that could result in an ACO's ineligibility to receive a shared savings payment due to noncompliance. In accordance with §§ 425.605(c)(2), and 425.610(c)(2), an ACO does not qualify to receive shared savings for a performance year if it failed to meet the quality performance standard as specified under § 425.512 or otherwise did not maintain its eligibility to participate in the Shared Savings Program. Furthermore, an ACO will not receive any shared savings payments during the time it is under a corrective action plan (CAP) for avoidance of at-risk beneficiaries and is not eligible to receive shared savings for the performance year attributable to the time that necessitated the CAP (the time period during which the ACO avoided at-risk beneficiaries) (refer to § 425.316(b)(2)(ii)(B) and (C)).

In the CY 2023 PFS rulemaking to establish the current prior savings adjustment, we did not describe how we would account for certain circumstances where there could be changes to the values used in calculating the prior savings adjustment. Such changes could occur as a result of changes in savings earned by ACOs in accordance with § 425.316(b)(2)(ii)(B) or (C) as a result of a compliance action to address avoidance of at-risk beneficiaries or issuance of a

revised initial determination of financial performance under § 425.315. If CMS determines that an ACO, its ACO participants, any ACO providers/suppliers, or other individuals or entities performing functions or services related to the ACO's activities avoids at-risk beneficiaries and requires the ACO to submit a CAP, the ACO will not receive any shared savings payments during the time it is under the CAP (§ 425.316(b)(2)(ii)(B)), and it will not at any time be eligible to receive shared savings for the performance year attributable to the time that necessitated the CAP (§ 425.316(b)(2)(ii)(C)). Upon completion of an ACO's CAP for avoidance of at-risk beneficiaries, CMS may release shared savings payments withheld from an ACO during the time it was under a CAP under § 425.316(b)(2)(ii)(B), so long as the shared savings are not attributable to the time that necessitated the CAP (that is, the time period during which the ACO avoided at-risk beneficiaries). Thus, depending on the timing of compliance actions undertaken by CMS, the amount of savings eligible for inclusion in the prior savings adjustment under § 425.658(b)(1), may change as a result of the compliance action. For instance, the total savings eligible for inclusion in the prior savings adjustment may increase after the completion of a CAP and release of shared savings payment withheld under § 425.316(b)(2)(ii)(B). Further, if an initial determination of financial performance was already made and shared savings payments distributed and then the ACO was found to have avoided at-risk beneficiaries and therefore ineligible to receive a shared savings payment for the performance year, CMS would recoup the shared savings for the time period during which the ACO avoided at-risk beneficiaries. This latter scenario would result in a decrease in the total amount of savings eligible for inclusion in the prior savings adjustment calculation.

Further, if CMS determines that the amount of shared savings due to the ACO or the amount of shared losses owed by the ACO has been calculated in error, under § 425.315 CMS may reopen its prior determination and issue a revised initial determination: (1) at any time in the case of fraud or similar fault as defined in § 405.902; or (2) not later than 4 years after the date of

the notification to the ACO of the initial determination of savings or losses for the relevant performance year, for good cause. If these situations—changes in the amount of shared savings for a prior performance year under § 425.316(b)(2)(ii)(B) or (C) as a result of a compliance action due to the avoidance of at-risk beneficiaries, or the issuance of a revised initial determination based on a reopening of ACO shared savings or shared losses under § 425.315—impact one of the 3 years prior to the start of the ACO’s current agreement period, it is possible that the prior savings adjustment would no longer reflect the savings or losses achieved by the ACO during the applicable years. In the CY 2023 PFS rulemaking we did not adopt a mechanism to account for these changes in the prior savings adjustment, but rather focused on changes to the prior savings adjustment related to changes in an ACO’s participant list, changes to the ACO’s assignment methodology selection, or changes to beneficiary assignment methodology under the Shared Savings Program as a whole.

(2) Proposed Revisions

We are proposing refinements to the prior savings adjustment calculation methodology, specified in 42 CFR part 425, subpart G, that would apply in the establishment of benchmarks for renewing ACOs and re-entering ACOs entering an agreement period beginning on January 1, 2024, and in subsequent years, to account for circumstances where the amount of savings or losses for a performance year used in the prior savings adjustment calculation changes retroactively. Specifically, we are proposing to modify the list of circumstances for adjusting the historical benchmark in § 425.652(a)(9) to include two additional scenarios: a change in savings earned by an ACO in a benchmark year in accordance with § 425.316(b)(2)(ii)(B) or (C) due to compliance action to address avoidance of at-risk beneficiaries, or a change in the amount of savings or losses for a benchmark year as a result of a reopening of a prior determination of ACO shared savings or shared losses and the issuance of a revised initial determination under § 425.315. In these situations, the amount of savings or losses that an ACO may have generated

in the 3 performance years prior to the start of the current agreement period and that would have been eligible for inclusion in the calculation of the prior savings adjustment may change. The refinements we are proposing would allow for the prior savings adjustment to be recalculated and the historical benchmark to be adjusted to reflect the any change in the amount of savings earned or losses incurred by the ACO in the 3 performance years prior to its current agreement period that are eligible for inclusion in the calculation of the prior savings adjustment.

We are proposing to modify the process currently described in § 425.652(a)(9) for adjusting the historical benchmark. Currently, an ACO may receive an adjusted historical benchmark because of changes in the ACO's assigned beneficiary population in the benchmark years of the ACO's current agreement period due to the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), a change to the ACO's beneficiary assignment methodology selection under § 425.226(a)(1)¹⁹³, or changes to the beneficiary assignment methodology specified in 42 CFR part 425, subpart E. We are proposing to modify § 425.652(a)(9) to indicate that an ACO would receive an adjusted historical benchmark for changes in values used in benchmark calculations in accordance with § 425.316(b)(2)(ii)(B) or (C) due to compliance action to address avoidance of at-risk beneficiaries or as a result of issuance of a revised initial determination under § 425.315. More specifically, an ACO would receive an adjusted benchmark for the following reasons: (1) a change in the amount of savings calculated for any of an ACO's three benchmark years eligible for inclusion in the prior savings adjustment in accordance with § 425.316(b)(2)(ii)(B) or (C) due to compliance action taken to address avoidance of at-risk beneficiaries, or (2) CMS issues a revised initial determination under § 425.315 that impacts the amount of savings or losses calculated for one of the ACO's benchmark years. We note that a compliance action taken to

¹⁹³ Refer to section III.G.7.a of this proposed rule for the proposal to revise the current reference to § 425.400(a)(4)(ii) in § 425.652(a)(9)(iv) to a reference to § 425.226(a)(1).

address avoidance of at-risk beneficiaries may lead to a change in the amount of savings earned by an ACO for a previous performance year when CMS releases savings previously withheld under § 425.316(b)(2)(ii)(B) for a time period other than the time period during which the ACO avoided at-risk beneficiaries following completion of a CAP or CMS recoups shared savings previously disbursed to an ACO under § 425.316(b)(2)(ii)(C) for a time period during which the ACO is later determined to have avoided at-risk beneficiaries.

Only ACOs whose current benchmark includes a prior savings adjustment or whose benchmark would include an adjustment for prior savings following a change in the amount of savings earned for a previous performance year that is a benchmark year for the ACO's current agreement period would receive an adjusted benchmark under these proposed changes. Furthermore, we propose to modify the process currently described in § 425.652(a)(9) to indicate that if either of these two conditions occur after the ACO has already received its historical benchmark for the first performance year of its agreement period, an ACO could receive an adjusted historical benchmark for the first year of its agreement period.

We are also proposing to add a new paragraph (e) to § 425.658 to indicate that, when either of the two aforementioned scenarios occurs, the prior savings adjustment itself would be recalculated. Without this addition there is currently no mechanism for recalculating the prior savings adjustment to address changes in ACO's savings or losses for a performance year within an agreement period. Further, we are proposing that, absent any other triggers for receiving an adjusted benchmark, an ACO would only receive an adjusted historical benchmark due to a change in the ACO's savings or losses for a performance year under §§ 425.315 or 425.316(b)(2)(ii)(B) or (C) if the change would result in a change to the prior savings adjustment as determined under § 425.652(a)(8). In other words, the ACO would not receive an adjusted historical benchmark following recalculation of the prior savings adjustment if the recalculation of the prior savings adjustment would not result in a change to the historical benchmark.

We believe that, in order to issue adjusted benchmarks and complete financial reconciliation in a timely fashion, a need exists to establish a timing cutoff for when the determination to issue an adjusted historical benchmark for these two additional reasons would be made. Each of the two scenarios for which we are proposing to recalculate the prior savings adjustment may occur at any point during any performance year of the ACO's agreement period as well as after the end of that agreement period. We are proposing that for an adjusted benchmark due to the two conditions being considered to be used in financial reconciliation for a performance year, any determination that changes the amount of the ACO's savings or losses in any of the benchmark years under §§ 425.315 or 425.316(b)(2)(ii)(B) or (C) must be issued no later than the date of the initial determination of shared savings or shared losses through financial reconciliation for the relevant performance year under § 425.605(e) or § 425.610(h). Note that if we are aware of a potential change under § 425.316(b)(2)(ii)(B) or (C) in the savings earned in a benchmark year by an ACO eligible for the prior savings adjustment or an upcoming revised initial determination under § 425.315 that could impact the determination of the ACO's savings or losses for a benchmark year, we may delay the initial determination of shared savings or shared losses for the ACO for the relevant performance year beyond when initial determinations would otherwise be issued in order to assess whether the ACO should receive an adjusted historical benchmark. Under this framework, changes to savings or losses for a benchmark year that are finalized after notification to the ACO of the initial determination of shared savings or shared losses for a given performance year would be reflected in the adjusted benchmark applied to the subsequent performance year during the relevant agreement period but would not be retroactively applied to completed performance years in the agreement period.

We considered several alternatives to the timing of when we could incorporate new information about a change in savings earned by an ACO in accordance with § 425.316(b)(2)(ii)(B) or (C) or a revised initial determination under § 425.315 into the prior

savings adjustment. The two primary alternatives we considered were: (1) requiring information about a change to the amount of savings calculated for a previous year in accordance with § 425.316(b)(2)(ii)(B) or (C) or a revised initial determination under § 425.315 to become available by December 31st of the year prior to the performance year; and (2) considering this information at any time it becomes available. An advantage of the former option of requiring information by December 31st is that it would allow us to issue the adjusted benchmark in March of the performance year, consistent with when adjusted benchmarks are otherwise issued to ACOs. A disadvantage of this approach is that it would provide less flexibility for when new information impacting savings or losses in the benchmark years could be applied to the benchmark used in financial reconciliation for a given performance year. An advantage of the latter approach of considering such information at any time that it becomes available is that an ACO could receive an adjusted benchmark and a revised initial determination of shared savings or shared losses even after receiving its initial determination for a performance year. However, a disadvantage of this approach is that it would generate significant operational complexities. If, for instance, information becomes available during performance year four of an ACO's agreement period that would potentially impact financial reconciliation results in the first 3 performance years of the agreement period, we would need to simultaneously issue adjusted benchmarks and revised initial determinations for several performance years. On balance, we believe it would be appropriate to consider new information that could impact the prior savings adjustment up to the point at which an ACO receives its initial determination for a particular performance year. We note that we are continuing to consider the complexities surrounding reopening initial determinations for multiple prior performance years throughout the program's benchmarking and financial reconciliation methodologies and may address this issue in future rulemaking.

We recognize that under § 425.658(b)(1)(iii), for a new ACO identified as re-entering ACO, the prior savings adjustment is based on the prior savings or losses of the ACO in which the majority of the ACO's ACO participants were participating. Accordingly, in the case of a re-entering ACO, we propose to consider whether this prior ACO is impacted by the following when determining whether to issue an adjusted benchmark: (1) a change in the amount of savings calculated for any of the ACO's benchmark years eligible for inclusion in the prior savings adjustment in accordance with § 425.316(b)(2)(ii)(B) or (C) due to compliance action to address avoidance of at-risk beneficiaries; or (2) a revised initial determination issued under § 425.315 that impacts the determination of the ACO's savings or losses for one of the benchmark years. In this case, other aspects of this proposal would apply similarly, including the timing cutoff for issuing an adjusted benchmark and issuing an adjusted benchmark only if the change in savings or losses determined for the applicable benchmark year would result in a change to the prior savings adjustment as determined under § 425.652(a)(8).

Below are two examples that illustrate how an ACO could receive an adjusted historical benchmark that incorporates additional savings as a result of the changes we are proposing.

- *Example 1:* An ACO renews to begin a new agreement period on January 1, 2025 but is under a corrective action plan under § 425.316(b) for avoidance of at-risk beneficiaries during performance year 2023. In accordance with § 425.316(b)(2)(ii)(B) the ACO did not receive a shared savings payment for performance year 2024, which represents the third benchmark year of its new agreement period. Therefore, the ACO's prior savings adjustment for its new agreement period would be calculated by setting the gross savings and losses for the third benchmark year equal to 0 as described in § 425.658(b)(1)(ii). However, in November of 2026 the corrective action plan for avoidance of at-risk beneficiaries is closed and CMS determines that the ACO is eligible to receive payment for shared savings for performance year 2024. In this example, the ACO would have previously received notification of the initial determination of

shared savings or shared losses for performance year 2025. Because the change in the status of the corrective action plan occurred after the ACO received its initial determination of shared savings and shared losses for performance year 2025, savings from the ACO's third benchmark year would be included in the calculation of the prior savings adjustment beginning with the benchmark used to determine financial performance for performance year 2026. That is, the ACO would receive an adjusted historical benchmark for performance year 2026 reflecting the recalculated prior savings adjustment, and financial reconciliation for performance year 2026 and subsequent performance years of the ACO's current agreement period would reflect that adjusted historical benchmark. However, financial reconciliation for performance year 2025 would not be reopened to reflect savings from the third benchmark year in the calculation of the prior savings adjustment because the corrective action plan was not lifted until after the ACO received its initial determination of shared savings or shared losses for that performance year.

- *Example 2:* An ACO begins a new agreement period on January 1, 2026, and receives its historical benchmark, which includes a prior savings adjustment. In February of 2027, information is identified that leads to a revised initial determination of shared savings and shared losses for benchmark year 2 of the ACO's new agreement period. Because the issue was identified in February of the second performance year of the new agreement period, which is prior to the ACO receiving an initial determination of its shared savings and shared losses for performance year 2026, the ACO would receive an adjusted historical benchmark for performance year 2026. Shared savings and shared losses calculations for performance year 2026 would reflect the recalculated prior savings adjustment included in this adjusted benchmark. All subsequent performance years in the agreement period would also reflect the recalculated prior savings adjustment.

In summary, we are proposing revisions to § 425.652(a)(9) to indicate that we would adjust the benchmark for changes in values used in benchmark calculations in accordance with

§ 425.316(b)(2)(ii)(B) or (C) due to compliance action to address avoidance of at-risk beneficiaries or as a result of the issuance of a revised initial determination under § 425.315. We are also proposing to add new paragraph (e) to § 425.658 to specify that the ACO's prior savings adjustment is recalculated for changes to the ACO's savings or losses for a performance year used in the prior savings adjustment calculation in accordance with § 425.316(b)(2)(ii)(B) or (C) due to compliance action to address avoidance of at-risk beneficiaries or as a result of issuance of a revised initial determination under § 425.315. Further, the new provision § 425.658(e) would also establish that for new re-entering ACOs, the prior savings adjustment will be recalculated for changes in savings or losses for a performance year used in the prior savings adjustment for the ACO in which a majority of the new ACO's ACO participants were previously participating.

We seek comment on this proposal to adjust the historical benchmark to reflect changes in savings or losses for a performance year that constitutes a benchmark year for an ACO's current agreement period. These changes would be applicable for agreement periods beginning on or after January 1, 2024.

e. Proposal to Update How Benchmarks Are Risk Adjusted

(1) Overview of Risk Adjustment within Shared Savings Program Benchmark Calculations

When establishing, adjusting, and updating an ACO's historical benchmark, CMS makes certain adjustments to account for the severity and case mix of, and certain demographic factors for, the ACO's assigned beneficiary population and the assignable beneficiary population. We use prospective HCC risk scores and (as applicable) demographic risk scores to perform this risk adjustment.

To follow is a summary of the calculations in which we will account for the severity and case mix of the ACO's assigned beneficiary population or the assignable beneficiary population when establishing, adjusting, and updating the historical benchmark, for agreement periods

beginning on January 1, 2024, and in subsequent years, including as proposed elsewhere in this proposed rule.

- We risk adjust benchmark year expenditures used to establish the historical benchmark for changes in severity and case mix using prospective HCC risk scores, in accordance with § 425.652(a)(3). In making this adjustment, we account for changes in severity and case mix in the ACO's assigned beneficiary population between the first and third benchmark years and between the second and third benchmark years.¹⁹⁴

- We calculate the ACO's regional FFS expenditures using risk adjusted county-level FFS expenditures, which are determined in accordance with § 425.654(a)(4) by adjusting FFS expenditures for severity and case mix of assignable beneficiaries in the county using prospective HCC risk scores and by making separate expenditure calculations for populations of beneficiaries by Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries). The ACO's risk adjusted regional FFS expenditures are utilized in determining the regional adjustment to the historical benchmark (in accordance with § 425.656), the regional component of the national-regional blended trend factor (in accordance with § 425.652(a)(5)), and the regional component of the three-way blended benchmark update factor (in accordance with § 425.652(b)(2)).

- We calculate the regional adjustment to the historical benchmark in accordance with § 425.656, including the following calculations to account for severity and case mix:

¹⁹⁴ See, for example, Medicare Shared Savings Program, Shared Savings and Losses, Assignment and Quality Performance Standard Methodology Specifications (version #11, January 2023), available at <https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf-2> (see section 3.6, "Risk Adjustment Policies").

++ We adjust for differences in severity and case mix between the ACO's assigned beneficiary population for BY3 and the assignable population of beneficiaries for the ACO's regional service area for BY3 in accordance with § 425.656(b)(3).

++ In calculating the negative regional adjustment, we apply an offset factor based on the ACO's overall proportion of BY3 assigned beneficiaries who are dually eligible for Medicare and Medicaid (including dually eligible ESRD, disabled, and aged beneficiaries) and the ACO's weighted average prospective HCC risk score for BY3 taken across the four Medicare enrollment types, in accordance with § 425.656(c)(4).

- We adjust the ACO's historical benchmark to account for changes in severity and case mix in the ACO's assigned beneficiary population between BY3 and the performance year in accordance with §§ 425.652(a)(10), 425.605(a)(1) and (2) (BASIC track), and 425.610(a)(2) and (3) (ENHANCED track), at the time of financial reconciliation for a performance year. We use prospective HCC risk scores to adjust the historical benchmark for changes in severity and case mix for all assigned beneficiaries between BY3 and the performance year, with positive adjustments subject to a cap equal to the ACO's aggregate growth in demographic risk scores between BY3 and the performance year plus 3 percentage points (refer to §§ 425.605(a)(1)(ii) and 425.610(a)(2)(ii), and section III.G.4.b.(1) of this proposed rule).

- In calculating the regional component of the three-way blended update factor, we are proposing to cap prospective HCC risk score growth in an ACO's regional service area between BY3 and the performance year by applying an adjustment factor, as discussed in section III.G.4.b.(2) of this proposed rule and the proposed new provision at § 425.655.

- We adjust the flat dollar amounts of the ACPT component of the three-way blended update factor for each performance year, for differences in severity and case mix between the ACO's BY3 assigned beneficiary population and the national assignable FFS population for each

Medicare enrollment type identified for the 12-month calendar year corresponding to BY3, in accordance with § 425.660(b)(4).

(2) Background on Calculation of Prospective HCC Risk Scores Used to Risk Adjust Shared Savings Program Benchmark Calculations

(a) Historical Practices

We have detailed how CMS performs Shared Savings Program risk adjustment calculations in programmatic material, including publicly available specifications documents. See, for example, Medicare Shared Savings Program, Shared Savings and Losses, Assignment and Quality Performance Standard Methodology Specifications (version #11, January 2023), available at <https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf-2> (see section 3.6, “Risk Adjustment Policies”). While we have specified the details of these practices in guidance, we have not previously codified these practices in regulation.

More generally, CMS maintains the CMS-HCC risk adjustment models for the Medicare Advantage (MA) program. CMS maintains CMS-HCC risk adjustment models for populations of beneficiaries based on age, disability status, gender, institutional status, eligibility for Medicaid, and health status (see section 1853(a)(1)(C)(i) of the Act), including a separate MA risk adjustment model for the ESRD population, and a Part D risk adjustment model (known as the RxHCC model). Over time, CMS has implemented revised versions of the CMS-HCC risk adjustment models (also referred to generally as the “CMS-HCC model”). Historically, transitions to a revised version of the CMS-HCC model have been gradually phased-in over time by blending the old risk adjustment model and the revised risk adjustment model. CMS specifies the CMS-HCC risk adjustment models applicable for a calendar year in the annual MA Rate Announcement (see sections 1853(a)(1)(C) and (b)(1) of the Act). Prior to doing so, CMS solicits comment on the CMS-HCC risk adjustment methodology (see section 1853(b)(2) of the

Act). Using the specified model, or blend of models (if applicable), CMS calculates prospective HCC risk scores for all Medicare beneficiaries, including FFS beneficiaries. These prospective HCC risk scores are then used to set MA capitation rates and Part C and D payment policies for the applicable calendar year.

To perform risk adjustment calculations for the Shared Savings Program, we calculate prospective HCC risk scores for Medicare FFS beneficiaries for the relevant benchmark year or performance year. In doing so, we use the CMS-HCC risk adjustment model(s) that are applicable for the particular calendar year corresponding to the benchmark or performance year to identify a Medicare FFS beneficiary's prospective HCC risk score for that benchmark or performance year. Prospective HCC risk scores used in financial calculations for the Shared Savings Program have the MA coding pattern adjustment of 5.90 percent removed, if applicable.¹⁹⁵ Additionally, all prospective HCC risk scores are renormalized by Medicare enrollment type based on a national assignable FFS population to ensure that the mean risk score among assignable beneficiaries is equal to one. Renormalization helps to ensure consistency in risk scores from year to year, given changes made to the underlying risk score models. All risk adjustment calculations for the Shared Savings Program, including risk score renormalization, are performed separately for each Medicare enrollment type for the following populations of beneficiaries: ESRD, disabled, aged/dual eligible for Medicare and Medicaid, aged/non-dual eligible for Medicare and Medicaid.¹⁹⁶

¹⁹⁵ The MA risk adjustment models used for beneficiaries classified as ESRD for the Shared Savings Program (that is, beneficiaries in long-term dialysis or transplant status, no more than three months post-graft) do not currently employ a coding intensity adjustment, therefore no adjustment is currently removed from risk scores for beneficiaries in the ESRD enrollment type.

¹⁹⁶ A beneficiary's final risk score for each month is the risk score determined for that beneficiary based on the beneficiary's risk adjustment model status for that month. There are risk adjustment models for MA subpopulations (for example, community model versus institutional model versus new enrollee model for aged/non-dual eligible beneficiaries), and the risk scores used by the Shared Savings Program for beneficiaries in a Medicare enrollment type may be derived from more than one risk adjustment model.

Under the Shared Savings Program, we calculate demographic only risk scores using a separate model than those used to calculate prospective HCC risk scores. For agreement periods beginning on January 1, 2024 and subsequent years, CMS will use demographic risk scores to determine the cap on risk score growth between BY3 and the performance year. Demographic risk scores consider only certain specified patient demographic factors, such as age, sex, Medicaid status, and the basis for Medicare entitlement (that is, age, disability, or ESRD), without incorporating diagnostic information. As such, demographic risk scores are not subject to changes in coding intensity or coding accuracy in the same way that prospective HCC risk scores are. We note that while the Shared Savings Program uses the same demographic factors as those used in MA, Shared Savings Program demographic factor coefficients are calibrated based on the entire Medicare FFS population instead of new Medicare enrollees as is used by MA.

Currently, when establishing, adjusting, and updating the benchmark, we account for changes in severity and case mix between benchmark years or between BY3 and the performance year by multiplying the expenditures for the applicable year by a quotient of two ACO-level renormalized risk scores, known as the risk ratio. For example, to risk adjust the expenditures for an ACO's assigned beneficiary population to account for changes in case mix and severity from the first benchmark year to the third, we multiply BY1 expenditures by a risk ratio equal to the mean renormalized risk score among the ACO's assigned beneficiaries in BY3 divided by the mean renormalized risk score among the ACO's assigned beneficiaries in BY1 for each Medicare enrollment type. For instance, a one percent rate of growth in renormalized risk scores between these benchmark years would be expressed by a risk ratio of 1.010. This ratio reflects growth in risk for the ACO's assigned beneficiary population relative to that of the national assignable population. Because the risk ratios used in benchmarking calculations may be determined using risk scores calculated from different underlying CMS-HCC risk adjustment models, depending on the CMS-HCC risk adjustment model(s) applicable to the corresponding

benchmark or performance year, this approach allows for the possibility that differences in risk models between the benchmark years and the performance year could impact an ACO's financial performance.

Since the inception of the Shared Savings Program in 2012, there have been several CMS-HCC model changes. Several factors reduce the impact of using different risk adjustment models to calculate prospective HCC risk scores for benchmark and performance years when performing Shared Savings Program risk adjustment calculations. One factor is that the Shared Savings Program renormalizes prospective HCC risk scores by Medicare enrollment type, which ensures that the mean risk score for the national assignable FFS population for each enrollment type is equal to one. If a new CMS-HCC model leads to a shift in the mean of the distribution of prospective HCC risk scores for the national assignable FFS population for a particular Medicare enrollment type, then renormalizing the risk scores would counterbalance this effect. Because renormalization factors are calculated across the assignable beneficiary population for each enrollment type, any adverse or beneficial impact for an ACO from a change in CMS-HCC model would derive from the mean risk score for the ACO's assigned beneficiaries within a given enrollment type being impacted in a systematically different way than the mean for the national assignable population for that enrollment type.

A second factor is that risk scores are used in multiple ways that balance their effects when establishing, adjusting or updating a benchmark. Risk scores are used to adjust ACO expenditures and also to adjust regional expenditures used in calculating the regional adjustment to the benchmark and regional growth rates in benchmark calculations. Any impact of a new CMS-HCC model that could increase or decrease an ACO's risk scores used to establish, adjust or update a benchmark may differ directionally from the impact that risk scores for the assignable FFS population in an ACO's regional service area might have on risk-adjusted regional expenditure calculations. For example, if a new CMS-HCC model lowers the risk ratio

between BY3 and the PY and therefore lowers the benchmark for an ACO, all else equal, then the new risk adjustment model may also lower the risk scores for the ACO's regional service area assignable beneficiary population, which would increase risk-adjusted regional expenditures.¹⁹⁷ This would put upward pressure on the benchmark by increasing the regional update factor. Any changes to the ACO's risk ratio may be thus reduced by changes to the ACO's regional update factor. This would reduce the impact of CMS-HCC model changes on ACO financial performance.

A third factor is that CMS-HCC model transitions have been gradually phased-in over time by blending the old risk adjustment model and the new risk adjustment model, thereby constraining the magnitude of any change in risk ratios resulting from differences in the risk adjustment models used to calculate prospective HCC risk scores. That is, as a result of this blending, the risk ratios used to adjust expenditures between BY3 and the PY may have some degree of overlap in underlying risk adjustment models used to calculate both the numerator and denominator of the risk ratios.

(b) Introduction of the 2024 CMS-HCC Risk Adjustment Model, Version 28

On March 31, 2023, CMS released the Announcement of CY 2024 MA Capitation Rates and Part C and Part D Payment Policies,¹⁹⁸ which finalized the transition to a revised CMS-HCC risk adjustment model. The revised 2024 CMS-HCC risk adjustment model, Version 28 (V28), has the same structure as the 2020 CMS-HCC risk adjustment model currently used for payment in that it has eight model segments as first implemented for payment for CY 2017 and condition count variables as first implemented for payment for CY 2020. It incorporates the following technical updates: (1) updated data years used for model calibration, (2) updated denominator

¹⁹⁷ For each county and Medicare enrollment type (ESRD, disabled, aged/dual eligible, and aged/non-dual eligible) in the ACO's regional service area, CMS divides average per capita county-level FFS expenditures by the county average renormalized CMS-HCC risk score to obtain risk-adjusted county expenditures.

¹⁹⁸ For more details, refer to Announcement of Calendar Year (CY) 2024 Medicare Advantage (MA) Capitation Rates and Part C and Part D Payment Policies (March 31, 2023) (herein CY 2024 Rate Announcement), available at <https://www.cms.gov/files/document/2024-announcement-pdf.pdf>.

year used in determining the average per capita predicted expenditures to create relative factors in the model, and (3) a clinical reclassification of the hierarchical condition categories (HCCs) using the International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) codes. In addition, as part of the clinical reclassification, CMS conducted an assessment on conditions that are coded more frequently in MA relative to FFS. This assessment is consistent with Principle 10 of CMS's longstanding model principles, described in more detail initially in the December 2000 report titled, "Diagnostic Cost Group Hierarchical Condition Category Models for Medicare Risk Adjustment (Final Report)" (available at https://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/Reports/downloads/pope_2000_2.pdf). As a result of this assessment, in addition to the technical updates, the revised model includes additional constraints and the removal of several HCCs in order to reduce the impact on risk score variation in coding between MA and FFS.¹⁹⁹

For CY 2024, MA risk scores will be calculated as a blend of 67 percent of the risk scores calculated under the 2020 CMS-HCC risk adjustment model, Version 24 (V24), and 33 percent of the risk scores calculated with the 2024 CMS-HCC risk adjustment model (V28). CMS expects that for CY 2025, MA risk scores will be calculated using a blend of 33 percent of the risk scores calculated with V24 and 67 percent of the risk scores calculated with V28, and for CY 2026, 100 percent of risk scores will be calculated with V28.²⁰⁰

With the transition to the use of the V28 CMS-HCC model beginning in CY 2024 in MA, it is timely to revisit how we apply the CMS-HCC risk adjustment model(s) to calculate risk scores used in Shared Savings Program calculations. As summarized in the CY 2024 Rate Announcement, some commenters questioned if the updated MA risk adjustment model will

¹⁹⁹ See Advance Notice of Methodological Changes for Calendar Year (CY) 2024 for Medicare Advantage (MA) Capitation Rates and Part C and Part D Payment Policies (February 1, 2023), available at <https://www.cms.gov/files/document/2024-advance-notice-pdf.pdf>.

²⁰⁰ See CY 2024 Rate Announcement, available at <https://www.cms.gov/files/document/2024-announcement-pdf.pdf> at 3.

affect lines of business outside of Medicare Advantage such as the ACO REACH Model and Medicare Shared Savings Program. In response to these comments, we explained that we were considering the implications of these changes to the CMS-HCC risk adjustment model for these initiatives.²⁰¹

In section III.G.4.e.(3) of this proposed rule, we discuss our initial analysis of the impact of the V28 CMS-HCC model on Shared Savings Program calculations, including modeling of an alternative approach to calculating benchmark year risk scores. We propose a modified approach to making such calculations for agreement periods beginning on January 1, 2024, and in subsequent years, in section III.G.4.e.(4) of this proposed rule.

(3) Initial Analysis of the Impact of Risk Adjustment Model Changes on Shared Savings Program Calculations and Modeling of an Alternative Approach to Calculating Benchmark Year Risk Scores

To further evaluate the potential impact of the V28 CMS-HCC model transition on Shared Savings Program ACOs, we analyzed the following:

- Our current approach in which we apply the CMS-HCC risk adjustment model(s) applicable for a particular calendar year to calculate a Medicare FFS beneficiary's prospective HCC risk score for the corresponding benchmark or performance year. This approach could lead to different CMS-HCC risk adjustment models being used to calculate prospective HCC risk scores for the benchmark years as compared to a particular performance year of the ACO's agreement period when there is a transition to a new CMS-HCC risk adjustment model between one or more benchmark years and the performance year.
- An alternative approach in which we would use the CMS-HCC risk adjustment model(s) applicable to the calendar year corresponding to the performance year to calculate a Medicare FFS beneficiary's prospective HCC risk score for the performance year, and for each

²⁰¹ See *id.* at 97.

benchmark year of the ACO's agreement period.²⁰² This approach ensures consistency between the CMS-HCC risk adjustment methodology used to calculate the prospective HCC risk scores for the benchmark years relative to a particular performance year.

To conduct this analysis, we calculated prospective HCC risk scores and risk ratios for CY 2018 (treated as BY3) and CY 2021 (treated as the PY) for all 275 ACOs that participated in both PY 2018 and PY 2021. Risk ratios between BY3 and the PY were calculated under the current approach, in which we used the V24 CMS-HCC model to calculate BY3 prospective HCC risk scores and the V28 CMS-HCC model to calculate PY prospective HCC risk scores, and under the alternative approach of calculating both BY and PY prospective HCC risk scores using V28.²⁰³

CMS performed this analysis to roughly estimate how V28 would have impacted payment to ACOs in PY 2021 using weighted average risk scores calculated across the three non-ESRD Medicare enrollment types (disabled, aged/dual eligible, aged/non-dual eligible). The analysis provides insight into the impact of a fully phased-in V28, which is expected to occur in PY 2026 (particularly for ACOs that would at that point have a BY3 prior to 2024). For the 275 ACOs in the sample, combined PY 2021 shared savings payments would have been about 11 percent lower than actual payments if V28 had been fully phased-in for the performance year, when using V24 to calculate BY3 prospective HCC risk scores (reflecting the current approach to applying CMS-HCC risk adjustment models). Alternatively, combined shared savings payments would have been about 2 percent higher than actual if V28 were used for BY3

²⁰² A similar approach was suggested by commenters in earlier rulemaking for the Shared Savings Program. See, for example, the December 2018 final rule (83 FR 68013), in which we summarize commenters' recommendation that CMS modify the current methodology to use the same CMS-HCC risk score model to calculate risk scores for both the benchmark years and the performance year.

²⁰³ The V24 CMS-HCC model was not applicable to CY 2018 but was used in this analysis to calculate BY3 prospective HCC risk scores under the current approach in order to measure the impact of the transition from V24 to V28 on Shared Savings Program ACOs.

calculations as well as for PY 2021 calculations (reflecting the alternative approach to applying CMS-HCC risk adjustment models).

Table 39 compares the estimated impact on PY 2021 shared savings of the current approach, and the alternative approach to calculating BY3 and PY prospective HCC risk scores.

TABLE 39: Estimated Impacts on PY 2021 Shared Savings of the V28 CMS-HCC Model under Current and Alternative Approaches to BY3 and PY Risk Score Calculation (Expressed as Percent of Benchmark)

	Current Approach BY3 V24, PY V28	Alternative Approach BY3 V28, PY V28	Current minus Alternative
Minimum	-6.6%	-1.6%	-6.7%
10th percentile	-1.4%	-0.4%	-1.1%
25th percentile	-0.4%	0.0%	-0.5%
Median	0.0%	0.0%	0.0%
Mean	-0.2%	0.1%	-0.2%
75th percentile	0.1%	0.2%	0.0%
90th percentile	0.9%	0.6%	0.5%
Maximum	2.3%	2.2%	2.2%

Estimated decreases in PY 2021 shared savings payments are more extreme at the tail of the distribution when using the current approach. Over 10 percent of ACOs showed more than 1.4 percent in reduced shared savings payments relative to benchmark under the modeling of the current approach, in which we used V24 to calculate BY3 prospective HCC risk scores and V28 to calculate PY prospective HCC risk scores. In contrast, about 3 percent of ACOs showed declines of such magnitude in shared savings payments relative to the benchmark using the alternative approach to calculating prospective HCC risk scores for BY3 and PY 2021 with the V28 CMS-HCC model. Compared to the alternative approach, the current approach is estimated to result in a reduction in shared savings of about 0.2 percent per ACO on average, relative to benchmark. These impacts would be smaller, potentially one-third of the magnitude, if the use of V24 in BY3 was compared to the blend of 33 percent V28 and 67 percent V24 for the PY (reflecting the blend applicable for CY 2024).

Table 40 compares the estimated impact on PY 2021 shared savings of the current approach, and the alternative approach to calculating BY3 and PY risk scores (expressed as percentage of benchmark), based on the following ACO characteristics: ACO average renormalized prospective HCC risk scores for aged/disabled beneficiaries, ACO participation in performance-based risk, and year of entry into the Shared Savings Program. We observed that the current approach would have the greatest adverse effect on ACOs with the highest average risk scores (calculated with the V24 CMS-HCC model), ACOs participating in two-sided models, and ACOs that have been in the Shared Savings Program longer. ACOs that would not have been harmed by the current approach had an average renormalized risk score for their non-ESRD populations roughly equal to 1.00. The 5 percent of ACOs in the modeling with the most adverse impact from the current approach had an average renormalized risk score for their non-ESRD populations of 1.22. For ACOs with the highest average risk scores, the modeling showed the current approach would have resulted in reduced shared savings of about 2 percent (relative to benchmark) per ACO, as compared to the alternative approach. The most adversely impacted ACOs in the modeling also were roughly 40 percent more likely to participate in a two-sided model and to have participated in the Shared Savings Program nearly 2 years longer than ACOs not harmed. The modeling demonstrates that the alternative approach would reduce the negative impact that the current approach shows for ACOs with high risk scores, with earlier entry dates into the Shared Savings Program, and with participation in a two-sided model.

TABLE 40: Estimated Impacts on PY 2021 Shared Savings of the V28 CMS-HCC Model under Current and Alternative Approaches to BY3 and PY Risk Score Calculation, Based on ACO Characteristics (Expressed as Percent of Benchmark)

	Current Approach BY3 V24, PY V28	Alternative Approach BY3 V28, PY V28	Current minus Alternative
Average HCC (Aged/Disabled)			
>1.20	-2.0%	0.0%	-2.1%
1.10 to 1.20	-0.5%	-0.1%	-0.4%
1.025 to 1.10	-0.4%	0.0%	-0.4%
0.975 to 1.025	-0.1%	0.1%	-0.2%
0.90 to 0.975	0.2%	0.2%	0.1%
<0.90	0.5%	0.2%	0.3%
PY21 Track/Level

One-sided Model	0.1%	0.1%	0.0%
Program Entry			
On/before 2013	-0.6%	0.1%	-0.7%
On/after 2014	-0.1%	0.1%	-0.1%

In the context of the transition to the V28 CMS-HCC model, the results of this analysis show that the current approach to calculating prospective HCC risk scores is expected to adversely impact ACO financial performance, particularly for ACOs that serve a high-risk beneficiary population, when compared to the stated alternative approach. The factors discussed in section III.G.4.e.(2) of this proposed rule — renormalizing risk scores to the national assignable FFS population, risk-adjusted regional expenditures providing a counterbalance to how risk ratios impact the benchmark, and the phased transition from V24 to V28 by means of a blended risk model — will reduce the impact of a risk adjustment model transition. However, these factors will be insufficient to prevent adverse effects on ACO financial performance due to the larger impact from the transition to V28 relative to prior CMS-HCC model transitions. The alternative policy under which CMS would apply the same CMS-HCC risk adjustment model used in the performance year to calculate prospective HCC risk scores for all benchmark years

would strengthen risk adjustment in the Shared Savings Program and consistently apply the CMS-HCC model in the Shared Savings Program context as it is applied in MA.

(4) Proposed Revisions

The adoption of the alternative approach to calculating prospective HCC risk scores for the performance year and each benchmark year of an ACO's agreement period would allow us to more accurately measure the change in severity and case mix for an ACO's assigned beneficiary population or the assignable beneficiary population. Under such an approach, there would be no potential for distortion from using different CMS-HCC risk adjustment models in calculating prospective HCC risk scores for benchmark years and the performance year that could occur under the current policy. For this reason, we propose to modify our current use of the CMS-HCC risk adjustment model and adopt the alternative approach to calculating prospective HCC risk scores for a performance year and the relevant benchmark years for agreement periods beginning on January 1, 2024, and in subsequent years.

We propose to add a new section to our regulations at § 425.659, which would codify our existing framework for calculating risk scores used in Shared Savings Program benchmark calculations and adopt the alternative approach to calculating prospective HCC risk scores for a performance year and the relevant benchmark years discussed in this section of this proposed rule. We propose in paragraph (a) of § 425.659 to codify our current practice of accounting for differences in severity and case mix of the ACO's assigned beneficiaries and assignable beneficiaries (as defined under § 425.20) in calculations used in establishing, adjusting and updating the ACO's historical benchmark.

We propose to set forth in paragraph (b) of § 425.659 our approach to determining Medicare FFS beneficiary prospective HCC risk scores for Shared Savings Program benchmark and performance year calculations. In paragraph (b)(1) of § 425.659, we propose to codify our current policy under which CMS specifies the CMS-HCC risk adjustment methodology used to

calculate prospective HCC risk scores for Medicare FFS beneficiaries (as defined under § 425.20) for use in Shared Savings Program calculations. Additionally, we propose:

- To codify our current practice of calculating risk scores for Medicare FFS beneficiaries for a performance year, which provides that CMS uses the CMS-HCC risk adjustment methodology applicable for the corresponding calendar year.

- To codify our current practice for agreement periods beginning before January 1, 2024, of applying the CMS-HCC risk adjustment methodology for the calendar year corresponding to benchmark year in calculating risk scores for Medicare FFS beneficiaries for each benchmark year of the agreement period.

- For agreement periods beginning on January 1, 2024, and in subsequent years, CMS would apply the CMS-HCC risk adjustment methodology for the calendar year corresponding to the performance year in calculating risk scores for Medicare FFS beneficiaries for each benchmark year of the agreement period.

We propose at § 425.659(b)(2) to codify our current practices for calculating prospective HCC risk scores for a benchmark or performance year. Specifically, in calculating prospective HCC risk scores, we would remove the MA coding intensity adjustment, if applicable. Further, we would renormalize prospective HCC risk scores by Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries) based on a national assignable FFS population for the relevant benchmark or performance year. We would calculate the average prospective HCC risk score by Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries) in order to risk adjust benchmark calculations also performed by Medicare enrollment type.

We note that at this time we are not proposing to modify the current approach to calculating demographic risk scores under the Shared Savings Program, as described in section III.G.4.e.(1) of this proposed rule.

We also propose to adjust the benchmark to account for CMS-HCC risk adjustment model changes during the term of the agreement period to maintain uniformity between the calculation of prospective HCC risk scores for the performance year and each benchmark year. We propose to revise the list of circumstances for adjusting the historical benchmark for the second and each subsequent performance year during the term of the agreement period at § 425.652(a)(9) to include a change in the CMS-HCC risk adjustment methodology used to calculate prospective HCC risk scores under proposed, new § 425.659. We further propose to add a new paragraph (a)(9)(vi) to § 425.652 to specify that we would redetermine factors based on prospective HCC risk scores calculated for benchmark years by calculating the prospective HCC risk scores using the CMS-HCC risk adjustment methodology that applies for the calendar year corresponding to the applicable performance year in accordance with proposed § 425.659(b)(1).

We also propose a technical and conforming change to § 425.650(a), which generally describes the organization of the sections on the benchmarking methodology within subpart G of the Shared Savings Program regulations. In the description of the benchmarking methodology applicable for agreement periods beginning before January 1, 2024, we propose to update the list of referenced sections to include the proposed new § 425.659.

This proposed policy would address the concerns of ACOs and other interested parties regarding the transition to the V28 CMS-HCC model or other similar future changes to CMS-HCC risk adjustment methodology that could occur during the term of an ACO's agreement period. Under this proposal, both the numerator and denominator in the PY/BY3 risk ratio would be calculated using a consistent risk model, and any distributional impacts should, on average, be

balanced. This would prevent distortion to historical benchmarks resulting from model changes. This conclusion is informed by the data analysis described in section III.G.4.e.(3) of this proposed rule, which shows that on average ACOs would have earned roughly 0.2 percent in additional PY 2021 shared savings payments relative to benchmark when both benchmark year and performance year prospective HCC risk scores are calculated under V28 compared to calculations under both V24 and V28.

Our analysis shows that ACOs with high risk scores would benefit from using the proposed approach to calculate BY and PY prospective HCC risk scores relative to the current policy. This proposal would therefore help the Shared Savings Program retain ACOs serving the highest risk beneficiaries. This is a priority for CMS as high risk beneficiaries may benefit the most from better care coordination and quality improvement activities, particularly by ACOs with above average duration of participation in the program. Similarly, the proposed approach would support potential participation from new ACOs that would consider whether risk adjustment calculations in the Shared Savings Program benchmarking methodology would be adequate for beneficiaries with the highest risk.

This proposal would not affect how prospective HCC risk scores are calculated for ACOs in agreement periods that began prior to January 1, 2024, consistent with our historical practice of incorporating changes to the benchmarking methodology only at the start of an ACO's agreement period. ACOs in an existing agreement period that includes performance year 2024, 2025 or 2026 may benefit from the factors discussed in section III.G.4.e.(2) of this proposed rule — renormalizing risk scores to the national assignable FFS population, risk-adjusted regional expenditures providing a counterbalance to how risk ratios impact the benchmark, and the phased transition from V24 to V28 by means of a blended risk model. These factors would diminish adverse effects of using the new CMS-HCC risk adjustment methodology in Shared Savings Program calculations.

If we finalize the proposed approach for agreement periods beginning on January 1, 2024, and in subsequent years, we note that an ACO in an existing agreement period may choose to terminate its participation agreement early in order to early renew under a new participation agreement to be under the revised approach. For instance, an ACO under an existing agreement period with the current methodology (with a 2022 or 2023 start date) could apply to early renew with the application cycle for the January 1, 2025 agreement period start date, which would occur during CY 2024. For an existing ACO that applied to early renew and enters a new agreement period beginning on January 1, 2024, the proposed policy, if finalized, would apply to the ACO's new agreement period. Any ACO that early renews would have its benchmark rebased at the start of the new agreement period.

The following examples, based on the first three years of a 5-year agreement period beginning on January 1, 2024, illustrate the applicability of the current approach to calculating BY and PY prospective HCC risk scores using different CMS-HCC risk adjustment model(s), as compared to the proposed approach to calculating both BY and PY prospective HCC risk scores using the same CMS-HCC risk adjustment model(s). Under the current policy an ACO beginning a new agreement period on January 1, 2024, would have its prospective HCC risk scores for BY1 (2021) calculated using a blend of 25 percent under the 2014 CMS-HCC model, Version 22 (V22), and 75 percent V24,²⁰⁴ and for BY2 (2022) and BY3 (2023) calculated using V24.^{205,206} For PY1 (2024), prospective HCC risk scores would be calculated using a blend of 67 percent V24 and 33 percent V28. For PY2 (2025), prospective HCC risk scores are expected to be

²⁰⁴ For more details, refer to Announcement of Calendar Year (CY) 2021 Medicare Advantage (MA) Capitation Rates and Part C and Part D Payment Policies (April 6, 2020), available at <https://www.cms.gov/files/document/2021-announcement.pdf>.

²⁰⁵ For more details, refer to Announcement of Calendar Year (CY) 2022 Medicare Advantage (MA) Capitation Rates and Part C and Part D Payment Policies (January 15, 2021), available at <https://www.cms.gov/files/document/2022-announcement.pdf>.

²⁰⁶ For more details, refer to Announcement of Calendar Year (CY) 2023 Medicare Advantage (MA) Capitation Rates and Part C and Part D Payment Policies (April 4, 2022), available at <https://www.cms.gov/files/document/2023-announcement.pdf>.

calculated using a blend of 33 percent V24 and 67 percent V28. For PY3 (2026), prospective HCC risk scores are expected to be calculated using V28. Under the current methodology, the risk ratios used to risk adjust expenditures would have the numerator and denominator calculated using different underlying CMS-HCC risk adjustment models. Specifically, to risk adjust BY1 expenditures to BY3 when establishing or adjusting the ACO's historical benchmark, the risk ratio would include risk scores calculated under V24 (BY3) and a blend of 25 percent V22 and 75 percent V24 (BY1). To risk adjust BY3 expenditures to the performance year when updating the historical benchmark during financial reconciliation, risk ratios would include risk scores calculated under V24 (as applicable to BY3) and either a blend of V24 and V28 (for PY1 and as expected for PY2) or fully calculated with V28 (as expected for PY3).

Under the proposed approach, BY and PY prospective HCC risk scores would be calculated under the CMS-HCC risk adjustment model(s) applicable to the calendar year corresponding to the relevant performance year. For an ACO beginning a new agreement period on January 1, 2024, in PY1 (2024) all benchmark year and PY1 prospective HCC risk scores would be calculated using a blend of 67 percent V24 and 33 percent V28. In PY2 (2025), all benchmark year and PY2 prospective HCC risk scores are expected to be calculated using a blend of 33 percent V24 and 67 percent V28. In PY3 (2026), all benchmark year and performance year prospective HCC risk scores are expected to be calculated using V28. In the case of an ACO in an existing agreement period that early renews for a new agreement period beginning on January 1, 2025, the calculations described in this paragraph regarding the blend of V24 and V28 for 2025 and the fully phased-in V28 CMS-HCC model for 2026 would be expected to apply for the ACO's first and second performance years (respectively).

We seek comment on these proposals regarding the prospective HCC risk scores to be used in risk adjustment for purposes of benchmark calculations under the Shared Savings Program.

5. Proposed Modifications to Advance Investment Payments Policies

a. Overview

In the CY 2023 PFS final rule (87 FR 69782 through 69805), we finalized a new payment option for eligible Shared Savings Program ACOs entering agreement periods beginning on or after January 1, 2024, to receive advance shared savings payments. This payment option is referred to as advance investment payments (AIP) and the payments themselves are referred to as advance investment payments.

In that final rule, we explained that section 1899(i) of the Act authorizes the Secretary to use other payment models instead of the one-sided model described in section 1899(d) of the Act so long as the Secretary determines that the other payment model would improve the quality and efficiency of items and services furnished to Medicare beneficiaries without additional program expenditures (87 FR 69783 and 69784). In accordance with section 1899(i) of the Act, we determined that making advance investment payments to certain ACOs participating in the Shared Savings Program would improve the quality and efficiency of items and services furnished to Medicare beneficiaries by enhancing the accessibility of the Shared Savings Program (*Id.*).

We established standards for an ACO's receipt and use of advance investment payments within the Shared Savings Program regulations at § 425.630 and also specified requirements in connection with AIP in other sections within 42 CFR part 425. Such standards include: eligibility criteria to limit AIP to new, low revenue ACOs that are inexperienced with performance-based risk; application procedures and contents, including submission of a spend plan; policies governing use and management of payments; amount and frequency of advance investment payments, which are comprised of a one-time \$250,000 upfront payment and up to 8 quarterly payments; the methodology for calculation of the quarterly payment amount based on the ACO's assigned population; termination of advance investment payments, as well as recoupment and

recovery of advance investment payments; policies to monitor ACO eligibility for AIP; and ACO public reporting requirements regarding the use of advance investment payments.

Within this section of this proposed rule, we propose modifications to refine AIP policies to better prepare for initial implementation of AIP beginning with ACOs entering agreement periods on January 1, 2024. In summary, we are proposing to better support ACOs that are prepared to progress to performance-based risk by allowing ACOs to advance to two-sided model Levels within the BASIC track's glide path beginning in PY3 of the agreement period in which they receive advance investment payments (section III.G.5.b of this proposed rule). We are also proposing to recoup advance investment payments from shared savings for ACOs that wish to early renew to continue their participation in the Shared Savings Program (section III.G.5.c of this proposed rule). We propose to specify that CMS would terminate advance investment payments for future quarters to ACOs that elect to terminate their participation in the Shared Savings Program (section III.G.5.d. of this proposed rule). We propose to require ACOs to report spend plan updates and actual spend information to CMS in addition to publicly reporting such information (section III.G.5.e. of this proposed rule). We propose to codify that ACOs receiving advance investment payments may seek reconsideration review of all payment calculations (section III.G.5.f. of this proposed rule). If finalized, these policies would be effective beginning January 1, 2024.

b. Proposal to Modify AIP Eligibility Requirements to Allow ACOs to Advance to Performance-Based Risk During the 5-Year Agreement Period

(1) Background

The policies we finalized with the CY 2023 PFS final rule require an ACO to remain under a one-sided model for the duration of its agreement period in which it receives advance investment payments to remain compliant with AIP requirements. The ACO would otherwise face potential compliance action and may be required to repay all advance investment payments

within 90 days of receiving written notification from CMS. This limits an ACO's ability to select participation options that include progression along the BASIC track's glide path to a performance-based two-sided risk model. This policy arises from the interaction of numerous standards.

First, an ACO is eligible to receive advance investment payments if CMS determines that all of the following criteria are met: (1) the ACO is not a renewing or a re-entering ACO; (2) the ACO has applied to participate in the Shared Savings Program under any level of the BASIC track's glide path and is eligible to participate in the Shared Savings Program; (3) the ACO is inexperienced with performance-based risk Medicare ACO initiatives; and (4) the ACO is a low revenue ACO (§ 425.630(b)). An eligible ACO will receive a one-time upfront payment of \$250,000 and quarterly payments each quarter for the first 2 performance years of the ACO's 5-year agreement period, totaling no more than 8 quarterly payments (§ 425.630(f)).

Second, under § 425.630(h), CMS will terminate an ACO's advance investment payments in accordance with § 425.316(e) if the ACO is no longer inexperienced with performance-based risk Medicare ACO initiatives or is no longer a low revenue ACO. Section 425.316(e) specifies that if CMS determines during any performance year of the agreement period that an ACO receiving advance investment payments is experienced with performance-based risk Medicare ACO initiatives or is a high revenue ACO, and the ACO remains experienced with performance-based risk Medicare ACO initiatives or a high revenue ACO after a deadline specified by CMS pursuant to compliance action, the ACO must repay all advance investment payments it received.

An eligible ACO that joins the Shared Savings Program in Level A of the BASIC track and opts to receive advance investment payments will be eligible for all 8 quarterly payments to be paid over PY1 and PY2, so long as the ACO remains in Level A (or progresses to Level B) in PY2 and remains inexperienced with performance-based risk Medicare ACO initiatives and a low revenue ACO. An ACO that joins the Shared Savings Program at Levels B through E of the

BASIC track, however, will not be eligible to receive all 8 quarters of advance investment payments because current program regulations require that an ACO remain inexperienced with performance-based risk Medicare ACO initiatives while receiving advance investment payments (§ 425.630(h)(2)). More specifically, if an ACO receiving advance investment payments elects to participate at Level B of the BASIC track in PY1 progresses along the glide path to Level C for PY2, CMS would determine that the ACO is experienced with performance-based risk in PY2 and the ACO would no longer be eligible to receive advance investment payments during PY2.

In the CY 2023 final rule (87 FR 69787), we stated that advance investment payments were intended to assist smaller, community-based providers in forming high-performing ACO networks by providing much-needed startup capital that can be used to attract and maintain staffing, purchase healthcare delivery infrastructure and IT systems, and develop and implement a strategy to address the health needs of underserved communities. It is for this reason we restricted AIP eligibility to those ACOs that are inexperienced with performance-based risk. ACOs that are experienced with performance-based risk generally would not need advance investment payments to successfully participate in the Shared Savings Program as they have previously participated in the Shared Savings Program or certain Innovation Center models or CMS programs in which the ACO accepted risk for shared losses. In this proposed rule, we propose to modify program regulations to permit an ACO to progress to two-sided risk along the BASIC track's glide path within the agreement period while the ACO continues to benefit from advance investment payments.

(2) Proposed Revisions

We propose to modify AIP eligibility requirements to allow an ACO receiving advance investment payments to transition to two-sided risk within its 5-year agreement period under the BASIC track's glide path. Specifically, we propose to modify § 425.630(b)(2) and (3) to allow an eligible ACO receiving advance investment payments to advance to performance-based risk

(by advancing from Level A or B to Level C, D, or E of the BASIC track's glide path) beginning in PY3 of the ACO's agreement period. We also propose to modify § 425.316(e)(2) to specify that CMS would cease payment of advance investment payments if CMS determines that an ACO approved for AIP became experienced with performance-based risk Medicare ACO initiatives during the first or second performance year of its agreement period or became a high revenue ACO during any performance year of the agreement period in which it received advance investment payments. Pursuant to § 425.316(e)(2)(ii), CMS may take compliance action against such ACOs. We also propose to modify § 425.316(e)(2)(i) to specify that CMS will cease payment of advance investment payments no later than the quarter after the ACO became experienced with performance-based risk Medicare ACO initiatives or became a high revenue ACO.

Under the proposed approach, ACOs may choose to move into a two-sided risk participation option within the Shared Savings Program's BASIC track beginning in PY3 (and in subsequent performance years). These ACOs would still be required to repay advance investment payments through earned shared savings over the remaining performance years of its agreement period as prescribed in § 425.630(g). We propose that this policy would be effective January 1, 2024. Under this proposal, an ACO could not use advance investment payments to fund repayment mechanisms or repay shared losses. This limitation also reduces the risk that ACOs stretch themselves beyond their financial capacity while receiving advance investment payments by taking on large amounts of risk. Unlike other ACOs, ACOs receiving advance investment payments will have the additional financial obligation of repaying the advance investment payments if they misjudge their appetite for risk and leave the program mid performance period after incurring shared losses. These policies are intended to align with our goal to support the creation of new ACOs that need time and resource assistance to develop the infrastructure to operate an ACO that effectively manages patient care and lowers costs.

After 2 years of participation, new ACOs may have sufficient experience to be capable of taking on the smaller amounts of downside risk available in levels C-E of the BASIC track. Given that the option to receive advance investment payments was designed for ACOs that are new to the Shared Savings Program, low revenue, and inexperienced with risk, it does not align with broader program goals to permit ACOs of such size or capitalization to take on the high levels of downside risk in the ENHANCED track during their first agreement period in the Shared Savings Program. As proposed, these modifications balance the risk of a new ACO taking on too much risk too quickly while allowing them to take on moderate risk as they develop more experience with the program.

Specifically, we propose to amend the eligibility criteria specified in § 425.630(b) as follows. We propose to revise the eligibility criterion at § 425.630(b)(2) to remove language stating that the ACO has applied to participate in the Shared Savings Program “under any level of the BASIC track’s glide path”; the revised provision would simply state that “CMS has determined that the ACO is eligible to participate in the Shared Savings Program.” Further, we propose to amend the criterion in § 425.630(b)(3) to specify that the ACO must be inexperienced with performance-based risk Medicare ACO initiatives during its first 2 performance years but may participate in Levels of the BASIC track that would make them experienced with performance-based risk Medicare ACO initiatives starting with the third year of its first agreement period. Specifically, we propose to specify in revisions to § 425.630(b)(3), that the ACO may participate in the Levels of the BASIC track's glide path as follows during the agreement period in which the ACO receives advance investment payments:

- For performance year 1, the ACO must participate in Level A of the BASIC track’s glide path.
- For performance year 2, the ACO may participate in Level A of the BASIC track’s glide path (in accordance with § 425.600(a)(4)(i)(C)(3)) or Level B.

- For performance years 3 through 5, the ACO may participate in Level A of the BASIC track's glide path (in accordance with § 425.600(a)(4)(i)(C)(3)), or Levels B through E.

To illustrate the proposed policy, consider an ACO entering an agreement period beginning on January 1, 2024, that applies for and is determined to be eligible to receive advance investment payments. The ACO must participate in Level A for PY1. In PY2, the ACO may remain under Level A for all subsequent years of the agreement period in accordance with § 425.600(a)(4)(i)(C)(3) or may move to Level B. The ACO would receive advance investment payments for PY1 and PY2, receiving the one-time payment of \$250,000 and the 8 quarterly payments. If the ACO remained at Level A for PY2, it could then transition to a higher level of risk and potential reward within the glide path for PY3 (that is, Levels B, C, D, or E) in accordance with §425.600(a)(4)(i)(C)(3)(iii). If the ACO participated in Level B for PY2, it could automatically progress for PY3 to Level C (in accordance with § 425.600(a)(4)(i)(C)(2)) or elect to transition to Level D (in accordance with § 425.600(a)(4)(i)(C)(2)(i) and § 425.226(a)(2)(i)) or Level E (in accordance with § 425.600(h)(2)(i) and § 425.226(a)(2)(i)) beginning with PY3.

Under this proposed modification, CMS would continue to recoup from future shared savings. In contrast to what is required under existing § 425.316(e)(3), the ACO would not be immediately obligated to repay all advance investment payments it received by virtue of its transition to a two-sided model in its third performance year or any subsequent performance year. We note that under our proposal if an ACO opts to progress to a two-sided risk model (BASIC track's glide path Levels C through Level E) in PY2, CMS would terminate the ACO's advance investment payments, the ACO may be subject to compliance actions specified in §§ 425.216 and 425.218, and CMS may seek repayment of advance investment payments as set forth at § 425.316(e).

We seek comment on our proposals to amend AIP policies and require that all AIP ACOs be inexperienced with performance-based risk Medicare ACO initiatives while the ACO receives advance investment payments – that is, during PY1 and PY2 of the agreement period – and to allow ACOs to progress to performance-based risk under the BASIC track’s glide path beginning with PY3 of the same agreement period.

c. Proposal to Modify AIP Recoupment and Recovery Policies for Early Renewing ACOs

(1) Background

In the CY 2023 PFS final rule (87 FR 69803 through 69805), CMS finalized program policies regarding recoupment and recovery of advance investment payments. In accordance with § 425.630(g)(4), if an ACO terminates its participation agreement during the agreement period in which it received an advance investment payment, the ACO must repay all advance investment payments it received. CMS will provide written notification to the ACO of the amount due and the ACO must pay such amount no later than 90 days after the receipt of such notification.

Paragraph (2) of the definition of “renewing ACO” at § 425.20 includes an ACO that continues its participation in the Shared Savings Program for a consecutive agreement period, without a break in participation, because it is an ACO that terminated its current participation agreement under § 425.220 and immediately enters a new agreement period to continue its participation in the program. In prior rulemaking (see, for example, 83 FR 67885 through 67890), we have referred to this provision as allowing for an “early renewal” option. In developing the AIP policies in the PFS rulemaking for CY 2023, we did not address the potential interactions between the policy on recovery of advance investment payments specified in § 425.630(g) and a voluntary termination of the participation agreement by an ACO that is seeking to early renew.

(2) Proposed Revisions

We propose to amend § 425.630(g)(4) to create a limited exception to CMS's policy of recovering advance investment payments from an ACO that voluntarily terminates its participation agreement for the agreement period during which it received advance investment payments. Under this proposal, we would not seek to collect all advance investment payments received from an ACO in accordance with § 425.630(g)(4) if the ACO voluntarily terminates its participation agreement at the end of PY2 or later during the agreement period in which it received advance investment payments, provided that the ACO immediately enters into a new participation agreement with CMS under any level of the BASIC track's glide path or the ENHANCED track. Rather, we would carry forward any remaining balance of advance investment payments owed by the early renewing ACO into the ACO's new agreement period.

We propose to allow an ACO approved for AIP to early renew its participation agreement before the expiration of its current agreement, as long as the ACO terminates its current participation agreement effective on or after December 31 of the ACO's second performance year. By requiring the ACO to maintain its current agreement period for the first 2 years, the ACO will receive all of its advance investment payments prior to renewing its participation agreement. We further propose that in such circumstances, the early renewing ACO must continue to repay the advance investment payments through shared savings earned in the subsequent agreement period. If an ACO early renews prior to PY3, it will no longer comply with the eligibility requirements for receiving payments in § 425.630(b)(1) and may be subject to compliance actions under §§ 425.216 and 425.218.

Section 425.630(e)(3) specifies that an ACO may spend an advance investment payment over its entire agreement period and must repay to CMS any unspent funds remaining at the end of the ACO's agreement period. We propose to amend § 425.630(e)(3) to permit an early renewing ACO to spend advance investment payments in its second agreement period so long as the advance investment payments are spent within 5 performance years of when it began to

receive advance investment payments. If the ACO does not spend all of the advance investment payments received by the end of the fifth performance year, the ACO must repay any unspent funds to CMS. The duration of spending advance investment payments was discussed in the CY 2023 PFS final rule (87 FR 69801).

We believe these policy proposals would be most relevant to an ACO that is receiving advance investment payments and seeks to early renew to enter a new participation agreement to participate under modified Shared Savings Program policies that are not applicable to the ACO's current agreement period. For such an ACO, any remaining balance of advance investment payments owed would continue to be recouped from any shared savings the ACO earns in its new agreement period. Further, such an ACO would continue its participation in the Shared Savings Program without a lapse in participation and would be required to continue to adhere to all AIP requirements. We believe continued program participation aligns with our goals to improve the quality and efficiency of care. These policies provide ACOs the flexibility to participate in the Shared Savings Program in a manner that may work best for their structure and patient population without having to choose between immediately paying back the advance investment payment funds they received and being able to enter a new agreement with the Shared Savings Program. Some policy changes are applicable to new agreement periods, and we believe ACOs approved for AIP should have the opportunity to enter a new agreement to experience those changes. This proposed modification, if finalized, would be effective January 1, 2024.

We seek comment on the proposed changes to § 425.630(e)(3) and § 425.630(g)(4).

d. Proposal to Amend Termination Policies to Allow CMS to Cease Distribution of Advance Investment Payments Following an ACO's Notification of Voluntary Termination

(1) Background

In the CY 2023 PFS final rule (87 FR 69803), we finalized policies for termination of advance investment payments at § 425.630(h). Section 425.630(h)(1) specifies that CMS may terminate an ACO's advance investment payments if the ACO fails to comply with the requirements of § 425.630 or meets any of the grounds for ACO termination set forth in § 425.218(b). However, we did not address the termination of advance investment payments if an ACO voluntarily terminates its participation agreement in accordance with § 425.220(a). This created ambiguity regarding whether CMS would continue to make quarterly advance investment payments to an ACO that voluntarily terminates its participation agreement in accordance with § 425.220(a) and does not immediately enter a new agreement period. We are concerned that the continued payment of advance investment payments in such a case would not serve the purpose for which CMS is making such payments and would create unnecessary program integrity risks for the Shared Savings Program. In such a case, CMS would be knowingly paying funds to an ACO that will need to be repaid upon termination.

(2) Proposed Revisions

We propose to permit CMS to terminate advance investment payments for future quarters to an ACO that has provided CMS with notice of termination in accordance with § 425.220(a) if the ACO will not immediately enter a new agreement period. This avoids distributing advance investment payments to an ACO from which CMS would subsequently need to recover such payments. Specifically, we propose to add § 425.630(h)(1)(iii), which allows CMS to terminate an ACO's advance investment payments when the ACO voluntarily terminates its participation agreement in accordance with § 425.220(a). We are also proposing conforming changes to the punctuation of the list of factors in paragraphs (h)(1)(i) and (ii) of §425.630. If finalized, these proposed changes would be effective January 1, 2024.

In summary, if finalized, CMS will cease paying advance investment payments to an ACO that voluntarily terminates its participation in the Shared Savings Program if the ACO will

not immediately enter a new agreement period. In accordance with § 425.630(g)(4), the ACO would still be obligated to repay all advance investment payments within the 90-days after receiving notice of the amount due to CMS. We seek comment on this proposal.

e. Proposal to Require ACOs to Report to CMS Spend Plan Updates and Use of Advance Investment Payments

In the CY 2023 PFS final rule (87 FR 69786 through 69788), CMS finalized program policies to require ACOs that receive advance investment payments to submit a spend plan to CMS as a part of their Shared Savings Program application (§ 425.630(d)(1)). In accordance with §425.630(d)(3), CMS may review an ACO's spend plan at any time and require the ACO to modify its spend plan to comply with the spend plan requirements specified at § 425.630(d)(2) and the requirements for use and management of advance investment payments at § 425.630(e).

In the CY 2023 PFS final rule (87 FR 69801 and 69802), we also finalized requirements at § 425.308(b)(8) that an ACO receiving advance investment payments must publicly report information, updated annually, about the ACO's use of advance investment payments for each performance year, including the following:

- The ACO's spend plan.
- The total amount of any advance investment payments received from CMS.
- An itemization of how advance investment payments were spent during the year,

including expenditure categories, the dollar amounts spent on the various categories, any changes to the spend plan submitted under § 425.630(d), and such other information as may be specified by CMS.

These provisions do not require an ACO to submit this same information to CMS. To support CMS's ability to monitor AIP efficiently, we propose that an ACO must report to CMS the same information about its use of advance investment payments that it is required to publicly report under § 425.308(b)(8).

To ensure that § 425.630 sets forth the complete requirements applicable to an ACO's obligation to report information on its receipt and use of advance investment payments, we propose to add a new provision at § 425.630(i) specifying that an ACO must (1) publicly report information about the ACO's use of advance investment payments for each performance year in accordance with § 425.308(b)(8); and (2) in a form and manner and by a deadline specified by CMS, report to CMS the same information it is required to publicly report in accordance with § 425.308(b)(8).

We believe that these proposed changes would help ensure that CMS efficiently obtains information in a consistent manner from all ACOs receiving advance investment payments and thereby support CMS's monitoring and analysis of the use of advance investment payments. CMS believes that these proposed changes will impose little to no administrative burden on participating ACOs, which are already required to publicly report this information by § 425.308(b)(8). Further, CMS expects to use the submitted data as the template that ACOs can use to populate their public reporting webpage early in each performance year to minimize administrative burden for ACOs.

If finalized, these proposed changes would be effective January 1, 2024. We seek comment on these proposals.

f. Proposal to Permit Reconsideration Review of Quarterly Payment Calculations

(1) Background

In the CY 2023 PFS final rule (87 FR 69795 and 69796), we specified that an ACO can request a reconsideration review if CMS does not make an advance investment payment to the ACO pursuant to subpart I of part 425 (§ 425.630(f)). However, we did not specify that an ACO could request reconsideration of the advance investment payment amount received.

(2) Proposed Revisions

We propose to permit an ACO to request a reconsideration review for all advance investment payment quarterly payment calculations, not just instances where no payments are distributed. We propose to revise § 425.630(f) to provide that CMS would notify in writing each ACO of its determination of the amount of advance investment payment it will receive and that such notice would inform the ACO of its right to request reconsideration review in accordance with the procedures specified under subpart I of the regulations. We seek comment on this proposal.

6. Shared Savings Program Eligibility Requirements

a. Overview

We are proposing two modifications to the Shared Savings Program eligibility requirements that, if finalized, would be implemented on January 1, 2024. Specifically, we propose the following, which are discussed in more detail in sections (b) and (c) below:

- Remove the option for ACOs to request an exception to the shared governance requirement that 75 percent control of an ACO's governing body must be held by ACO participants.
- Codify the existing Shared Savings Program operational approach to specify that CMS determines that an ACO participant TIN participated in a performance-based risk Medicare ACO initiative if it was or will be included on a participant list used in financial reconciliation for a performance year under performance-based risk during the 5 most recent performance years.

b. Shared Governance Requirement

(1) Background

In the November 2011 final rule (76 FR 67819), we finalized policies that require an ACO to establish and maintain a governing body with adequate authority to execute the statutory functions of an ACO, and we codified the governing body policies at § 425.106. Specifically, § 425.106(c)(3) mandates that at least 75 percent control of an ACO's governing body must be

held by ACO participants. An ACO's governing body is responsible for providing ACO leadership, strategic direction, and oversight for operational management towards meeting the goals of the ACO, including better care, healthy communities, and reduced spending. This responsibility incorporates not only the delivery of improved healthcare, but also the promotion of evidence-based healthcare practices, improved engagement of patients and caregivers, reporting on quality and cost, provision of high-quality care to beneficiaries, and the distribution of shared savings, among other functions. In the November 2011 final rule (76 FR 67819), we indicated our belief that this requirement allowed for Medicare-enrolled entities that directly provide health care services to beneficiaries to drive decision-making, while recognizing that partnerships with non-Medicare enrolled entities outside this 75 percent composition allow these participants access to capital and infrastructure needed for an ACO. This physician-driven leadership is balanced by the remaining percentage of the governing body that is made up of patient advocates, accounting, legal and other professionals that support administrative duties and other functions of the ACO.

We affirmed in the November 2011 final rule (76 FR 67820) our belief that the 75 percent participant control requirement is necessary to ensure that ACOs are provider-driven, innovative in care delivery and strike an appropriate balance to incentivize and empower ACO participants to be accountable for the success of the ACO's operations and improve the health outcomes of their beneficiaries. Previously, commenters expressed concern that the 75 percent participant control threshold is overly prescriptive and may hinder operations, conflict with IRS and State tax laws, and restrict access to capital for the ACO. ACOs requested flexibility to develop their own governing body composition to meet the unique leadership needs of the ACO. In response to these comments, CMS granted an exception process for an ACO that wishes to structure its governing body in a manner that does not meet the 75 percent participant control threshold as required under § 425.106(c)(3). Under the exception process defined at §

425.106(c)(5), an ACO must describe why it seeks to differ from the 75 percent participant control threshold and how the ACO will involve ACO participants in innovative ways in ACO governance. If the exception is granted by CMS, an ACO can form a governing body with less than 75 percent participant control.

In the December 2014 Medicare Shared Savings Program proposed rule (79 FR 72776) we proposed to revise § 425.106(c)(5) to remove the flexibility for ACOs to deviate from the requirement that at least 75 percent control of an ACO's governing body must be held by ACO participants. We stated that, through program implementation, we learned that ACO applicants do not have difficulty meeting the requirements under § 425.106(c)(3) that ACO participants maintain 75 percent control of the governing body. We also noted that since CY 2012, we had not denied participation to any ACO applicants solely based on failure to comply with this requirement and no exceptions have been granted by CMS under § 425.106(c)(5). Furthermore, we affirmed the 75 percent participant control requirement to be "necessary and protective of the ACO participant's interests" and thus, that there was no reason to continue to offer an exception to the rule.

During the public comment period for the December 2014 Medicare Shared Savings Program proposed rule, several commenters advocated for retaining the flexibility offered at § 425.106(c)(5), stating that an ACO may elect to utilize the exception in the future. In our response, we noted that our program experience thus far had not suggested that commenters' concerns that laws concerning the composition of tax-exempt or State-licensed entities would interfere with their ability to meet the 75 percent participant control threshold would impact their compliance with this requirement. However, since implementation of the requirement remained in the early stages and we had limited applicability with ACOs in two-sided risk tracks, we declined to finalize the proposal in the June 2015 final rule (80 FR 32719) and elected to retain the flexibility at § 425.106(c)(5). In the final rule, we noted that we anticipated granting such

exceptions only in limited circumstances (that is, an ACO being unable to meet the 75 percent participant control requirement because it conflicts with other laws) and might revisit this issue in future rulemaking.

(2) Proposed Revisions

We continue to believe that ACO participants should drive ACO leadership to move toward improved quality of care and patient outcomes, and that this is a key component of ACO success and ability to earn shared savings. The 75 percent participant control threshold is critical to ensuring that governing bodies are participant-led and best positioned to meet program goals, while allowing for partnership with non-Medicare enrolled entities to provide needed capital and infrastructure for ACO formation and administration.

Over the years, a few ACOs have requested an exception to form a governing body with less than 75 percent participant control. CMS discussed the exemption requests with the interested ACOs and ultimately the ACOs made adjustments to comply with the 75 percent participant control requirement. To date, CMS has not granted an ACO an exception to this requirement, despite the flexibility provided in current regulation. Accordingly, we believe that there is no reason to continue to offer an exception to the requirement, as ACOs have demonstrated that they can appropriately meet the 75 percent participant control requirement without utilizing this flexibility since its establishment in the November 2011 final rule. Thus, we propose to remove the option under § 425.106(c)(5) for ACOs to request an exception to the requirement specified in § 425.106(c)(3) that 75 percent control of the ACO's governing body must be held by ACO participants. Additionally, we propose a corresponding revision to § 425.204(c)(3) to remove the option for ACOs to request an exception to the 75 percent control requirement under § 425.106(c)(3) as part of their Shared Savings Program applications.

We are seeking public comments on the appropriateness of our proposed policy refinement and elimination of the exception process. If finalized, our proposed modification to

§ 425.106(c) would make no changes to paragraphs(c)(2), (3) and (4). CMS would amend § 425.106(c)(5) to remove reference to paragraph (c)(3) and the procedure for submitting a request for an exception to the 75 percent requirement. Specifically, the revised regulation text would state: “In cases in which the composition of the ACO's governing body does not meet the requirements of paragraph (c)(2) of this section, the ACO must describe why it seeks to differ from these requirements and how the ACO will provide meaningful representation in ACO governance by Medicare beneficiaries.” Additionally, CMS would amend § 425.204(c)(3) to remove references to § 425.106(c)(3) and the procedure for submitting a request for an exception to the 75 percent requirement. Specifically, the revised regulation text would state: “If an ACO requests an exception to the governing body requirement in § 425.106(c)(2), the ACO must describe—(i) Why it seeks to differ from the requirement; and (ii) How the ACO will provide meaningful representation in ACO governance by Medicare beneficiaries.” If finalized, this policy would be effective beginning January 1, 2024.

c. Identifying ACOs Experienced with Risk Based on TINs’ Prior Participation

(1) Background

In the December 2018 final rule, we added a new paragraph (d) under § 425.600 to set forth the participation options for ACOs that are experienced or inexperienced with “performance-based risk Medicare ACO initiatives” (which is defined at § 425.20 to include certain Innovation Center ACO models as well as two-sided risk tracks of the Shared Savings Program). We also finalized the definitions of “experienced with performance-based risk Medicare ACO initiatives” and “inexperienced with performance-based risk Medicare ACO initiatives” (83 FR 68062). These definitions classify ACOs by experience level based on the percentage of ACO participant TINs that participated in performance-based risk Medicare ACO initiatives during a 5-year lookback period. However, current regulation text does not specify how CMS determines whether an ACO participant TIN has “participated” in a performance-

based risk Medicare ACO initiative. To improve clarity of the regulations, we propose to codify our existing program policy under which an ACO participant TIN is considered to have participated in a performance-based risk Medicare ACO initiative if it was or will be included in financial reconciliation for a performance year under such initiative during any of the 5 most recent performance years.

Under the December 2018 final rule, an ACO is “inexperienced with performance-based risk Medicare ACO initiatives” (and therefore eligible to enter an agreement period under the BASIC track’s glide path), if less than 40 percent of its ACO participants has participated in a performance-based risk Medicare ACO initiative in “each” of the 5 most recent performance years prior to its Shared Savings Program agreement start date, and the ACO legal entity has not participated in any performance-based risk Medicare ACO initiative (83 FR 67895). Similarly, an ACO is “experienced with performance-based risk Medicare ACO initiatives” if 40 percent or more of its ACO participants has participated in a performance-based risk Medicare ACO initiative in “any” of the 5 most recent performance years prior to its Shared Savings Program agreement start date (83 FR 67895). Thus, if 40 percent or more of the entities on an ACO participant list participated in a performance-based risk Medicare ACO initiative in a single performance year within the 5 most recent performance years, we would determine that the ACO meets the definition of “experienced with performance-based risk Medicare ACO initiatives.” Conversely, we would determine that an ACO satisfies the definition of “inexperienced with performance-based risk Medicare ACO initiatives” only if it is below the 40 percent threshold in all of the 5 most recent performance years prior to the ACO’s agreement start date. In other words, an ACO is inexperienced with performance-based risk Medicare ACO initiatives as long as it does not meet the definition of “experienced with performance-based risk Medicare ACO initiatives” in any of the five most recent performance years prior to the ACO’s agreement start date. We chose to use a 5-year lookback period for determining whether an ACO is experienced

or inexperienced with performance-based risk Medicare ACO initiatives for a number of reasons, including that it could reduce the incentive for organizations to wait out the period in an effort to establish a new legal entity with the same or very similar composition of ACO participants for purposes of gaming program policies.

We recognize that some ACOs or TINs in performance-based risk Medicare ACO initiatives participate for only part of a performance year, but our current regulation text does not specify the duration of participation required for CMS to determine that an ACO participant TIN has participated in a performance-based risk Medicare ACO initiative.

(2) Proposed Revisions

We propose to codify the current operational approach for determining whether an ACO participant has participated in a performance-based risk Medicare ACO initiative. Under our current operational approach, an ACO participant is considered to have participated in a performance-based risk Medicare ACO initiative if its TIN was or will be used to calculate financial reconciliation for the entity participating in such ACO initiative (“Initiative ACO”). In general, if an ACO participant was included on an Initiative ACO’s participant list for a performance year during the 5 most recent performance years before the ACO’s agreement start date, and the Initiative ACO is, or will be, financially reconciled for that performance year, the ACO participant will be considered to have participated in the Initiative ACO. This will generally be true regardless of whether the entity leaves the Initiative ACO mid-performance year, because its claims experience would still be used in the Initiative ACO’s alignment and financial reconciliation for that performance year. If the ACO participant was included on an Initiative ACO’s participant list for a performance year during the lookback period, but the ACO voluntarily terminates before the deadline for reconciliation or is otherwise not eligible for reconciliation, the ACO participant will not be considered to have experience with risk because its claims experience would not be used for financial reconciliation.

Except for determinations made regarding AIP ACOs for purposes of § 425.316(e)(2), we determine whether an ACO is experienced with performance-based risk Medicare ACO initiatives prior to the start of an ACO's agreement start date. At the time we make these determinations, the ACO may be in the middle of a PY for which reconciliation has not yet occurred. Nevertheless, we believe that at the time we make these determinations, we have the information necessary to determine whether an ACO or ACO participant TIN will be included in financial reconciliation for a PY in the relevant Medicare ACO initiative because this issue is addressed in the terms of each Medicare ACO initiative. For example, as outlined in § 425.221(b)(2)(ii)(A), if an ACO in a two-sided model terminates from the Shared Savings Program after June 30th of a PY, they will be held responsible for a pro-rated share of any shared losses determined for the performance year during which the termination becomes effective. Any ACO participant TIN that was included on the participant list for that performance year will have been included in beneficiary alignment and their claims experience used to calculate the benchmark and performance year expenditures. For other Medicare ACO initiatives, the terms of the participation agreement specify when the ACO is subject to reconciliation and which TINs will be included in reconciliation.

We propose to modify the existing definitions for “experienced with performance-based risk Medicare ACO initiatives” and “inexperienced with performance-based risk Medicare ACO initiatives” at § 425.20 to include the following new sentence at the end of each definition: “An ACO participant is considered to have participated in a performance-based risk Medicare ACO initiative if the ACO participant TIN was or will be included in financial reconciliation for a performance year under such initiative during any of the 5 most recent performance years.” We also propose a technical correction to remove the language “as defined under this section” from both definitions. We propose that these amendments would become effective on January 1, 2024.

We seek comments on the proposed regulation text.

7. Proposed Technical Changes to References in Shared Savings Program Regulations

a. References to an ACO's Assignment Methodology Selection

Section 1899(c)(2)(A) of the Act, as amended by the Bipartisan Budget Act of 2018, provides all ACOs with a choice of prospective assignment for agreement periods beginning on or after January 1, 2020. In the December 2018 final rule (83 FR 67859 through 67863), we finalized modifications to the Shared Savings Program's regulations, to separate the choice of beneficiary assignment methodology from the choice of participation track (financial model). We also added a new section of the Shared Savings Program regulations at § 425.226 to govern annual participation elections. In accordance with § 425.226, before the start of a performance year an ACO may make elections related to its participation in the Shared Savings Program, including selection of its beneficiary assignment methodology, which will be effective at the start of the applicable performance year and for the remaining years of the agreement period, unless superseded by a later election. Section 425.226(a)(1) specifies that an ACO may select the assignment methodology that CMS employs for assignment of beneficiaries under subpart E of the Shared Savings Program regulations. An ACO may select either of the following: (i) preliminary prospective assignment with retrospective reconciliation, as described in § 425.400(a)(2); or (ii) prospective assignment, as described in § 425.400(a)(3).

For consistency, in the December 2018 final rule (83 FR 67991), we also finalized conforming changes to regulations that previously identified assignment methodologies according to program track. Among other changes to the Shared Savings Program regulations, we added § 425.400(a)(4)(ii) to establish that for agreement periods beginning on July 1, 2019, and in subsequent years, the ACO may select the assignment methodology CMS employs for the assignment of beneficiaries. As specified in § 425.400(a)(4)(ii)(B), this selection of assignment methodology is made prior to the start of each agreement period, and may be modified prior to the start of each performance year as specified in § 425.226 (83 FR 67863).

Although §§ 425.226(a)(1) and 425.400(a)(4)(ii) both reference assignment methodology selection, there are key differences in the purpose each section serves in directing action from the ACO versus action that CMS initiates. Section 425.226 states that the initial selection of, and any annual selection for a change in, beneficiary assignment methodology by an ACO, must be made in the form and manner, and according to the timeframe, that we establish. Therefore, § 425.226(a)(1) is the relevant regulation for referencing the ACO's option to select and to change its selection of assignment methodology. That is, § 425.226 describes actions for which the ACO is responsible because the ACO is selecting the assignment methodology that will be effective at the beginning of the ACO's agreement period or making a change to the ACO's prior assignment methodology selection that will become effective at the beginning of the next performance year.

In comparison, § 425.400 outlines how we employ the assignment methodology described in §§ 425.402 and 425.404 for purposes of benchmarking, preliminary prospective assignment (including quarterly updates), retrospective reconciliation, and prospective assignment. Therefore, § 425.400(a)(4)(ii) is the relevant regulation for referencing how we determine the assignment methodology to be used in the referenced program operations or program calculations. That is, § 425.400(a)(4)(ii) governs actions undertaken by us because we are applying the ACO's selected assignment methodology when determining benchmarking, preliminary prospective assignment, retrospective reconciliation, and prospective assignment.

Throughout the current Shared Savings Program regulations text, there are various references to § 425.226(a)(1) or § 425.400(a)(4)(ii). We conducted a review of the Shared Savings Program regulations text to determine whether the existing twelve references to either § 425.226(a)(1) or § 425.400(a)(4)(ii) align with provisions' intended purposes. We also considered the intended purposes of the provisions in identifying the appropriate cross-reference

to include in the proposed new regulation at § 425.655, which is described in section III.G.4.b. of this proposed rule.

We believe the following five references to § 425.400(a)(4)(ii) are consistent with the intended purpose of § 425.400(a)(4)(ii), in referring to how we determine the ACO's chosen assignment methodology for purposes of determining beneficiary assignment or performing certain program calculations: § 425.609(c)(1); § 425.652(a)(5)(v)(A); § 425.652(b)(2)(iv)(A); § 425.654(a)(1)(i); and § 425.656(b)(3).

We believe the following two references to § 425.226(a)(1) are consistent with the intended purpose of § 425.226(a)(1) because the references are used when referring to the ACO's option to change its selection of assignment methodology: § 425.601(a)(9) introductory text; and § 425.652(a)(9) introductory text.

We identified five inconsistencies in references to §§ 425.226(a)(1) and 425.400(a)(4)(ii) that we are proposing to revise in this proposed rule. To follow is a description of the five references we are proposing to revise and the proposed technical changes to the applicable provisions in 42 CFR part 425, subpart G to ensure that the appropriate assignment selection reference is being cited for clarity and consistency.

For performance years starting on January 1, 2019, and subsequent performance years, CMS adds beneficiaries to an ACO's list of assigned beneficiaries based on a beneficiary's designation of an ACO professional as the provider or supplier they consider responsible for coordinating their overall care, if certain conditions are satisfied, including the conditions specified in § 425.402(e)(2)(ii)(A). In accordance with § 425.402(e)(2)(ii)(A), the beneficiary must meet the eligibility criteria established at § 425.401(a) and must not be excluded by the criteria at § 425.401(b). Further, the provision specifies that the exclusion criteria at § 425.401(b) apply for purposes of determining beneficiary eligibility for alignment to an ACO based on the beneficiary's designation of an ACO professional as responsible for coordinating their overall

care under § 425.402(e), regardless of the ACO's assignment methodology selection under § 425.400(a)(4)(ii). The reference to § 425.400(a)(4)(ii) in § 425.402(e)(2)(ii)(A) is not consistent with the intended purpose of the reference the ACO's selected assignment methodology. Therefore, we are proposing to amend § 425.402(e)(2)(ii)(A) by removing the reference to § 425.400(a)(4)(ii) and adding in its place a reference to § 425.226(a)(1), for clarity and consistency.

The introductory text of § 425.601(a) (applicable to agreement periods beginning on or after July 1, 2019, and before January 1, 2024) and § 425.652(a) (applicable to agreement periods beginning on January 1, 2024, and in subsequent years) specifies that in computing an ACO's historical benchmark for its first agreement period under the Shared Savings Program, CMS determines the per capita Parts A and B fee-for-service expenditures for beneficiaries that would have been assigned to the ACO in any of the 3 most recent years prior to the start of the agreement period using the ACO participant TINs identified before the start of the agreement period as required under § 425.118(a) and the beneficiary assignment methodology selected by the ACO for the first performance year of the agreement period as required under § 425.226(a)(1). Accordingly, the introductory text of § 425.601(a) and § 425.652(a) is describing how we will compute expenditures for beneficiaries that would have been assigned to the ACO based on the assignment methodology selected by the ACO. This provision is referring to how we determine the assignment methodology to be used to identify the beneficiary population that would have been assigned in the three benchmark years, not to the ACO's act of selecting the assignment methodology. Therefore, we are proposing to amend the introductory text of § 425.601(a) and § 425.652(a) by removing the reference to § 425.226(a)(1) and adding in its place a reference to § 425.400(a)(4)(ii), for clarity and consistency.

Section 425.652(a)(9)(ii) specifies that for agreement periods beginning on January 1, 2024, and in subsequent years, when adjusting the benchmark for certain changes during the

agreement period, we redetermine the regional adjustment amount under § 425.656 according to the ACO's assigned beneficiaries for BY3, and based on the assignable population of beneficiaries identified for the assignment window corresponding to BY3 that is consistent with the assignment window that applies under the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.226(a)(1). In § 425.652(a)(9)(ii) the reference to § 425.226(a)(1) is not consistent with the intended purpose of the reference, which is to specify how we determine the assignment methodology that will be used to identify the assigned beneficiary and assignable beneficiary populations which are in turn used to redetermine the regional adjustment in the event the ACO changes its selected assignment methodology. Therefore, we are proposing to amend § 425.652(a)(9)(ii) by removing the reference to § 425.226(a)(1) and adding in its place the reference to § 425.400(a)(4)(ii), for clarity and consistency.

Section 425.652(a)(9)(iv) describes that for agreement periods beginning on January 1, 2024, and in subsequent years, when adjusting the benchmark for certain changes during the agreement period, we redetermine the proration factor used in calculating the prior savings adjustment under § 425.658(b)(3)(ii) to account for changes in the ACO's assigned beneficiary population in the benchmark years of the ACO's current agreement period due to the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), a change to the ACO's beneficiary assignment methodology selection under § 425.400(a)(4)(ii), or changes to the beneficiary assignment methodology under 42 CFR part 425, subpart E. In § 425.652(a)(9)(iv) the reference to § 425.400(a)(4)(ii), is not consistent with the intended purpose of provision, which is to specify that we will redetermine the proration factor used in calculating the prior savings adjustment if the ACO changes its beneficiary assignment methodology selection. Therefore, we are proposing to amend § 425.652(a)(9)(iv) by removing

the reference to § 425.400(a)(4)(ii) and adding in its place a reference to § 425.226(a)(1), for clarity and consistency.

We seek comments on these proposed technical changes.

b. Definition of Rural Health Clinic

In the November 2011 final rule, we established a definition for the term “Rural health center (RHC)” for the Shared Savings Program at § 425.20.²⁰⁷ The definition of “Rural health center (RHC)” at § 425.20 states that this term has the same meaning given to this term under § 405.2401(b). The term “Rural health clinic (RHC)” is defined at § 405.2401(b) to mean a facility that has—

- Been determined by the Secretary to meet the requirements of section 1861(aa)(2) of the Act and 42 CFR part 491 concerning RHC services and conditions for approval; and
- Filed an agreement with CMS that meets the requirements in § 405.2402 to provide RHC services under Medicare.

This inconsistency between § 425.20, which inaccurately uses the word “center,” and § 405.2401(b), which accurately uses the word “clinic,” recently came to our attention. We note that the term “rural health clinic” was in use and defined at § 405.2401(b) when we established the term and definition for “Rural health center (RHC)” under part 425 with the November 2011 final rule. Furthermore, in the November 2011 final rule (76 FR 67803) we separately established an acronym “RHCs” for “Rural Health Clinics” in the acronyms list reflecting the accurate term.

To ensure clarity and accuracy, we are proposing to correct the error in the definition for “Rural health center (RHC)” at § 425.20 by replacing the word “center” with the word “clinic”. We would like to clarify that all uses of the acronym “RHC” or “RHCs” throughout Part 425 –

²⁰⁷ See, for example, 76 FR 67930 through 67932 (discussion of our proposal to define FQHCs and RHCs as these terms are defined in § 405.2401(b)), and 76 FR 67974 and 67975 (finalized regulations text for § 425.20).

including in the definition of “primary care physician” in § 425.20 as well as in §§ 425.102 and 425.304 and throughout 42 CFR part 425, subpart E – have been interpreted to refer to “rural health clinic” or “rural health clinics” as defined at § 405.2401(b). Further, we propose to revise the definition of rural health center in § 425.20 to specify that the referenced provision at § 405.2401(b) is within Title 42, Chapter IV of the Code of Federal Regulations. We seek comments on these proposed technical changes.

c. Definition of At-Risk Beneficiary

In the November 2011 final rule (see 76 FR 67974), we established the definition of “At-risk beneficiary” at § 425.20, the meaning of which includes, but is not limited to, a beneficiary who –

- Has a high risk score on the CMS-HCC risk adjustment model;
- Is considered high cost due to having two or more hospitalizations or emergency room visits each year;
- Is dually eligible for Medicare and Medicaid;
- Has a high utilization pattern;
- Has one or more chronic conditions;
- Has had a recent diagnosis that is expected to result in increased cost;
- Is entitled to Medicaid because of disability; or
- Is diagnosed with a mental health or substance abuse disorder.

In finalizing modifications to the proposed definition of at-risk beneficiary, we explained that we agreed with commenters that our proposed definition should be expanded to include patients who are entitled to *Medicare* (emphasis added) because of disability (see 76 FR 67950). However, in codifying the relevant regulation text at § 425.20, we inadvertently referred to patients who are entitled to *Medicaid* because of disability (emphasis added). We note that an

individual who is entitled to Medicare because of disability and who is also entitled to Medicaid, would be included under the category “Is dually eligible for Medicare and Medicaid.”

We are proposing to correct the typographical error in the definition for “At-risk beneficiary” at § 425.20 by replacing the word “Medicaid” in paragraph (7) with the word “Medicare”. We also propose to adjust inaccurate punctuation in the list of paragraphs within this definition by replacing the period at the end of paragraphs (5) and (6) with a semi-colon. We seek comment on these proposed changes.

d. Updating Terminology in Regulations on Data Sharing with ACOs

It has come to our attention that certain terminology that is used in the data sharing regulations for the Shared Savings Program in 42 CFR part 425, subpart H is outdated or inconsistent with the terminology used elsewhere in the Medicare program and in the HIPAA regulations in 45 CFR part 164. We are proposing technical and conforming changes to § 425.702(c)(1)(ii)(A)(3) and § 425.702(c)(1)(ii) for clarity and consistency.

In accordance with the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA), CMS discontinued the use of Social Security Number-based Health Insurance Claim Numbers (HICNs) as the beneficiary identifier on Medicare cards and replaced that identifier type with Medicare Beneficiary Identifiers (MBIs) by April 2019. MBIs are now used for Medicare transactions like billing, eligibility status, and claim status. All claims with a date of service on or after January 1, 2020, must use the beneficiary’s MBI, rather than the HICN.^{208,209} To accommodate this change from HICN to MBI, starting in PY 2018 we revised Shared Savings Program reports providing beneficiary-identifiable information under § 425.702, and claim and claim line feed files with beneficiary identifiable claims data provided under

²⁰⁸ CMS, MLN Matters, “New Medicare Beneficiary Identifier (MBI) Get It, Use It”. Article number SE18006, revised March 19, 2020. Available at <https://www.cms.gov/outreach-and-education/medicare-learning-network-mln/mlnmattersarticles/downloads/se18006.pdf>.

²⁰⁹ CMS.gov website, Medicare Beneficiary Identifiers (MBIs), at <https://www.cms.gov/Medicare/New-Medicare-Card>.

§ 425.704, to include a field for the beneficiary’s MBI. By the end of PY 2019 we discontinued populating data in the HICN fields. However, when we made this operational update we did not make conforming changes to the regulations text at § 425.702(c)(1)(ii)(A) to revise the list of the four data elements we provide to ACOs on their fee-for-service beneficiary population: (1) beneficiary name; (2) date of birth; (3) HICN; and (4) sex. Therefore, because CMS has discontinued use of the HICN, we propose to revise § 425.702(c)(1)(ii)(A)(3) to refer to “Beneficiary identifier” instead of “Health Insurance Claim Number (HICN).” This change to the regulations text will not change the information that is provided to ACOs pursuant to § 425.702(c)(1)(ii).

Further, we propose to revise the list of purposes in § 425.702(c)(1)(ii) for which an ACO may request certain beneficiary-identifiable data for purposes of population-based activities to better align with the terminology used in the first paragraph of the definition of health care operations at 45 CFR 164.501. Specifically, we propose to remove the reference to “process development” and to add in its place a reference to “protocol development.” In prior rulemaking, we indicated that ACOs could request beneficiary-identifiable data under § 425.702(c)(1)(ii) for purposes of carrying out population-based activities, including process development, and referred to care coordination processes and required process development under § 425.112 (see 80 FR 32734 and 32735). We do not believe the revision we are proposing would impact ACOs’ ability to request data for these types of process development. Rather, activities related to care coordination processes and the development of required processes under § 425.112 would continue to fall within the population-based activities listed in § 425.702(c)(1)(ii) for which an ACO may request data, including protocol development (as added by this proposed revision) and care coordination. This proposed revision would also ensure that the terminology used in § 425.702(c)(1)(ii) is consistent with the language of the

proposed new provision at § 425.702(c)(1)(iii) discussed in section III.G.2.b.(2) of this proposed rule.

We seek comment on these proposed changes.

8. Seeking Comments on Potential Future Developments to Shared Savings Program Policies

a. Background

In an article published on the New England Journal of Medicine’s website on April 27, 2022,²¹⁰ CMS lays out a vision for how Accountable Care Organizations (ACOs) participating in the Shared Savings Program and in Center for Medicare and Medicaid Innovation (Innovation Center) models can help CMS achieve its goal of having all beneficiaries in the traditional Medicare program cared for by health care providers who are accountable for costs and quality of care by 2030. This article describes a vision for the Shared Savings Program and new Innovation Center models to expand participation in ACOs, strengthen incentives for savings for participants and for Medicare, and make access to ACOs more equitable, including: (1) aligning features of new Center for Medicare and Medicaid Innovation (Innovation Center) models and features in the Shared Savings Program; (2) adopting lessons from the ACO Investment Model to help provide upfront investments for small ACOs that lack experience with performance-based risk; (3) examining benchmarking approaches that could support increased participation, including among organizations serving patients with high costs of care and address the effects of rebasing and regional benchmark adjustments; and (4) examining the use of incentives to recruit health care providers that care for underserved populations to join ACOs, with the goal of closing gaps in outcomes, and asking health care providers to consider beneficiaries’ social needs in care plans.

²¹⁰ Jacobs D, Rawal P, Fowler L, Seshamani M. Expanding Accountable Care’s Reach among Medicare Beneficiaries. *NEJM.org*, April 27, 2022, available at <https://www.nejm.org/doi/full/10.1056/NEJMp2202991>.

CMS adopted several policies as part of the CY 2023 PFS final rule to advance these goals, including providing advance shared savings payments in the form of advance investment payments to certain new, low-revenue ACOs that they can use to build the infrastructure needed to succeed in the Shared Savings Program and promote equity by holistically addressing beneficiary needs, including social needs; reinstating a sliding scale reflecting an ACO's quality performance for use in determining shared savings for ACOs and shared losses for ENHANCED track ACOs; modifying the benchmarking methodology to strengthen financial incentives for long-term participation by reducing the impact of ACOs' performance and market penetration on their benchmarks; support the business case for ACOs serving high-risk and a high proportion of dually eligible populations to participate; and mitigate bias in regional expenditure calculations for ACOs electing prospective assignment; and expanding opportunities for certain low-revenue ACOs participating in the BASIC track to share in savings.

CMS has also continued to receive significant input from interested parties regarding opportunities to increase participation in ACO initiatives. One such option would be to identify ways that the Shared Savings Program can support ACOs' efforts to strengthen primary care, such as by providing prospective payments for primary care that would reduce reliance on fee-for-service payments and support innovations in care delivery that better meet beneficiary needs and increase access to primary care in underserved communities. Empirical data support the notion that primary care serves as the foundation of high-performing ACOs. ACO performance results have indicated that ACOs comprised of 75 percent or more of primary care clinicians share in savings at almost twice the rate of those ACOs comprised of less than 75 percent primary care clinicians.²¹¹ Another option would be to offer a higher risk track in the Shared Savings Program, on which CMS requests input below.

²¹¹ Refer to "Medicare Shared Savings Program Saves Medicare More Than \$1.6 Billion in 2021 and Continues to Deliver High-quality Care" – As of August 30, 2022, available at <https://www.cms.gov/newsroom/press-releases/medicare-shared-savings-program-saves-medicare-more-16-billion-2021-and-continues-deliver-high>.

b. Incorporating a Higher Risk Track than the ENHANCED Track

Over time, CMS has considered a higher risk Shared Savings Program track under which the shared savings/loss rate would be somewhere between 80 percent and 100 percent (that is, a rate higher than that currently offered under the ENHANCED track) that builds on the experience of the Next Generation ACO (NGACO) and ACO Realizing Equity, Access, and Community Health (ACO REACH) Models. “Higher risk” sharing provides a higher level of potential reward which may encourage ACOs that would not otherwise have participated in the Shared Savings Program because of current limitations on potential upside to consider participating. Also, a higher risk sharing model may incentivize participating ACOs to take on more risk (and potential reward) and incentivize ACOs to improve performance in the program, which may result in reduced healthcare costs for Medicare, and more effective, efficient care for beneficiaries. In addition, higher risk sharing may incentivize ACOs to develop new care delivery strategies, such as a focus on specialty care integration and reduced care fragmentation. Offering a higher risk sharing track may also help CMS reach our goal of having all beneficiaries in the traditional Medicare program in a care relationship with a health care provider who is accountable for the costs and quality of their care by 2030 by encouraging efficient ACOs to continue participation in the Shared Savings Program.

Currently, under the Shared Savings Program, ACOs may enter participation agreements under one of two tracks—the BASIC track or the ENHANCED track. The BASIC track allows eligible ACOs to begin under a one-sided model and incrementally transition to higher levels of risk and potential reward through the BASIC track’s glide path. The ENHANCED track is a two-sided model that represents the highest level of risk and potential reward currently offered under the Shared Savings Program. The rules governing the participation options available to ACOs and the progression from lower to higher risk for ACOs entering the program are described in § 425.600 of the regulations.

Under the BASIC track, eligible ACOs operate under either a one-sided model or a two-sided model, either sharing savings only or sharing both savings and losses with the Medicare program. Under the BASIC track's glide path, the level of risk and potential reward phases in over the course of an agreement period with the ACO beginning participation under a one-sided model and progressing to incrementally higher levels of risk and potential reward, unless the ACO chooses to begin under a two-sided model and/or progress more quickly than the glide path would require.²¹² The glide path includes five levels (Levels A through E). Levels A and B are one-sided models (shared savings only);²¹³ and Levels C, D, and E are two-sided models (shared savings and shared losses) that provide for incrementally higher performance-based risk.²¹⁴ An ACO in the ENHANCED track operates under a two-sided model, sharing both savings and losses with the Medicare program, for all 5 performance years of the agreement period.

To qualify for a shared savings payment, an ACO must meet a minimum savings rate (MSR) requirement, meet the quality performance standard or alternative quality performance standard established under § 425.512, and otherwise maintain its eligibility to participate in the Shared Savings Program under 42 CFR part 425.²¹⁵ For ACOs meeting the applicable quality performance standard established under § 425.512(a)(2) or § 425.512(a)(4)(i) (for PY 2022 and PY 2023) or § 425.512(a)(5)(i) (for PY 2024 and subsequent performance years), the final shared savings rate is equal to the maximum sharing rate specific to the ACO's track/level of participation as follows: 40 percent for ACOs participating in Level A or Level B of the BASIC track,²¹⁶ 50 percent for ACOs participating in Levels C, D, or E of the BASIC track,²¹⁷ and 75

²¹² Refer to § 425.600(a)(4)(i).

²¹³ Refer to §§ 425.600(a)(4)(i)(A)(1), 425.605(d)(1)(i) (Level A); §§ 425.600(a)(4)(i)(A)(2), 425.605(d)(1)(ii) (Level B).

²¹⁴ Refer to §§ 425.600(a)(4)(i)(A)(3), 425.605(d)(1)(iii) (Level C); §§ 425.600(a)(4)(i)(A)(4), 425.605(d)(1)(iv) (Level D); §§ 425.600(a)(4)(i)(A)(5), 425.605(d)(1)(v) (Level E).

²¹⁵ Refer to §§ 425.100(b), 425.604(c), 425.605(c), 425.606(c), 425.610(c).

²¹⁶ Refer to § 425.605(d)(1)(i)(A), (d)(1)(ii)(A).

²¹⁷ Refer to § 425.605(d)(1)(iii)(A), (d)(1)(iv)(A), (d)(1)(v)(A).

percent for ACOs participating in the ENHANCED track.²¹⁸ Beginning in PY 2023, ACOs meeting the MSR requirement that do not meet the applicable quality performance standard established under § 425.512(a)(2) or § 425.512(a)(4)(i) or § 425.512(a)(5)(i), as applicable, but meet the alternative quality performance standard described in § 425.512(a)(4)(ii) (for PY 2023) or § 425.512(a)(5)(ii) (for PY 2024 and subsequent performance years) will have the opportunity to share in savings at a lower rate that is scaled by the ACO's quality performance. Additionally, beginning in PY 2024, certain ACOs participating in the BASIC track that do not meet the MSR have the opportunity to share in savings at a rate that is equal to half of the rate to which they would have otherwise been entitled had they met the MSR.²¹⁹ CMS computes an ACO's shared savings payment by applying the final sharing rate to the ACO's savings on a first dollar basis (meaning the final sharing rate is applied to the ACO's full total savings amount), with the payment subject to a cap that is equal to 10 percent of the updated benchmark for an ACO in the BASIC track or 20 percent of the updated benchmark for an ACO in the ENHANCED track.²²⁰

ACOs that operate under a two-sided model and have losses that meet or exceed a minimum loss rate (MLR) must share losses with the Medicare program.²²¹ Once this MLR is met or exceeded, the ACO will share in losses at a rate determined according to the ACO's track/level of participation, up to a loss recoupment limit (also referred to as the loss sharing limit).²²² In determining shared losses, ACOs participating in Level C, D, or E of the BASIC track are subject to a fixed shared loss rate (also referred to as the loss sharing rate) of 30 percent.²²³ ENHANCED track ACOs are subject to a loss rate that is scaled by the ACO's quality performance, subject to a minimum of 40 percent and a maximum of 75 percent.²²⁴

²¹⁸ Refer to § 425.610(d).

²¹⁹ Refer to § 425.605(h).

²²⁰ Refer to § 425.605(d); § 425.610(e).

²²¹ Refer to § 425.100(c).

²²² Refer to § 425.605(d); § 425.610(f), (g).

²²³ Refer to § 425.605(d)(1)(iii)(C), (d)(1)(iv)(C), (d)(1)(v)(C).

²²⁴ Refer to § 425.610(f).

For agreement periods beginning before January 1, 2024, certain ACOs were only allowed to enter the program in the ENHANCED track, and ACOs entering the program in the BASIC track were limited in how many agreement periods they could participate in the BASIC track before being required to transition to the ENHANCED track. Based on changes finalized in the CY 2023 PFS final rule, for agreement periods starting on January 1, 2024, and in subsequent years, participation in the ENHANCED track will be optional (see 87 FR 69818).

In the NGACO Model, NGACOs were offered the choice between two risk arrangements, partial risk or full risk. Under both arrangements, the NGACO was responsible for 100 percent of performance year expenditures, for services rendered to the NGACO's aligned beneficiaries.²²⁵ Under the partial risk arrangement, the NGACO could receive or owe up to 80 percent of savings/losses, whereas under the full risk arrangement, the NGACO could receive or owe up to 100 percent of savings/losses. To mitigate the ACO's risk of large shared losses, as well as to protect the Medicare Trust Funds against paying out excessive shared savings, NGACOs were required to choose a cap on gross savings/losses. The cap, expressed as a percentage of the benchmark, ranged from 5 percent to 15 percent. The risk arrangement chosen by the NGACO (80 or 100 percent) was applied to gross savings or losses after the application of the cap. In PYs 1-3, a discount was applied to the NGACO's benchmark that was set at a standard 3 percent, with various adjustments, that allowed the final discount to vary from 0.5 percent to 4.5 percent. In PYs 4-6, a discount of 0.5 percent was applied to the benchmark under the partial risk arrangement, and a discount of 1.25 was applied to the benchmark under the full

²²⁵ In 2020, due to the impacts of the COVID-19 pandemic, NGACOs were offered an optional amendment to the Participation Agreement (PA) for 2020 (PY5). For NGACOs that signed the amendment, CMS removed all beneficiary experience associated with COVID-19 related admissions and retrospectively updated the prospective trend with a regional observed trend. For 2021, CMS modified the NGACO financial methodology to provide financial protection to all NGACOs continuing in the model for PY6. PY6 financial protections included: adoption of an extreme and uncontrollable circumstances policy, under which any shared losses were prorated based on the number of months during the PHE and the number of beneficiaries residing in an impacted area, and all expenses associated with COVID-19 related admissions were removed from both PY expenditures and retrospective trend.

risk arrangement. The purpose of the discount was to ensure that CMS received a financial benefit from any savings achieved by the NGACOs participating in the model.

Under the ACO REACH Model, REACH ACOs are offered the choice of participating under the Global or the Professional Risk Options. As in the NGACO Model, under both risk sharing options, the ACO REACH ACO is responsible for 100 percent of performance year expenditures for services rendered to aligned beneficiaries. Because ACOs electing the Global Risk Option retain up to 100 percent of the savings/losses, a discount is applied to the benchmark to ensure savings are also generated for CMS. Consequently, for ACOs in the Global Risk Option, the benchmark is reduced by a fixed percentage based on the performance year.²²⁶ The benchmark for ACOs participating in the Professional Option does not include this discount, and these ACOs are only eligible to retain 50 percent of savings or owe 50 percent of any losses.

When considering including a higher risk track in the Shared Savings Program, we must balance several factors to protect beneficiaries, ACOs, and the Medicare trust funds. One factor to consider is that there may be selective participation with regard to which ACOs would choose to participate in a higher risk track, if offered. For example, Shared Savings Program ACOs that have a history of high levels of shared savings or have received a favorable high regional adjustment to their benchmark may be more likely than other ACOs to switch to the higher risk track upon renewing or early renewing their participation in the program so they can receive additional benefit from the higher levels of potential reward offered in a higher risk track. Section 1899(i)(3) of the Act, grants the Secretary the authority to use other payment models, if the Secretary determines that doing so would improve the quality and efficiency of items and services furnished under Medicare and the alternative methodology would result in program expenditures equal to or lower than those that would result under the statutory payment model

²²⁶ For more details, refer to CMS, ACO Realizing Equity, Access, and Community Health (REACH) Model, PY2023 Financial Settlement Overview, available at: <https://innovation.cms.gov/media/document/aco-reach-py2023-fncl-settlement> (see Table 4: Schedule of Discounts by Risk Arrangement).

under section 1899(d). We have concerns that introducing a higher risk track would lead to only select ACOs participating, creating benefits limited almost entirely to those ACOs and limited to no benefits gained for beneficiaries or CMS.

Another consideration is that ACOs in a higher risk track could have an increased incentive (relative to existing Shared Savings Program risk models) to avoid high-cost beneficiaries in the performance year in order to maximize their potential shared savings payment or avoid or reduce potential shared losses. The Shared Savings Program truncates individual beneficiary expenditures at the 99th percentile of national Medicare fee-for-service expenditures by enrollment type, which can help to protect ACOs from the impact of expenditure outliers (i.e., prevent a small number of extremely costly beneficiaries from significantly affecting the ACO's per capita expenditures) and reduce the incentive for ACOs to avoid high-cost beneficiaries. As described earlier in this section of this proposed rule, the Shared Savings Program also caps the amount of shared savings an ACO may receive or the amount of shared losses it may owe, which can further discourage beneficiary selection. If introducing a higher risk-track to the program, we would need to consider whether the program's existing approach to expenditure truncation and capping shared savings and shared losses would be sufficient in curbing incentives for ACOs to engage in beneficiary selection in light of the higher potential risk and reward, while ensuring that the new risk model will still be attractive to ACOs and improve the quality and efficiency of the care their assigned beneficiaries receive.

When considering a higher risk track, CMS would need to balance the incentives for ACOs to transition to higher levels of risk and potential reward only when they are very confident it is in their financial interest to do so, with the benefits of increasing ACO participation in the Shared Savings Program and in two-sided accountable care tracks, all while ensuring sufficient financial safeguards against inappropriately large shared losses for ACOs coordinating and improving quality of care for high-cost beneficiaries. We are seeking comment

on the following: (1) policies/model design elements that could be implemented so that a higher risk track could be offered without increasing program expenditures; (2) ways to protect ACOs serving high-risk beneficiaries from expenditure outliers and reduce incentives for ACOs to avoid high-risk beneficiaries; and (3) the impact that higher sharing rates could have on care delivery redesign, specialty integration, and ACO investment in health care providers and practices.

c. Increasing the Amount of the Prior Savings Adjustment

Under section 1899(d)(1)(B)(ii) of the Act, an ACO's benchmark must be reset at the start of each agreement period using the most recent available 3 years of expenditures for Parts A and B services for beneficiaries assigned to the ACO. Section 1899(d)(1)(B)(ii) of the Act provides the Secretary with discretion to adjust the historical benchmark by "such other factors as the Secretary determines appropriate." Pursuant to this authority, as described in the CY 2023 PFS final rule (87 FR 69898 through 69915), we established a prior savings adjustment that will apply when establishing the benchmark for eligible ACOs entering an agreement period beginning on January 1, 2024, or in subsequent years, to account for the average per capita amount of savings generated during the ACO's prior agreement period.

The prior savings adjustment adopted in the CY 2023 PFS final rule is designed to adjust an ACO's benchmark to account for the average per capita amount of savings generated by the ACO across the 3 performance years prior to the start of its current agreement period for re-entering and renewing ACOs. In the final rule, we explained that reinstating a prior savings adjustment would be broadly in line with our interest in addressing dynamics to ensure sustainability of the benchmarking methodology. Specifically, such an adjustment would help to mitigate the rebasing ratchet effect on an ACO's benchmark by returning to an ACO's benchmark an amount that reflects its success in lowering growth in expenditures while meeting the program's quality performance standard in the performance years corresponding to the

benchmark years for the ACO's new agreement period. We also explained our belief that a prior savings adjustment could help address an ACO's effects on expenditures in its regional service area that result in reducing the regional adjustment added to the historical benchmark.

In the CY 2023 PFS final rule (87 FR 69899), we explained that, in order to mitigate the potential for rebased benchmarks for ACOs that are lower-spending compared with their regional service area and that achieved savings in the benchmark period to become overinflated, we believed that adjusting an ACO's benchmark based on the higher of either the prior savings adjustment or the ACO's positive regional adjustment would be appropriate. We also note that elsewhere in this proposed rule, we have proposed to further mitigate the impacts of the negative regional adjustment when the overall adjustment to an ACO's historical benchmark is negative; however, the negative regional adjustments by enrollment type would continue to be factored in when the overall regional adjustment is positive.

In the CY 2023 PFS final rule (87 FR 69902), we finalized a policy to apply a 50 percent scaling factor to the pro-rated positive average per capita prior savings because we believed it would be important to consider a measure of the sharing rate used in determining the shared savings payment the ACO earned in the applicable performance years under its prior agreement period(s). In response to discussion of this policy in the CY 2023 PFS proposed rule, ACOs and other interested parties commented that we should consider using a higher scaling factor that may more closely match the maximum shared savings rate from an ACO's prior agreement period. However, in the CY 2023 PFS final rule, we reiterated our belief that a 50 percent scaling factor would be appropriate because it represents a middle ground between the maximum sharing rate of 75 percent under the ENHANCED track and the lower sharing rates available under the BASIC track (e.g., 40 percent). Additionally, we noted that if we were to finalize a scaling factor that would more closely match the average shared savings rate from an ACO's prior agreement

period, many ACOs would have a scaling factor below 50 percent, which would be less advantageous than the policy that we finalized.

In the CY 2023 PFS final rule (87 FR 69902), we also finalized a policy to calculate the final adjustment to the benchmark by adding the pro-rated average per capita prior savings to the ACO's negative regional adjustment for ACOs that are higher spending relative to their regional service area. Under this policy, we apply the 50 percent scaling factor after offsetting the negative regional adjustment to maximize the portion of the pro-rated average per capita savings that would be added to the negative regional adjustment in determining the final adjustment to the benchmark and strengthen incentives for ACOs to remain in the program.

MedPAC commented on the CY 2023 PFS proposed rule that while the prior savings adjustment is a reasonable policy for mitigating ratcheting effects, implementing both the prior savings adjustment and the regional adjustment policies together would be duplicative. MedPAC also expressed concern that the prior savings adjustment and the regional adjustment could interact in a way that would perpetuate a programmatic bias towards ACOs receiving a positive regional adjustment. In MedPAC's view, many ACOs would receive an inflated prior savings adjustment because the prior savings adjustment would be based on savings achieved using benchmarks already inflated by the regional adjustment. However, we explained in the CY 2023 PFS final rule (87 FR 69913) that because for most ACOs, the positive regional adjustment would exceed the prior savings adjustment, our policy of applying the larger of the regional adjustment and the prior savings adjustment potentially mitigates this concern.

We are seeking comment on potential changes to the 50 percent scaling factor used in determining the prior savings adjustment. such as using an average of the ACO's shared savings rates from the 3 years prior to the start of its agreement period, increasing to 75 percent of shared savings achieved if the ACO participated in the ENHANCED track in the 3 years prior to the start of the agreement period, or another value corresponding to the maximum shared savings

rate the ACO was eligible to earn in the 3 years prior to the start of the agreement period. We are also seeking comment on potential changes to the positive regional adjustment to reduce the possibility of inflating the benchmark while still mitigating potential ratchet effects on ACO benchmarks.

d. Expanding the ACPT Over Time and Addressing Overall Market-wide Ratchet Effects

As described in the December 2018 final rule (83 FR 68024 through 68030), we used our statutory authority under section 1899(i)(3) of the Act to adopt the policy under which we update the historical benchmark using a blend of national and regional growth rates. In accordance with § 425.601(b), for agreement periods beginning on July 1, 2019, and before January 1, 2024, we update the historical benchmark for an ACO for each performance year using a blend of national and regional growth rates between BY3 and the performance year.

In the CY 2023 PFS final rule (87 FR 69902), we finalized a policy for agreement periods beginning on January 1, 2024, and in subsequent years to incorporate a prospectively projected administrative growth factor, a variant of the United States Per Capita Cost (USPCC) that we refer to as the Accountable Care Prospective Trend (ACPT), into a “three-way” blend with national and regional growth rates to update an ACO's historical benchmark for each performance year in the ACO's agreement period. The three-way blend is calculated as the weighted average of the ACPT (one-third weight) and the existing national-regional “two-way” blend (two-thirds weight). The ACPT will be projected for an ACO's entire agreement period near the start of that agreement period, providing a degree of certainty to ACOs.

We explained in the CY 2023 PFS final rule that the ACPT will insulate a portion of the annual benchmark update from any savings occurring as a result of the actions of ACOs participating in the Shared Savings Program and address the impact of increasing market penetration by ACOs in a regional service area on the existing blended national-regional growth factor. Because the ACPT is prospectively set at the outset of an agreement period, any savings

generated by ACOs during the agreement period would not be reflected in the ACPT component of the three-way blend. Accordingly, incorporation of the ACPT may allow benchmarks to increase beyond actual spending growth rates as ACOs slow spending growth. By limiting ACOs' ability to slow spending growth for purposes of their own benchmarks, we noted that we believed the use of this three-way blend to update ACOs' benchmarks would incentivize greater savings by ACOs and greater program participation. Additionally, because incorporating the ACPT into the update would reduce the degree to which an ACO's savings negatively impact its benchmark through the regional trend component of the update, we also stated our belief that this change to the update methodology would help to address concerns raised by ACOs and other interested parties regarding the disproportionate impact of an ACO's savings on the benchmark update for ACOs with high market share.

In the final rule, we noted that it was possible that incorporating the ACPT into a three-way blended update factor would have the potential for mixed effects. For example, it may also lower an ACO's benchmark relative to the two-way blend if external factors lead to higher program spending growth than originally projected at the start of an ACO's agreement period. Consequently, we finalized that if an ACO generates losses for a performance year that meet or exceed its MLR (for two-sided model ACOs) or negative MSR (for one-sided model ACOs) under the three-way blend, we would recalculate the ACO's updated benchmark using the two-way blend and the ACO would receive whichever benchmark update minimizes shared losses. However, the ACO would not be eligible to share in savings resulting from use of the two-way blend in updating the benchmark. We also finalized that if unforeseen circumstances such as an economic recession, pandemic, or other factors cause actual expenditure trends to significantly deviate from projections, we would retain discretion to decrease the weight applied to the ACPT in the three-way blend.

In their comments on the proposal to adopt the three-way blend in the CY 2023 PFS proposed rule, ACOs and other interested parties expressed concern that the three-way blend effectively increases the proportion of the benchmark update that is based upon national trends, as opposed to regional trends, noting that the blend may not adequately account for geographic variation in spending growth that is outside of an ACO's control. Over a 5-year agreement period, we recognize some ACOs may be disadvantaged or advantaged in the short term by benchmark updates that give greater weight to a national update factor. However, as we stated in the CY 2023 PFS final rule (87 FR 69891), we believe that the net impact of these deviations will be modest in the context of offsetting considerations. For example, the three-way blend only incorporates the ACPT at a one-third weight and maintains the current two-way blend for the majority weight of the benchmark trend calculation, allowing for a significant proportion of the benchmark update to reflect expenditure growth in an ACO's regional service area. The ACPT itself is also expected to project spending above realized spending as ACOs generate savings, thereby providing a stable, predictable component of the update factor that will be beneficial for ACOs.

Interested parties who commented on the proposal in the CY 2023 PFS proposed rule to incorporate the ACPT as part of a three-way blend suggested modifications to the three-way blend to further mitigate potential ratchet effects and to better reflect regional variation in spending. These included modifications such as: (1) keeping a two-way national-regional blend and substituting the national component of the two-way blend with the ACPT (see 87 FR 69890); and (2) adjusting the weight of the ACPT in the three-way blend to reflect each ACO's market penetration, as is done with the national component of the two-way blend (see 87 FR 69893). CMS declined to implement these suggestions in the CY 2023 PFS final rule.

We seek comment on the following potential refinements to the ACPT and the three-way blended benchmark update factor as CMS works toward broad implementation of administrative

benchmarks: (1) replacing the national component of the two-way blend with the ACPT; and (2) scaling the weight given to the ACPT in a two-way blend for each ACO based on the collective market share of multiple ACOs within the ACO's regional service area.

e. Promoting ACO and CBO Collaboration

Section 1899(b)(2)(G) of the Act requires an ACO to define processes to promote evidence-based medicine and patient engagement; report on quality and cost measures; and coordinate care, such as through the use of telehealth, remote patient monitoring, and other enabling technologies. In the November 2011 final rule (76 FR 67827), we finalized policies to require that a participating Shared Savings Program ACO provide documentation in its application describing its plans to: (1) promote evidence-based medicine; (2) promote beneficiary engagement; (3) report internally on quality and cost metrics; and (4) coordinate care. We emphasized our belief that ACOs should retain the flexibility to establish processes that are best suited to their practice and patient population. As part of these required processes, we explained that ACOs should adopt a focus on patient-centeredness, which could include such activities as: a process for evaluating the needs of the ACO's population, including consideration of diversity in its patient populations, and a plan to address the needs of this population, including how the ACO intends to partner with other interested parties in the community to improve the health of its population; a plan to engage in shared decision making with beneficiaries; and a plan to implement individualized care plans, including taking into account the community resources available to the individual beneficiary.

When establishing these required processes and patient centeredness criteria in the November 2011 final rule (76 FR 67826), we stated that as we learn more about successful strategies in these areas, and as we gain more experience assessing specific critical elements for success, the Shared Savings Program eligibility requirements under section 1899(b)(2)(G) of the Act may be revised. For example, in subsequent rules we underscored the importance of health information

technology development and infrastructure within care coordination. In the June 2015 final rule, we finalized two modifications to the care coordination processes required of ACOs under § 425.112(b)(4): (1) adding a new eligibility requirement under § 425.112(b)(4)(ii)(C), which required an ACO to describe in its application how it will encourage and promote the use of enabling technologies for improving care coordination for beneficiaries, and (2) adding a new provision at § 425.112(b)(4)(ii)(D), which required the applicant to describe how the ACO intends to partner with long-term and post-acute care providers to improve care coordination for the ACO's assigned beneficiaries (80 FR 32725). In the CY 2018 PFS final rule (82 FR 53222), we shifted from requiring an ACO to submit documents detailing how it would meet the requirements of § 425.112 as a narrative in its Shared Savings Program application to instead requiring it to certify at the time of application that it has defined the required processes and patient centeredness criteria consistent with the requirements specified in section § 425.112 and to furnish such documentation upon request – thereby reducing ACO burden while maintaining CMS's flexibility to obtain additional documentation when necessary (see § 425.204(c)(ii)).

Additionally, in previous rulemaking (80 FR 32722), we specified that the care coordination processes under § 425.112 could include coordination with CBOs that provide services that address social determinants of health. This coordination could include a plan to partner with interested parties of the community, a plan to engage in shared decision making with beneficiaries, and a plan to implement individualized care plans. In that rulemaking (80 FR 32722), we also confirmed our understanding that ACOs differ in their ability to adopt the appropriate health information exchange technologies, but we continued to underscore the importance of robust health information exchange tools in effective care coordination.

We are seeking comment on ways to improve and incentivize collaboration between ACOs and interested parties in the community or CBOs. As explained in the CY 2023 PFS final rule (87 FR 69790), where we refer to CBOs, we mean public or private not-for-profit entities that

provide specific services to the community or targeted populations in the community to address the health and social needs of those populations. They may include community-action agencies, housing agencies, area agencies on aging, or other non-profits that apply for grants to perform social services. They may receive grants from other agencies in the U.S. Department of Health and Human Services, including Federal grants administered by the Administration for Children and Families (ACF), Administration for Community Living (ACL), or the Centers for Disease Control, or from State-funded grants to provide social services. Generally, we believe such organizations are trusted entities that know the populations they serve and their communities, want to be engaged, and may have the infrastructure or systems in place to help coordinate supportive services that address social determinants of health or serve as a trusted source to share information.²²⁷ We recognize that ACOs wishing to address social needs may want to make investments in goods or social services that would enable their ACO participants and ACO providers/suppliers to work with CBOs that have expertise in identifying and providing the types of social services that the ACO's beneficiary population requires.

It is important to note that the Shared Savings Program does not prohibit ACOs from partnering with CBOs. Currently, if a CBO is enrolled in Medicare, it may already be an ACO participant or an ACO provider/supplier. We believe CBOs could play an important role in identifying and addressing gaps in health equity. As we stated in the CY 2023 PFS final rule, we hope to encourage more ACOs to partner with CBOs whether they provide items and services reimbursed by Medicare or not. We recognized that Federal and other sources of grant funding for social services may be insufficient to fully address the demand for services within a community or broader geography. As we noted in that final rule, contractual arrangements

²²⁷ U.S. Department of Health & Human Services, Office of the Assistant Secretary for Preparedness and Response, Community-Based Organizations during COVID-19, available at <https://www.phe.gov/emergency/events/COVID19/atrisk/returning-to-work/Pages/default.aspx>.

between the health care sector and CBOs providing social services have increased in recent years to meet this demand.

We are seeking comment on approaches, generally, for encouraging or incentivizing increased collaboration between ACOs and CBOs, including any policies specifically designed to encourage ACOs to partner with CBOs and address unmet health-related social needs. We are also seeking comment on potential changes CMS could make to the patient-centered care requirements in § 425.112 to strengthen partnerships between ACOs and interested parties in the community, including CBOs, to address unmet health-related social needs.

H. Medicare Part B Payment for Preventive Vaccine Administration Services (§§ 410.10, 410.57, 410.152)

1. Statutory Background

Under section 1861(s)(10) of the Act, Medicare Part B currently covers both the vaccine and vaccine administration for the specified preventive vaccines – the pneumococcal, influenza, hepatitis B and COVID-19 vaccines. Section 1861(s)(10)(B) of the Act specifies that the hepatitis B vaccine and its administration is only covered for those who are at high or intermediate risk of contracting hepatitis B, as defined at § 410.63. Under sections 1833(a)(1)(B) and (b)(1) of the Act, respectively, there is no applicable beneficiary coinsurance, and the annual Part B deductible does not apply for these vaccines or the services to administer them. Per section 1842(o)(1)(A)(iv) of the Act, payment for these vaccines is based on 95 percent of the Average Wholesale Price (AWP) for the vaccine product, except where furnished in the settings for which payment is based on reasonable cost, such as a hospital outpatient department (HOPD), rural health clinic (RHC), or Federally qualified health center (FQHC). Some other preventive vaccines, such as the zoster vaccine for the prevention of shingles, not specified for Medicare Part B coverage under section 1861(s)(10) of the Act are instead covered and paid for under Medicare Part D.

2. Medicare Part B Payment for the Administration of Preventive Vaccines

a. Pneumococcal, Influenza and Hepatitis B Vaccine Administration

In the CY 2022 PFS final rule (86 FR 65186), we finalized a uniform payment rate of \$30 for the administration of a pneumococcal, influenza or hepatitis B vaccine covered under the Medicare Part B preventive vaccine benefit. We explained that since the administration of the preventive vaccines described under section 1861(s)(10) of the Act are finalized independent of the PFS, these payment rates will be updated as necessary, independent of the valuation of any specific codes under the PFS. (Please see COVID-19 vaccine administration payment information in the next section.) The CY 2022 PFS final rule (86 FR 65180 through 65182) provides a detailed discussion on the history of the valuation of the three Level II Healthcare Common Procedure Coding System (HCPCS) codes, G0008, G0009, and G0010, which describes the services to administer an influenza, pneumococcal, and hepatitis B vaccine, respectively.

In the CY 2023 PFS final rule (87 FR 69984), we finalized an annual update to the payment amount for the administration of Part B preventive vaccines based upon the percentage increase in the Medicare Economic Index (MEI). Additionally, we finalized the use of the PFS Geographical Adjustment Factor (GAF) to adjust the payment amount to reflect cost differences for the geographic locality based upon the fee schedule area where the preventive vaccine is administered. These adjustments and updates apply to HCPCS codes G0008, G0009, G0010, and to Level I Current Procedural Terminology (CPT) codes that describe the service to administer COVID-19 vaccines, which we discuss in the next section.²²⁸

The current payment rates for G0008, G0009, and G0010, as finalized in the CY 2023 PFS final rule, can be found on the CMS Seasonal Influenza Vaccines Pricing website under

²²⁸ <https://www.cms.gov/medicare/medicare-part-b-drug-average-sales-price/covid-19-vaccines-and-monoclonal-antibodies>.

Downloads.²²⁹ The payment rates for these services with the annual update applied for CY 2024, will be made available at the time of publication of the CY 2024 PFS final rule.

b. COVID-19 Vaccine Administration

In the CY 2022 PFS final rule (86 FR 65181 and 65182), we provide a detailed history regarding the determinations of the initial payment rates for the administration of the COVID-19 vaccines, and how the payment policy evolved to a rate of \$40 per dose. We note that in the CY 2022 PFS proposed rule (86 FR 39220 through 39224), we included a comment solicitation requesting information that specifically identifies the resource costs and inputs that should be considered when determining payment rates for preventive vaccine administration. As part of the comment solicitation, we requested feedback specifically related to the circumstances and costs associated with furnishing COVID-19 vaccines, in order to ensure that we took these into consideration when determining our payment policy. In the CY 2022 PFS final rule (86 FR 65185), we stated that, after consideration of all the comments received, it was appropriate to establish a single, consistent payment rate for the administration of all four Part B preventive vaccines in the long term, but to pay a higher, \$40 payment rate for administration of COVID-19 vaccines in the short term, while pandemic conditions persisted (86 FR 65185).

In the CY 2023 PFS final rule (87 FR 69988 through 69993), we stated that in light of the timing distinctions between a PHE declared under section 319 of the Public Health Service (PHS) Act and an Emergency Use Authorization (EUA) declaration under section 564 of the Federal Food, Drug, and Cosmetic Act (FD&C Act), we reconsidered the policies finalized in the CY 2022 PFS final rule in light of our goal to promote broad and timely access to COVID-19 vaccines. We explained that our goal would be better served if our policies with respect to payment for these products, as addressed in the November 2020 IFC and CY 2022 PFS final

²²⁹ <https://www.cms.gov/medicare/medicare-fee-for-service-part-b-drugs/mcrpartdrugavgsalesprice/vaccinespricing>.

rule, continue until the EUA declaration for drugs and biological products with respect to COVID-19 (see 85 FR 18250) is terminated. Therefore, we finalized that we would maintain the current payment rate of \$40 per dose for the administration of COVID-19 vaccines through the end of the calendar year in which the March 27, 2020 EUA declaration under section 564 of the FD&C Act (EUA declaration) for drugs and biological products ends. Effective January 1 of the year following the year in which the EUA declaration ends, the COVID-19 vaccine administration payment would be set at a rate to align with the payment rate for the administration of other Part B preventive vaccines, that is, \$30 per dose. As mentioned above, we also finalized that, beginning January 1, 2023, we would annually update the payment amount for the administration of all Part B preventive vaccines based upon the percentage increase in the MEI, and that we would use the PFS GAF to adjust the payment amount to reflect cost differences for the geographic locality based upon the fee schedule area where the vaccine is administered.

The current payment rates for the CPT codes that describe the service to administer COVID-19 vaccines, as finalized in the CY 2023 PFS final rule, can be found on the CMS COVID-19 Vaccines and Monoclonal Antibodies website.²³⁰ The payment rates for these services with the annual update applied for CY 2024, will be made available at the time of publication of the CY 2024 PFS final rule.

3. In-Home Additional Payment for Administration of COVID-19 Vaccines

a. Background

In the CY 2022 PFS final rule (86 FR 65187 and 65190), we provide a detailed discussion on the payment policy for COVID-19 vaccine administration in the home. In summary, providers and suppliers that administer a COVID-19 vaccine in the home, under

²³⁰ <https://www.cms.gov/medicare/medicare-part-b-drug-average-sales-price/covid-19-vaccines-and-monoclonal-antibodies>.

certain circumstances, can bill Medicare for one of the existing COVID-19 vaccine administration CPT codes²³¹ along with HCPCS code M0201 (*COVID-19 vaccine administration inside a patient's home; reported only once per individual home per date of service when only COVID-19 vaccine administration is performed at the patient's home*). In CY 2022, the Medicare Part B payment amount paid to providers and suppliers administering a COVID-19 vaccine in the home was \$75.50 dollars per dose (\$40 for COVID-19 vaccine administration and \$35.50 for the additional payment for administration in the home). These payment amounts were then geographically adjusted using PFS GPCIs (as discussed in the CY 2023 PFS final rule at 87 FR 69980 through 69983).

Since announcing the add-on payment for in-home COVID-19 vaccine administration in June 2021, we noted that we established these policies on a preliminary basis to ensure access to COVID-19 vaccines during the public health emergency and that we would continue to evaluate the needs of Medicare patients and these policies. In the CY 2022 PFS proposed rule (86 FR 39224 through 39226), we included a comment solicitation to collect feedback on these policies and potential future changes. As part of the comment solicitation, we requested feedback related to our definition of “home,” program integrity concerns, changes that we should consider, costs associated with administering COVID-19 vaccines in the home, and whether outside of a PHE there is a need to vaccinate people in the home rather than going to a health care provider or supplier. In the CY 2022 PFS final rule (86 FR 65188 through 65190), we discussed the feedback received, and we noted that commenters overwhelmingly recommended that we continue making the additional payment for COVID-19 vaccines administered in the home beyond the end of the PHE. Many commenters also supported extending the payment to other preventive vaccines, either permanently or until the end of the PHE. Commenters emphasized

²³¹ <https://www.cms.gov/medicare/medicare-part-b-drug-average-sales-price/covid-19-vaccines-and-monoclonal-antibodies>.

the importance of increasing vaccination rates and making vaccines available to underserved homebound beneficiaries who face barriers including chronic illness, financial and social precarity, and lack of access to digital resources. We agreed with commenters that the added costs and compelling needs required CMS to adopt the in-home add-on payment rate for COVID-19 vaccine administration. In addition, we stated that since we did not expect those needs or costs to diminish immediately with the end of the PHE, we believed it would be appropriate to leave the in-home add-on payment rate in place through the end of the calendar year in which the PHE ends. We explained that this extension of payment past the end of the PHE would also afford CMS the opportunity to monitor vaccine uptake data (86 FR 65189). We note that in section III.H.3.c. of this proposed rule, we are proposing revisions to § 410.152 that relate to this payment policy.

In the CY 2023 PFS final rule (87 FR 69984 through 69986), we discussed that we had received many comments and requests from interested parties that the in-home add-on payment be applied more broadly to all preventive vaccines. Commenters also expressed concerns that discontinuation of the in-home additional payment would negatively impact access to the COVID-19 vaccine for underserved homebound beneficiaries. We noted that while we agreed with these concerns, we also believed that we need to learn more about the populations served through the current in-home add-on payment, and other potential populations that may not have been able to access a COVID-19 vaccine despite the availability of the in-home add-on payment, in order to understand the barriers in receiving vaccinations in their home versus in the community. We also noted the need to consider potential program integrity concerns. Therefore, we finalized that we would continue the additional payment of \$35.50 when a COVID-19 vaccine is administered in a beneficiary's home, under the certain circumstances described in section III.H.3.b of the final rule, only for the duration of CY 2023. We explained that we were continuing the additional payment for at-home COVID-19 vaccinations for another

year in order to provide us time to track utilization and trends associated with its use, in order to inform the Part B preventive vaccine policy on payments for in-home vaccine administration for CY 2024.

We also finalized the policy to adjust this payment amount for geographic cost differences as we do the payment for the preventive vaccine administration service, that is, based upon the fee schedule area where the COVID-19 vaccine is administered, by using the PFS GAF. In addition, we finalized an update to the \$35.50 payment amount by the CY 2023 MEI percentage increase, consistent with the policy finalized for the other preventive vaccine administration services. We note that in the CY 2023 PFS final rule (87 FR 69688 through 69710), we rebased and revised the MEI to a 2017 base year. Therefore, we finalized (87 FR 69986) that for CY 2023, the in-home additional payment amount for COVID-19 vaccine administration described by HCPCS code M0201 was \$36.85 ($\$35.50 \times 1.038 = \36.85), and we established that payment for these services is adjusted for geographic cost differences using the relevant PFS GAF. We note that in section III.H.3.c. of this proposed rule, we are proposing revisions to § 410.152 that relate to these policies.

b. Conditions for Billing HCPCS code M0201

In establishing the additional payment for COVID-19 vaccine administration in the home, we also established certain conditions for the add-on payment described by HCPCS code M0201. In the CY 2022 PFS final rule, we provide a detailed discussion on how we established the certain conditions under which the code can be used, and the situations we contemplated to arrive at our final payment policy (86 FR 65187 and 65188).

For purposes of this add-on payment for in-home COVID-19 vaccine administration, the following requirements apply when billing for HCPCS code M0201:^{232,233}

²³² <https://www.cms.gov/medicare/covid-19/medicare-covid-19-vaccine-shot-payment>.

²³³ <https://www.cms.gov/files/document/vaccine-home.pdf>.

- The patient has difficulty leaving the home to get the vaccine, which could mean any of these:

- ++ They have a condition, due to an illness or injury, that restricts their ability to leave home without a supportive device or help from a paid or unpaid caregiver;

- ++ They have a condition that makes them more susceptible to contracting a pandemic disease like COVID-19; or

- ++ They are generally unable to leave the home, and if they do leave home, it requires a considerable and taxing effort.

- The patient is hard-to-reach because they have a disability or face clinical, socioeconomic, or geographical barriers to getting a COVID-19 vaccine in settings other than their home. These patients face challenges that significantly reduce their ability to get vaccinated outside the home, such as challenges with transportation, communication, or caregiving.

- The sole purpose of the visit is to administer the COVID-19 vaccine. Medicare will not pay the additional amount if the provider or supplier furnished another Medicare covered service in the same home on the same date.

- A home can be:

- ++ A private residence, temporary lodging (for example, a hotel or motel, campground, hostel, or homeless shelter);

- ++ An apartment in an apartment complex or a unit in an assisted living facility or group home (including assisted living facilities participating in the CDC's Pharmacy Partnership for Long-Term Care Program when their residents are vaccinated through this program);

- ++ A patient's home that is made provider-based to a hospital during the PHE for COVID-19; or

- ++ Communal spaces of a multi-unit or communal living arrangement.

- A home cannot be:

++ An institution that meets the requirements of sections 1861(e)(1), 1819(a)(1), or 1919(a)(1) of the Act, which includes hospitals and skilled nursing facilities (SNFs), as well as most nursing facilities under Medicaid.²³⁴

The COVID-19 vaccine must be administered inside an individual's home. For this purpose, an individual unit in a multi-dwelling building is considered a home. For example, an individual apartment in an apartment complex or an individual bedroom inside an assisted living facility or group home is considered a home. HCPCS code M0201, as noted in the code descriptor, can be billed only once per individual home per date of service. Medicare pays the additional payment amount for up to a maximum of 5 vaccine administration services per home unit or communal space within a single group living location; but only when fewer than 10 Medicare patients receive a COVID-19 vaccine dose on the same day at the same group living location.

c. Proposals for CY 2024 and Subsequent Years

Over the past several months, CMS has engaged in an in-depth analysis of the use of HCPCS billing code M0201, which specifically indicates that a COVID-19 vaccine was furnished in the home on a Medicare claim. The analysis found that data for in-home COVID-19 vaccinations among Medicare fee-for-service beneficiaries from June 2021 to June 2022 show the payment code was used at a disproportionately high rate by underserved populations, including persons who are dual eligible for both Medicare and Medicaid and those of advanced age. The data reflect that, between June 2021-June 2022, those 85 years of age and older were over 3 times more likely than younger beneficiaries to have received an in-home COVID-19 vaccination, and persons who are dual eligible for both Medicare and Medicaid were over 2 times more likely than those who are not dual eligible to have received a COVID-19 vaccine

²³⁴ 42 CFR 409.42(a).

provided in their home. The data also showed higher usage of the in-home payment code among those with some common chronic conditions.²³⁵

In light of the results of our study, we concluded that the in-home additional payment improved healthcare access to vaccines for these often-underserved Medicare populations. From an analysis of the data, it is clear that the in-home additional payment is being billed significantly more frequently for beneficiaries that are harder to reach and that may be less likely to otherwise receive these preventive benefits. Therefore, we propose to maintain the in-home additional payment for COVID-19 vaccine administration under the Part B preventive vaccine benefit. In addition, since our statutory authority at section 1861(s)(10) of the Act to regulate Part B preventive vaccine administration is identical for all four preventive vaccines, and since the payment has been shown to positively impact health equity and healthcare access, we propose to extend the additional payment to the administration of the other three preventive vaccines included in the Part B preventive vaccine benefit – the pneumococcal, influenza, and hepatitis B vaccines. We propose to provide the additional payment for pneumococcal, influenza, hepatitis B and COVID-19 vaccine administrations in the home, when the conditions described in section III.H.3.b of this proposed rule are met. We note that several of the conditions we established for the in-home additional payment, discussed previously in this section of the proposed rule, refer specifically to COVID-19. If we finalize the proposal to expand the in-home additional payment to the other preventive vaccines, we would broaden the conditions for the payment to reflect preventive vaccines for the other diseases.

Further, since expanding this policy could mean that multiple vaccines are administered during the same visit to the home, we propose to limit the additional payment to one payment per home visit, even if multiple vaccines are administered during the same home visit. We

²³⁵ Common chronic conditions as identified by the CMS Chronic Conditions Data Warehouse, <https://www2.ccwdata.org/web/guest/home/>.

emphasize that every vaccine dose that is furnished would still receive its own unique vaccine administration payment. We intend to continue to monitor utilization of the M0201 billing code for the in-home additional payment, and we plan to revisit the policy should we observe inappropriate use or abuse of the code. We propose to modify the regulations at § 410.152(h) to reflect these policies.

We seek comment on the policy condition mentioned in section III.H.3.b of this proposed rule regarding Medicare payment of the in-home additional payment amount for up to a maximum of 5 vaccine administration services per home unit or communal space within a single group living location, but only when fewer than 10 Medicare patients receive a COVID-19 vaccine dose on the same day at the same group living location. We invite feedback on the applicability of this policy to the proposed policy to make the in-home additional payment available for the administration of all four Part B preventive vaccines.

If finalized as proposed, the in-home additional payment for the administration of pneumococcal, influenza, and hepatitis B vaccines would be effective January 1, 2024, to join the current additional payment for the in-home administration of COVID-19 vaccines that is now being extended. That is, providers and suppliers would continue to bill Medicare Part B for the additional payment for the in-home administration of COVID-19 vaccines, and beginning January 1, 2024, they would also be able to bill Medicare Part B for the in-home administration of pneumococcal, influenza, and hepatitis B vaccines. In addition, like the current in-home additional payment for COVID-19 vaccine administration, the proposed in-home additional payment for the administration of Part B preventive vaccines that would be effective beginning for CY 2024, if finalized, would be geographically adjusted based on the PFS GAF, and annually updated by the CY 2024 MEI percentage increase. For CY 2024, the proposed growth rate of the 2017-based MEI is estimated to be 4.5 percent, based on the IHS Global, Inc. (IGI) first quarter 2023 forecast with historical data through fourth quarter 2022. Therefore, we would multiply the

CY 2023 in-home additional payment amount for Part B preventive vaccine administration of \$36.85 by the proposed CY 2024 percentage increase in the MEI of 4.5 percent, which would result in a proposed CY 2024 in-home additional payment for Part B preventive vaccine administration of \$38.51 ($\$36.85 \times 1.045 = \38.51). We are also proposing that if more recent data are subsequently available (for example, a more recent estimate of the MEI percentage increase), we would use such data, if appropriate, to determine the CY 2024 MEI percentage increase in the CY 2024 PFS final rule; we would apply that new MEI percentage increase to update last year's \$36.85 CY 2023 in-home additional payment amount for Part B preventive vaccine administration.

Therefore, in this proposed rule, we propose to amend the Part B payment for preventive vaccine administration regulations at § 410.152(h) to reflect the following:

- Effective January 1, 2022, the Medicare Part B additional payment amount paid to providers and suppliers administering a COVID-19 vaccine in the home, under certain circumstances, is \$35.50. For COVID-19 vaccines administered in the home January 1, 2022 through December 31, 2022, the additional payment amount under Medicare Part B is adjusted to reflect geographic cost variations using the PFS GPCIs.

- Effective January 1, 2023, the additional payment amount for the administration of a COVID-19 vaccine in the home is annually updated based upon the percentage change in the MEI. For COVID-19 vaccines administered in the home January 1, 2023 through December 31, 2023, the payment amount is adjusted to reflect geographic cost variations using the PFS GAF.

- Effective January 1, 2024, the payment policy allowing for additional payment for the administration of a COVID-19 vaccine in the home would be extended to include the other three preventive vaccines included in the Part B preventive vaccine benefit, and the payment amount for all four vaccines would be identical. That is, beginning January 1, 2024, the Medicare Part B will pay the same additional payment amount to providers and suppliers that administer a

pneumococcal, influenza, hepatitis B, or COVID-19 vaccine in the home, under certain circumstances. This additional payment amount would be annually updated using the percentage increase in the MEI and adjusted to reflect geographic cost variations using the PFS GAF.

We solicit comment on these proposals and the proposed amendments to the regulation text.

4. Other Amendments to Regulation Text

In CY 2023 PFS final rule (87 FR 69987 through 69993), we finalized changes to our policies regarding Part B coverage and payment for COVID-19 monoclonal antibody products and their administration. In that final rule (87 FR 69987), we discussed that all COVID-19 monoclonal antibody products and their administration are covered and paid for under the Part B preventive vaccine benefit through the end of year in which the Secretary terminates the EUA declaration for drugs and biological products with respect to COVID-19. In addition, we explained that, under the authority provided by section 3713 of the CARES Act, we have established specific coding and payment rates for the COVID-19 vaccine, as well COVID-19 monoclonal antibodies and their administration, through technical direction to Medicare Administrative Contractors (MACs) and information posted publicly on the CMS website (87 FR 69987). At 87 FR 69983, we listed the unique payments rates for the administration of COVID-19 monoclonal antibodies in Table 85. We note that at the time of the publication of this proposed rule, there are no COVID-19 monoclonal antibodies approved or authorized for use against the dominant strains of COVID-19 in the United States.

In the CY 2023 PFS final rule, we also established a policy to continue coverage and payment for monoclonal antibodies that are used for pre-exposure prophylaxis (PreP) of COVID-19 under the Part B preventive vaccine benefit, if they meet applicable coverage requirements (87 FR 69992). We explained that we would continue to pay for these products and their administration even after the EUA declaration for drugs and biological products is terminated, so

long as after the EUA declaration is terminated, such products have market authorization.

Additionally, we established that payments for the administration of monoclonal antibodies that are used for PreP of COVID-19 would be adjusted for geographic cost variations using the PFS GAF. However, we did not codify these policies in our regulations. We now propose revisions to the relevant regulations to include monoclonal antibodies that are used for PreP of COVID-19 under the Part B preventive vaccine benefit. Specifically, we propose to revise the following regulations to reflect policies for monoclonal antibodies for PreP of COVID-19 that we finalized in the CY 2023 PFS final rule:

- At § 410.10, in paragraph (l), we propose to add a phrase regarding monoclonal antibodies used for pre-exposure prophylaxis of COVID-19, and their administration.
- At § 410.57, in paragraph (c), we propose to add a phrase regarding monoclonal antibodies used for pre-exposure prophylaxis of COVID-19, and their administration.

We note again that at the time of the publication of this proposed rule, there are no COVID-19 monoclonal antibodies approved or authorized for use against the dominant strains of COVID-19 in the United States. Therefore, we are not proposing any payment regulations regarding monoclonal antibodies for PreP of COVID-19 at this time. If and when a new monoclonal antibody for PreP of COVID-19 becomes authorized for use, we would use the authority provided by section 3713 of the CARES Act, as discussed in the CY 2023 PFS Final Rule (87 FR 69987), to establish specific coding and payment rates for the administration of that product through technical direction to MACs and information posted publicly on the CMS website. We would subsequently propose coding and payment rates for the administration of that product via rulemaking.

We also note that, for the purposes of the in-home additional payment discussed above in section III.H.3.c. of this proposed rule, that additional payment is not applicable to the administration of monoclonal antibodies for PreP of COVID-19. With regard to monoclonal

antibodies for PreP of COVID-19, as displayed in Table 85 of the CY2023 PFS final rule (87 FR 69983), we set the coding and payment rates for the administration of COVID-19 monoclonal antibodies in the home to be higher than those in other health care settings, and therefore such amounts already account for the higher costs of administering the product in the home. More information on our coding and payment policies for COVID-19 monoclonal antibodies is available at <https://www.cms.gov/monoclonal>.

Also, in the CY 2023 PFS final rule, we codified our payment rates for all four Part B preventive vaccines, and we finalized that the vaccine administration payment rates for all four Part B preventive vaccines would be annually updated by the MEI and geographically adjusted by the PFS GAF. We included these policies in regulation text at § 410.152(h). However, we neglected to include the effective date for the MEI policy in the regulation text. We are proposing the following correction, and we are reorganizing other elements of the regulation text at § 410.152(h) as we codify the in-home additional payment:

- At § 410.152, at paragraph (h)(5), we propose to add that the paragraph is effective beginning January 1, 2023.
- At § 410.152, we propose to combine the existing paragraph (h)(2) and (h)(3) into a new paragraph (h)(2), with subparagraphs (h)(2)(i) and (h)(2)(ii)
- At § 410.152, at a revised paragraph (h)(3), we propose new regulations regarding the in-home additional payment for preventive vaccine administration, as described in this section of the proposed rule in section III.H.3.c.

I. Medicare Diabetes Prevention Program (MDPP)

The Centers for Medicare & Medicaid Services' (CMS) Medicare Diabetes Prevention Program Expanded Model (hereafter, "MDPP" or "expanded model") is an evidence-based behavioral intervention that aims to prevent or delay the onset of type 2 diabetes for eligible Medicare beneficiaries diagnosed with prediabetes. MDPP is an expansion in duration and scope

of the Diabetes Prevention Program (DPP) model test, which was initially tested by CMS through a Round One Health Care Innovation Award (2012-2016). MDPP was established in 2017 as an “additional preventive service” covered by Medicare and not subject to beneficiary cost-sharing, in addition to being available once per lifetime to eligible beneficiaries. To facilitate delivery of MDPP in a non-clinical community setting (to align with the certified DPP model test) by non-clinical providers, CMS created through rulemaking in the CY 2017 PFS final rule, a new MDPP supplier type, in addition to requiring organizations that wish to participate in MDPP enroll in Medicare separately, even if they are already enrolled in Medicare for other purposes.

MDPP is a non-pharmacological behavioral intervention consisting of no fewer than 22 intensive sessions using a Centers for Disease Control and Prevention (CDC) approved National Diabetes Prevention Program (National DPP) curriculum. Sessions are furnished over 12 months by a trained Coach who provides training on topics that include long-term dietary change, increased physical activity, and behavior change strategies for weight control and diabetes risk reduction. Suppliers may use the CDC-developed PreventT2 curriculum²³⁶ or an alternate CDC-approved curriculum when delivering MDPP. The primary goal of the expanded model is to help Medicare beneficiaries reduce their risk for developing type 2 diabetes by achieving at least 5 percent weight loss.

Eligible organizations seeking to furnish MDPP began enrolling in Medicare as MDPP suppliers on January 1, 2018 and began furnishing MDPP on April 1, 2018. Through the National DPP Diabetes Prevention Recognition Program (DPRP), the CDC administers a national quality assurance program recognizing eligible organizations that furnish the National DPP through its evidence-based DPRP Standards,²³⁷ which are updated every 3 years. The CDC

²³⁶ <https://www.cdc.gov/diabetes/prevention/resources/curriculum.html>.

²³⁷ Centers for Disease Control & Prevention Diabetes Prevention Recognition Program: Standards and Operating Procedures. May 1, 2021. <https://www.cdc.gov/diabetes/prevention/pdf/dprp-standards.pdf>.

established the DPRP in 2012 and possesses significant experience assessing the quality of program delivery by organizations throughout the United States, applying a comprehensive set of national quality standards. For further information on the DPP model test, the CDC’s National DPP, and DPRP Standards, please refer to the CY 2017²³⁸ and CY 2018 PFS²³⁹ final rules and the following websites: <https://Innovation.cms.gov/initiatives/Health-Care-Innovation-Awards/>; <https://www.cdc.gov/diabetes/prevention/index.html>; and <https://www.cdc.gov/diabetes/prevention/pdf/dprp-standards.pdf>.

We are proposing to amend § 410.79(b) to remove the definition for the core maintenance session interval while adding definitions for the following terms: Combination delivery, Distance learning, Extended flexibilities, Extended flexibilities period, Full-Plus CDC DPRP recognition, Online delivery, and Virtual sessions. In addition, we propose to amend § 410.79(c)(2)(i)(A) and (B) to update the maximum number of payable sessions during the MDPP core services period. We also propose to amend § 410.79(e)(2) to extend certain flexibilities established through rulemaking as a result of the recent COVID-19 public health emergency (PHE) for a period of 4 years. Furthermore, we propose to amend § 414.84 to streamline the MDPP payment structure by adding service-based attendance payments, while still retaining the diabetes risk reduction performance payments for 5 percent and 9 percent weight loss. We also propose to amend § 424.205(a) and (c) to remove “MDPP interim preliminary recognition” and replace it with “CDC preliminary recognition”.

1. Proposed Changes to § 410.79 by amending paragraphs (b), (c)(2)(i) and (e)(2)

The MDPP expanded model was implemented through the rulemaking process in two phases in the CY 2017 PFS final rule²⁴⁰ and in the CY 2018 PFS final rule²⁴¹. Through this proposed rule, we are proposing to amend the MDPP expanded model to revise certain MDPP policies adopted through previous rulemaking. We are proposing to amend § 410.79(b) to remove the definition for the core maintenance session interval while adding definitions for Combination delivery, Distance learning and Online delivery modalities, among other definitions. The core maintenance session interval, as defined in the CY 2018 PFS, means one of the two consecutive 3-month time periods during months 7 through 12 of the MDPP services period, during which an MDPP supplier offers an MDPP beneficiary at least one core maintenance session per month. The core maintenance session interval represents a performance interval for attendance-based payments in the current payment structure. Given that we are proposing that beneficiary attendance be paid on a fee-for-service basis, we propose removing the core maintenance session interval to make the payment structure less confusing.

In prior rulemaking, we did not formally define the MDPP delivery modalities that are considered virtual. In this proposed rule, we propose adding definitions for distance learning and online delivery modalities in § 410.79(b) to better clarify which virtual modalities can be used in the proposed Extended flexibilities period.

We are also proposing to modify the definitions for Make-up session, MDPP services period, and MDPP session as defined in § 410.79(b) to remove most references to ongoing maintenance sessions. In the CY 2022 PFS, we removed eligibility for the Ongoing Maintenance Sessions for those beneficiaries who started the Set of MDPP services on or after January 1, 2022. Given that the 2-year MDPP services period for those beneficiaries who started

²⁴⁰ <https://www.govinfo.gov/content/pkg/FR-2016-11-15/pdf/2016-26668.pdf>.

²⁴¹ <https://www.govinfo.gov/content/pkg/FR-2017-11-15/pdf/2017-23953.pdf>.

MDPP on or before December 31, 2022 will end on or before December 30, 2024, eligibility for ongoing maintenance services will end December 31, 2023 for all beneficiaries.

The core services period, as defined in § 410.79(c)(2)(i)(A) and (B), consists of at least 16 core sessions offered at least one week apart during the months 1 through 6 of the MDPP services period, and two 3-month core maintenance session intervals offered during months 7 through 12 of the MDPP services period. In order to conform to the proposed revisions to the payment structure in § 414.84, we are proposing to amend the expanded model regulations to allow for fee-for-service payments for beneficiary attendance during the core services period.

MDPP's performance-based payment structure was established in the CY 2018 PFS to pay for the Set of MDPP services that makes up the periodic performance payments to MDPP suppliers during the MDPP services period. The aggregate of all MDPP performance payments constitutes the total performance-based payment amount for the Set of MDPP services. Although beneficiaries may currently attend at least 16 weekly sessions in months 1-6 and at least 6 monthly sessions in months 7-12, MDPP suppliers are only paid five times for beneficiary attendance: after a beneficiary attends the 1st, 4th and 9th sessions in months 1-6, and after attending the second core maintenance session in months 7-9 and in months 10-12.

Since this payment structure went into effect in 2018, we received feedback from suppliers and interested parties that the MDPP performance-based payment structure is confusing to suppliers, including those new to Medicare and existing Medicare-enrolled suppliers. Confusion with claims submission has been due in part to the MDPP payment structure, which pays for attendance and diabetes risk-reduction performance-based milestones instead of paying for an individual service. Paying for an individual service delivery is typical in Medicare. Public comments in response to the CY 2018 PFS proposed rule have indicated that CMS should modify its payment structure such that it allows for an adequate and predictable payment stream to cover the cost of providing services as long as beneficiaries attend sessions.

After 5 years of testing the current performance-based payment structure, we have determined that the attendance-based performance payments are not working. For example, there are currently five attendance-based performance payments over the 12-month MDPP service period, with a potential 4 to 5-month lag between the third payment and the fourth payment. Our monitoring data show that attendance sharply drops after the first quarter of the expanded model, which is likely after the 9th weekly session has been attended. We believe that our current payment structure does not incentivize beneficiary retention. As a result, we are proposing fee-for-service payments for beneficiary attendance, allowing for up to 22 attendance-based payments versus the five that are currently in place. Thus, we propose allowing beneficiaries to attend a maximum of 22 sessions during the core services period, including up to 16 sessions in months 1-6 and up to 6 sessions in months 7-12.

We are proposing to amend the MDPP expanded model to revise certain MDPP policies finalized in the CY 2021 PFS final rule. We are proposing to extend the flexibilities allowed under the COVID-19 Public Health Emergency for a period of 4 years until December 31, 2027. These Extended flexibilities are described in § 410.79(e)(3)(iii), and (iv) of this paragraph. The MDPP regulations provide for the following flexibilities during the PHE or an applicable 1135 waiver event:

- *Alternatives to the requirement for in-person weight measurement (§410.79(e)(3)(iii)).*

Section 410.79(e)(3)(iii) permits an MDPP supplier to obtain weight measurements for MDPP beneficiaries for the baseline weight and any weight loss-based performance achievement goals in the following manner: (1) via digital technology, such as scales that transmit weights securely via wireless or cellular transmission; or (2) via self-reported weight measurements from the at-home digital scale of the MDPP beneficiary. We stated that self-reported weights must be obtained during live, synchronous online video technology, such as video chatting or video conferencing, wherein the MDPP Coach observes the beneficiary weighing themselves and

views the weight indicated on the at-home digital scale. Alternatively, the MDPP beneficiary may self-report their weight by submitting to the MDPP supplier a date-stamped photo or video recording of the beneficiary's weight, with the beneficiary visible in their home. The photo or video must clearly document the weight of the MDPP beneficiary as it appears on the digital scale on the date associated with the billable MDPP session. This flexibility allows suppliers to bill for participants achieving weight loss performance goals.

- *Elimination of the maximum number of virtual services (§ 410.79(e)(3)(iv))*: The virtual session limits described in § 410.79 (d)(2), and (d)(3)(i) and (ii) do not apply, and MDPP suppliers may provide all MDPP sessions virtually during the PHE as defined in § 400.200 of this chapter or applicable 1135 waiver event. MDPP suppliers were permitted to provide the Set of MDPP services virtually during the COVID-19 PHE, as long as the virtual services are furnished in a manner that is consistent with the CDC DPRP standards for virtual sessions, follow the CDC-approved National DPP curriculum requirements, and the supplier has an in-person DPRP organizational code.

We are proposing that during the Extended flexibilities period, MDPP suppliers may provide virtual services as long as they are provided in a manner consistent with the CDC DPRP standards for distance learning. The proposed extension of these flexibilities under § 410.79(e)(3)(v) will allow beneficiaries to obtain the Set of MDPP services either in-person, through distance learning, or through a combination of in-person and distance learning for a proposed period of 4 years.

In the May 2, 2023 **Federal Register** (88 FR 27413), we published a notice extending COVID-19 PHE flexibilities for MDPP suppliers, providing them the opportunity to deliver the Set of MDPP services either virtually or in-person (or a combination of both) from May 12, 2023 through December 31, 2023. As a result, MDPP suppliers can continue delivering the Set of MDPP services on a virtual basis during this period to allow MDPP suppliers additional time to

resume in-person services. For more information on the **Federal Register** Notice, please see <https://www.federalregister.gov/d/2023-09188>. For more information on the flexibilities that MDPP suppliers were permitted to implement during the PHE, please see <https://www.cms.gov/files/document/participants-medicare-diabetes-prevention-program-cms-flexibilities-fight-covid-19.pdf>.

The CDC’s 2021 DPRP Standards allow two types of virtual delivery modalities: “Distance learning” and “online” delivery. According to CDC, *Distance learning* involves “a yearlong National DPP lifestyle change program delivered 100 percent by trained Lifestyle Coaches via remote classroom or telehealth. The Lifestyle Coach provides live (synchronous) delivery of session content in one location and participants call-in or video-conference from another location.” Although “telehealth” is included in CDC’s definition of distance learning, CMS stated in the CY 2017 PFS final rule (82 FR 52976) that MDPP services delivered via a telecommunications system or other remote technologies do not qualify as telehealth services.²⁴²

Additionally, CDC defines *online* delivery as a yearlong National DPP lifestyle change program delivered online for all participants. One hundred percent of the program is experienced through the Internet via phone, tablet, laptop, in an asynchronous classroom where participants are experiencing the content on their own time without a live Lifestyle Coach teaching the content. However, live Lifestyle Coach interaction should be provided to each participant no less than once per week during the first 6 months and once per month during the second 6 months. E-mails and text messages can count toward the requirement for live coach interaction as long as there is bi-directional communication between coach and participant.²⁴³

Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2017; Medicare Advantage Pricing Data Release; Medicare Advantage and Part D Medical Low Ratio Data Release; Medicare Advantage Provider Network Requirements; Expansion of Medicare Diabetes Prevention Program Model. 82 FR 52976, November 15, 2017. <https://www.govinfo.gov/content/pkg/FR-2017-11-15/pdf/2017-23953.pdf>.

²⁴³Centers for Disease Control & Prevention Diabetes Prevention Recognition Program: Standards and Operating Procedures. May 1, 2021. <https://www.cdc.gov/diabetes/prevention/pdf/dprp-standards.pdf>.

In the CY 2021 PFS final rule (85 FR 84472),²⁴⁴ we established that virtual sessions performed under flexibilities finalized in that rule could only be performed by suppliers who offered in-person services. For the proposed Extended flexibilities period, CMS proposes to limit virtual delivery to the CDC DPRP definition of “distance learning.” This proposal is based on the data we have obtained to date from the PHE, including anecdotal, monitoring, evaluation, claims, and CDC DPRP data, suggesting that the majority of the MDPP virtual sessions delivered during the COVID-19 PHE 1135 waiver event were distance learning sessions.

MDPP was certified and established as an in-person service. However, in response to the COVID-19 PHE, we established and implemented policies that allowed MDPP suppliers to provide MDPP services virtually during the PHE, as long as the virtual services: were furnished in a manner that is consistent with the CDC DPRP standards for virtual sessions, the curriculum furnished during the virtual sessions addressed the same curriculum topics as the CDC-approved National DPP curriculum, the supplier had an in-person DPRP organizational code, and other requirements specified at § 410.79(e)(3)(iv) were satisfied. We believe that distance learning allows for a similar live group experience for beneficiaries, but delivered only in a synchronous virtual manner through telephonic or video conference. Through utilizing distance learning, participants may still interact with their Coach and other participants in their cohort in real-time, allowing for relationship building and peer support, unlike online delivery which is delivered asynchronously. Therefore, the proposed Extended flexibilities do not include online delivery

²⁴⁴ Centers for Medicare & Medicaid Services. Medicare Program; CY 2021 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment Policies; Medicare Shared Savings Program Requirements; Medicaid Promoting Interoperability Program Requirements for Eligible Professionals; Quality Payment Program; Coverage of Opioid Use Disorder Services Furnished by Opioid Treatment Programs; Medicare Enrollment of Opioid Treatment Programs; Electronic Prescribing for Controlled Substances for a Covered Part D Drug; Payment for Office/Outpatient Evaluation and Management Services; Hospital IQR Program; Establish New Code Categories; Medicare Diabetes Prevention Program (MDPP) Expanded Model Emergency Policy; Coding and Payment for Virtual Check-in Services Interim Final Rule Policy; Coding and Payment for Personal Protective Equipment (PPE) Interim Final Rule Policy; Regulatory Revisions in Response to the Public Health Emergency (PHE) for COVID-19; and Finalization of Certain Provisions from the March 31st, May 8th and September 2nd Interim Final Rules in Response to the PHE for COVID-19. (85 FR 84472), December 28, 2020. <https://www.federalregister.gov/d/2020-26815>.

(or asynchronous virtual), as defined in the CDC DPRP Standards through the “online” modality, including virtual make-up sessions.

We previously stated that the MDPP expanded model was certified for expansion by the Chief Actuary of CMS, based on a model test that used in-person delivery. Given the 3-year duration of the COVID-19 PHE and the feedback received from MDPP suppliers, beneficiaries, MA plans, interested parties, and comments submitted during the CY 2022 rulemaking, there is interest in extending the flexibilities offered during the PHE to reduce the burden of traveling to an in-person class on a weekly basis, as beneficiaries experienced transportation as well as child/elder care challenges with in-person delivery. Additionally, we have heard interest in a hybrid or combination delivery option where participants could attend some in-person classes as well as virtual classes. As a result of this feedback, we are proposing to extend the flexibilities allowed under § 410.79(e)(3)(iii) (regarding use of alternative methods for obtaining weight measurements during virtual services) and § 410.79(e)(3)(iv) (regarding elimination of the maximum number of virtual services) for 4 years, to give us time to test and evaluate the distance learning delivery of MDPP.

Since MDPP was established in the CY 2017 PFS final rule, CMS and interested parties have considered whether fully virtual services could be included as part of the expanded model. For example, in the CY 2017 PFS proposed rule, CMS proposed that MDPP suppliers be allowed to provide MDPP services via remote technologies, even though the majority of CDC DPRP organizations provided in-person delivery at that time.²⁴⁵ However, we also recognized that the virtual delivery of the Set of MDPP services may introduce additional risk of fraud and abuse. CMS stated that if that provision was to be finalized, we would propose specific policies

²⁴⁵ Centers for Medicare & Medicaid Services. Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2017; Medicare Advantage Pricing Data Release; Medicare Advantage and Part D Medical Low Ratio Data Release; Medicare Advantage Provider Network Requirements; Expansion of Medicare Diabetes Prevention Program Model. **Federal Register**, 81(136): July 15, 2016. <https://www.govinfo.gov/content/pkg/FR-2016-07-15/pdf/2016-16097.pdf>.

in future rulemaking to mitigate these risks. In the CY 2017 PFS final rule (81 FR 80459), CMS deferred establishing policies related to organizations delivering the Set of MDPP services virtually.

In the subsequent CY 2018 PFS proposed rule, we explained our rationale for proposing not to allow fully virtual delivery of MDPP, but did propose to allow, consistent with CDC DPRP Standards, a limited number of virtual make-up sessions for participants who missed a regularly scheduled session. “Virtual make-up session” was defined in § 410.79(d)(2) as a make-up session that is not furnished in-person and that is furnished in a manner consistent with the requirements in paragraph § 410.79(d)(1). In the CY 2018 PFS final rule, we finalized that the Set of MDPP services would be primarily delivered in-person, in a classroom-based setting, and within an established timeline.

We prioritized establishing a service that, when delivered within this framework, would create the least risk of fraud, waste, and abuse, increase the likelihood of success for beneficiaries, and maintain the integrity of data. Furthermore, we believed at that time that in-person administration of beneficiaries’ weight measurements was the most reliable and appropriate approach to monitoring beneficiary-level progress toward the 5 percent weight loss programmatic goal.

However, circumstances have changed since the start of the expanded model. We have received comments from interested parties in response to the CY 2018 PFS proposed rule and thereafter regarding increasing the limited virtual delivery of MDPP. Commenters noted that increased virtual options could expand access to MDPP for beneficiaries in rural areas, beneficiaries who are homebound or who lack transportation options, as well as increase beneficiary choice of delivery modality and flexibility of location. Commenters also noted that virtual National DPP delivery has been successful in reaching beneficiaries in certain locations.

Ultimately, we finalized our policy that suppliers could offer no more than four virtual makeup sessions during months 1-6 and two virtual makeup sessions during months 7-12.

On March 13, 2020, less than 2 years after MDPP went into effect, COVID-19 was declared a national emergency by Proclamation 9994.²⁴⁶ By mid-March 2020, MDPP suppliers were largely unable to deliver in-person classes due to national and local restrictions resulting from the national emergency. On April 6, 2020, CMS established MDPP PHE-related flexibilities in the first Interim Final Rule with Comment (IFC-1),²⁴⁷ to allow for temporary flexibilities that prioritized availability and continuity of services for MDPP suppliers and MDPP beneficiaries impacted by extreme and uncontrollable circumstances during the COVID-19 PHE. These flexibilities allowed an unlimited number of virtual sessions, waived the once-per-lifetime limit for those participating in MDPP when the PHE started, and waived the 5 percent weight loss requirement to continue with ongoing maintenance sessions.

However, we did not waive the requirement for in-person weigh-ins at that time, leaving suppliers unable to obtain the 5 percent weight loss performance payment given the local and State restrictions and stay-at-home orders during the initial months of the PHE. This prevented suppliers from collecting an in-person weight from beneficiaries at each MDPP session as described in § 424.205(g)(2)(v) to document the 5 percent weight loss.

In the CY 2021 PFS final rule, we finalized the MDPP Emergency Policy and updated the PHE flexibilities established in the IFC-1 in the following ways: allowing for virtual weigh-ins and new cohorts to begin virtually; reinstating the 5 percent weight loss requirement during an 1135 waiver event; and reinstating the once-per-lifetime limit during an 1135 waiver event

²⁴⁷ Centers for Medicare & Medicaid Services, HHS. Medicare and Medicaid Programs; Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency. (85 FR 19230, Monday, April 6, 2020) [https://www.federalregister.gov/documents/2020/04/06/2020-06990/medicare-and-medicaid-programs-policy-and-regulatory-revisions-in-response-to-the-covid-19-public.](https://www.federalregister.gov/documents/2020/04/06/2020-06990/medicare-and-medicaid-programs-policy-and-regulatory-revisions-in-response-to-the-covid-19-public)

starting with beneficiaries who started the Set of MDPP services in 2021 or thereafter. These changes sought to address interruptions in services caused by CMS not waiving the in-person weigh-in in IFC-1, which prevented MDPP suppliers from starting new cohorts and getting reimbursed for participants who achieved and maintained the 5 percent weight loss goals. Additionally, beneficiaries who began sessions on or before December 31, 2020, were able to re-start MDPP sessions at a later date. Similarly, we allowed suppliers to pause, then resume MDPP sessions at a later date.

During the COVID-19 PHE, we allowed full virtual delivery of MDPP. In making that policy change in the CY 2021 PFS final rule, we stated that “Because MDPP services are covered under Medicare only when they are furnished at least in-part in-person, a supplier that does not have an organizational code authorizing in-person services (“virtual-only suppliers”) may not provide MDPP services, either virtually or in-person.” We indicated that it is not appropriate to permit virtual-only suppliers, such as suppliers with CDC DPRP recognition in the distance learning, online, or combination only modalities, to furnish MDPP services when the Emergency Policy is in effect. This is due to the requirement that MDPP suppliers remain prepared to resume in-person delivery of the Set of MDPP services to start new cohorts and to serve beneficiaries who wish to return to in-person services when the Emergency Policy is no longer in effect.

As stated earlier, we propose to extend the flexibilities allowed during the COVID-19 PHE under § 410.79(e)(3)(iii), and (iv) for 4 years, or through December 31, 2027. We are proposing that the Extended flexibilities under § 410.79(e)(3)(iii) and (iv) continue to apply only to MDPP suppliers that have and maintain CDC DPRP in-person recognition. We recognize that organizations and interested parties may be disappointed that we are not proposing to allow organizations with CDC recognition in distance learning delivery modalities to participate in MDPP unless they also have and maintain their in-person CDC recognition. In the

CY 2021 PFS final rule, we stated that virtual only suppliers are not permitted to provide the Set of MDPP services because MDPP beneficiaries may elect to return to in-person services after the PHE for COVID-19 or other applicable 1135 waiver event ends, and MDPP suppliers need to be able to accommodate their request.

MDPP was established as an in-person service since the original DPP test and data used in the certification were based on in-person delivery. During the COVID-19 PHE, we were able to allow greater use of virtual sessions, but the virtual delivery was primarily furnished as a virtual classroom. We are also proposing that suppliers may offer a combination delivery of MDPP, including both in-person and distance learning. We believe that after almost 4 years of having the option to deliver the Set of MDPP services through distance learning, between the COVID-19 PHE and the **Federal Register** Notice to extend the PHE flexibilities through December 31, 2023, allowing MDPP suppliers to have the option to continue delivering the Set of MDPP services in the same manner will be the least disruptive to both suppliers and beneficiaries. We are also proposing that MDPP suppliers may no longer suspend the Set of MDPP services as described in paragraph (e)(3)(v) in this section on or after January 1, 2024. We believe we have given MDPP suppliers ample time, through the **Federal Register** Notice to extend the PHE flexibilities through December 31, 2023, to adequately prepare to resume MDPP services from an operational perspective.

Furthermore, we also believe that our proposal to extend the PHE flexibilities for 4 years, or through December 31, 2027, will make MDPP more equitable and accessible for all eligible beneficiaries by providing both suppliers and beneficiaries more flexibility in how the Set of MDPP services are delivered, including in-person, distance learning, or a combination of in-person and distance learning. For an example, allowing virtual sessions will make MDPP more accessible to beneficiaries who reside in rural communities and who may have transportation and other barriers to attending in-person classes. We anticipate that the combination of a simplified

payment structure in addition to more flexibilities regarding how MDPP is delivered will encourage more organizations to engage in and deliver MDPP, making MDPP more accessible to more beneficiaries.

Additionally, extending the COVID-19 PHE flexibilities for 4 years would provide CMS an opportunity to evaluate the impact of the Extended flexibilities over a longer period of time. To better track the use of distance learning through claims, we are proposing the creation of a new HCPCS G-code specific to “distance learning,” that will more accurately track sites from which distance learning occurs, the number of MDPP sessions delivered by distance learning, monitor the expanded model for fraud, waste, or abuse, and evaluate the impact of distance learning and in-person delivery modalities of MDPP relative to cost-savings and diabetes risk reduction among participants.

In previous rulemaking, we received comments about how to best monitor the use of virtual make-up sessions, and whether CMS would use an additional HCPCS code or modifier to indicate virtual sessions since there was a limit to the number of virtual make-up sessions a beneficiary can attend.²⁴⁸ In response, we finalized the use of the virtual make-up sessions in § 410.79(d)(2) and stated that MDPP suppliers must include the virtual modifier (VM) on claims to indicate the use of the virtual make-up session. As part of the MDPP flexibilities established in response to the COVID-19 PHE, we eliminated the maximum number of virtual make-up sessions that could be delivered by MDPP suppliers, described in § 410.79(d)(2) and (d)(3)(i) and (ii), but still required MDPP suppliers to use the VM to indicate when a beneficiary received MDPP virtually.

²⁴⁸ Centers for Medicare & Medicaid Services. Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2017; Medicare Advantage Pricing Data Release; Medicare Advantage and Part D Medical Low Ratio Data Release; Medicare Advantage Provider Network Requirements; Expansion of Medicare Diabetes Prevention Program Model. 82 FR 52976, November 15, 2017. <https://www.govinfo.gov/content/pkg/FR-2017-11-15/pdf/2017-23953.pdf>.

Given the inconsistent use of the virtual modifier as it was described in the CY 2018 PFS final rule to document the virtual make-up sessions allowed during the PHE as described in § 410.79(e)(2)(iii), we propose to add a HCPCS code for distance learning to better track the synchronous virtual delivery of the Set of MDPP services to be used instead of the VM when submitting MDPP claims, including claims for make-up sessions since we are not permitting online (asynchronous virtual) delivery of the Set of MDPP services. At this time, we are not proposing to remove use of the VM entirely in-case we need it in future rulemaking, for example, should we allow online make-up sessions in future rulemaking.

MDPP supplier locations have traditionally clustered proximate to large metropolitan areas, leaving significant gaps throughout rural communities. Given that the MDPP curriculum consists of no fewer than 16 weekly sessions in months 1-6, and 6 monthly sessions in months 7-12 months, the participation commitment may pose significant challenges to beneficiaries with limited mobility or access to reliable transportation. Based on findings from the 2nd evaluation report of the MDPP expanded model²⁴⁹, we believe that in-person requirements have contributed to significant MDPP under-utilization, not only for those who reside in rural communities, but also populations that experience excessive diabetes related disparities, including populations of color, low-income beneficiaries, those living in Tribal and rural communities, and the disabled.

To date, beneficiary uptake of MDPP has been low, with 4,848 beneficiaries participating as of December 31, 2021, and approximately half of those participants were Medicare FFS beneficiaries. White women account for the majority of MDPP participants to date, with the both the National DPP and MDPP having enrolled a similar high proportion of non-Hispanic white women. RTI estimated that 97 percent of participants travel less than 25 miles to attend in-person services, with the average distance to the nearest MDPP supplier location being 5 to 7 miles.

²⁴⁹ RTI International. *Evaluation of the Medicare Diabetes Prevention Program: Second Evaluation Report*. November 2022. <https://innovation.cms.gov/data-and-reports/2022/mdpp-2ndannevalrpt>.

At the time of the second annual evaluation report, which was released in November, 2022 and includes data through December 31, 2021, 39 percent of all Medicare beneficiaries live more than 25 miles from the nearest MDPP location. Extending the PHE flexibilities to allow distance learning will make MDPP more accessible to beneficiaries who live more than 25 miles from the nearest MDPP location or lack transportation.¹⁰

Additionally, the 2nd evaluation report (p. 32) noted that suppliers tried to make MDPP services accessible to Medicare beneficiaries by scheduling sessions at locations that were most convenient to Medicare beneficiaries. It was also noted that while beneficiary engagement and connection tend to be stronger with in-person cohorts, moving to distance learning delivery reduced participant barriers (p. 34). While some suppliers and beneficiaries experienced initial challenges migrating to fully virtual delivery, the report noted an overwhelming support from MDPP suppliers for the continued opportunity to administer MDPP through distance learning or a combination of in-person and synchronous virtual delivery. Therefore, by proposing the use of synchronous virtual delivery as an acceptable modality for MDPP delivery, our goal is to use the Extended Flexibilities period to increase beneficiary access to and uptake of MDPP while demonstrating that the beneficiaries receiving the Set of MDPP services through distance learning experience similar or better outcomes compared to in-person delivery concerning attendance, achievement of the 5 percent weight loss goal, and cost savings.

Through the CY 2018 PFS final rule, we established important MDPP payment policies and program integrity safeguards in order to mitigate the risk of fraud, waste, and abuse in MDPP that included the creation of supplier enrollment requirements and compliance standards. MDPP monitoring activities are performed primarily through an independent monitoring contractor, with referrals sent to CMS for further investigation or enforcement action, as appropriate. We will continue to implement, adapt, and scale the current monitoring strategy for indications of fraud, waste, and abuse for both in-person and the proposed distance learning

modalities. Should we identify excessive indicators of fraud, waste, and/or abuse of the synchronous virtual delivery of the Set of MDPP services during the extended PHE flexibilities period, we may opt to discontinue these flexibilities through subsequent rulemaking.

With these safeguards in-place, we anticipate the proposed programmatic updates will boost supplier enrollment, with the goal of increasing beneficiary participation and retention due to increased access to the Set of MDPP services. Moreover, we believe that extending the PHE flexibilities will especially increase equitable access to diabetes preventive services among rural and at-risk populations. For example, for beneficiaries with transportation challenges or child/elder care obligations, the ability to participate in MDPP through a live virtual classroom, or distance learning, may encourage uptake and retention among those participants. Also, for beneficiaries living in rural areas or regions with a limited number of MDPP suppliers, the distance learning option will allow beneficiaries to enroll in programs further away from their homes, making MDPP accessible to more beneficiaries. Finally, we believe that increased participation in the Set of MDPP services through distance learning may provide data necessary to conduct an impactful evaluation of the synchronous virtual delivery of MDPP.

We propose to amend § 410.79(b), (c), and (d) to remove most references to, and requirements of, the Ongoing Maintenance phase described in these sections. In the CY 2022 PFS, CMS removed eligibility for the Ongoing Maintenance Sessions for those beneficiaries who started the Set of MDPP services on or after January 1, 2022. Eligibility for these services will end December 31, 2023.

We are proposing to amend § 410.79(b), (c)(2)(i) and (e)(2), and seek comment on these proposals.

2. Proposed changes to §414.84

Although MDPP has over 300 suppliers representing over 1,000 locations across the US, based on fee-for-service claims analysis, only one-third of them have submitted claims since

MDPP launched in April 2018. We have heard anecdotally from suppliers, CDC, and interested parties that our payment structure is complex, which has created barriers to organizations wanting to participate in MDPP. As a result, the lack of suppliers has contributed to limited beneficiary access to the preventive services offered under this expanded model. Challenges inherent in the current payment structure include irregular flow of operating funds due to the performance-based payment structure, claims denials due to the complicated payment structure, and a lack of incentive to retain participants after the 9th core session due to the potential 4 to 5-month payment lag between the 9th session attended and the 2nd session attended in months 7-9. Consistent with this last challenge, our monitoring data show a sharp drop in claims after the first quarter.

We propose to update the payment structure from a performance-based attendance and weight loss structure to a hybrid structure that pays for attendance on a fee-for-service basis and diabetes risk reduction (that is, weight loss), on a performance basis. MDPP, as defined in § 410.79(b), consists of up to 16 sessions offered during the core sessions phase (Months 1-6) and 6 monthly maintenance sessions offered during the core maintenance sessions phase (Months 7-12), (collectively the “core sessions phase”). In the current payment structure, suppliers must submit a claim after a participant completes the first, fourth, and ninth sessions during the first 6 months, then following the second core maintenance session in months 7-9 and in months 10-12 in the core maintenance sessions phase. Depending on the timing of the ninth session attended and the second core maintenance session attended by the beneficiary in months 7 to 9, suppliers may have a 4- to 5-month gap between attendance-based performance payments in the current MDPP payment structure.

Given consistent supplier and interested party feedback regarding the complexity of this payment structure and necessary up-front costs incurred by suppliers, we propose to simplify the payment structure and pay for attendance on a fee-for-service basis. We propose creating an

Attendance Payment, which we propose to define as a payment that is made to an MDPP supplier for furnishing services to an MDPP beneficiary when the MDPP beneficiary attends an MDPP core or core maintenance session. We also propose that suppliers may receive an Attendance Payment after they submit a claim for each MDPP session, starting with the first core session, using a new HCPCS G-code, *Behavioral counseling for diabetes prevention, in-person, group, 60 minutes*, or *Behavioral counseling for diabetes prevention, distance learning, 60 minutes*, for MDPP dates of service on or after January 1, 2024.

This proposed payment structure aligns closely to that of similar benefits such as the Intensive Behavioral Counseling for Obesity (IBTO) and Diabetes Self-Management Training (DSMT), and also allows suppliers to receive regular payments for service for up to a year during a 12-month MDPP service period. We propose paying for up to 22 sessions, either in-person or distance learning, or a combination of in-person and distance learning, for MDPP dates of services within a 12-month MDPP services period. In months 1 to 6, payments are allowed for one in-person or distance learning session every week up to a maximum of 16 sessions. During months 7 to 12, payments are allowed for one in-person or distance learning session every month up to a maximum 6 sessions.

We proposing to update the performance goal to mean a weight loss goal that an MDPP beneficiary must achieve during the MDPP services period for an MDPP supplier to be paid a performance payment, and removing the performance-based payments for attendance from the performance goal. We are retaining the diabetes risk-reduction performance payments, which include payments for 5 percent and 9 percent weight loss because we want to continue to pay for outcomes, and the MDPP certification includes a diabetes risk-reduction component (that is, achievement of 5 percent weight loss from baseline). Although we are proposing to remove the attendance-based performance goal and pay for attendance on a fee-for-service basis, we want to continue rewarding suppliers for successful outcomes for beneficiaries (weight loss), and

motivating them to not only retain participants, but also deliver a high-quality program that achieves better outcomes.

As part of the performance payments, MDPP suppliers must still submit a claim when 5 percent weight loss from baseline weight is achieved and will receive a one-time payment for this claim (weight loss G-code). We are proposing to create a new HCPCS G-code, “Maintenance of 5 percent weight loss from baseline, months 7-12” to be submitted along with the monthly session claim for beneficiaries who have met the 5 percent weight loss performance goal, for whom the one-time claim for 5 percent weight loss has been submitted. This maintenance of 5 percent weight loss code replaces the attendance plus 5 percent weight loss HCPCS G-codes, G9878 and G9879, in months 7-12.

The one-time claim for 5 percent weight loss must be submitted prior to submitting a claim for the enhanced payment in months 7 to 12 for maintaining the 5 percent weight loss. Additionally, suppliers must continue to submit a claim when 9 percent weight loss from baseline weight is achieved per § 414.84(b)(7), so they may receive a one-time payment for this claim.

This proposed payment structure increases the maximum attendance-based payments a supplier may receive in the first 6 months by \$56 per MDPP beneficiary, while allowing for similar maximum attendance payments in months 7-12 and maintaining the maximum total payment of \$768 per person during the MDPP services period. Also, this proposed payment structure takes into consideration the Extended flexibilities, by adding a distance learning HCPCS G-code. The new structure simplifies the claims submission process because it no longer requires that suppliers submit 11 to 15 G-codes for different attendance-based sessions at irregular intervals.

This proposed payment structure allows suppliers to submit one of two G-codes (depending on whether the MDPP session was delivered in person or via distance learning) for

each session. In months 7-12, suppliers may also add the proposed maintenance of the 5 percent weight loss from baseline G-code to their claim once the 5 percent weight loss has been achieved. The proposed payment structure allows suppliers to indicate which sessions were held via distance learning without needing to provide additional information in the claim submission process. The proposed new payment structure reduces complexity by reducing the number of G-codes from 15 to 6.

Table 41 displays the proposed MDPP payment structure and Table 42 indicates the current CY 2023 performance payments.

TABLE 41: Proposed Changes to MDPP Payment Structure to include Attendance-Based Service Payments and Diabetes Risk Reduction Performance Payments

HCPCS G-Code	Payment Description*	CY 2024
GXXX0	Behavioral counseling for diabetes prevention, in-person, group, 60 minutes	\$25
GXXX1	Behavioral counseling for diabetes prevention, distance learning, 60 minutes	\$25
G9880	5 percent WL Achieved from baseline weight	\$145
GXXX2**	Maintenance 5 percent WL from baseline in months 7-12	\$8
G9881	9 percent WL Achieved from baseline weight	\$25
G9890	Bridge Payment	\$25
Subtotal Maximum Attendance-Based Payment		\$550
Total Maximum Payment		\$768

*Medicare pays up to 22 sessions billed with codes GXXX1 and GXXX0, combined, in a 12-month period:

Months 1-6: 1 in-person or distance learning session every week (max 16 sessions)

Months 7-12: 1 in-person or distance learning session every month (max 6 sessions)

**Suppliers must submit claim for 5 percent weight loss (G9880) prior to submitting claims for the maintenance 5 percent WL from baseline in months 7-12.

TABLE 42: CY 2023 MDPP Payment Structure

HCPCS G-Code	Payment Description	CY 2023
	Core Sessions (Months 1-6)	
G9873	Attend 1 Core Session	\$38
G9874	Attend 4 Core Sessions	\$115
G9875	Attend 9 Core Sessions	\$191
	Core Maintenance (CM) Sessions (Months 7-12)	
G9876	Attend 2 Core Maintenance Sessions (No 5% WL) in CM Interval 1 (Months 7-9)	\$76
G9877	Attend 2 Core Maintenance Sessions (No 5 percent WL) in CM Interval 2 (Months 10-12)	\$76
G9878	Attend 2 Core Maintenance Sessions (5 percent WL) in CM Interval 1 (Months 7-9)	\$101
G9879	Attend 2 Core Maintenance Sessions (5 percent WL) in CM Interval 2 (Months 10-12)	\$101
G9880	5 percent WL Achieved from baseline weight	\$184
G9881	9 percent WL Achieved from baseline weight	\$38
G9890	Bridge Payment	\$38
G9891	Non-payable session code (This code is for reporting purposes only).	\$0
	Core Maintenance Sessions (Months 7-12)**	
G9882	Attend 2 Ongoing Maintenance (OM) Sessions in OM Interval 1 (Months 13-15)	\$57
G9883	Attend 2 Ongoing Maintenance Sessions in OM Interval 2 (Months 16-18)	\$57
G9884	Attend 2 Ongoing Maintenance Sessions in OM Interval 3 (Months 19-21)	\$58
G9885	Attend 2 Ongoing Maintenance Sessions in OM Interval 4 (Months (22-24)	\$58
Subtotal Maximum Attendance-Based Payment		\$496
Total Maximum Payment		\$768

**In the CY 2022 PFS, CMS removed the Ongoing Maintenance Sessions for those beneficiaries who started MDPP services on or after January 1, 2022. MDPP beneficiaries who were participating in the Set of MDPP Services on or before December 31, 2021 may continue with the ongoing maintenance phase if they maintain 5 percent weight loss and attendance requirements.

In previous rulemaking, we received comments regarding how to best monitor the use of virtual make-up sessions, and whether we would use an additional HCPCS code or modifier to indicate virtual sessions since there is a limit to the number of virtual make-up sessions a beneficiary can attend. In response, we finalized the use of the virtual make-up sessions in § 410.79(d)(2) and stated in the preamble to the CY 2018 PFS final rule that MDPP suppliers must include the virtual modifier on claims to indicate the use of the virtual make-up session. As part of the flexibilities established in response to the COVID-19 PHE, we eliminated the maximum number of virtual make-up sessions that could be delivered by MDPP suppliers, described in § 410.79(d)(2) and (d)(3)(i) and (ii), but still required MDPP suppliers to use the virtual modifier to indicate when a beneficiary received MDPP virtually.

We are proposing to amend §414.84(a), (b), (c), and newly redesignated paragraphs (d)(1) and (e). We seek comment on these proposals.

3. Changes to § 424.205 (a), (b)(1), (c), and newly designated (c)(1), (d)(14), (f)(2)(i), (g)(1)(i)(C)

The Centers for Disease Control and Prevention (CDC), which administers the Diabetes Prevention Recognition Program (DPRP), is responsible for implementing the quality assurance function of the National DPP at the national level, including for MDPP. The DPRP awards four categories of recognition: Pending, preliminary, full, and full-plus. Organizations may participate in MDPP with preliminary, full, or full-plus CDC recognition. Organizations may advance in CDC DPRP recognition by demonstrating their ability to effectively deliver the behavioral change program (preliminary) and achieve the outcomes shown to prevent or delay type 2 diabetes (full and full-plus). To achieve full CDC recognition, organizations must demonstrate a reduction in risk of developing type 2 diabetes among completers in the evaluation cohort by showing that at least 60 percent of all completers achieved at least **one** of the following outcomes:

- At least 5 percent weight loss 12 months after the cohort began; or
- At least 4 percent weight loss and at least 150 minutes/week on average of physical activity 12 months after the cohort began; or
- At least a 0.2 percent reduction in HbA1C.

Organizations are granted an additional 2 years of full recognition (full-plus), for a total of 5 years if, at the time full recognition is achieved, organizations meet the following retention criteria:

- A minimum of 50 percent at the beginning of the fourth month since the cohorts held their first sessions;

- A minimum of 40 percent at the beginning of the seventh month since the cohorts held their first sessions; and

- A minimum of 30 percent at the beginning of the tenth month since the cohorts held their first sessions.

In the CY 2017 PFS final rule, we indicated that we would align the CDC's DPRP and MDPP to the greatest extent possible. When the CY 2018 PFS went into effect on January 1, 2018, CDC's 2018 DPRP Standards had neither been publicly released nor gone into effect. For these reasons, we had to establish an interim MDPP preliminary recognition so that eligible organizations could begin enrolling in Medicare to become MDPP suppliers starting January 1, 2018, and approved suppliers could start serving Medicare beneficiaries on April 1, 2018.

When the CY 2018 PFS final rule was issued, the CDC 2015 DPRP Standards were still in effect, and CDC only recognized organizations with pending or full DPRP recognition. Consequently, CMS and CDC developed an interim solution that would allow organizations that met the MDPP interim preliminary recognition standard, which went into effect on January 1, 2018, to become eligible to enroll in Medicare as an MDPP supplier.

Because CMS and CDC understood that there would be a 2 to 4-month gap between when the CY 2018 PFS went into effect for MDPP (January 1, 2018) and when the CDC 2018 DPRP Standards would be cleared and go into effect, we worked with CDC to establish an interim solution so that eligible organizations with MDPP interim preliminary or CDC DPRP full recognition could apply to Medicare to become MDPP suppliers before the CDC's 2018 Standards went into effect on March 1, 2018. The CY 2018 PFS final rule at § 424.205(c)(2)(ii) established that CDC-recognized organizations with pending CDC DPRP recognition could meet additional criteria for an "interim preliminary recognition" standard and enroll as MDPP suppliers. With the MDPP new supplier type going into effect on January 1, 2018, and

beneficiary enrollment starting on April 1, 2018, we wanted suppliers to be able to enroll in Medicare to become MDPP suppliers in time for the April 1 MDPP launch.

Now that the CDC DPRP Standards for preliminary recognition are in effect, we propose to remove § 424.205(c) and retire the MDPP “interim preliminary recognition” standard. We also propose to amend § 424.59(a)(1) (redesignated § 424.205(b)(1)) to require that, at the time of enrollment, organizations have preliminary, full, or full-plus CDC DPRP recognition. As described in the CY 2018 PFS final rule, MDPP suppliers who received MDPP interim preliminary recognition during the 4-month time period between when the CY 2018 PFS final rule was published and when the CDC 2018 standards went into effect, have achieved at least CDC preliminary recognition.

To maintain compliance with the current CDC DPRP Standards, organizations that enrolled in Medicare as MDPP suppliers based on their MDPP interim preliminary recognition between January 1, 2018 and February 28, 2018 would have had at least two CDC DPRP evaluations given the 5-year time lapse. Per CDC DPRP Standards, organizations are required to submit data to CDC every 6 months, and undergo evaluation every 12 to 18 months, depending upon the timing of new cohorts.

Since the CDC DPRP Standards were updated in 2018 and 2021 and are due to be updated in Spring 2024, suppliers are required to meet the most current CDC DPRP Standards for preliminary, full, or full-plus recognition to maintain their eligibility to enroll and participate in MDPP as MDPP suppliers. Organizations that are interested in enrolling in Medicare as MDPP suppliers should refer to the CDC DPRP’s most current standards¹ to understand how to obtain preliminary, full, or full-plus CDC recognition, and consult § 424.205 for all other enrollment conditions that need to be met, in advance of submitting their application to become a MDPP supplier.

We propose to amend § 424.205 newly designated paragraphs (c) and (f) to remove reference to, and requirements of, the Ongoing Maintenance phase described in these sections with the exception of § 424.205 newly designated paragraph (d)(14), which we are retaining for historical recordkeeping and crosswalk purposes. In the CY 2022 PFS, CMS removed eligibility for the Ongoing Maintenance Sessions for those beneficiaries who started the Set of MDPP services on or after January 1, 2022. Eligibility for these services will end December 31, 2023.

We are proposing to amend § 424.205 (a), (b)(1), newly redesignated paragraphs (c)(1) and (g)(1)(i)(C). We seek comment on these proposals.

4. Proposed changes to § 424.210(b) and (d)

We propose to amend § 424.210(b) and (d) to remove reference to, and requirements of, the Ongoing Maintenance phase described in these sections. In the CY 2022 PFS final rule, CMS removed eligibility for the Ongoing Maintenance Sessions for those beneficiaries who started the Set of MDPP Services on or after January 1, 2022. Eligibility for these services will end December 31, 2023.

We are proposing to amend its regulation at § 424.210 by amending paragraphs (b) and (d). We seek comment on these proposals.

J. Appropriate Use Criteria for Advanced Diagnostic Imaging

Section 1834(q) of the Act, as added by section 218(b) of the Protecting Access to Medicare Act (Pub. L. 113-93, April 1, 2014) (PAMA), directs CMS to establish a program to promote the use of appropriate use criteria (AUC) for advanced diagnostic imaging services. Since the bill was passed, we have taken steps to implement this program and codified the AUC program in our regulations at 42 CFR 414.94. In CY 2020, we began conducting an educational and operations testing period for the claims-based reporting of AUC consultation information and the program currently operates in this phase.

1. Background

AUC are evidence-based guidelines that assist clinicians in selecting the imaging studies most likely to improve health outcomes for patients based on their individual clinical presentation. AUC present information in a manner that links a specific clinical condition or presentation; one or more services; and an assessment of the appropriateness of the service(s). For purposes of this program, AUC are a set or library of individual AUC. Each individual criterion is an evidence-based guideline for a particular clinical scenario based on a patient presenting symptoms or condition. Under this program, any clinician who orders an advanced diagnostic imaging service must consult AUC for the imaging service ordered. Examples of advanced diagnostic imaging services include computed tomography, positron emission tomography, nuclear medicine and magnetic resonance imaging.

To consult AUC, clinicians use clinical decision support mechanisms (CDSMs). CDSMs are the electronic portals through which clinicians access the AUC during the patient workup. They can be standalone applications that require direct entry of patient information, but may be more effective when they are integrated into electronic health records (EHRs). Ideally, clinicians would interact directly with the CDSM through their primary user interface, thus minimizing interruption to the clinical workflow.

Under the AUC program, clinicians and facilities that furnish the imaging service are responsible for reporting information about the ordering clinician's AUC consultation on the imaging service claim. The furnishing clinician and facility are not paid if the ordering clinician fails to consult and/or if the consultation information is not correctly included on the imaging service claim.

2. Statutory Authority

Section 218(b) of the PAMA added a new section 1834(q) of the Act entitled, "Recognizing Appropriate Use Criteria for Certain Imaging Services," which directed the Secretary to establish a program to promote the use of AUC. Section 1834(q)(4) of the Act

requires ordering professionals to consult with specified applicable AUC through a qualified CDSM for applicable imaging services furnished in an applicable setting and paid for under an applicable payment system; and payment for such service may only be made if the claim for the service includes information about the ordering professional's consultation of specified applicable AUC through a qualified CDSM.

3. Discussion of Statutory Requirements and Implementation

There are four major components of the AUC program under section 1834(q) of the Act, and each component has its own implementation date: (1) establishment of AUC by November 15, 2015 (section 1834(q)(2) of the Act); (2) identification of mechanisms for consultation with AUC by April 1, 2016 (section 1834(q)(3) of the Act); (3) AUC consultation by ordering professionals, and reporting on AUC consultation by January 1, 2017 (section 1834(q)(4) of the Act); and (4) annual identification of outlier ordering professionals (based on low adherence to AUC) for services furnished after January 1, 2017 (section 1834(q)(5) of the Act). These four components are precursors to the requirement that, beginning for CY 2017, we establish mandatory prior authorization procedures for outlier ordering professionals when ordering advanced diagnostic imaging services (section 1834(q)(6) of the Act).

a. Establishment of AUC

We addressed the first component of the Medicare AUC program under section 1834(q)(2) of the Act, establishment of AUC, in the CY 2016 PFS final rule with comment period (80 FR 70886). With this rule, we began to codify the statutory requirements in our regulations at 42 CFR 414.94. We also defined provider-led entity (PLE) as well as additional definitions under section 1834(q)(1) of the Act in our regulations at § 414.94(b). In § 414.94(c)(1) and (2), respectively, we set forth the requirements and process by which PLEs become qualified by CMS to develop, modify or endorse AUC. We qualified the first group of PLEs under the AUC program and posted them to the CMS website in June 2016 at which time

their AUC libraries became specified applicable AUC for purposes of section 1834(q)(2)(A) of the Act.

b. Identification of Mechanisms for Consultation with AUC

We addressed the second component under section 1834(q)(3) of the Act, identification of mechanisms for consultation with AUC, in the CY 2017 PFS final rule (81 FR 80170). In this rule we defined clinical decision support mechanism (CDSM) in § 414.94(b). In § 414.94(g)(1) and (2), respectively, we set forth the requirements CDSMs must meet and established a process by which CDSMs may become qualified by CMS in accordance with the statutory requirements under section 1834(q)(3)(B)(ii). We qualified the first group of CDSMs under the AUC program and posted them to the CMS website in July 2017.

c. AUC Consultation and Reporting

We addressed the third component under section 1834(q)(4) of the Act, AUC consultation by ordering professionals, and reporting on AUC consultation, primarily in the CY 2018 PFS final rule (82 FR 53190). Additionally, in the CY 2017 PFS final rule, we defined terms in § 414.94(b) (81 FR 80405 and 80406) and identified exceptions to the AUC consultation and reporting requirements under section 1834(q)(4) in § 414.94(i) (81 FR 80422 through 80424) which are pertinent to the third component. We also continued to revise the regulation at § 414.94 as needed and in response to comments from interested parties in subsequent rulemaking cycles. These updates, revisions and clarifications, which continued through annual PFS rulemaking for CYs 2018, 2019, and 2020, are discussed throughout this section as they directly relate to the AUC consultation requirement under section 1834(q)(4)(A) of the Act and reporting requirement under section 1834(q)(4)(B) of the Act.

In the CY 2017 PFS final rule we defined applicable payment systems consistent with section 1834(q)(4)(D) of the Act to include the PFS established under section 1848(b) of the Act, the prospective payment system for hospital outpatient department services under section 1833(t)

of the Act, and the ambulatory surgical center payment system under section 1833(i) of the Act (81 FR 80406). In the CY 2016 PFS final rule with comment period we defined applicable setting consistent with section 1834(q)(1)(D) of the Act to include a physician's office, a hospital outpatient department (including an emergency department), and an ambulatory surgical center (80 FR 71105). We later added independent diagnostic testing facility (IDTF) to the definition of applicable setting in the CY 2019 PFS final rule (83 FR 59690 and 59691).

Also in the CY 2017 PFS final rule, consistent with section 1834(q)(4)(C) of the Act, we identified exceptions to the AUC consultation and reporting requirements under section 1834(q)(4) of the Act in the case of: a service ordered for an individual with an emergency medical condition, a service ordered for an inpatient and for which payment is made under Medicare Part A, and a service ordered by an ordering professional for whom the Secretary determines that consultation with applicable AUC would result in a significant hardship (81 FR 80422 through 80424). The significant hardship exception criteria and process under § 414.94(i)(3) was later updated in the CY 2019 PFS final rule (83 FR 59697 through 59700).

In the CY 2018 PFS final rule, we established a voluntary period from July 2018 through the end of 2019 during which ordering professionals who were ready to participate in the AUC program could consult specified applicable AUC through qualified CDSMs and communicate the results to furnishing professionals (82 FR 53193 through 53195). Furnishing professionals who were ready to do so could report AUC consultation information on the claim. To incentivize early use of qualified CDSMs for consulting AUC, we established in the CY 2018 Updates to the Quality Payment Program; and Quality Payment Program: Extreme and Uncontrollable Circumstances Policy for the Transition Year final rule with comment period and interim final rule a high-weight improvement activity for ordering professionals who consult specified AUC using a qualified CDSM for the Merit-based Incentive Payment System (MIPS) performance period that began January 1, 2018 (82 FR 54193).

In addition, in the CY 2018 PFS final rule, we established the start date of January 1, 2020, for the Medicare AUC program for advanced diagnostic imaging services in § 414.94(j)(1) (82 FR 53189 through 53195). Specifically, for services ordered on and after January 1, 2020, we established that ordering professionals must consult specified applicable AUC using a qualified CDSM when ordering applicable imaging services in § 414.94(j), and furnishing professionals must report AUC consultation information on the Medicare claim in § 414.94(k). In the CY 2019 PFS final rule, we specified under § 414.94(j)(2) that when delegated by the ordering professional, clinical staff under the direction of the ordering professional may perform the AUC consultation with a qualified CDSM. In the CY 2018 PFS final rule, we further specified that the AUC program, including the claims denial payment penalty phase, would begin on January 1, 2020, with a year-long educational and operations testing period for CY 2019 during which AUC consultation information was expected to be reported on claims, but claims would not be denied for failure to include proper AUC consultation information (82 FR 53193 through 53195). As discussed in further detail below, the educational and operations testing period was subsequently extended multiple times and the program currently operates in the educational and operations testing period.

In the CY 2018 PFS final rule and consistent with section 1834(q)(4)(B) of the Act, we established in § 414.94(k) that the following information must be reported on Medicare claims for advanced diagnostic imaging services: (1) the qualified CDSM consulted by the ordering professional; (2) whether the service ordered would or would not adhere to specified applicable AUC, or whether the specified applicable AUC consulted was not applicable to the service ordered; and (3) the NPI of the ordering professional (if different from the furnishing professional) (82 FR 53190 through 53193). Section 1834(q)(4)(B) of the Act specifies that payment for advanced diagnostic imaging service claims under the AUC program may only be made if the claim submitted by the furnishing professional (of which there can be more than one

if the professional component is furnished by a different entity than the technical component) includes this information about the ordering professional's AUC consultation. This statutory requirement establishes a real-time claims-based reporting requirement whereby payment for the imaging service is contingent upon specific information being present on the claim. We worked to operationalize the real-time claims-based reporting requirement by announcing our intention to use G-codes and HCPCS modifiers to report AUC consultation information on the Medicare claims in the CY 2019 PFS final rule.

In the CY 2022 PFS final rule (86 FR 64996), we provided further clarification around the scope of the AUC program specifically pertaining to updates or modifications to orders for advanced diagnostic imaging services (86 FR 65227 through 65229), the extreme and uncontrollable circumstances significant hardship exception (86 FR 65229 and 65230) and specified claims processing solutions, including creation and use of a new HCPCS modifier intended to accurately identify claims that are and are not subject to the AUC program requirements. We also discussed special circumstances related to: services furnished by a critical access hospital (CAH) (86 FR 65231 and 65232), services paid under the Maryland Total Cost of Care Model (86 FR 65232 and 65233), inpatients converted to outpatients (86 FR 65233 and 65234), Medicare as the secondary payer (86 FR 65234 and 65235), and imaging services ordered prior to the start of the claims denial payment penalty phase but furnished on or after the start of the payment penalty phase (86 FR 65235). We addressed where to identify the ordering professional on practitioner claims for imaging services (86 FR 65231) (we addressed where to identify ordering professionals on institutional claims in educational materials following the CY 2019 PFS final rule claims-based reporting discussion (83 FR 59696)) and confirmed that claims that do not properly append AUC consultation information will be returned for correction and resubmission, rather than denied, when the payment penalty phase begins (86 FR 65234). We did not specify how long claims would be returned before the payment penalty phase would shift to

claim denials. Finally, we established that the payment penalty phase would begin on the later of January 1, 2023, or the January 1 that follows the declared end of the PHE for COVID-19.

Under this specification and with the declared end of the PHE for COVID-19 on May 11, 2023, the payment penalty phase would have been scheduled to begin on January 1, 2024. However, as announced via the AUC website in 2022 and discussed further below in this section of the proposed rule, the educational and operations testing period will continue until further notice.

We did not include provisions pertaining to the AUC program in the CY 2023 PFS final rule (87 FR 69404).

d. Identification of Outlier Ordering Professionals

We began to address the fourth component under section 1834(q)(5) of the Act, identification of outlier ordering professionals, in the CY 2017 PFS final rule by finalizing the first list of priority clinical areas (PCAs) in § 414.94(e)(5) (81 FR 80406 through 80412) which were intended to ultimately guide identification of outlier ordering professionals who would eventually be subject to prior authorization when ordering advanced diagnostic imaging services. Section 1834(q)(5) of the Act directs CMS to: (1) determine on an annual basis no more than 5 percent of total ordering professionals who are outlier ordering professionals; and (2) base the determination of an outlier ordering professional on low adherence to AUC which may be based on comparisons to other ordering professionals and include data for ordering professionals for whom prior authorization applies; and (3) use 2 years of data to identify outlier ordering professionals; and (4) consult with physicians, practitioners and other interested parties in developing methods to identify outlier ordering professionals. To date, we have not proposed or codified the methods for identifying outlier ordering professionals as prescribed by section 1834(q)(5) of the Act, and thus, we have not subjected any ordering professionals to prior authorization when ordering advanced diagnostic imaging services as prescribed by section 1834(q)(6) of the Act.

4. Timeline

As evident from the description of our regulatory activities to date, we have not met the statutory implementation time frame for the AUC program components. The educational and operations testing period began January 1, 2020, and the AUC program continues to operate in this phase currently. In this phase, there are no payment penalties for advanced diagnostic imaging service claims that do not append AUC consultation information. The provisions in section 1834(q) of the Act repeatedly stress the importance of engagement with interested parties in developing the Medicare AUC program. Throughout our implementation activities, we have intentionally taken a diligent, stepwise implementation approach to maximize the opportunity for public comment and engagement with interested parties, and allow for adequate advance notice to physicians and practitioners, beneficiaries and other AUC interested parties of any programmatic changes or updates. These efforts to maximize engagement included speaking and answering live questions at multiple CMS Open Door Forums, participating in external meetings sponsored by and at the request of interested parties like medical specialty societies and health care practitioners, and meeting in person and virtually with interested parties upon request to receive feedback and answer questions to the best of our ability and within the context of already publicly available information. All of these interactions were critical to inform our proposals during each round of notice and comment rulemaking. This approach has allowed us to be comprehensive in our assessment of implementation options and regulatory proposals, responsive to concerns expressed by interested parties, and agile in reacting to unexpected events, like the PHE for COVID-19. Since the CY 2022 PFS final rule was released, we have used the AUC website²⁵⁰ to publicly announce updates to the AUC program. In July 2022, we updated the AUC website to inform interested parties that the payment penalty phase of the AUC

²⁵⁰ <https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/appropriate-use-criteria-program>.

program would not begin on January 1, 2023 even if the PHE for COVID-19 ended in 2022. This update also stated that the educational and operations testing period would continue and that we are not able to forecast when the payment penalty phase will begin. In October 2022, we updated the AUC website again to announce that applications for CDSM and PLE initial qualification and re-qualification would not be accepted for the 2023 application cycle and that all CDSMs and PLEs qualified as of July 2022 would remain qualified through this cycle.

5. Proposal to Pause Program for Reevaluation

Since 2015, we have taken a thoughtful, stepwise approach that maximized engagement and involvement of interested parties to implement the statutory provisions set forth in section 1834(q), as added by section 218(b) of the PAMA, using notice and comment rulemaking. As discussed previously in this section of the proposed rule, we established the first two components of the AUC statutory requirements - establishment of AUC and mechanisms for consultation. We began to build the parameters for the fourth component, outlier identification, leading to prior authorization, by establishing the PCAs. And we began implementing the third component, the AUC consultation and reporting requirement, using the ongoing educational and operations testing period. At this time, however, we have exhausted all reasonable options for fully operationalizing the AUC program consistent with the statutory provisions as prescribed in section 1834(q)(B) of the Act directing CMS to require real-time claims-based reporting to collect information on AUC consultation and imaging patterns for advanced diagnostic imaging services to ultimately inform outlier identification and prior authorization. As a result, we propose to pause implementation of the AUC program for reevaluation, and rescind the current AUC program regulations from § 414.94. We expect this to be a hard pause to facilitate thorough program reevaluation and, as such, we are not proposing a time frame within which implementation efforts may recommence.

a. Real-Time Claims-Based Reporting

Section 1834(q)(4)(A) of the Act requires ordering professionals to consult AUC using a qualified CDSM. Section 1834(q)(4)(B) of the Act requires furnishing professionals to report information about the ordering professional's AUC consultation with a qualified CDSM on the Medicare claim for the advanced diagnostic imaging service the ordering professional ordered. This section dictates that payment to the furnishing professional is contingent on reporting the ordering professional's AUC consultation information, which must include the ordering professional's NPI, the qualified CDSM that was consulted, and whether the service ordered adheres or does not adhere to the AUC consulted, or if there were no AUC applicable to the order available for consultation via the qualified CDSM that was consulted as described above.

While each component of the statutory requirements has presented unique challenges to implement, the greatest challenge has been in fully implementing and operationalizing the real-time claims-based reporting requirement consistent with section 1834(q)(4)(B) of the Act so as to ensure accurate reporting, claims processing and, ultimately, outlier identification and prior authorization. We formally solicited public comment and feedback from interested parties in notice and comment rulemaking in the CY 2017 PFS rulemaking cycle, and have welcomed and encouraged feedback and information from interested parties less formally throughout the duration of our implementation efforts in each successive year. In the CY 2017 PFS final rule, we discussed the importance of developing and operationalizing a meaningful solution for collecting AUC consultation information on Medicare claims. We explained that "we must diligently evaluate our options taking into account the vast number of claims impacted and the limitations of the legacy claims processing system." We further noted that "[m]oving too quickly to satisfy the reporting requirement could inadvertently result in technical and operational problems that could cause delays in payments" (81 FR 80420). In addition to consulting with claims processing experts outside of and between rulemaking cycles, we continued to clearly and intentionally solicit feedback and suggestions from interested parties to assist us in developing

workable claims processing edits and solutions to operationalize the AUC reporting requirement consistent with section 1834(q)(4)(B) of the Act in rulemaking cycles for the CY 2018, 2019 and 2022 PFS.

Having considered many rounds of input from interested parties, including internal and external experts, and diligent exploration of options, we have come to believe that the real-time claims-based reporting requirement prescribed by section 1834(q)(4)(B) of the Act presents an insurmountable barrier for CMS to fully operationalize the AUC program. To properly apply the statutory provisions of the AUC program, including specifications around settings in which services are furnished and payment systems under which Medicare payments are made, it is critical that claims are accurately identified in the Medicare claims processing system and accurately subjected to system's edits to ensure AUC consultation information is properly reported on the claim. Equally important is ensuring that claims not subject to the AUC program are not inappropriately subjected to claims system's edits. We consider a process where the Medicare claims processing system properly and accurately identifies only claims for services subject to the AUC program requirements, without manual action by practitioners/facilities that submit claims, to be a fully automated process. The existing Medicare claims processing system does not have the capacity to fully automate the process for distinguishing between advanced diagnostic imaging claims that are or are not subject to the AUC program requirement to report AUC consultation information as prescribed by section 1834(q)(4)(B) of the Act. This means that the Medicare claims processing system is not able to ensure that claims for services that are not subject to the AUC consultation information reporting requirement will not be improperly denied for failure to append AUC consultation information. We note here that our intention, as announced in the CY 2022 PFS final rule, was to begin the payment penalty phase of the AUC program by returning, rather than denying, claims for advanced diagnostic imaging services that do not contain AUC consultation information for correction and resubmission; however, section

1834(q)(4)(B) of the Act specifies that payment for advanced diagnostic imaging services under the AUC program may only be made if the claim for the imaging service includes specific AUC consultation information. Consequently, the payment penalty phase would eventually need to shift from returning claims for correction and resubmission to denying claims. As such, and without the practicable capacity to fully automate the process for editing claims to ensure only appropriate claims are edited for AUC consultation information, there is a significant risk that full implementation of the penalty phase of the AUC program would result in inappropriate claims denials.

To avoid these inappropriate denials, we considered requiring claims to include certain modifiers that would identify them as not being subject to the AUC consultation and reporting requirements under section 1834(q)(4)(A) and (B) of the Act. However, this would add an extra layer of burden on furnishing professionals, including freestanding and hospital-based imaging facilities, requiring them to append information to the claims even for services that are not subject to the AUC consultation and reporting requirement in order to allow us to identify which imaging services are and are not subject to the AUC consultation and reporting requirements under section 1834(q)(4)(A) and (B) of the Act, and allow us to appropriately process claims. Additionally, the AUC program is designed to target a subset of advanced diagnostic imaging services furnished in specific settings and paid under specific payment systems, as opposed to, for example, all Medicare part B advanced diagnostic imaging service claims, and includes multifaceted criteria for identifying which services are subject to the program. As such, ordering professionals would need to know, at the time of the order, where each imaging service will be furnished and under which payment system the claim will be paid to determine whether AUC consultation, and transmission of AUC consultation information with the order, is required. Furnishing professionals, including freestanding and hospital-based imaging facilities, would need to be able to delineate which orders received without AUC consultation information are not

subject to the AUC program from those that are subject to the program and its requirements. If they are able to confirm that a service is not subject to the AUC program, then they would need to identify the appropriate modifier to append to the claim so it can be processed and be paid without AUC consultation information. Alternatively, if they find that the order is subject to the AUC program, they would need to take steps to obtain AUC consultation information from the ordering professional, decline to furnish the service, or risk denial of the claim for a furnished service.

An example that highlights the practical complexity and unwieldiness of the AUC program is the, not uncommon, scenario where an advanced diagnostic imaging service is furnished in two settings—only one of which is an applicable setting. For example, this occurs when the technical component (TC) of an imaging service is furnished in a setting, like a critical access hospital (CAH), that is not an applicable setting. As we discussed in the CY 2022 PFS final rule, because the service was not furnished in an applicable setting, the entirety of the service (both the technical and professional component (PC)), is not subject to the AUC consultation requirement. Therefore, neither of the separate claims for the TC and PC for the service are required to include AUC consultation information. However, there is no way in real-time claims processing for us to identify that the PC claim is for an imaging service that was not furnished in an applicable setting. For the claim to process and be paid when it does not include AUC consultation information, the furnishing professional for the PC would need to append a modifier to the claim to identify it as not being subject to the AUC consultation and reporting requirement.

b. Accuracy of Claims Data

Because, as noted above, the CMS claims processing system is unable to fully automate editing advanced diagnostic imaging claims, risks around reporting accuracy are inherent to the AUC program prescribed by section 1834(q)(4)(B) of the Act. These risks directly impact

furnishing professionals, including free-standing and hospital-based facilities, by affecting payment for advanced diagnostic imaging services they furnish, in some cases based on conduct of ordering professionals with whom they have little or no affiliation. Beyond the potential for inappropriate claims denials as discussed above, by manually appending information to their claims as supplied by ordering professionals, furnishing professionals are attesting to the credibility and accuracy of that information and may find themselves subject to audits or post-pay review. Considering that the AUC program ultimately involved the identification of outlier ordering professionals and imposing a prior authorization procedure for them as prescribed in sections 1834(q)(5) and (6) of the Act, reliance on manual reporting by one party of information supplied by another party presents a serious risk to data accuracy and integrity. Since section 1834(q)(5) of the Act directs CMS to use these data from claims-based AUC consultation information collection to identify outlier ordering professionals, and section 1834(q)(6) of the Act directs CMS to require prior authorization for outlier ordering professionals, the quality and accuracy of the data used to make these determinations is critical to ensure the AUC program leads to appropriate application of prior authorization for advanced diagnostic imaging services.

c. Effect on Medicare Beneficiaries

We recognize that a program to promote the use of AUC for advanced diagnostic imaging could improve imaging utilization patterns for Medicare beneficiaries. Ideally, beneficiaries would undergo fewer and more appropriate imaging procedures to inform more efficient treatment plans and address medical conditions more quickly and without unnecessary tests. In the CY 2019 PFS final rule, we estimated how adding AUC consultation to an ordering professional's workload would directly impact a Medicare beneficiary based on the additional office visit time needed for consultation and ordering. We estimated this impact by calculating the cost to beneficiaries associated with the additional consultation time to be \$68,001,000 annually (83 FR 60040). In the CY 2022 PFS final rule we updated this estimate based on

Medicare claims data and changes in wage estimates to \$54,789,518 annually. We estimated that potential savings would offset this cost by \$27,394,759 annually based on process efficiencies that may be implemented over time by ordering professionals (86 FR 65626). In the CY 2019 PFS final rule, we estimated other impacts associated with the AUC program including potential savings to the Medicare program. We estimated potential savings of \$700,000,000 annually by extrapolating savings from a clinical decision support pilot project performed by the Institute for Clinical Systems Improvement in Bloomington, Minnesota²⁵¹ (83 FR 60043). Since this estimate was based on information from previous clinical decision support experiences and not Medicare claims data or wage estimates, we did not update this estimate in the CY 2022 PFS final rule.

While the incorporation of any new process into workflows can be expected to impart burden that eventually lessens, we have additional concerns about risks for beneficiaries stemming from the real-time claims-based reporting requirement prescribed by section 1834(q)(4)(B) of the Act. Beyond the burden of adding to the workload of the ordering and furnishing professionals for advanced diagnostic imaging services, the AUC consultation program can produce risk to beneficiaries in receiving timely imaging services, and potentially being financially liable for advanced diagnostic imaging service claims denied by the Medicare program, whether properly or due to omissions or errors in conveying AUC consultation information on claims. Beneficiaries may experience delays in scheduling and receiving imaging if AUC information is not properly provided with the order from the ordering professional to furnishing professionals/facilities. This may happen, even if the imaging service is not subject to the AUC program requirements, in any circumstance where the furnishing professional/facility is unclear whether the AUC consultation and reporting requirements apply (for example if Medicare is the secondary payer, or under other circumstances as discussed in the CY 2022 PFS final rule). Section 1834(q) of the Act does not separately establish protections to Medicare

²⁵¹ Miliard, M. Nuance, ICSI aim to prevent unnecessary imaging tests. Healthcare IT News. November 10, 2010.

beneficiaries from financial liability for advanced diagnostic imaging service claims not paid by Medicare as required under the AUC program. As discussed above, because the Medicare claims processing system cannot fully automate a process to ensure only claims for advanced diagnostic imaging services subject to the AUC program reporting requirement under section 1834(q)(4)(B) of the Act are edited as such, there is a risk of inappropriate claims denials. Additionally, in the event that an ordering professional fails to consult AUC or neglects to communicate AUC consultation information (or relevant exception information) to the furnishing professional/facility and the furnishing professional/facility proceeds with furnishing the imaging service despite the absence of this information, the beneficiary may incur unwarranted financial liability for the imaging service.

d. Summary

Taken together and, in particular, due to the inability of the Medicare claims processing system to automate claims processing edits that ensure only claims subject to the AUC program requirements as prescribed in section 1834(q) of the Act will be processed as such, returned or denied accordingly, we believe the inherent risks in terms of data integrity and accuracy, beneficiary access, and potential beneficiary financial liability for advanced diagnostic imaging services render the AUC program impracticable, and have led us to our proposal to pause efforts to implement the AUC program for reevaluation and rescind current regulations. Working within the parameters prescribed under section 1834(q) of the Act, we have not identified any practical way to move the AUC program forward beyond the educational and operations testing period. Further, without a way forward to fully implement the AUC program, we believe there is no utility in continuing the educational and operations testing period. We will continue efforts to identify a workable implementation approach and will propose to adopt any such approach through subsequent rulemaking. We note, and discuss further below in this section of the proposed rule, that clinical decision support tools can be beneficial in assisting with clinical

decision making and we encourage continued use of clinical decision support in a manner that best serves and assists clinicians.

6. Summary of Other Quality Initiatives

As discussed above, section 218(b) of the PAMA of 2014 entitled “Promoting Evidence-Based Care” established the Medicare AUC program. The statute was designed to promote the use of AUC for advanced diagnostic imaging services with enforcement through immediate non-payment of claims for which there was no AUC consultation and, eventually, prior authorization for “outliers” that more frequently neglect to consult AUC. Promoting the use of AUC in clinical practice is an activity that encourages the use of evidence-based information/guidelines/recommendations to guide patient care thus resulting in improved value and quality. Subsequent to PAMA, the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114-10, April 16, 2015) established the Quality Payment Program, which is an incentive program to tie Medicare PFS payment to performance by rewarding high-value, high-quality care. After enactment of these laws, CMS worked to implement both programs by successfully establishing and fully operationalizing the Quality Payment Program (both the Merit-based Incentive Payment System (MIPS) and Advanced Alternative Payment Models (APMs)) and, as discussed above, taking steps to implement each component of the AUC program up to and through the ongoing educational and operations testing period. We have developed outreach and educational materials and made all AUC program-related information available on the CMS AUC website.²⁵² We believe that many goals of the AUC program have been met by the QPP and other more comprehensive accountable care initiatives such as the Medicare Shared Savings Program, advances in electronic clinical quality measures (eCQMs) and Interoperability requirements of Certified Electronic Health Record Technology (CEHRT),

²⁵² <https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/appropriate-use-criteria-program>.

and new Innovation Center models such as ACO REACH and Kidney Care Choices where physicians and other health care providers join together to take responsibility for both the quality of care and total cost of care their patients experience. These quality and value-based care programs are designed to achieve quality of care goals by addressing issues of utilization, cost and quality holistically instead of via claim-by-claim examination and improvement initiatives for specific types of services.

While these initiatives, including the Shared Savings Program, do not specifically target advanced diagnostic imaging, we expect that this more global approach to improving quality and accountable care would broadly affect all services, including advanced diagnostic imaging utilization. Both ACO participation and episode of care payment models promote accountability for beneficiary cost of care as well as improving or maintaining quality of care according to applicable quality measures. Similarly, the MIPS ties together quality and costs by measuring and scoring performance in four performance categories: quality, cost, improvement activities, and promoting interoperability. MIPS uses measures and activities in each of these categories, such as the Total Per Capita Cost (TPCC) specialty measure, which focuses on effective primary care management to support Medicare savings. While also not specific to advanced diagnostic imaging, improvements in primary care management including ordering of diagnostic tests may involve consideration of appropriate imaging orders.

More specific to advanced diagnostic imaging, MIPS includes 10 specific quality measures pertaining to imaging or under the “Diagnostic Radiology” Specialty Measure Set. Additionally, the Meaningful Measures 2.0 Framework includes a priority area for safety with the goal of “Reduced Preventable Harm” (<https://edit.cms.gov/files/document/cascade-meaningful-measures-framework.xlsx>). An objective under this goal is “Diagnostic Accuracy/Error” which includes a cascade measure concept/family of “Appropriate use of radiology and lab testing.” An example of an existing measure within this concept is

“Appropriate Follow-up Imaging for Incidental Abdominal Lesions”

(<https://www.cms.gov/files/document/cascade-measures.xlsx>).

While a standalone program specifically requiring AUC consultation when ordering advanced diagnostic imaging services would directly target goals of improving advanced diagnostic imaging ordering patterns, our experience in recent years has demonstrated that the goals of appropriate, evidence based, coordinated care can be achieved more effectively, efficiently and comprehensively through other CMS quality initiatives.

7. Proposal to Rescind § 414.94

To execute this proposal and provide clarity to interested parties, we propose to amend our regulations to rescind the current regulations by removing the text of § 414.94 and reserve it for future use. This section contains the entirety of the regulations we adopted in the course of implementing elements of section 1834(q) of the Act. We believe the removal of these regulations is consistent with our proposal to pause efforts to implement the AUC program for reevaluation, and would avoid the potential confusion that could result if we were merely to retain or amend the regulation text at § 414.94.

We want to acknowledge and emphasize the value of clinical decision support to bolster efforts to improve the quality, safety, efficiency and effectiveness of health care. We welcome and encourage the continued voluntary use of AUC and/or clinical decision support tools in a style and manner that most effectively and efficiently fits the needs and workflow of the clinician user. Across many specialties and services, not just advanced diagnostic imaging, clinical decision support predates the enactment of the PAMA and, given its utility when accessed and used appropriately, we expect it to continue being used to streamline and enhance decision making in clinical practice and improve quality of care. Resources on clinical decision support are available on HHS Agency websites including the following:

- Office of the National Coordinator - <https://www.healthit.gov/topic/safety/clinical-decision-support>.
- Agency for Healthcare Research and Quality - <https://www.ahrq.gov/cpi/about/otherwebsites/clinical-decision-support/index.html>.
- Centers for Disease Control and Prevention - <https://www.cdc.gov/opioids/healthcare-admins/ehr/clinical-decision-support.html>.

8. Summary

In conclusion, we are proposing to pause efforts to implement the AUC program for reevaluation and to rescind the current AUC program regulations at § 414.94. We are not proposing a time frame within which implementation efforts may recommence. We will continue efforts to identify a workable implementation approach and will propose to adopt any such approach through subsequent rulemaking.

K. Medicare and Medicaid Provider and Supplier Enrollment

1. Medicare Enrollment

a. Background

Section 1866(j)(1)(A) of the Act requires the Secretary to establish a process for the enrollment of providers and suppliers into the Medicare program. The overarching purpose of the enrollment process is to help confirm that providers and suppliers seeking to bill Medicare for services and items furnished to Medicare beneficiaries meet all applicable Federal and State requirements to do so. The process is, to an extent, a “gatekeeper” that prevents unqualified and potentially fraudulent individuals and entities from entering and inappropriately billing Medicare. Since 2006, we have undertaken rulemaking efforts to outline our enrollment procedures. These regulations are generally codified in 42 CFR part 424, subpart P (currently §§ 424.500 through 424.575 and hereafter occasionally referenced as subpart P). They address,

among other things, requirements that providers and suppliers must meet to obtain and maintain Medicare billing privileges.

As outlined in § 424.510, one such requirement is that the provider or supplier must complete, sign, and submit to its assigned Medicare Administrative Contractor (MAC) the appropriate enrollment form, typically the Form CMS-855 (OMB Control No. 0938-0685). The Form CMS-855, which can be submitted via paper or electronically through the Internet-based Provider Enrollment, Chain, and Ownership System (PECOS) process (SORN: 09-70-0532, PECOS), collects important information about the provider or supplier. Such data includes, but is not limited to, general identifying information (for example, legal business name), licensure and/or certification data, and practice locations. The application is used for a variety of provider enrollment transactions, including the following:

- Initial enrollment – The provider or supplier is -- (1) enrolling in Medicare for the first time; (2) enrolling in another Medicare contractor's jurisdiction; or (3) seeking to enroll in Medicare after having previously been enrolled.
- Change of ownership – The provider or supplier is reporting a change in its ownership.
- Revalidation – The provider or supplier is revalidating its Medicare enrollment information in accordance with § 424.515. (Suppliers of durable medical equipment, prosthetics, orthotics, and supplies (DMEPOS) must revalidate their enrollment every 3 years; all other providers and suppliers must do so every 5 years.)
- Reactivation – The provider or supplier is seeking to reactivate its Medicare billing privileges after it was deactivated in accordance with § 424.540.
- Change of information – The provider or supplier is reporting a change in its existing enrollment information in accordance with § 424.516.

After receiving the provider's or supplier's initial enrollment application, CMS or the MAC reviews and confirms the information thereon and determines whether the provider or supplier meets all applicable Medicare requirements. We believe this screening process has greatly assisted CMS in executing its responsibility to prevent Medicare fraud, waste, and abuse.

As previously mentioned, over the years we have issued various final rules pertaining to provider enrollment. These rules were intended not only to clarify or strengthen certain components of the enrollment process but also to enable us to take further action against providers and suppliers: (1) engaging (or potentially engaging) in fraudulent or abusive behavior; (2) presenting a risk of harm to Medicare beneficiaries or the Medicare Trust Funds; or (3) that are otherwise unqualified to furnish Medicare services or items. Consistent with this, and as we discuss in this section III.K. of this proposed rule, we propose several changes to our existing Medicare provider enrollment regulations.

(We note that section III.K.2 of this proposed rule addresses a proposed change to one of our Medicaid provider enrollment provisions.)

b. Legal Authorities

There are two principal categories of legal authorities for our proposed Medicare provider enrollment provisions:

- Section 1866(j) of the Act furnishes specific authority regarding the enrollment process for providers and suppliers.
- Sections 1102 and 1871 of the Act provide general authority for the Secretary to prescribe regulations for the efficient administration of the Medicare program.

c. Medicare Provider Enrollment Provisions

i. Revocation and Denial Reasons and Revisions to Other Revocation Policies

(A) Revocations

Under § 424.535(a), CMS may revoke a Medicare provider's or supplier's enrollment for any of the reasons specified within that paragraph. (The revocation grounds are currently identified as § 424.535(a)(1) through (22), with paragraphs (a)(15) and (16) designated as reserved.) These reasons include, for instance, the provider's or supplier's: (i) failure to adhere to Medicare enrollment requirements; (ii) exclusion by the HHS Office of Inspector General (OIG); (iii) felony conviction within the previous 10 years; (iv) pattern of improper or abusive billing, prescribing of Part B or Part D drugs, or ordering/referring/certifying of Medicare services or items; and (v) termination by another Federal health care program. A revocation is designed to safeguard the Medicare program, the Trust Funds, and beneficiaries by removing from (and preventing payment to) Medicare providers and suppliers that have engaged in problematic or otherwise non-compliant behavior. When a provider or supplier is revoked, they are generally barred from reenrolling in Medicare for a period of 1 to 10 years. The length of this "reenrollment bar" is determined based upon the severity of the basis of the revocation. The maximum reenrollment bar is typically restricted to egregious acts of misconduct.

We have previously finalized a number of regulations adding new revocation reasons to § 424.535(a) to address particular program integrity vulnerabilities and types of provider or supplier behavior. We have also used rulemaking to refine other policies regarding revocations, such as the reenrollment bar and the effective dates of certain revocations. Given our continuing obligation to assess potential vulnerabilities and establish payment safeguard measures, we believe that several additions and revisions to our revocation policies in § 424.535(a) are necessary at this time.

(1) Non-Compliance Revocation Ground (§ 424.535(a)(1))

Existing § 424.535(a)(1), in part, permits revocation if the provider or supplier is determined to not be in compliance with the enrollment requirements described in subpart P or in the enrollment application applicable to its provider or supplier type. We propose to change the

language therein that reads “described in this subpart P or in the enrollment application” to “described in this title 42, or in the enrollment application ...” This is because there are enrollment requirements located outside of 42 CFR part 424, subpart P; for instance, certain enrollment requirements pertaining to opioid treatment programs are in § 424.67(b). All enrollment requirements, regardless of their placement in title 42, must be adhered to, which is why we believe the scope of § 424.535(a)(1) should be expanded.

(2) Misdemeanor Convictions

As already alluded to, a provider or supplier can be revoked under § 424.535(a)(3)(i) if the provider, supplier, or any owner, managing employee, officer, or director of the provider or supplier was, within the preceding 10 years, convicted of a Federal or State felony that CMS determines is detrimental to the best interests of the Medicare program and its beneficiaries. Section 424.535(a)(3)(ii) lists examples of such felonies, though they are not limited in scope and severity to these offenses.

Section 424.535(a)(3) does not include misdemeanor convictions, and there currently is no regulatory authority to revoke a provider or supplier based solely on a misdemeanor. However, we have become aware of and increasingly concerned about providers and suppliers convicted of misdemeanors for conduct that could endanger the Trust Funds’ integrity and Medicare beneficiaries’ health and safety. One case, for instance, involved a physician who wrote and filled prescriptions in fictitious patients’ names to obtain Schedule II controlled substances for personal use. The physician pled guilty to a reduced misdemeanor charge for attempting to obtain controlled substances by fraud. In another situation, an owner of a provider was charged with felony assault with a dangerous weapon; the court reduced it to a misdemeanor as part of a guilty plea and sentenced the defendant to 2 years of probation.

We believe that our responsibility in overseeing the Medicare program requires that we have the ability to take protective action in such instances. To this end, we propose in new §

424.535(a)(16)(i) that CMS may revoke a provider's or supplier's enrollment if they, or any owner, managing employee or organization, officer, or director thereof, have been convicted (as that term is defined in 42 CFR 1001.2) of a misdemeanor under Federal or State law within the previous 10 years that CMS deems detrimental to the best interests of the Medicare program and its beneficiaries. Proposed § 424.535(a)(16)(ii) would state that offenses under § 424.535(a)(16) include, but are not limited in scope or severity to, the following:

- Fraud or other criminal misconduct involving the provider's or supplier's participation in a Federal or State health care program or the delivery of services or items thereunder.
- Assault, battery, neglect, or abuse of a patient (including sexual offenses).
- Any other misdemeanor that places the Medicare program or its beneficiaries at immediate risk, such as a malpractice suit that results in a conviction of criminal neglect or misconduct. (This example mirrors that in § 424.535(a)(3)(ii)(C) regarding felonies.)

Our proposal accounts for the fact that some States may classify a particular crime as a misdemeanor while others may deem it a felony; in other words, the misdemeanors included in proposed § 424.535(a)(16) may be treated as felonies in certain States. This reflects our concern about the seriousness of these actions. Indeed, merely because particular State statutes may designate the aforementioned actions as misdemeanors does not, in our view, lessen the risk the latter can pose to Medicare and its beneficiaries. It is, in short, the action itself, rather than its specific classification under State law, that is of principal concern to us.

We are soliciting comments on this proposal. We specifically are seeking feedback on:

- (1) whether there are any potential unintended consequences of our proposal that we are not considering; or (2) any guardrails we should consider so as not to create unintended consequences for persons with misdemeanor convictions.
- (3) False Claims Act Civil Judgments

The False Claims Act (FCA) (31 U.S.C. §§ 3729 – 3733) is the Federal government’s principal civil remedy for addressing false or fraudulent claims for Federal funds. Section 3729(a)(1) of the FCA lists specific actions that can result in an FCA judgment against a defendant. These include the following:

- Knowingly presenting, or causing to be presented, a false or fraudulent claim for payment or approval.
- Knowingly making, using, or causing to be made or used, a false record or statement material to a false or fraudulent claim.
- Conspiring to violate any of the provisions in section 3729(a)(1) of the FCA.
- Having possession, custody, or control of property or money used, or to be used, by the government and knowingly delivering, or causing to be delivered, less than all of that money or property.
- Being authorized to make or deliver a document certifying receipt of property used, or to be used, by the government and, intending to defraud the Government, making or delivering the receipt without completely knowing that the information on the receipt is true.
- Knowingly buying, or receiving as a pledge of an obligation or debt, public property from an officer or employee of the government, or a member of the Armed Forces, who lawfully may not sell or pledge property.
- Knowingly making, using, or causing to be made or used, a false record or statement material to an obligation to pay or transmit money or property to the government, or knowingly concealing or knowingly and improperly avoiding or decreasing an obligation to pay or transmit money or property to the government.

Under section 3729(a)(1), a party that is liable under the FCA must pay a civil penalty of between \$5,000 and \$10,000 for each false claim (though these amounts are periodically revised for inflation) and triple the amount of the government’s damages.

Although the FCA's scope is not restricted to the health care arena and applies to all types of Federal government programs, the FCA has proven effective in helping to stem Medicare fraud. However, an FCA civil judgment against a provider or supplier does not, in and of itself, impact the latter's Medicare enrollment. Even if, for example, a provider is found to have knowingly submitted fraudulent claims and is liable for \$100,000 in damages, we have no ability to revoke the provider's enrollment on this basis. This concerns us, for the actions identified in section 3729(a)(1) of the FCA involve serious misbehavior. We believe we must address this vulnerability to protect the Medicare program and its beneficiaries.

We accordingly propose in § 424.535(a)(15) that CMS could revoke the enrollment of a provider or supplier if the provider or supplier, or any owner, managing employee or organization, officer, or director thereof, has had a civil judgment under the FCA imposed against them within the previous 10 years. (Strictly for purposes of (a)(15), however, the term "civil judgment" would not include FCA settlement agreements. The provision would require a judgment against the provider or supplier.) Recognizing that the specific facts and circumstances of each case will differ, we would consider the following factors in our decision:

- The number of provider or supplier actions that the judgment incorporates (for example, the number of false claims submitted).
- The types of provider or supplier actions involved.
- The monetary amount of the judgment.
- When the judgment occurred.
- Whether the provider or supplier has any history of final adverse actions (as that term is defined in § 424.502).
- Any other information that CMS deems relevant to its determination.

We note that we would include FCA civil judgments against owners, managing employees and organizations, and officers and directors (as those terms are defined in § 424.502)

of the provider or supplier within the scope of this revocation basis. This is consistent with our approach to several other revocation reasons in § 424.535(a) and reflects our recognition that certain owning and managing parties exercise great influence over the provider or supplier organization and its daily operations. Should such a party have an FCA civil judgment against them, this could present a program integrity risk. We therefore believe that § 424.535(a)(15) should encompass such situations, though we would consider the degree of the owning or managing party's control over the provider or supplier (for example, percentage of ownership, scope of day-to-day operational authority) as a factor in our determination.

(4) Violation of Provider and Supplier Standards

Section 410.33(g) lists detailed enrollment standards that independent diagnostic testing facilities (IDTFs) must meet to enroll and maintain enrollment in Medicare. Likewise, § 424.57(c) identifies 30 enrollment standards that DMEPOS suppliers must meet as conditions of enrollment. These IDTF and DMEPOS standards address matters such as the maintenance of liability coverage, solicitation of patients, and customer service requirements. In addition, §§ 424.67(b) and (e), 424.68(c) and (e), and 424.205(b) and (d) contain enrollment standards and conditions for, respectively, opioid treatment programs (OTPs), home infusion therapy (HIT) suppliers, and Medicare diabetes prevention programs (MDPPs). The standards and conditions in §§ 410.33(g), 424.57(c), 424.67(b) and (e), 424.68(c) and (e), and 424.205(b) and (d) are in addition to, and not in lieu of, the more general enrollment requirements in 42 CFR part 424, subpart P with which IDTFs, DMEPOS suppliers, OTPs, HIT suppliers, MDPPs, and all other provider and supplier types must comply.

We propose to add new paragraph (a)(23) to § 424.535 that would permit CMS to revoke an IDTF's, DMEPOS supplier's, OTP's, HIT supplier's, or MDPP's enrollment based on a violation of any standard or condition in, respectively, §§ 410.33(g), 424.57(c), 424.67(b) or (e), 424.68(c) or (e), or 424.205(b) or (d). No revocation reason in existing § 424.535(a) specifically

references these regulatory paragraphs or violations thereof. Although we have sometimes applied a comparatively broad revocation basis in § 424.535(a)(1) to certain non-compliant IDTFs, DMEPOS suppliers, OTPs, HIT suppliers, and MDPPs (for example, an invalid practice location under § 424.535(a)(5)), we believe a narrower approach that allows us to target violations of the aforementioned standards and conditions is preferable. That is, our proposal would more directly tie these regulatory paragraphs to § 424.535(a) by establishing a new revocation reason restricted to non-compliance with any of them.

(5) Scope of § 424.535(a)(17)

Under § 424.535(a)(17), we may revoke enrollment if the provider or supplier has an existing debt that CMS appropriately refers to the United States Department of Treasury. In determining whether a revocation is appropriate, CMS considers the six factors outlined in § 424.535(a)(17)(i) through (vi); these include, for instance, the reason for the provider's or supplier's failure to pay the debt. Section 424.535(a)(17)'s purpose is to spur providers and suppliers to repay their financial obligations to Medicare; in our view, their failure to do so raises doubts as to whether the provider or supplier can be a reliable partner of the Medicare program.

We have received inquiries from interested parties concerning the scope of this provision, such as whether paragraph (a)(17) applies to debts that are no longer being collected or are being appealed. We propose to revise paragraph (a)(17) to address these issues.

First, and to help accommodate our revisions, existing § 424.535(a)(17)(i) through (vi) would be re-designated as paragraphs (a)(17)(i)(A) through (F).

Second, in new paragraph (a)(17)(ii), we propose to exclude from paragraph (a)(17)(i)'s purview those cases where: (1) the provider's or supplier's Medicare debt has been discharged by a bankruptcy court; or (2) the administrative appeals process concerning the debt has not been exhausted or the timeline for filing such an appeal, at the appropriate appeal level, has not expired. In our view, the debts in these two situations have not been finally and fully adjudicated

for purposes of paragraph (a)(17)(i)'s applicability. For this reason, we believe basic fairness to the provider or supplier justifies revised paragraph (a)(17)(ii).

Third, in § 424.535(a)(17)(i) we would change the term “existing debt” to “failure to repay a debt”. This would allow us to potentially use our revocation authority even if collection action has ceased and the debt was ultimately terminated as a result, since the provider or supplier had still failed to repay it. Our central concern is more with the provider’s or supplier’s inaction in fulfilling its financial obligations to Medicare than with the particular status or result of CMS’ collection efforts. In other words, and as with all of our revocation reasons in § 424.535(a), the issue is the provider’s or supplier’s conduct, which, in the case of § 424.535(a)(17), involves the provider’s or supplier’s failure to repay monies it owed to the Federal government. Simply because the debt could not be collected and was subsequently “written off” does not negate the fact that the provider or supplier did not meet its responsibility to repay it in the first place. Although the financial obligation may no longer constitute a debt because it was “written off”, the core point is that it was a debt at one time but the provider did not repay it. Again, it is the provider’s non-payment of the debt when it was current rather than whether said debt still exists that is critical, hence our proposed move away from “existing debt” to a status that better reflects the provider’s inaction irrespective of the timing of the debt. In our view, a provider’s failure to fulfill its financial obligations to the Medicare program: (1) constitutes a potential vulnerability to the program; and (2) could well increase the likelihood that any of the provider’s or supplier’s future Medicare debts, too, may not be repaid. Our obligation to safeguard the Trust Funds, we believe, requires us to have authority to take action to help prevent the latter occurrence. For these reasons, we believe our proposed change is warranted.

Nevertheless, we recognize that our proposed revision to § 424.535(a)(17)(i) might cause concern within the provider community, for there could be numerous reasons behind the “writing

off” of a Medicare debt. For example, a provider may have been unable to repay a particular debt (that was later written off) because of a severe local emergency or natural disaster. While we would retain the authority to revoke under paragraph (a)(17)(i), we emphasize that we would still apply the aforementioned six factors in all potential revocation cases under paragraph (a)(17). Indeed, one of these factors is the “reason(s) for the failure to fully repay the debt (to the extent this can be determined)”, and we will continue to carefully consider the factual circumstances behind the repayment failure so as to ensure fairness to the provider or supplier.

(B) Reasons for Denial

As already discussed, we are proposing new revocation authorities in § 424.535(a)(15), (16), and (23). We believe the rationales for these revocation reasons are equally applicable to newly enrolling providers and suppliers. Our program integrity concerns are the same regardless of whether the provider or supplier is already enrolled or is attempting to enroll; in either case, we must protect the Trust Funds and beneficiaries from problematic parties. Consequently, we propose to largely duplicate these new revocation reasons and establish concomitant grounds in § 424.530 for denying enrollment as follows.

First, § 424.530(a)(1), like § 424.535(a)(1), addresses the need for compliance with subpart P’s enrollment requirements. We propose to change this reference from subpart P to title 42. As already noted, several sections of title 42 contain enrollment requirements outside of those in subpart P and to which the provider or supplier must adhere.

Second, we propose in new § 424.530(a)(16)(i) that CMS may deny a provider’s or supplier’s enrollment application if they, or any owner, managing employee or organization, officer, or director thereof, has been convicted (as that term is defined in 42 CFR 1001.2) of a misdemeanor under Federal or State law within the previous 10 years that CMS deems detrimental to the best interests of the Medicare program and its beneficiaries. (Section 424.530(a)(16)(ii) would mirror proposed § 424.535(a)(16)(ii).) Our concern is that we currently

have no legal authority to deny enrollment based on misdemeanor convictions for behavior that could endanger the Trust Funds or Medicare beneficiaries.

Third, new § 424.530(a)(17) would permit CMS to deny a provider's or supplier's enrollment application if the provider or supplier, or any owner, managing employee or organization, officer, or director thereof, has had a civil judgment under the FCA imposed against them within the previous 10 years. The same factors for consideration in § 424.535(a)(15) would be included in § 424.530(a)(17). Given our previously stated view that the actions identified in section 3729(a)(1) of the FCA involve serious misbehavior, we believe proposed § 424.530(a)(17) would help protect the integrity of the Medicare program.

Fourth, and for the same reasons we are proposing new § 424.535(a)(23), we would duplicate the latter in new denial reason § 424.530(a)(18). We must strive to ensure that enrolling IDTFs, DMEPOS suppliers, OTPs, HIT suppliers, and MDPPs are legitimate providers and suppliers, as evidenced in part by their compliance with the standards and conditions applicable to them.

(C) Effective Date of Revocation

Section 424.535(g) addresses revocation effective dates. It states that a revocation becomes effective 30 days after CMS or the contractor mails notice of its determination to the provider or supplier. Yet there are exceptions. If the revocation is based on a Federal exclusion or debarment, felony conviction, license suspension or revocation, or non-operational practice location, the revocation is effective with the date of exclusion or debarment, felony conviction, license suspension or revocation, or the date that CMS or its contractor determined that the provider or supplier was non-operational. The purpose of these exceptions is to prevent payment to a provider or supplier while it is out of compliance with Medicare enrollment requirements. To illustrate, assume a supplier's license is revoked on June 1. CMS learns of this and mails a revocation notice to the supplier on June 15. If we applied the aforementioned "30 days after

mailing” policy, the supplier could bill and be paid for services furnished between June 1 and July 15 while unlicensed. Per existing § 424.535(g), however, the revocation would be effective June 1, meaning all services furnished after that date would be ineligible for payment.

We view § 424.535(g)’s four exceptions as an important program integrity protection against improper payments. We do not believe providers and suppliers should be paid for services furnished during a period of non-compliance. With this principle in mind, we propose a number of policy and organizational changes to § 424.535(g).

First, we would split existing § 424.535(g) into several paragraphs. Paragraph (g)(1) would include the previously mentioned 30-day effective date policy, though with the following language at its beginning, “Except as described in paragraphs (g)(2) and (g)(3) of this section”. New paragraph (g)(2) would list the four retroactive revocation situations in existing § 424.535(g). Each situation (and its associated revocation effective date) would be incorporated into a separate sub-paragraph to make paragraph (g)(2) clearer and more readable.

Second, paragraph (g)(2) would include the following additional situations where a retroactive effective date would be warranted:

- Revocations under proposed § 424.535(a)(16) (regarding misdemeanor convictions): the effective date would be the date of the misdemeanor conviction.
- Revocations based on a State license surrender in lieu of further disciplinary action: the effective date would be the date of the license surrender.
- Revocations based on termination from a Federal health care program other than Medicare (for example, Medicaid): the effective date would be the date of the termination.
- Revocations based on termination of a provider agreement under 42 CFR part 489: the effective date would be, as applicable to the type of provider involved, the later of the following: (1) the date of the provider agreement termination; or (2) as applicable, the date that CMS

establishes under 42 CFR 489.55. (Section 489.55 permits payments beyond the provider agreement termination date in certain instances and for a certain period.)

- Revocations based on proposed § 424.535(a)(23) would be as follows:

++ If the standard or condition violation involved the suspension, revocation, or termination (or surrender in lieu of further disciplinary action) of the provider's or supplier's Federal or State license, certification, accreditation, or MDPP recognition, the revocation effective date would be the date of the license, certification, accreditation, or MDPP recognition suspension, revocation, termination, or surrender.

++ If the standard or condition violation involved a non-operational practice location (for example, an IDTF's failure to maintain a physical facility on an appropriate site per § 410.33(g)(3)), the revocation effective date would be the date the non-operational status began.

++ If the standard violation involved a felony conviction of an individual or entity described in § 424.67(b)(6)(i), the revocation effective date would be the date of the felony conviction.

(For all other standard violations, the effective date in paragraph (g)(1) would apply if the effective date in new paragraph (g)(3) (discussed later in this section of the proposed rule) does not.)

As with our existing four bases for a retroactive revocation, these new grounds would help ensure that providers and suppliers do not receive payment for services rendered while non-compliant with enrollment requirements. For example, a provider's State license surrender would mean that the provider is not appropriately licensed (and can thus be revoked under § 424.535(a)(1)) and, accordingly, should not be paid by Medicare for furnished services while unlicensed. Concerning terminations under another Federal health care program, some such programs are occasionally delayed in reporting their actions to CMS, during which period CMS continues making payments to the affected provider or supplier until CMS receives notice of the

termination. Any Federal program termination is of concern to us, which is why we promulgated a revocation reason based on this action. We believe that any such termination that leads to a Medicare revocation should consequently be retroactive to the date of the program termination since the latter stemmed from conduct that, in our view, was serious enough to warrant the subsequent revocation. Likewise, there could be a brief administrative time lapse between when a provider agreement is terminated and a Medicare revocation is effectuated, meaning that a provider without a required provider agreement might still receive payments beyond the provider agreement termination date or the date that CMS establishes under § 489.55. The aforementioned retroactive effective dates involving § 424.535(a)(23), meanwhile, generally mirror those currently in § 424.535(g) (for example, felony conviction).

Third, new § 424.535(g)(3) would state that if the action that triggered the revocation occurred before the provider's or supplier's enrollment effective date, the revocation effective date would be the enrollment effective date that CMS assigned to the provider or supplier. To illustrate, suppose an adverse legal action occurred on February 1 and the provider was enrolled effective April 1. Although CMS was unaware of the action at the time of enrollment, it revoked the provider on April 15 upon learning of it. The revocation effective date would be April 1 rather than February 1. The aim of § 424.535(g)(3) is merely to reiterate that we could not apply a revocation effective date that is earlier than the date the provider or supplier is enrolled. It is a technical, though, we believe, obvious clarification.

(D) Timeframes for Reversing a Revocation Under § 424.535(e)

Section 424.535(e) states that if a revocation was due to adverse activity (sanction, exclusion, felony) by one of the parties listed in § 424.535(e) (for example, owner, managing employee, authorized or delegated official, supervising physician), the revocation can be reversed if the provider or supplier terminates and submits proof that it has terminated its business relationship with that party within 30 days of the revocation notification. We have been

concerned about this 30-day period. We do not believe a provider or supplier should be afforded so much time to terminate this business relationship; each day the revoked provider or supplier remains affiliated with the party in question, the more Medicare dollars that could be paid until the 30-day timeframe expires. It is the provider's or supplier's constant responsibility to ensure that its owning and managing personnel present no program integrity risks to the Medicare program. To give the provider or supplier 30 days to terminate a relationship that should have been promptly ended upon the commission of the adverse action (for example, when the owner became excluded) would be inconsistent with our obligation to protect the Trust Funds; it could also convey a false impression that maintaining affiliations with problematic parties is acceptable so long as the relationship ceases within a month of the revocation notice. To this end, we propose to revise § 424.535(e) to reduce the 30-day period therein to 15 days. We are not proposing, for instance, a 5-day period because we recognize that it might be administratively and financially difficult to immediately terminate the business relationship in question, especially an owner's interest in the provider or supplier. Still, the reduction from 30 days to 15 days evidences our concern about making Medicare payments to providers and suppliers that have relationships with parties presenting program integrity risks.

We emphasize that this change would have no impact on a revoked provider's or supplier's ability to appeal a revocation under 42 CFR part 498. It would only affect the provider's or supplier's utilization of § 424.535(e) to reverse the revocation. We are soliciting comments on whether 15 days is an appropriate timeframe.

ii. Stay of Enrollment

CMS may deactivate a provider's or supplier's Medicare billing privileges for any of the reasons specified in § 424.540(a). A deactivation differs from a revocation in that the former: (1) merely involves the stoppage, rather than the termination, of the provider's or supplier's billing privileges; and (2) does not entail any reenrollment bar under § 424.535(c). The latter is a

particularly important distinction, for a deactivated provider or supplier can reactivate its billing privileges by following the procedures in § 424.540(b). It need not wait (as a revoked provider or supplier must) for the expiration of the 1 to 10-year bar period referenced in § 424.535(c) before attempting to restore its ability to bill Medicare. Indeed, we sometimes impose a deactivation instead of a revocation when we believe a more modest sanction is warranted.

Nevertheless, a deactivation can still impose a potential burden on a provider or supplier. This is especially true concerning § 424.540(e), which prohibits a provider or supplier from receiving payment for services or items furnished while deactivated. While deactivation is a less severe action than a revocation, it may be too punitive in certain cases. We believe that a middle ground between a deactivation and non-action on our part is warranted. In our view, we need as much flexibility as possible to take appropriate, fair, and reasonable measures that are commensurate with the degree of the provider's or supplier's action, inaction, or non-compliance.

For these reasons, we propose in new § 424.541 a new enrollment status labeled a "stay of enrollment." This would be a preliminary, interim status---prior to any subsequent deactivation or revocation---that would represent, in a sense, a "pause" in enrollment, during which the provider or supplier would still remain enrolled in Medicare; in this vein, CMS would neither formally nor informally treat the stay as a sanction or adverse action for purposes of Medicare enrollment. We would also notify the affected provider or supplier in writing of the stay.

There would be two prerequisites for a stay's implementation. First, the provider or supplier must be non-compliant with at least one enrollment requirement in Title 42. Mere suspicion of or information alleging non-adherence is insufficient. Actual non-compliance is required. Second, CMS ascertains that the provider or supplier can remedy the non-compliance via the submission of, as applicable to the situation, a Form CMS-855, Form CMS-20134, or

Form CMS-588 change of information or revalidation application (hereafter collectively referenced “Form CMS-855 change request” or “change of information application”). This change request could involve, for instance, reporting a new street number (to illustrate, a provider’s address changed from 10 Smith Street to 15 Smith Street) that the provider previously failed to disclose to CMS. We believe that using the aforementioned, comparatively bright-line Form CMS-855 submission standard would furnish clarity as to the types of non-compliance that can be remedied under our proposal and the specific vehicle for said remedial action.

When a “stay period” is imposed, the provider or supplier would not receive payment for services or items furnished during this period. These services and items would not be payable because the provider or supplier was non-compliant with enrollment requirements and thus not entitled to payment, even after the stay concludes. To permit payment for these services and items would be contrary to our obligation to safeguard the Trust Funds.

Although we acknowledge that this denial of payment is similar to what occurs with a deactivation under § 424.540, there are critical differences between the two actions. First, § 424.541 would make clear that a stay period lasts no more than 60 days. A deactivation, on the other hand, has no finite timeframe, meaning that services and items might not be payable for a long period of time if the provider or supplier does not submit the required reactivation application. Second, MACs can generally process Form CMS-855 change requests more rapidly than a reactivation application. A provider or supplier subject to a stay could therefore begin receiving payments sooner than would a deactivated provider or supplier. Third, while a reactivation application typically involves the provider’s or supplier’s completion of the entire Form CMS-855, a change of information application may only involve the submission of a limited amount of data (such as the information that is changing and basic identifying data). Completion of a change of information application is, in sum, considerably less burdensome for providers and suppliers than completion of a reactivation application.

Indeed, the issue of burden is the core consideration behind our proposal. As previously indicated, we do not wish to have to proceed to a deactivation (much less a revocation) in all cases of non-compliance. This is especially true if CMS believes in a particular case that the non-adherence can be fairly quickly corrected via the provider's or supplier's submission of updated enrollment data. Although we again recognize that payments for services and items furnished during the stay would not be covered, we emphasize that this would also be the case if CMS instead imposed a deactivation or revocation, with the important distinction that the period of non-payment would often be significantly shorter with a stay than with a deactivation and certainly a revocation. In all, we believe that our stay provision would ultimately reduce the burden on providers who would otherwise be deactivated or revoked for non-compliance.

Notwithstanding this, we believe the affected provider or supplier should have an opportunity to raise a concern about a stay by submitting a rebuttal. The rebuttal process would generally mirror that for deactivations and payment suspensions (outlined in 42 CFR 424.546 and 405.374, respectively), the two actions most akin to a stay. We recognize that given the comparatively and rather short time period that a stay would typically entail, many stays would have long expired by the time a provider or supplier files a rebuttal and CMS makes its determination thereon. In addition, if the provider or supplier can quickly return to compliance, they may likely pursue this course rather than submit a rebuttal (although the provider or supplier may still do so). Yet merely because some providers and suppliers might forego submitting a rebuttal does not mean the process should be unavailable to them.

Consistent with all of the foregoing, we propose a number of provisions in § 424.541. In paragraph (a)(1), we propose that CMS may stay an enrolled provider's or supplier's enrollment if the provider or supplier:

- Is non-compliant with at least one enrollment requirement in Title 42; and

- Can remedy the non-compliance via the submission of, as applicable to the situation, a Form CMS-855, Form CMS-20134, or Form CMS-588 change of information or revalidation application.

We emphasize that our authority to impose a stay would be discretionary. CMS would not be required to stay the provider's or supplier's enrollment. We could, for instance, elect to proceed directly to a deactivation or revocation (if grounds exist for either) without applying a stay as a prerequisite thereto. Our decision as to which action is most appropriate would depend upon the facts and circumstances of the case at issue.

In paragraphs (a)(2)(i) and (ii), respectively, we would state that during the period of any stay imposed under § 424.541:

- The provider or supplier remains enrolled in Medicare; and
- Claims submitted by the provider or supplier with dates of service within the stay period will be denied.

In paragraph (a)(3), we propose that a stay of enrollment would last no longer than 60 days from the postmark date of the notification letter. We believe a 60-day period would give the provider or supplier adequate time to submit the required Form CMS-855 change of information application.

In paragraph (a)(4), we propose that CMS must notify the affected provider or supplier in writing of the stay's imposition.

In paragraph (b), we would outline our proposed rebuttal process, which, as stated, would largely align with that for deactivations and payment suspensions.

In paragraph (b)(1), we propose that if a provider or supplier receives written notice from CMS or its contractor that the provider or supplier is subject to a stay under § 424.541, the provider or supplier has 15 calendar days from the date of the written notice to submit a rebuttal to the stay as described in § 424.541.

In paragraph (b)(2), we propose that CMS may, at its discretion, extend the 15-day time-period referenced in paragraph (b)(1).

In paragraphs (b)(3)(i) through (iv), we propose that the rebuttal must:

- Be in writing.
- Specify the facts or issues about which the provider or supplier disagrees with the stay's imposition and/or the effective date, and the reasons for disagreement.
- Submit all documentation the provider or supplier wants CMS to consider in its review of the stay.
- Be submitted in the form of a letter that is signed and dated by the individual supplier (if enrolled as an individual physician or non-physician practitioner), the authorized official or delegated official (as those terms are defined in § 424.502), or a legal representative (as defined in § 498.10). If the legal representative is an attorney, the attorney must include a statement that he or she has the authority to represent the provider or supplier; this statement is sufficient to constitute notice of such authority. If the legal representative is not an attorney, the provider or supplier must file with CMS written notice of the appointment of a representative; this notice of appointment must be signed and dated by, as applicable, the individual supplier, the authorized official or delegated official, or a legal representative.

In paragraph (b)(4), we propose that the provider's or supplier's failure to submit a rebuttal that is both timely under paragraph (b)(1) of this section and fully compliant with all of the requirements of paragraph (b)(3) of § 424.541 constitutes a waiver of all rebuttal rights under this section.

In paragraph (b)(5), we propose that upon receipt of a timely and compliant stay rebuttal, CMS reviews the rebuttal to determine whether the imposition of the stay and/or the effective date thereof are correct.

In paragraph (b)(6), we propose that a determination made under paragraph (b) is not an initial determination under § 498.3(b), and therefore, not appealable.

In paragraph (b)(7), we propose that nothing in paragraph (b) requires CMS to delay the imposition of a stay pending the completion of the review described in paragraph (b)(5).

We propose in paragraph (b)(8) to clarify the interaction between a stay and a subsequent deactivation or revocation.

In paragraph (b)(8)(i), we propose that nothing in paragraph (b) would require CMS to delay the imposition of a deactivation or revocation pending the completion of the review described in paragraph (b)(5) of this section. We believe we must retain the discretion to apply a subsequent deactivation or revocation should circumstances warrant.

In paragraph (b)(8)(ii)(A), we propose that if CMS deactivates the provider or supplier during the stay, any rebuttal to the stay the provider or supplier submits that meets the requirements of § 424.541 would be combined and considered with the provider's or supplier's rebuttal to the deactivation under § 424.546 if CMS has not yet made a determination on the stay rebuttal. (This is meant to facilitate efficiency and simplicity in the review process of both rebuttals.) In paragraph (b)(8)(ii)(B), however, we propose that in all cases other than that described in paragraph (b)(8)(ii)(A), a stay rebuttal that was submitted in compliance with § 424.541 would be considered separately and independently of any review of any other rebuttal or, for revocations, appeal.

Finally, existing § 424.555(b) states that payment may not be made for Medicare services and items furnished to a Medicare beneficiary by a deactivated, denied, or revoked provider or supplier. The paragraph further states that the beneficiary has no financial liability for such services and items provided by these providers and suppliers. To clarify the issues of payment and beneficiary liability for purposes of § 424.541, we propose to add providers and suppliers

currently under a stay of enrollment to the categories of providers and suppliers falling within the scope of § 424.555(b).

iii. Reporting Changes in Practice Location

Consistent with §§ 424.57(c)(2), 410.33(g)(2), and 424.516(d)(1)(iii), respectively, the following provider and supplier types must report a change in practice location within 30 days of the change: (1) DMEPOS suppliers; (2) IDTFs; and (3) physicians, nonphysician practitioners, and physician and nonphysician practitioner organizations. All other provider and supplier types are required per § 424.516(e)(2) to report practice location changes within 90 days of the change. As explained below, we propose two sets of regulatory revisions regarding practice location changes. First, we propose to revise § 424.516(e)(1) to require therein such location changes involving providers and suppliers other than the categories previously described to be reported within 30 days of the change. Second, we would clarify in §§ 410.33(g)(2), 424.516(d)(1)(iii), and 424.516(e)(1) that a change of practice location includes adding a new location or deleting an existing one.

We have recently discovered instances where certain provider and supplier types not addressed in §§ 424.57(c)(2), 410.33(g)(2), or 424.516(d)(1)(iii), have moved their practice location without notifying CMS. This is problematic for two reasons. One is that Medicare payments are often based on the provider's or supplier's specific geographic location. If we are not timely informed of the change in location, CMS could be making incorrect payments to the provider or supplier for an extended period (for instance, 90 days); this would be inconsistent with CMS's obligation to protect the Trust Funds. The other reason is that we would be unable to promptly determine whether the new site is compliant with Medicare provider enrollment requirements (for example, via a site visit) because we would not yet know of the change. The provider or supplier might be furnishing services from an invalid location, hence resulting in improper payments. CMS needs to ensure the accuracy of its payments, and being more rapidly

advised of critical data like a practice location change would help facilitate this. It would also facilitate consistency with the aforementioned 30-day requirement in §§ 424.57(c)(2), 410.33(g)(2), and 424.516(d)(1)(iii).

For purposes of reporting practice location changes, we have traditionally included additions and deletions of locations within the scope of such changes. There is as much payment safeguard risk with belatedly reported additions and deletions as with changes. Paying a provider or supplier for services it furnishes at an unreported newly-established location could involve improper payments because, again, CMS does not even know whether the site meets all provider enrollment requirements; likewise, CMS could be paying a provider or supplier for services related to a location that was deleted and no longer exists. To make certain we are more promptly notified of practice location additions and deletions, we propose to revise §§ 410.33(g)(2), 424.516(d)(1)(iii), and 424.516(e)(1) to reiterate that these two transactions must be reported within 30 days of the addition or deletion. (A similar revision to § 424.57(c)(2) is unnecessary because all changes to enrollment data (including practice location additions, deletion, and changes) must already be reported within 30 days.)

iv. Definitions

We are also proposing several new and clarified definitions to help explain the meaning of certain provider enrollment concepts.

(A) “Pattern or Practice”

Several of our existing Medicare enrollment revocation reasons are based upon the provider or supplier engaging in a pattern or practice of conduct. These reasons include all of the following:

- Section 424.535(a)(8)(ii): The provider or supplier has a pattern or practice of submitting claims that fail to meet Medicare requirements.

- Section 424.535(a)(14): The physician or eligible professional has a pattern or practice of prescribing Part B or D drugs that is abusive, represents a threat to the health and safety of Medicare beneficiaries, or fails to meet Medicare requirements.

- Section 424.535(a)(21): The physician or eligible professional has a pattern or practice of ordering, certifying, referring, or prescribing Medicare Part A or B services, items, or drugs that is abusive, represents a threat to the health and safety of Medicare beneficiaries, or otherwise fails to meet Medicare requirements.

In determining whether such a pattern or practice exists and if a revocation under any of these authorities is warranted, CMS considers the factors specified in § 424.535(a)(8)(ii), (14), and (21), respectively.

We have received questions from interested parties over the years as to what constitutes a pattern or practice under these provisions. We have always made these determinations on a case-by-case basis, using the above-referenced factors. We do not propose to change this general procedure, for it gives us the flexibility we need to address each situation on its own facts and circumstances. Every case is different, and our factors are designed to account for this. Nonetheless, and to furnish elucidation to the provider community, we believe that certain minimum regulatory parameters are appropriate. This would be based on our past experience in applying § 424.535(a)(8)(ii), (14), and (21), our review of the factors therein, and the factual circumstances we have encountered in these cases.

To this end, we propose to establish a definition of “pattern or practice” in § 424.502. It would mean:

- For purposes of § 424.535(a)(8)(ii), at least three submitted non-compliant claims.
- For purposes of § 424.535(a)(14), at least three prescriptions of Part B or Part D drugs that are abusive, represent a threat to the health and safety of Medicare beneficiaries, or otherwise fail to meet Medicare requirements.

- For purposes of § 424.535(a)(21), at least three orders, certifications, referrals, or prescriptions of Medicare Part A or B services, items, or drugs that are abusive, represent a threat to the health and safety of Medicare beneficiaries, or otherwise fail to meet Medicare requirements.

We recognize that our minimum threshold of three might appear small upon first impression. Yet interested parties should not assume that three non-compliant claims, orders, etc. would always trigger a revocation. To the contrary, it would often take more than three (and, on occasion, considerably more) to warrant revocation action. In only the rarest of circumstances would we revoke based on three claims, referrals, etc., and these would typically involve egregious non-compliance by the provider or supplier; we specifically chose three as our threshold to account for these isolated instances. We assure the provider community that, in every case, we would continue to diligently consider the factors outlined in § 424.535(a)(8)(ii), (14), and (21) and would treat the provider or supplier fairly given the facts presented. Our proposed definition in no way negates the validity or importance of these factors; its sole purpose is to furnish greater clarity to the provider community.

To accommodate our definition, we also propose to make several technical changes to § 424.535(a)(8)(ii), (14), and (21).

The introductory paragraph of § 424.535(a)(8)(ii) reads: “CMS determines that the provider or supplier has a pattern or practice of submitting claims that fail to meet Medicare requirements. In making this determination, CMS considers, as appropriate or applicable, the following:”. We are concerned that this language could be construed as meaning that so long as the “pattern or practice” definition in § 424.502 is met --- that is, at least three non-compliant claims, orders, etc., were involved --- a § 424.535(a)(8)(ii) revocation must automatically follow. As previously discussed, this is untrue. Even if the definition’s threshold is met, we would then consider the entirely separate question of whether a revocation is

warranted. In other words, the first step in our analysis would be to ascertain whether the activity involved qualifies as a “pattern or practice.” If (and only if) it does, the second step would be to determine, using the specified factors, whether the provider or supplier should be revoked. To clarify this approach, we propose to change § 424.535(a)(8)(ii)’s opening paragraph to state: “CMS determines that the provider or supplier has a pattern or practice of submitting claims that fail to meet Medicare requirements and that a revocation on this basis is warranted. In determining whether a revocation is warranted, CMS considers, as appropriate or applicable, the following:”.

Language similar to that in existing § 424.535(a)(8)(ii) is present in § 424.535(a)(14)(i) and (ii). For the reasons outlined in the previous paragraph, we propose to revise the opening of § 424.535(a)(14)(i) to state: “The pattern or practice is abusive or represents a threat to the health and safety of Medicare beneficiaries, or both, and CMS determines that a revocation on this basis is warranted. In determining whether a revocation is warranted, CMS considers the following factors:”. The revised opening of § 424.535(a)(14)(ii) would read: “The pattern or practice of prescribing fails to meet Medicare requirements and CMS determines that a revocation on this basis is warranted. In determining whether a revocation is warranted, CMS considers the following factors:”.

With respect to § 424.535(a)(21), the closing language of the first sentence and the entirety of the second sentence reads: “...or otherwise fails to meet Medicare requirements. In making its determination as to whether such a pattern or practice exists, CMS considers the following factors:”. We propose to change this to state: “...or otherwise fails to meet Medicare requirements, and CMS determines that a revocation on this basis is warranted. In determining whether a revocation is warranted, CMS considers the following factors:”.

(B) Indirect Ownership

We propose to define “indirect ownership interest” in § 424.502. Some interested parties have expressed uncertainty about what indirect ownership is. An understanding of indirect ownership is important for providers and suppliers because they are required to report on their enrollment application all of their 5 percent or greater indirect owners. Section 420.201 defines an “indirect ownership interest” as “any ownership interest in an entity that has an ownership interest in the disclosing entity. The term includes an ownership interest in any entity that has an indirect ownership interest in the disclosing entity.” We believe this definition (albeit with certain modifications for purposes of clarity and to conform to the terminology of part 424, subpart P) would provide the desired elucidation. Accordingly, our proposed definition of “indirect ownership interest” would state:

- Any ownership interest in an entity that has an ownership interest in the enrolling or enrolled provider or supplier. (For example, Provider A is owned by Entity B. Entity B is owned by Entity C. Entity C would have an indirect ownership interest in (and be an indirect owner of) Provider A.)
- Any ownership interest in an indirect owner of the enrolling or enrolled provider or supplier. (Using the preceding example, if Entity D had an ownership interest in Entity C, Entity D would have an indirect ownership interest in Provider A.)

We would designate this portion of our definition as paragraphs (1)(i) and (ii). To further clarify the concept of indirect ownership, we propose in paragraph (2) to mirror an example contained in § 420.202(a). Paragraph (2) would state: “The amount of indirect ownership interest is determined by multiplying the percentages of ownership in each entity. For example, if A owns 10 percent of the stock in a corporation that owns 80 percent of the provider or supplier, A's interest equates to an 8 percent indirect ownership interest in the provider or supplier and must be reported on the enrollment application. Conversely, if B owns 80 percent of the stock of a corporation that owns 5 percent of the stock of the provider or supplier, B's

interest equates to a 4 percent indirect ownership entity in the provider or supplier and need not be reported.”

(C) PTs and OTs in Private Practice and Speech-Language Pathologists

Physical therapists in private practice (PTPPs), occupational therapists in private practice (OTPPs), and speech-language pathologists (SLPs) are permitted under the Act to receive payment for furnished Medicare services. However, they do not fall within the regulatory definition of “supplier” under § 400.202. The reason is that while the services they provide are payable under Medicare (thus allowing these individuals to enroll in the program), PTPPs, OTPPs, and SLPs are not formally recognized in either the Act or the CFR as types of “suppliers.” Nevertheless, we have applied the provisions of subpart P of part 424 to PTPPs, OTPPs, and SLPs via current guidance. We have also afforded PTPPs, OTPPs, and SLPs the same appeal rights (for example, appeals of enrollment denials and revocations) as all other enrolling or enrolled individuals and entities. To codify these practices in the CFR, we propose several regulatory provisions.

First, we propose to define “supplier” in § 424.502 as follows: “Supplier means, for purposes of this subpart, all of the following: (1) the individuals and entities that qualify as suppliers under § 400.202; (2) physical therapists in private practice; (3) occupational therapists in private practice; and (4) speech-language pathologists.” Second, we would include within new § 405.800(d) the same definition of “supplier” we are proposing in § 424.502. This is because subpart H of part 405 addresses various types of provider enrollment appeals under Medicare Part B. Third, 42 CFR part 498, too, contains various provisions concerning provider enrollment appeals. Section 498.2 defines “supplier” for purposes of part 498 by outlining several categories of suppliers. One such category, codified in paragraph (6) of this definition, reads, “Physical therapist in independent practice.” We propose to revise paragraph (6) to state:

“For purposes of this part, physical therapist in private practice, occupational therapist in private practice, or speech-language pathologist.”

(D) Authorized Officials

Under § 424.510(d)(3), an authorized official or delegated official must sign the Medicare enrollment application (for example, Form CMS-855A) on behalf of the provider or supplier if the latter is a corporation, partnership, group, limited liability company, or other organization. The terms authorized official and delegated official are defined in § 424.502. The former is “an appointed official (for example, chief executive officer, chief financial officer, general partner, chairman of the board, or direct owner) to whom the organization has granted the legal authority to enroll it in the Medicare program, to make changes or updates to the organization's status in the Medicare program, and to commit the organization to fully abide by the statutes, regulations, and program instructions of the Medicare program.” A delegated official is defined as an individual “who is delegated by the ‘Authorized Official’ the authority to report changes and updates to the enrollment record. The delegated official must be an individual with ownership or control interest in, or be a W-2 managing employee of, the provider or supplier.”

With respect to the authorized official definition, interested parties have questioned CMS on whether the term “organization” as used therein means: (1) the entity listed in Section 2 of the Form CMS-855 as identified by its legal business name (LBN) and tax identification number (TIN); or (2) the provider or supplier type that is enrolling. To illustrate, suppose Entity A (with its unique LBN and TIN) submits three separate Form CMS-855A initial enrollment applications to enroll an HHA, a hospice, and a skilled nursing facility (SNF), all of which have Entity A’s LBN and TIN. In this type of situation, the question is whether “organization” refers to Entity A or instead to three separate ones – that is, the HHA, hospice, and the SNF.

We propose to add a sentence to the conclusion of the “authorized official” definition clarifying that the term “organization” therein --- and exclusively for purposes of applying the “authorized official” definition -- means the enrolling entity as identified by its LBN and TIN and not the provider or supplier type(s) that the entity is enrolling as. Using our previous illustration, this is because the HHA, hospice, and the SNF are not legal entities (such as corporations) separate and distinct from Entity A but are, in effect, part of Entity A itself; Entity A, in other words, is enrolling as an HHA, hospice, and SNF. In practical terms, this means an authorized official serves in that role on behalf of the enrolling entity (Entity A). Per our example, therefore, the individual could sign CMS provider enrollment applications concerning the HHA, hospice, and the SNF. We welcome comments on our proposed clarification.

2. Medicaid and CHIP Enrollment

a. Background

The Medicaid program (title XIX of the Act) is a joint Federal and State health care program that (as of December 2022) covers more than 85 million low-income individuals. States have considerable flexibility when administering their Medicaid programs within a broad Federal framework, and programs vary from State to State. The Children’s Health Insurance Program (CHIP) (title XXI of the Act) is a joint Federal and State health care program that (as of December 2022) provides health care coverage to over 7 million children in families with incomes too high to qualify for Medicaid, but too low to afford private coverage.

In operating Medicaid and CHIP, and as required by sections 1902(a)(78) and 2107(e)(1)(D) of the Act, respectively, each State requires providers to enroll if the providers wish to furnish, order, prescribe, refer, or certify eligibility for Medicaid or CHIP items or services in that State.²⁵³ States may also establish their own provider enrollment requirements

²⁵³ Section 1902(kk)(7) also requires physicians and other eligible professionals who order or refer Medicaid services and items to be enrolled in Medicaid. This requirement is made applicable to CHIP via section 2107(e)(1)(G) of the Act.

which must be met in addition to the applicable Federal provider enrollment requirements. Similar to Medicare provider enrollment, the purpose of the Medicaid and CHIP provider enrollment processes is to ensure that providers: (1) meet all Medicaid or CHIP requirements (and any other State-specific or Federal requirements); (2) are qualified to furnish, order, prescribe, refer, or certify Medicaid and CHIP services, items, and drugs; and (3) are eligible to receive payment, where applicable.

Different States may have different provider enrollment processes in operating their Medicaid and CHIP programs. However, all States must comply with Federal Medicaid and CHIP provider enrollment requirements, including those in part 455, subparts B and E.²⁵⁴ For example, under subpart B, providers must disclose information regarding, among other things, ownership and control of the provider entity, certain business transactions, and criminal convictions related to Federal health care programs. Under subpart E, States must implement various Medicaid provider screening requirements. (In addition, State enrollment requirements must be consistent with section 1902(a)(23) of the Act and implementing regulations at § 431.51, under which States may set reasonable standards relating to the qualifications of providers; however, States may not restrict the right of beneficiaries to obtain services from any person or entity that is both qualified and willing to furnish such services.)

Another such provision in part 455 to which states must adhere involves denial or termination of enrollment. Under § 455.416, the State must deny or terminate a provider's Medicaid or CHIP enrollment for reasons specified therein, which include the following:

- Any person with a 5 percent or greater direct or indirect ownership interest in the provider fails to: (1) submit timely and accurate information; and (2) cooperate with any screening methods required under part 455, subpart E.

²⁵⁴ All of subpart E, and 42 CFR 455.107 in Subpart B, are applicable to CHIP under §457.990.

- Any person with a 5 percent or greater direct or indirect ownership interest in the provider has been convicted of a criminal offense related to that person's involvement with Medicare, Medicaid, or CHIP in the last 10 years.

- The provider, or a person with an ownership or control interest in or who is an agent or managing employee of the provider, fails to submit timely or accurate information as required.

- The provider, or any person with a 5 percent or greater direct or indirect ownership interest in the provider, fails to submit sets of fingerprints in a form and manner to be determined by the State Medicaid agency within 30 days of a CMS or a State Medicaid agency request.

- The provider fails to permit access to provider locations for any site visits under § 455.432.

Of particular importance, as will be discussed in more detail in this section III.K. of this proposed rule is that, under section 1902(a)(39) of the Act and § 455.416(c), the State must deny or terminate the provider's enrollment if the provider is terminated under the Medicare program, or the Medicaid program or CHIP of any other State.

These termination reasons require States to take action against providers that have, for instance, demonstrated an unwillingness or inability to meet certain Medicaid or CHIP requirements, or engaged in improper conduct. The possibility of being terminated also encourages providers to abide by Medicaid and CHIP enrollment rules, thus protecting Medicaid and CHIP against improper provider activity. Recognizing, however, that special circumstances may exist concerning a particular provider (and given the importance of leaving the States with as much discretion in their enrollment processes as possible), several of the otherwise mandatory termination reasons in § 455.416 permit the State to forgo termination if the State: (1) determines that such an action would not be in the Medicaid program's best interests; and (2) documents this decision in writing. Furthermore, States may develop additional State-specific reasons for

terminating a Medicaid or CHIP provider, so long as such reasons (and the enforcement thereof) are not inconsistent with the requirements of §§ 455.416 and 431.51.

b. The 21st Century Cures Act's Medicaid and CHIP Provider Enrollment Requirements

The 21st Century Cures Act (Pub. L. 114-255; hereafter referred to as the Cures Act) was signed into law on December 13, 2016. The Cures Act addresses a variety of nationwide health care issues. Among the topics outlined in section 5005 of the Cures Act is Medicaid and CHIP provider enrollment and, in particular, Medicaid and CHIP provider terminations. For purposes of our proposals in this section III.K., the most pertinent provisions in section 5005 of the Cures Act are as follows:

- Section 5005(a)(1) of the Cures Act added a new paragraph (8) to section 1902(kk) of the Act requiring the State to report the termination of a provider under Medicaid or CHIP to the Secretary within 30 days after the effective date of the termination. Section 5005(a)(1) of the Cures Act also outlines information that must be included in the termination notification that the State sends to CMS. However, paragraph (8)(A) limits this reporting requirement to terminations for reasons specified in § 455.101 as in effect on November 1, 2015, which are limited to terminations “for cause” (including, but not limited to, terminations for reasons relating to fraud, integrity, or quality). Paragraph (8)(B) provides that, for purposes of the reporting requirement, the effective date of a termination is the later of: (1) the effective date specified in the notice of termination; or (2) the date on which applicable appeal rights have been exhausted or the timeline for appeal has expired.

- Section 5005(a)(3) of the Cures Act added a new paragraph (ll) to section 1902 of the Act stating that within 30 days of receiving notification of a Medicaid or CHIP provider termination, the Secretary shall review such termination and, if the Secretary determines appropriate, include such termination in any database or similar system developed under section 6401(b)(2) of the Affordable Care Act.

- Section 5005(a)(4)(A) of the Cures Act added a new paragraph (D) to section 1903(i)(2) of the Act providing that, except for emergency items or services (but not including items or services furnished in a hospital emergency department), no Federal financial participation (FFP) funds may be paid for items and services furnished by a provider terminated under Medicaid or CHIP (as described in section 1902(kk)(8)) beginning 60 days after the date the termination is included in the termination database.

We have issued extensive sub-regulatory guidance to assist States in implementing Medicaid and CHIP screening and enrollment provisions outlined in 42 CFR part 455. This guidance is compiled in a document titled “Medicaid Provider Enrollment Compendium” (MPEC) (<https://www.medicaid.gov/sites/default/files/2021-05/mpec-3222021.pdf>), originally issued in May 2016 and subsequently updated several times. After the enactment of the Cures Act, CMS again updated the MPEC to clarify the operational details concerning several of the statutory provisions amended by section 5005.

Under CMS’ existing process (under the statute and MPEC guidance), when a State reports a “for cause” termination, CMS determines whether: (1) the State submitted the required termination data in accordance with section 1902(kk)(8) of the Act; and (2) the termination is, indeed, “for cause.” If CMS concludes that the reported termination is “for cause” and is thus appropriate to be included in the database referenced in section 1902(ll) of the Act, the information is uploaded into a CMS-managed database. This database contains information on Medicaid and CHIP terminations and Medicare revocations, the latter of which is updated at least monthly. The database enables a State to review Medicaid and CHIP terminations in other States, as well as Medicare revocations, and, under § 455.416(c), to deny enrollment or take its own termination action against a provider if the latter is also enrolled in the State. Moreover, the database gives CMS access to information on Medicaid and CHIP provider terminations

nationwide, which permits us to take a Medicare revocation action against the provider under § 424.535(a)(12)(i), if appropriate, based on the Medicaid or CHIP termination.

c. Proposed Provisions

i. Termination Lengths - Background

There are two termination database-related matters that have generated uncertainty during our implementation of the § 455.416(c) termination requirement. They involve: (1) the length of time for which a termination remains active in the termination database; and (2) the interaction of different termination periods imposed by the States and/or the Medicare program.

Under § 424.535(c), if a Medicare provider or supplier is revoked from Medicare, they are barred from participating in the Medicare program from the effective date of the revocation until the end of the reenrollment bar, which, under existing §424.535(c), is generally for a period of 1 to 10 years. This 1- to 10-year period typically constitutes: (1) the time period for which the provider or supplier is revoked from Medicare; and (2) the amount of time that the Medicare revocation will remain in the termination database.

Many States have similar reenrollment bars for terminated Medicaid and CHIP providers. (Hereafter, and for purposes of consistency, the terms “termination period” and “reenrollment bar” as used in this section III.K. refer to a Medicaid or CHIP reenrollment bar, unless otherwise noted.) Yet these termination periods often differ among the States. For instance, State A may terminate a provider for 3 years for a particular transgression while State B might do so for 10 years for the same conduct. We recognize the traditional deference given to States regarding the establishment of reenrollment bars. However, the interplay between varying termination period lengths (especially as they relate to the termination database and the previously-mentioned termination requirement in § 455.416(c)) has caused confusion among the States, provider communities, and other interested parties. Accordingly, we propose to specify in regulation the length of time for which for cause provider terminations will remain in the database and, by

extension, the period for which other States must deny or terminate the provider under to § 455.416(c).

ii. Revision to § 455.416(c)

As previously indicated, under § 455.416(c) the State Medicaid agency must deny or terminate the enrollment of any provider that is terminated on or after January 1, 2011, under title XVIII of the Act, or under the Medicaid program or CHIP of any other State. We propose to add the following clause to the end of § 455.416(c): “and is currently included in the termination database under § 455.417.” This revision would clarify that the denial and termination requirement under § 455.416(c) is predicated on the provider’s inclusion in the termination database.

iii. Length of Inclusion in Database (§ 455.417)

For the reasons outlined above, we propose several provisions in new § 455.417 as follows:

- In paragraph (a)(1), we propose that a provider would remain in the termination database referenced in section 1902(l) of the Act for a period that is the lesser of:

- ++ The length of the termination period imposed by the initially terminating State Medicaid program or CHIP, or the reenrollment bar imposed by the Medicare program; or

- ++ 10 years (for those Medicaid or CHIP terminations that are greater than 10 years).

- Under proposed paragraph (a)(2) all other State Medicaid programs or CHIPs in which the provider is enrolled or seeking to enroll would be required to terminate or deny the provider’s enrollment from their respective programs (under § 455.416(c)) for at least the same length of time as the termination database period).

- In paragraphs (b)(1)(i) and (ii), respectively, we propose that nothing in paragraph (a) would prohibit:

- ++ The initially terminating State from imposing a termination period of greater than 10 years consistent with that State’s laws, or

++ Another State from terminating the provider, based on the original State's termination, for a period: (A) of greater than 10 years; or (B) that is otherwise longer than that imposed by the initially terminating State.

In paragraph (b)(2), however, we would make clear that the period established under paragraph (b)(1)(ii) must be no shorter than the period in which the provider is to be included in the termination database under paragraph (a).

To illustrate how paragraphs (a) through (b) would work in practice, consider the following examples:

++ Example 1: State A, the initially terminating State, terminates a provider for a period of 5 years. Under paragraph (a)(1), the provider would remain in the termination database for 5 years. Under paragraph (b), when State B terminates the provider based on the State A termination (under § 455.416(c)), it may impose any termination period so long as (under proposed paragraph (b)(2)) it is no shorter than the 5-year period in which the provider remains in the termination database. (This is because all States must adhere, at a minimum, to the termination database period.) However, whatever period State B imposes would have no effect on the length of time the provider is to remain in the termination database, which is 5 years under the original State's (State A's) termination period. If, therefore, State B imposes an 8-year termination period, the provider would still only remain in the termination database for 5 years, but State B could (under its State law) prohibit the provider from enrolling in its State B Medicaid program or CHIP for another 3 years beyond that period.

++ Example 2: State A, the initially terminating State, terminates a provider for 15 years. Under paragraph (a)(1), the provider would remain in the termination database for only 10 years. Under paragraph (b), however, State A may enforce its original 15-year termination period imposed on the provider notwithstanding that the provider would only remain in the database for 10 years. When State B terminates the provider based on the State A termination

(under § 455.416(c)), it may impose any termination period permitted under its State law so long as it is at least the length of the 10-year termination database period in this Example 2.

As indicated in Examples 1 and 2, there is a critical distinction between a State-imposed termination period (or a Medicare reenrollment bar) and the length of time in which a provider remains in the termination database. The former generally involves the period for which the provider is prohibited from reenrolling in the initially terminating State program or Medicare (in the case of a revocation); the latter involves the minimum period in which other States must also terminate the provider under § 455.416(c). (Hereafter, the former will be referred to as the “termination period” or “reenrollment bar” and the latter the “termination database period.”)

Aside from the aforementioned need for clarity, there are several other important reasons for proposed § 455.417(a) and (b).

First, despite our aforementioned concerns about inconsistencies in State-imposed termination periods, we are committed to ensuring that States have as much discretion as possible in administering their respective Medicaid programs. We believe proposed § 455.417(a) and (b), taken together, would clarify the duration of the requirement to terminate under § 455.416(c) while preserving each State’s ability to impose whatever termination period it deems appropriate (subject to proposed paragraph (b)(2), which designates the termination database period as a minimum).

Second, establishment of a maximum 10-year termination database period would address situations where a State imposes an extremely lengthy, or even a lifetime, termination period that is far longer than: (1) that imposed by other States for the same conduct; or (2) the maximum Medicare 10-year reenrollment bar under § 424.535(c), but other States wish to permit a provider to reenroll before the initially terminating State’s reenrollment bar has expired. Moreover, a finite termination database period is needed to address instances where the initially terminating State establishes an indefinite termination period; if the termination remained in the database

until that State permitted the provider to reenroll, this would essentially cause the provider to be barred from the Medicaid program in all States indefinitely, regardless of the underlying cause of the termination and the circumstances associated therewith. This could be very problematic for the provider and perhaps lead to access to care issues in some States. Indeed, providers may experience undue burden in these cases because even if they can prove that the underlying cause for the termination has been resolved, they might remain unable to enroll in other States while an indefinite termination remains in the termination database. We believe that a maximum 10-year period in the database (if the State imposes a termination period of 10 years or longer) would give the broadest possible deference to the initially terminating State while still providing a consistent and finite period during which other States are required to terminate (and continue the termination) or deny the provider's enrollment under § 455.416(c).

In paragraph (c)(1), we propose that if the initially terminating State agency or the Medicare program reinstates the provider prior to the end of the termination period originally imposed by the initially terminating State program or Medicare, CMS would remove the provider from the termination database after the reinstatement has been reported to CMS. This proposal is intended to clarify the impact of a reinstatement, including those occurring prior to the expiration of the original termination period. Such instances of early reinstatement might include: (1) resolution of the underlying basis for the original termination; or (2) access to care concerns of the originally terminating State agency. However, we also propose in § 455.417(c)(2) that if the provider is removed from the database due to reinstatement by the originally terminating State agency, nothing prohibits CMS from immediately re-including the provider in the database if a separate basis for doing so exists under 42 CFR part 455 or 424. This is to emphasize that CMS is not required to afford the provider any sort of "waiting period" between the expiration of the original termination period and the commencement of a new one

should grounds exist for the imposition of the latter; the new termination database period can become effective immediately upon the expiration of the prior one.

Consider the following example of proposed § 455.417(c)(2)'s potential applicability. State A initially terminates a provider for 2 years. Under proposed § 455.417(a), the provider would be included in the termination database for 2 years. Under proposed § 455.417(b), all other States must terminate the provider from their Medicaid programs for at least that same time period. Yet Medicare is not required to (and elects not to) revoke the provider's Medicare enrollment notwithstanding the State A termination. Now assume that State A reinstates the provider after 1 year. Two days before the reinstatement takes effect, though, the provider is revoked from Medicare with a 3-year enrollment bar for a reason unrelated to the grounds behind the State A termination. Since § 455.416(c) requires State A (and all other States) to terminate the provider based on the Medicare revocation, CMS may place the provider in the termination database for a 3-year period effective immediately upon the expiration of the original termination database period. This is to ensure that the initial 1-year period runs its full course before the beginning of the 3-year termination database. If we commenced the 3-year period 2 days before the 1-year period expired, the 1-year period would, in effect, have lasted 2 days less than 1 year; likewise, the 3-year period would essentially be 3 years minus 2 days. This is due to the 2-day overlap between the two timeframes.

Aside from clarifying that Medicaid termination periods can run consecutively without any break between them, we believe that proposed § 455.417(c) would help ensure a seamless transition between the two periods and, in the process, prevent problematic Medicaid providers from using any gap in periods to bill Medicaid.

We indicated earlier that, per the statute and MPEC guidance, States must report "for cause" terminations to CMS for purposes of the termination database. We propose in new § 455.417(d) that, for purposes of § 455.417 only, terminations under § 455.416(c) (which, as

previously discussed, are based on another State’s termination of the provider) are not themselves considered “for cause” terminations, and therefore, need not be separately reported to CMS for inclusion in the termination database. Using Examples 1 and 2 as previously discussed, this would mean that State B would not have to report the terminations in those examples to CMS for termination database purposes, although State B would still be required to: (i) terminate the provider under § 455.416(c), based on the State A termination; and (ii) apply a termination period no shorter than the termination database period established under § 455.417(a). The goal of proposed § 455.417(d) is to eliminate repetitiveness in reporting the same data to CMS so as to ease the burden on States. In our view, and under the foregoing example, there is no reason for State B (and, for that matter, other States) to expend resources in reporting a termination that was already reported by the originally terminating State. Furthermore, this would avoid the potential for additional confusion regarding the termination database period, in that it would ensure that such period is based only on the initial State’s termination and not on subsequent derivative terminations.

L. Expand Diabetes Screening and Diabetes Definitions

For CY 2024, we propose to: (1) expand coverage of diabetes screening tests to include the Hemoglobin A1C test (HbA1c) test; (2) expand and simplify the frequency limitations for diabetes screening; and (3) simplify the regulatory definition of “diabetes” for diabetes screening (§ 410.18(a)), Medical Nutrition Therapy (MNT) (§ 410.130) and Diabetes Outpatient Self-Management Training Services (DSMT) (§ 410.140).

Medicare coverage for diabetes screening tests under Part B are described in statute (sections 1861(s)(2)(Y), 1861(ww)(2)(K), 1861(yy), and 1862(a)(1)(M) of the Act) and in regulation at 42 CFR 410.18. The statute and regulations allow for diabetes screening tests:

- The Fasting Plasma Glucose (FPG) test (section 1861(yy)(1)(A) of the Act and § 410.18(c)(1));

- The Post Glucose Challenge Test, also called the Glucose Tolerance Test (GTT) (§ 410.18(c)(2)); and
- Such other tests, and modifications to tests, as the Secretary determines appropriate, in consultation with appropriate organizations (section 1861(yy)(1)(B) of the Act) and that may be determined through a national coverage determination (§ 410.18(c)(3)).²⁵⁵

We propose to exercise our authority in section 1861(yy)(1) of the Act to add the HbA1c test to the types of diabetes screening tests covered under § 410.18(c), in consultation with recommendations by appropriate organizations.

Section 1861(yy)(3) of the Act limits the frequency of diabetes screening tests to not more often than twice within the 12-month period following the date of the most recent diabetes screening test of that individual. Our regulations allow two screening tests per calendar year if the patient was previously diagnosed with pre-diabetes and one screening test per year for patients who were previously tested who were not diagnosed with pre-diabetes, or who were never tested before (§ 410.18(d)). We propose to exercise our authority in section 1861(yy)(1)(3) of the Act to simplify our frequency limitations for diabetes screening by aligning to the statutory limitation of not more often than twice within the 12-month period following the date of the most recent diabetes screening test of that individual.

We also propose to simplify the regulatory definitions of “diabetes” for the purpose of diabetes screening at § 410.18(a) to remove the codified clinical test requirements from the definition of “diabetes.” We also propose to remove the definition of “pre-diabetes” at § 410.18(a). The diabetes and prediabetes definitions at § 410.18(a) supported existing regulatory frequency limitations in § 410.18(d), which describe separate frequency limitations between individuals previously diagnosed, and those terms would no longer be needed under our

²⁵⁵ The Secretary, as of the date of this proposed rule, has not approved additional diabetes screening tests by through a national coverage determination.

proposed updates. We recognize that it is unnecessary to codify clinically specific test criteria into the regulatory definition of diabetes, which reduces flexibility for the agency and health care system to adapt to evolving clinical standards without potentially producing programmatic benefit. The proposed revised definition of diabetes for screening purposes would be shortened to describe diabetes as diabetes mellitus, a condition of abnormal glucose metabolism.

Medicare coverage for MNT under Part B is described in statute (primarily sections 1861(s)(2)(V), 1861(vv), and 1861(ww)(2)(I) of the Act, in regulations at 42 CFR part 410, subpart G, and in National Coverage Determination (NCD) (Section 180.1 of the Medicare National Coverage Determinations Manual (NCD Manual)). Section 410.130 currently describes a number of definitions for purposes of the MNT benefit, including “diabetes.” The regulatory definition of diabetes for MNT purposes at § 410.130 is identical to the existing regulatory definition of diabetes for screening purposes at § 410.18(a). We propose to simplify the regulatory definitions of “diabetes” for the purpose of MNT at § 410.130 to remove the codified clinical test requirements. The proposed revised definition of diabetes for MNT purposes would be shortened to simply describe diabetes as diabetes mellitus, a condition of abnormal glucose metabolism. NCD 180.1 refers to the regulatory definition of diabetes at § 410.130, so no modifications would be required to the NCD.

Medicare coverage for DSMT under Part B is described in statute (sections 1861(s)(2)(S), 1861(qq), 1861(ww)(2)(F) of the Act) and in regulation at part 410 subpart H. Section 410.140 describes a number of definitions for the purposes of the DSMT benefit, including “diabetes”. The regulatory definition of diabetes for DSMT purposes at § 410.140 is identical to the existing regulatory definition of diabetes for MNT purposes at § 410.130 and the existing regulatory definition of diabetes for screening purposes at § 410.18(a). We propose to exercise our authority to simplify the regulatory definitions of “diabetes” for the purpose of DSMT at § 410.140 to remove the codified clinical test requirements. The proposed revised

definition of diabetes for DSMT purposes would be shortened to simply define diabetes as diabetes mellitus, a condition of abnormal glucose metabolism.

1. Background

Diabetes is a chronic disease that affects how the body turns food into energy and includes three main types: Type 1, Type 2 and gestational diabetes. The Centers for Disease Control and Prevention (CDC) reports that approximately 37.3 million Americans are living with diabetes and an additional 96 million Americans are living with prediabetes.²⁵⁶ CDC reports that 326,000 persons age 65 years and older are newly diagnosed with diabetes each year. CDC also estimates that among persons age 65 years and older, 21 percent have been diagnosed with diabetes while 5 percent have undiagnosed diabetes.²⁵⁷ Diabetes is the leading cause of kidney failure and new cases of blindness among adults, and the sixth leading cause of death among adults age 65 years and older in the US.²⁵⁸ Screening is performed on persons who may not exhibit symptoms to identify persons with either prediabetes or diabetes, who can then be referred for appropriate prevention or treatment, with the intention of improving health outcomes.

In October 2015, the United States Preventive Services Task Force (USPSTF) issued a revised final recommendation statement, with a grade of B, for screening for abnormal blood glucose as part of cardiovascular risk assessment in adults aged 40 to 70 years who are overweight or obese and again identified the FPG, GTT and HbA1c tests as appropriate for diabetes screening.²⁵⁹ In August 2021, the USPSTF issued a revised final recommendation statement, with a grade of B, that expanded recommended screening for prediabetes and type 2

diabetes in adults aged 35 to 70 years who have overweight or obesity, and that clinicians should offer or refer patients with prediabetes to effective preventive interventions, which are discussed in their report. The USPSTF again recommended the FPG, GTT and HbA1c tests as appropriate for diabetes screening and noted, “Because HbA1c measurements do not require fasting, they are more convenient than using a fasting plasma glucose level (FPG) or an oral glucose tolerance test (GTT).”²⁶⁰ The grade of B is indicated when the USPSTF has high certainty that the net benefit is moderate or moderate certainty that the net benefit is moderate to substantial.

We recognize that both the USPSTF and specialty societies have identified the HbA1c test as clinically appropriate for diabetes screening. In addition, the HbA1c test has certain unique advantages and disadvantages compared to the FPG and GTT tests that should be considered by the practitioner and patient when choosing a diabetes screening test. The American Diabetes Association (ADA) Standards of Care in Diabetes – 2023 reads, “Generally, FPG, 2-h PG during 75-g OGTT (aka GTT), and A1C (aka HbA1c) are equally appropriate for diagnostic screening... The same tests may be used to screen for and diagnose diabetes and to detect individuals with prediabetes...A1C (aka HbA1c) has several advantages compared with FPG and OGTT (aka GTT), including greater convenience (fasting not required), greater preanalytical stability, and fewer day-to-day perturbations during stress, changes in nutrition, or illness. However, these advantages may be offset by the lower sensitivity of A1C (aka HbA1c) at the designated cut point, greater cost, limited availability of A1C (aka HbA1c) testing in certain regions of the developing world, and the imperfect correlation between A1C (aka HbA1c) and average glucose in certain individuals... Despite these limitations with A1C (aka HbA1c), in 2009, the International Expert Committee added A1C (aka HbA1c) to the diagnostic criteria with the goal of increased screening.”²⁶¹ The American Association of Clinical Endocrinology

(AACE) also recommends screening for diabetes and prediabetes with similar tests, including HbA1c.²⁶²

The regulatory texts for diabetes screening, MNT, and DSMT include a clinically specific test-based definition for “diabetes” that has since been overtaken by evolving clinical standards. Since 2020, the ADA has revised and expanded its criteria for the diagnosis of diabetes to also include the HbA1c test and a random plasma glucose test for a patient appearing to have hyperglycemia or hyperglycemic crisis.²⁶³

2. Statutory Authority

Section 613 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108-173) added section 1861(yy) to the Act and mandated coverage of diabetes screening tests in the Medicare Part B program. Section 1861(yy)(1) of the Act describes diabetes screening tests as testing furnished to an individual at risk for diabetes for the purpose of early detection of diabetes, including the FPG test and such other tests, and modifications to tests, as the Secretary determines appropriate, in consultation with appropriate organizations. Section 1861(yy)(2) of the Act describes “individual at risk for diabetes” as an individual who has any of a number of listed risk factors, including obesity, defined as a body mass index greater than or equal to 30 kg/m² as an independent qualifying factor and overweight, defined as a body mass index greater than 25 kg/m², but less than 30, kg/m² (when present with a second qualifying factor including a family history of diabetes, a history of gestational diabetes and an age of 65 years or older. Section 1861(yy)(3) of the Act mandates that the Secretary shall establish standards, in consultation with appropriate organizations, regarding the frequency of diabetes screening tests, except that such frequency may not be more often than twice within the

²⁶² Lawrence Blonde, Guillermo E. Umpierrez, S. Sethu Reddy, et al. American Association of Clinical Endocrinology Clinical Practice Guideline: Developing a Diabetes Mellitus Comprehensive Care Plan—2022 Update. *Endocrine Practice*, 2023; 28: 923-1049, <https://doi.org/10.1016/j.eprac.2022.08.002>.

²⁶³ *Diabetes Care* 2020;43(Supplement_1):S14–S31, https://diabetesjournals.org/care/article/43/Supplement_1/S14/30640/2-Classification-and-Diagnosis-of-Diabetes

12-month period following the date of the most recent diabetes screening test of that individual.

Section 1861(yy) of the Act does not include a definition of diabetes.

Section 105 of the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (Pub. L. 106-554) added section 1861(vv) to the Act and mandated coverage of MNT under Part B. Section 1861(s)(2)(V) of the Act limits coverage of MNT to patients with diabetes or a renal disease. Section 1861(vv)(1) of the Act describes MNT, in pertinent part, as nutritional diagnostic, therapy, and counseling services for the purpose of disease management. Sections 1861(s)(2)(V) and (vv) of the Act do not include a codified definition of diabetes.

Section 4105(a) of the Balanced Budget Act of 1997 (Pub. L. 105-33) added section 1861(qq) to the Act and mandated coverage of DSMT. Section 1861(qq) of the Act describes DSMT, in part, as educational and training services furnished to an individual with diabetes by a certified provider in an outpatient setting by an individual or entity, but only if the physician who is managing the individual's diabetic condition certifies that such services are needed under a comprehensive plan of care related to the individual's diabetic condition to ensure therapy compliance or to provide the individual with necessary skills and knowledge to participate in the management of the individual's condition. Section 1861(qq) of the Act does not establish a definition of diabetes.

3. Regulatory Authority and National Coverage Determinations

Our implementing regulations for diabetes screening tests are codified at § 410.18. The regulatory definition of diabetes and prediabetes for the purposes of diabetes screening were created, in part, to distinguish separate frequency limitations for each. Section 410.18(d) allows two diabetes screening tests per calendar year for individuals diagnosed with pre-diabetes and one diabetes screening test per calendar year for individuals previously tested who were not diagnosed with pre-diabetes, or who were never tested before. Section 410.18(e) limit diabetes screening to “individual at risk for diabetes” with a list of qualifying eligibility factors, including

obesity, defined as a body mass index greater than or equal to 30 kg/m² as an independent qualifying factor (§ 410.18(e)(3)) and overweight, defined as a body mass index greater than 25 kg/m², but less than 30, kg/m² (when present with a second qualifying factor including a family history of diabetes, a history of gestational diabetes and an age of 65 years or older) (§410.18(e)(5)).

Our implementing regulations for MNT are codified at part 410 subpart G. Section 410.130 described a number of definitions for purposes of the MNT benefit, including “diabetes.” MNT is also described as a covered service at section 180.1 of the NCD Manual. NCD 180.1 does not include a codified definition of diabetes but does refer to “diabetes, as defined at § 410.130.” Our implementing regulations for DSMT are codified at part 410 subpart H. Section 410.140 describes a number of definitions for the purposes of the DSMT benefit, including “diabetes.”

NCD 190.20, Blood Glucose Testing, describes the indications and limitations of blood glucose testing generally but refers to § 410.18 and the Claims Processing Manual for specific policies on diabetes screening. NCD 190.21, Glycated Hemoglobin/Glycated Protein, authorizes coverage of the HbA1c test for the management of diabetes but does not address screening for diabetes.

In the CY 2004 PFS final rule (68 FR 63195), we finalized proposals to adopt regulatory definitions of diabetes for the purposes of MNT and DSMT. We codified in regulatory text at §§ 410.130 and 410.140 that diabetes is defined as “diabetes mellitus, a condition of abnormal glucose metabolism diagnosed using the following criteria: A fasting blood sugar greater than or equal to 126 mg/dL on two different occasions; a 2 hour post-glucose challenge greater than or equal to 200 mg/dL on 2 different occasions; or a random glucose test over 200 mg/dL for a person with symptoms of uncontrolled diabetes.” The definition of diabetes was based, in part on a clinical recommendation submitted by the American Association of Clinical Endocrinologists.

In the CY 2005 PFS final rule (69 FR 66235), we finalized proposals to adopt implementing regulations for diabetes screening, which was recently added as a Medicare covered benefit in the Section 613 of the MMA. We adopted a new regulatory definition of prediabetes as condition of abnormal glucose metabolism diagnosed using the following criteria: a fasting glucose level of 100-125 mg/dL, or a 2-hour post-glucose challenge of 140-199 mg/dL, as well as including the conditions of impaired fasting glucose and impaired glucose tolerance. We also adopted the regulatory definition of diabetes finalized in the CY 2004 PFS for MNT and DSMT. Neither the statutes nor the regulatory text for diabetes screening, MNT and DSMT distinguish between different types of diabetes.

4. Proposed Revisions

We propose to exercise our authority in section 1861(yy)(1)(B) of the Act to add the HbA1c test to the types of diabetes screening tests covered under § 410.18(c), consistent with a recently revised recommendation by the USPSTF. As described earlier in our proposal, the USPSTF recommended the HbA1C test for diabetes screening in their October 2015 and August 2021 revised final recommendation statements. We have engaged in meetings with appropriate organizations while developing our proposal to expand diabetes screening coverage, including the ADA, the Association of Diabetes Care & Education Specialists (ADCES), the National Clinical Care Commission (NCCC) and the Diabetes Advocacy Alliance (DAA). In addition, we consulted the published clinical recommendations from the USPSTF (described earlier), the ADA²⁶⁴ and the AACE²⁶⁵ in developing our proposal. We look forward to further consultation with organizations through the public notice and comment rulemaking process and invite public comment on our proposal.

²⁶⁴ https://diabetesjournals.org/care/article/45/Supplement_1/S17/138925/2-Classification-and-Diagnosis-of-Diabetes.

²⁶⁵ [https://www.endocrinepractice.org/article/S1530-891X\(22\)00576-6/fulltext](https://www.endocrinepractice.org/article/S1530-891X(22)00576-6/fulltext).

We propose to exercise our authority in section 1861(yy)(1)(3) of the Act to expand and simplify our frequency limitations for diabetes screening by aligning to the statutory limitation of not more often than twice within the 12-month period following the date of the most recent diabetes screening test of that individual. We also propose to remove the regulatory definition of pre-diabetes for the purposes of diabetes screening at § 410.18(a), which functionally served, in part, to distinguish the separate frequency limitations of diabetes screening at two diabetes screening tests per calendar year for individuals diagnosed with pre-diabetes and one diabetes screening test per calendar year for individuals previously tested who were not diagnosed with pre-diabetes, or who were never tested before (§ 410.18(d)). Our proposal to remove the regulatory definition of pre-diabetes is intended to simplify and expand diabetes screening while reducing unnecessary regulatory complexity. We recognize that pre-diabetes and diabetes exist on a continuum and both are screened and identified through common diabetes screening tests. Our proposal to remove the regulatory definition of pre-diabetes does not reflect a change in our position on pre-diabetes screening and treatment as a Medicare benefit. In making this proposal we recognize that the FPG, GTT and HbA1c tests include different levels of burden for the patient and also measure different aspects of diabetes pathology. The August 2021 USPSTF revised final recommendation statement states “HbA1c is a measure of long-term blood glucose concentration and is not affected by acute changes in glucose levels caused by stress or illness. Because HbA1c measurements do not require fasting, they are more convenient than using a fasting plasma glucose level or an oral glucose tolerance test. Both fasting plasma glucose and HbA1c levels are simpler to measure than performing an oral glucose tolerance test. The oral glucose tolerance test is done in the morning in a fasting state; blood glucose concentration is measured 2 hours after ingestion of a 75-g oral glucose load. The diagnosis of prediabetes or

type 2 diabetes should be confirmed with repeat testing before starting interventions.”²⁶⁶ We have engaged in meetings with appropriate organizations while developing our proposal to expand diabetes screening coverage, including the ADA, the ADCES, the NCCC, and the DAA. We also consulted with the written recommendations of a number of specialty societies and the USPSTF in developing our proposal. We acknowledge that the USPSTF, ADA and AACE recommend diabetes screening frequency screening of once every 3 years.^{267, 268, 269} We propose expanding the frequency limitations for diabetes screening to twice in a 12-month period under the theory that additional flexibility in screening frequency will remove barriers and empower clinicians to apply screening test by multiple types of tests or with increased frequency where the circumstances of the patient demonstrate a medical necessity. We look forward to further consultation with organizations through the public notice and comment rulemaking process and invite public comment on our proposal.

We propose to simplify the regulatory definitions of “diabetes” for the purpose of diabetes screening at § 410.18(a), MNT at § 410.130 and DSMT at § 410.140. In all three instances, we propose to remove the codified clinical test requirements from the definition of “diabetes” and keep a shorted version of the existing definition that would define diabetes as diabetes mellitus, a condition of abnormal glucose metabolism. We now recognize that regulatorily codifying clinically specific test criteria into the regulatory definition of diabetes for screening, MNT and DSMT benefit reduces flexibility for the agency and health care system to adapt to evolving clinical standards without potentially producing programmatic benefit. We believe that our proposal will empower practitioners to apply clinically accurate and appropriate

²⁶⁶ USPSTF Website: <https://www.uspreventiveservicestaskforce.org/uspstf/recommendation/screening-for-prediabetes-and-type-2-diabetes>.

²⁶⁷ https://diabetesjournals.org/care/article/43/Supplement_1/S14/30640/2-Classification-and-Diagnosis-of-Diabetes.

²⁶⁸ [https://www.endocrinepractice.org/article/S1530-891X\(22\)00576-6/fulltext](https://www.endocrinepractice.org/article/S1530-891X(22)00576-6/fulltext).

²⁶⁹ <https://www.uspreventiveservicestaskforce.org/uspstf/recommendation/screening-for-prediabetes-and-type-2-diabetes#bootstrap-panel--10>.

criteria and that we can ensure certain safeguards through medical coding and claims processing instructions. By analogy, we consider that end stage renal disease (ESRD) is not described with specific clinical test criteria in section 226A and 1881 of the Act, nor in regulations at § 406.13. We generally believe that scientific advancements in understanding and measuring disease pathology outpace the lengthy and formal notice and comment rulemaking process. In the instance of diabetes screening, MNT and DSMT, the regulatory codification of clinical test criteria into disease definitions may not be necessary nor ideal. We note that even without clinical test criteria codified in the regulatory definitions of diabetes and pre-diabetes, a Medicare claim that includes a diagnosis of diabetes or pre-diabetes would still need to include appropriate coding, substantiation in the medical record and compliance with claims processing instructions from CMS and Medicare Administrative Contractors (MACs).

In the alternative, we considered not removing the clinical test criteria for the regulatory definitions of diabetes or removing the regulatory definition of pre-diabetes. We considered adding the HbA1c test criteria result of 6.5% or greater into the regulatory definition of diabetes for screening, MNT and DSMT and the HbA1c test criteria result of 5.7 percent to 6.4 percent to the regulatory definition of pre-diabetes for screening. The alternative would be consistent with our proposal to expand coverage of diabetes screening by adding the HbA1c test, and would also be consistent with clinical recommendations by the USPSTF²⁷⁰ and the ADA²⁷¹. However, we did not propose this alternative because, while currently clinically appropriate, we believed it would further, unnecessarily complicate the regulatory definition of diabetes and pre-diabetes. As noted earlier, we now recognize that regulatorily codifying clinically specific test criteria into the regulatory definition of “diabetes” and “pre-diabetes” for screening, and “diabetes” for the

²⁷⁰ <https://www.uspreventiveservicestaskforce.org/uspstf/recommendation/screening-for-prediabetes-and-type-2-diabetes#bootstrap-panel--6>.

²⁷¹ https://diabetesjournals.org/care/article/43/Supplement_1/S14/30640/2-Classification-and-Diagnosis-of-Diabetes.

MNT and DSMT benefits reduces flexibility for the agency and health care system to adapt to evolving clinical standards without potentially producing programmatic benefit. We invite public comment on our proposal and alternative considered.

We believe that our proposal to expand and simplify coverage for diabetes screening aligns with the administration’s strategic pillar to advance health equity by addressing the health disparities that underlie our health system. The August 2021 updated USPSTF final recommendation statement reads, “The prevalence of diabetes is higher among American Indian/Alaska Native (14.7 percent), Asian (9.2 percent), Hispanic/Latino (12.5 percent), and non-Hispanic Black (11.7 percent) persons than among non-Hispanic White (7.5 percent) persons. Disparities in diabetes prevalence are the result of a variety of factors. A large body of evidence demonstrates strong associations between prevalence of diabetes and social factors such as socioeconomic status, food environment, and physical environment. The higher prevalence of diabetes in Asian persons may be related to differences in body composition. A difference in body fat composition in Asian persons results in underestimation of risk based on BMI thresholds used to define overweight in the US.”²⁷² The HbA1c test does not require fasting or drinking an unappetizing glucose solution. Expanding coverage for diabetes screening to include the HbA1c test will reduce screening burdens for a disease that disproportionately impacts minority and disadvantaged populations. In addition, earlier identification of diabetes and prediabetes among minorities and disadvantaged persons may lead to improved diabetes control and reduce its complications, which currently occur disproportionately in those groups.

5. Summary

In summary, we propose to exercise our authority in sections 1861(yy) of the Act to: (1) expand coverage of diabetes screening tests to include the HbA1c test; (2) expand and simplify

²⁷² USPSTF Website: <https://www.uspreventiveservicestaskforce.org/uspstf/recommendation/screening-for-prediabetes-and-type-2-diabetes>.

the frequency limitations for diabetes screening; and (3) simplify the regulatory definition of “diabetes” for diabetes screening, MNT and DSMT. We believe our proposals will expand access to quality care and improve health outcomes for patients through prevention, early detection, and more effective treatment. We recognize that expanded access and appropriate utilization of diabetes screening is critical to mitigating and avoiding downstream health complications that significantly impact beneficiary wellbeing, as well as being costly and burdensome to the healthcare system. The National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK) website states, “diabetes can cause serious health problems, such as heart disease, stroke, and eye and foot problems. Prediabetes also can cause health problems. The good news is that type 2 diabetes can be delayed or even prevented. The longer you have diabetes, the more likely you are to develop health problems, so delaying diabetes by even a few years will benefit your health.”²⁷³ The U.S. Department of Health and Human Services Office of the Assistant Secretary for Planning and Evaluation recently published a Report to Congress on the Affordability of Insulin that included a number of generalized findings on downstream impacts of serious diabetes related complications on health care use.²⁷⁴ Their findings include:

- In 2019, there were 8.7 million hospitalizations related to diabetes overall. About 71 percent were a result of the patient going to the emergency department. Ten percent of the 8.7 million hospitalizations had a principal diagnosis of diabetes.
- About 83 percent of hospitalizations occurred among patients living in communities in the bottom 50 percent of U.S. income, measured using median household income of the patient’s zip code, underscoring the need for affordable access to treatment for diabetes.

²⁷³ National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK), part of the National Institutes of Health, website: <https://www.niddk.nih.gov/health-information/diabetes/overview/preventing-type-2-diabetes>.

²⁷⁴ Office of the Assistant Secretary for Planning and Evaluation, U.S. Department of Health & Human Services. Report on the Affordability of Insulin. December 16, 2022. <https://aspe.hhs.gov/reports/insulin-affordability-rtc>.

- We also examined potentially avoidable hospitalization costs for Medicare and Medicaid beneficiaries with diabetes, specifically examining the costs for patients with amputations and ketoacidosis. For Medicare in 2020, total costs were \$3.8 billion for amputations, \$5.6 billion for ketoacidosis, and another \$1.0 billion for patients with both. Medicare paid more than 90 percent of overall costs, covering \$3.5 billion for amputations, \$5.2 billion for ketoacidosis, and \$936 million for hospitalizations involving both.

M. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug under a Prescription Drug Plan or an MA-PD plan

1. Previous Regulatory Action

In the CY 2021, CY 2022, and CY 2023 PFS final rules, we finalized policies for the CMS EPCS Program requirements specified in section 2003 of the SUPPORT Act (Pub. L. 115-271, October 24, 2018). We refer readers to 85 FR 84802 through 84807, 86 FR 65361 through 65370, and 87 FR 70008 through 70014 for the details of the statutory requirements and those finalized policies. Specifically, in the CY 2022 PFS final rule, we extended the date of compliance actions to no earlier than January 1, 2023 and, for prescribers writing Part D controlled substances prescriptions for beneficiaries in long-term care (LTC) facilities, January 1, 2025 (86 FR 65364 and 65365). We also finalized a proposal requiring prescribers to electronically prescribe at least 70 percent of their Schedule II, III, IV, and V controlled substances that are Part D drugs, except in cases where an exception or waiver applies (86 FR 65366); finalized multiple proposals related to the classes of exceptions specified by section 2003 of the SUPPORT Act (86 FR 65366 through 65369); and finalized our proposal to limit compliance actions with respect to compliance through December 31, 2023 to a non-compliance notice (86 FR 65370).

In the CY 2023 PFS final rule (87 FR 70012 through 70013), we extended the existing non-compliance action of sending notices to non-compliant prescribers, which we had finalized

for the CY 2023 CMS EPCS Program implementation year (January 1, 2023 through December 31, 2023), to the CY 2024 Program implementation year (January 1, 2024 through December 31, 2024). We also finalized a change to the data sources used to identify the geographic location of prescribers for purposes of the recognized emergency exception at § 423.160(a)(5)(iii) (87 FR 70011 through 70012) and finalized our proposal to use the Prescription Drug Event (PDE) data from the current evaluated year instead of the preceding year when CMS determines whether a prescriber qualifies for an exception based on issuing 100 or fewer Part D controlled substance prescriptions per calendar year (87 FR 70009 through 70011).

2. CMS EPCS Program Terminology

In the CY 2021, CY 2022, and CY 2023 PFS final rules (85 FR 84802 through 84807, 86 FR 65361 through 65370, and 87 FR 70008 through 70013), we used various terminology to describe aspects of the requirements for EPCS. In order to provide consistency and clarity throughout the CMS EPCS Program and future rules, we will use the following terms going forward.

- *CMS EPCS Program.* We will refer to the program requirements for EPCS at § 423.160(a)(5) as the “CMS EPCS Program.” We believe this provides an appropriate distinction from the prescriber’s act of electronically submitting individual prescriptions for controlled substances, which is also referred to as EPCS.

- *Non-compliance action or action for non-compliance.* We will use “non-compliance action” or “action for non-compliance” to refer to a consequence for not meeting the CMS EPCS Program compliance threshold, as described at § 423.160(a)(5), after exceptions have been applied.

- *Measurement year.* When we refer to “measurement year,” we mean the time period (beginning on January 1 and ending on December 31 of each calendar year) during which data is collected to calculate outcomes for the CMS EPCS Program. In prior rules, we have used the

term “current year” or “evaluated year,” but moving forward we will use the term “measurement year.”

- *Compliance threshold.* For the CMS EPCS Program, “compliance threshold” is the requirement at § 423.160(a)(5) that prescribers must conduct prescribing for at least 70 percent of their Schedule II, III, IV, and V controlled substances that are Part D drugs electronically, after exceptions, each measurement year.

- *Compliance analysis period.* The “compliance analysis period” is the time period after the measurement year where data is analyzed to determine whether prescribers have met the compliance threshold for the CMS EPCS Program.

- *Notification period.* The “notification period” is the time period during which we notify a prescriber of the prescriber’s initial compliance status and any associated review or waiver process that may be available prior to CMS determining the prescriber’s final compliance status.

- *Measurement cycle.* The “measurement cycle” is generally a period of 24 months, consisting of a measurement year, the compliance analysis period, and the notification period.

3. Standard for CMS EPCS Program

a. Updates to the NCPDP Standards

In the CY 2021 PFS final rule (85 FR 84804), we finalized a requirement for Part D prescribers to use the NCPDP SCRIPT standard version 2017071 standard for electronic prescribing of Schedule II, III, IV, and V controlled substances covered under Medicare Part D. In the CY 2021 PFS proposed rule, we had stated our belief that because prescribers were already required to use this standard when e-prescribing for covered Part D drugs for Part D eligible individuals, prescribers should use this same standard when e-prescribing controlled substances (85 FR 50261).

On December 27, 2022, as part of the Medicare Program; Contract Year 2024 Policy and Technical Changes to the Medicare Advantage Program, Medicare Prescription Drug Benefit Program, Medicare Cost Plan Program, Medicare Parts A, B, C, and D Overpayment Provisions of the Affordable Care Act and Programs of All-Inclusive Care for the Elderly; Health Information Technology Standards and Implementation Specifications proposed rule (herein referred to as the “CY 2024 Medicare Advantage and Part D Policy and Technical Changes proposed rule”) (87 FR 79550), we proposed to update provisions related to e-prescribing standards at § 423.160(b), including, after a transition period, requiring the NCPDP SCRIPT standard version 2022011 proposed for adoption at 45 CFR 170.205(b), and retiring the current NCPDP SCRIPT standard version 2017071, as the e-prescribing standard for covered Part D drugs for Part D eligible individuals. The CY 2024 Medicare Advantage and Part D Policy and Technical Changes final rule appeared in the April 12, 2023 **Federal Register** (88 FR 22120). In the final rule, we did not address comments received on the provisions of the proposed rule related to e-prescribing standards as these provisions were not finalized in the final rule. Rather, we will address provisions of the proposed rule that we did not finalize at a later time, such as in possible future rulemaking, as appropriate.

As stated in the CY 2021 PFS proposed rule (85 FR 50261), our intent with the CMS EPCS Program is for prescribers to use the same version of the NCPDP SCRIPT standard for their electronic prescribing of Schedule II-V controlled substances that are Part D drugs as for other electronic prescribing for Part D eligible individuals. Although we finalized the NCPDP SCRIPT standard version 2017071 as the standard in the CY 2021 PFS final rule, we want to clarify that, based on the existing regulatory text at § 423.160(a)(5), the CMS EPCS Program will automatically adopt the electronic prescribing standards at § 423.160(b) as they are updated. This is based on the requirement at § 423.160(a)(5) that prescribers conduct prescribing for at least 70 percent of their Schedule II, III, IV, and V controlled substances that are Part D drugs

electronically using the applicable standards in paragraph (b) of § 423.160. Therefore, any proposals from the CY 2024 Medicare Advantage and Part D Policy and Technical Changes proposed rule to standards at § 423.160(b) that are finalized will apply to electronic prescribing for the CMS EPCS program as well.

b. Standards for Same Legal Entity

In the CY 2022 PFS final rule (86 FR 65366), we finalized an exception at § 423.160(a)(5)(i) for prescriptions issued where the prescriber and dispensing pharmacy are the same entity (hereafter called the same entity exception). We stated our belief that a requirement to use the NCPDP SCRIPT standard version 2017071 within a closed system could increase costs and the rate of performance errors, such as data corruption and patient matching errors, which we understand often happens when a unified database is split into a transaction system that relays information to and from the same entity.

As we have implemented the same entity exception, our experience has been that the Prescription Drug Event (PDE) data, which we use for CMS EPCS Program compliance calculations, does not have a field that consistently and accurately identifies prescribers and dispensing pharmacies that are part of the same entity, making it impossible to exclude these prescriptions from the compliance calculations using PDE data. Additionally, we realized that we can include prescriptions where the prescriber and dispensing pharmacy are the same entity without triggering the concerns that led us to us to finalize the same entity exception, if we remove the requirement to use the NCPDP SCRIPT standard listed in § 423.160(b), as described below.

Medicare Part D has an existing electronic prescribing regulation that permits the use of either HL7 messages or the NCPDP SCRIPT Standard to transmit prescriptions or prescription-related information internally when the sender and the beneficiary are part of the same legal entity while still maintaining the requirement for e-prescribing. The Medicare Program; E-

Prescribing and Prescription Drug Program final rule (70 FR 67581), which appeared in the November 7, 2005 **Federal Register**, codified at § 423.160(a)(3)(ii), that either HL7 messages or the NCPDP SCRIPT Standard could be used when all parties to a transaction are, for example, employed by and part of the same legal entity. We subsequently finalized a proposal to move the provision to § 423.160(a)(3)(iii) in the CY 2008 PFS final rule (72 FR 66405).

We propose to integrate this regulation into the CMS EPCS Program, as it provides alignment across electronic prescribing policies for prescriptions prescribed and dispensed within the same legal entity without forcing these entities to adopt the NCPDP SCRIPT standard for such transmittals. With this proposal, prescribers in the same legal entities as the dispensing pharmacy would have multiple methods to conduct internal electronic transmittals for Schedule II, III, IV, and V controlled substances that are Part D drugs, as permitted in § 423.160(a)(3)(iii). Therefore, we believe that these prescribers' prescriptions can be included in the CMS EPCS Program compliance calculation so long as prescribers' electronic prescriptions are transmitted consistent with the exemption in § 423.160(a)(3)(iii).

With this proposal, we would no longer need to separately identify and apply different methodologies based on whether the prescriber and dispensing pharmacy are the same entity. We would identify electronic prescriptions for Schedule II-V controlled substances that are Part D drugs using the Prescription Origin Code data element in the PDE record, where a value of three indicates electronic transmission. Additionally, this proposal would expand the available standards for prescribers that are within the same legal entities as the dispensing pharmacy under the CMS EPCS Program, as defined by the Medicare Program; E-Prescribing and Prescription Drug Program final rule (70 FR 67581), by cross-referencing the standards at § 423.160(a)(3)(iii), which broadens the requirements of the e-prescribing standard that can be used to meet CMS EPCS Program requirements. We believe that by aligning with the regulation at § 423.160(a)(3)(iii), we are advancing e-prescribing standardization and addressing potential

concerns about burdening prescribers within the same legal entity, including workflow and data errors.

Therefore, to address our data limitations and also to provide flexibility where prescriptions are transmitted within the same legal entity, we are proposing to remove the same entity exception at § 423.160(a)(5)(i) from the CMS EPCS Program requirements and to redesignate paragraphs (a)(5)(ii) through (iv) as paragraphs (a)(5)(i) through (iii), respectively. We also propose to add “subject to the exemption in paragraph (a)(3)(iii) of this section” to § 423.160(a)(5). Under this proposed change, prescriptions that are prescribed and dispensed within the same legal entity would be included in CMS EPCS Program compliance calculations as part of the 70 percent compliance threshold at § 423.160(a)(5), and prescribers will not be exempt from the requirement to prescribe electronically at least 70 percent of their Schedule II-V controlled substances that are Part D drugs – but such prescriptions would only have to meet the applicable standards in § 423.160(b) subject to the exemption in § 423.160(a)(3)(iii).

We seek comment on the proposals to remove the same entity exception and expand the available standards for same legal entities within the CMS EPCS Program.

4. Definition of Prescriptions for Compliance Calculation

In the CY 2022 PFS final rule, we finalized the compliance threshold requirement for the CMS EPCS Program such that prescribers are required to prescribe at least 70 percent of their Schedule II, III, IV, and V controlled substances that are Part D drugs electronically, except in cases where an exception or waiver applies (86 FR 65366). Additionally, we indicated that the compliance threshold for each prescriber would be calculated by examining PDE data at the end of the measurement year and dividing the number of Part D controlled substances that were e-prescribed by the total number of Part D controlled substance prescriptions (excluding from both the numerator and denominator any prescriptions issued while a prescriber falls within an exception or is subject to a waiver) (86 FR 65365). Previously, we did not define how

prescriptions with multiple fills would affect the compliance threshold calculation. We are now proposing to specify how the compliance threshold is affected by multiple fills within the same year.

For purposes of CMS EPCS Program, we will count unique prescriptions in the measurement year using the prescription number assigned by the pharmacy and included in the Part D claims data. All prescriptions, regardless of how they are transmitted, may include a number of refills so that the pharmacy may provide additional fills of the prescribed medication without the need for a new prescription from, or visit to, a prescriber. Refills are not separately transmitted prescriptions; they are documented as part of the original prescription transmittal, which includes any refills issued against the original prescription (by the pharmacy). However, renewals of prescriptions (such as those for maintenance medications) require prescribers to generate a new prescription along with a new set of refills. Because of this distinction, we will count renewals as an additional prescription in the CMS EPCS Program compliance threshold calculation, and we will not count refills as an additional prescription in the CMS EPCS Program compliance threshold calculation unless the refill is the first occurrence of the unique prescription in the measurement year.

We believe, if we were to include every fill in the compliance threshold calculation, an increased burden could be placed on small prescribers, as they would potentially no longer qualify for the small prescriber exception at § 423.160(a)(5)(ii) (which we propose to be redesignated to § 423.160(a)(5)(i), as described in section III.M.3.b. of this rule). If we were to count every single fill, preliminary analysis of 2021 Part D data shows that approximately 23,000 prescribers would no longer qualify for the small prescriber exception and that approximately 6,900 additional prescribers would be considered non-compliant. For this reason, we would count only the unique prescriptions in the measurement year for the purposes of CMS EPCS Program compliance threshold calculations.

5. Updates to CMS EPCS Program Exceptions for Cases of Recognized Emergencies and Extraordinary Circumstances

a. Background

In the CY 2022 PFS final rule (86 FR 65367 through 65368), we finalized two exceptions related to exceptional circumstances that may prevent prescribers from being able to conduct EPCS. The first exception, codified at § 423.160(a)(5)(iii), is for prescribers who are prescribing during a recognized emergency, such as a natural disaster, a pandemic, or a similar situation where there is an environmental hazard. Prescribers in a geographic area of an emergency or disaster declared by a Federal, State, or local government entity are excluded from the CMS EPCS Program requirements. In the CY 2023 PFS final rule (87 FR 70012), we modified the exception to use the prescriber's PECOS address or, in situations where a prescriber does not have a PECOS address, the prescriber's address in the National Plan and Provider Enumeration System (NPPES) data, to determine whether the exception at § 423.160(a)(5)(iii) is applicable.

The second exception, codified at § 423.160(a)(5)(iv), is for prescribers who request and receive from CMS a waiver, which we grant to prescribers who are facing extraordinary circumstances that prevent them from electronically prescribing a controlled substance to a Part D beneficiary, but who are not in an emergency or disaster area. We defined "extraordinary circumstance" for purposes of this exception to mean a situation, other than an emergency or disaster, outside of the control of a prescriber that prevents the prescriber from electronically prescribing a controlled substance to a Part D beneficiary (86 FR 65367).

In this rule, we are proposing to further modify the recognized emergency exception and extraordinary circumstances waiver (which we propose to be codified at § 423.160(a)(5)(ii) and (iii), respectively, as described in section III.M.3.b. of this rule). We are proposing to modify the rules for when these exceptions apply by enabling prescribers to apply for waivers in times of an emergency and disaster and by limiting the emergencies or disasters that would trigger the

recognized emergency exception. Additionally, we are proposing to modify the duration of both exceptions and proposing timing requirements for submitting a waiver application.

b. Updating the Circumstances Applicable for the Recognized Emergency and Extraordinary Circumstances Waiver Exceptions

Our current exception for recognized emergencies applies to all prescribers with an address in PECOS, or alternatively in NPDES, in the geographic area of an emergency or disaster declared by a Federal, State, or local government entity. As we have implemented this exception, we realize there may be unintended consequences to our existing policy. First, while we can identify emergencies recognized by the Federal Emergency Management Agency (FEMA) or pandemics recognized by the Department of Health and Human Services (HHS), we may not be able to identify every local or state emergency. Because we excluded emergencies and disasters from our extraordinary circumstances waiver policy, some prescribers may not be able to receive an exception for an emergency or disaster we did not identify. Second, we realize that not every emergency may impact the ability of prescribers to conduct EPCS, and thus it may not be appropriate to automatically apply the exclusion to all prescribers in the affected geographic area of some emergencies. Third, we realized that some of our policies do not align with other emergency policies of CMS programs for quality reporting and performance. Therefore, in order to address these concerns, we looked to the Quality Payment Program Merit-based Incentive Payment System (MIPS) automatic policy for extreme and uncontrollable circumstances and to the extraordinary circumstances exceptions (ECE) for many of our quality reporting and value-based purchasing programs for hospitals and other types of facilities to see other examples of when we apply automatic exceptions versus when we ask clinicians or facilities to apply for a waiver.

In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38410) and CY 2018 OPDS/ASC final rule (82 FR 52584), we worked to align common processes for our ECE policies across many of

our quality programs including the Hospital IQR Program, Hospital OQR Program, IPFQR Program, ASCQR Program, and PCHQR Program, as well as the Hospital VBP Program, HAC Reduction Program, and the Hospital Readmissions Reduction Program. Using the Hospital IQR Program as an example, generally, CMS may grant an exception with respect to quality data reporting requirements in the event of extraordinary circumstances beyond the control of the hospital (42 CFR 412.140(c)(2)). A hospital may submit such a request in the form and manner described on QualityNet.org. CMS may also grant an exception to one or more hospitals that have not requested an exception if: CMS determines that a systemic problem with CMS data collection systems directly affected the ability of the hospital to submit data; or if CMS determines that an extraordinary circumstance, such as an act of nature (for example, hurricane), has affected an entire region or locale (*see* § 412.140(c)(2)(ii) and 76 FR 51651). We stated that if we make the determination to grant an ECE to hospitals in a region or locale, we would communicate this decision through routine communication channels (76 FR 51652).

Separately, in the context of clinicians participating in MIPS, CMS established another ECE policy. In the Medicare Program; CY 2018 Updates to the Quality Payment Program; and Quality Payment Program: Extreme and Uncontrollable Circumstance Policy for the Transition Year (CY 2018 Quality Payment Program final rule), we adopted in an interim final rule with comment period an automatic extreme and uncontrollable circumstances policy for one performance period due to several hurricanes (82 FR 53895 through 53900). In discussing the triggering events for this policy (82 FR 53897), we stated that we have discretion not to require MIPS eligible clinicians to submit an application for reweighting the performance categories in cases where an extreme and uncontrollable circumstance, such as an act of nature (for example, hurricane), affects an entire region or locale. We noted that we anticipate the types of events that could trigger this policy would be events designated by the Federal Emergency Management Agency (FEMA) as major disasters or a public health emergency declared by the Secretary,

although we will review each situation on a case-by-case basis. We also noted our intention to align the automatic extreme and uncontrollable circumstance policy with the ECE policies for other Medicare programs such that events that trigger ECE policies would also trigger the automatic extreme and uncontrollable circumstance policy (82 FR 53897). In the CY 2019 PFS final rule (83 FR 59875), we finalized a similar policy for all future years, which we codified at § 414.1380(c)(2)(i)(A)(8) and (C)(3).

We believe that it would be beneficial to interested parties for the CMS EPCS Program to have a similar policy as it relates to applying for an exception versus having an automatic exception for all prescribers in an affected region. This would streamline communications across CMS programs, as well as ensure that CMS can, where appropriate, except all prescribers for an appropriate circumstance beyond their control, including disasters or emergencies. In order to facilitate this transition, for the waiver exception at § 423.160(a)(5)(iv) (which we propose to codify at § 423.160(a)(5)(iii), as described in section III.M.3.b. of this rule), we are proposing to modify the definition of “extraordinary circumstance” to mean a situation outside of the control of a prescriber that prevents the prescriber from electronically prescribing a Schedule II-V controlled substance that is a Part D drug. This updated definition would drop the restriction “other than an emergency or disaster,” that we previously included when discussing this exception. This modification would allow prescribers the ability to request a waiver regardless of whether we trigger the recognized emergency exception.

Additionally, we are proposing to modify the recognized emergency exception at § 423.160(a)(5)(iii) (which we propose to codify at § 423.160(a)(5)(ii), as described in section III.M.3.b. of this rule) so that CMS will identify which events trigger the recognized emergency exception. We believe the ability to identify triggering events will allow us to ensure that the emergency affects widespread EPCS functionality. In applying this determination of which emergencies or disasters would trigger this exception, we would review each emergency

situation on a case-by-case basis but would generally look to events designated as a FEMA major disaster or a public health emergency declared by the Secretary. We also intend to align the determination of the emergency exception with the MIPS automatic extreme and uncontrollable circumstances policy, such that events that would trigger this policy, in most instances, would also qualify under the CMS EPCS Program exception for recognized emergencies. We expect any deviation from MIPS automatic extreme and uncontrollable circumstances policies would be rare and only in circumstances which may cause disruption for MIPS performance but should not affect a prescriber's ability to electronically prescribe Schedule II-V controlled substances that are Part D drugs, or vice versa.

We would inform prescribers of which emergencies or disasters qualify for the exception, as determined by CMS, using normal communication channels such as listservs and the CMS EPCS Program website.

We invite public comment on the proposals related to circumstances applicable for the recognized emergency and extraordinary circumstances waiver exceptions.

c. Duration of Recognized Emergency Exceptions

In the CY 2022 PFS final rule (86 FR 65367), we clarified that the recognized emergency exception would be applicable only if the dispensing date of the medication occurs during the time period that the declared disaster is occurring. In an effort to continue aligning the CMS EPCS Program with the Quality Payment Program, we propose that, as a default, prescribers impacted by the CMS EPCS Program recognized emergency exception at § 423.160(a)(5)(iii) (which we propose to codify at § 423.160(a)(5)(ii), as described in section III.M.3.b. of this rule) would be excepted for the entire measurement year, and not just for the duration of the emergency. We believe this would protect prescribers who may not be able to monitor their compliance status over multiple periods of time.

We seek comment on the proposed duration for exceptions due to recognized emergencies.

d. Duration and Timing of Extraordinary Circumstances Waiver Exception

In the CY 2022 PFS final rule (86 FR 65367 through 65368), we finalized an attestation process for prescribers to request a waiver.²⁷⁵ In this rule, we are not proposing any modifications on the information needed to request a waiver, but we are proposing the timeframe that would be covered by a waiver that is authorized under the CMS EPCS Program and the timing of waiver requests.

Section 1860D-4(e)(7)(B)(iii) of the Act, as added by section 2003 of the SUPPORT Act, refers to a waiver or a renewal thereof for a period of time, not to exceed one year, as determined by the Secretary. We propose that approved waivers for the CMS EPCS Program would apply to the entire measurement year. Prescribers who receive a waiver and continue to experience exceptional circumstances that extend beyond December 31 of a measurement year would be required to complete a new waiver application for the subsequent measurement year.

In the CY 2022 PFS proposed rule (86 FR 39332), we signaled that we would include more information about the waiver process in subsequent rulemaking. One issue that was not clearly defined is the timing of when a prescriber can request a waiver. In the CY 2022 PFS final rule (86 FR 65370), we finalized that we would notify prescribers that they are violating the EPCS requirement with information about how they can come into compliance, the benefits of EPCS, an information solicitation as to why they are not conducting EPCS, and a link to the CMS portal to request a waiver. We are now proposing that a prescriber has a period of 60 days from the date of the notice of non-compliance to request a waiver. Approved waivers would

²⁷⁵ The waiver application is currently going through the Paperwork Reduction Act approval process under the document identifier CMS-10834, and the proposed collection comment request appeared in the March 10, 2023 **Federal Register** (88 FR 15037).

apply to prescriptions written by a prescriber for the entire measurement year, and the waiver would expire on December 31 of the applicable measurement year.

We seek comment on the proposed waiver duration and the proposal for the timing and process of applying for waiver in cases of extraordinary circumstances.

6. Actions for Non-Compliance

In the CY 2022 PFS final rule (86 FR 65370), we limited compliance actions with respect to compliance from January 1, 2023 through December 31, 2023, to a non-compliance notice sent to prescribers who are violating the CMS EPCS Program requirement. In the CY 2023 PFS final rule (87 FR 70013), we extended the existing compliance action of sending notices to non-compliant prescribers from the CY 2023 CMS EPCS Program implementation year (January 1, 2023 through December 31, 2023) to the CY 2024 EPCS Program implementation year (January 1, 2024 through December 31, 2024). The content of the notices will remain unchanged and continue to consist of a notice to prescribers that they are violating the CMS EPCS Program requirements, information about how they can come into compliance, the benefits of EPCS, and a link to the CMS EPCS Program dashboard where the prescriber may request a waiver and provide information as to why they are not conducting EPCS.

We propose to continue the practice of issuing a prescriber notice of non-compliance as a non-compliance action for subsequent measurement years. As stated in the CY 2023 PFS final rule (87 FR 70013), we believe prescriber use of EPCS encourages the use of interoperable technology, produces a verifiable and traceable history, prevents fraud and abuse, and reduces burden. We believe that continuing to send non-compliance notices would support increased EPCS adherence and encourage increased EPCS adoption rates, which could be more effective than imposing more restrictive non-compliance actions or penalties that may increase burden on prescribers.

In the CY 2023 PFS proposed rule (87 FR 46240 through 46241), we solicited ideas of possible non-compliance actions with the goal of identifying one that would be operationally feasible (for example, can be accomplished without requiring modifications to the data available through the PDE file) and support the nation's ongoing fight against drug abuse and diversion without adding administrative burden to prescribers or hindering beneficiary access to needed medications. We did not receive a large number of comments. However, we did receive one comment noting that non-compliance alone is not a definitive indicator of fraud, waste, or abuse. We agree with the commenter that non-compliance alone is not a definitive indicator of fraud, waste, or abuse; however, we maintain that one risk to public safety is potential fraud, waste, and abuse and intend that a prescriber's non-compliance under the CMS EPCS program may be considered in our processes for assessing potential fraud, waste, and abuse.

We may use this information in our processes for assessing potential fraud, waste, and abuse, which, in some instances, could result in a referral to law enforcement or revocation of billing privileges, in the event that evidence of fraud, waste, or abuse is present. At this time, we believe the risk of fraud, waste, or abuse can be mitigated without the need for further penalties for CMS EPCS program non-compliance. Literature suggests a correlation between use of EPCS and reduction in fraud, waste, and abuse related to opioid prescriptions.^{276,277} Prescriber use of EPCS is directly related to improving prescription security, decreasing prescription forgery, and reducing the overall chance of fraud and alteration associated with paper prescribing.² Also notable are studies demonstrating reductions in opioid overdoses when EPCS use is increased and general findings that e-prescribing can improve coordination of care, reduce fraud and abuse, and contribute to public health safety.

²⁷⁶Achar, Suraj, et al. "Adoption and Increased Use of Electronic Prescribing of Controlled Substances." *Journal of Medical Regulation*, Federation of State Medical Boards, 27 Aug. 2021, <https://doi.org/10.30770/2572-1852-107.2.8>.

²⁷⁷ Abuok, Rahi, and David Powell. "Can Electronic Prescribing Mandates Reduce Opioid-Related Overdoses?" Science Direct, *JOURNAL of ECONOMICS & HUMAN BIOLOGY*, Elsevier B.V., 14 Apr. 2021, <https://doi.org/10.1016/j.ehb.2021.101000>.

Although we are not proposing further non-compliance actions beyond the extension of sending notices at this time, we will continue to evaluate compliance and prescriber performance under the CMS EPCS Program and will consider whether to propose changes in future years. We seek public comment on our proposal to continue the action of sending notice to prescribers who are identified as non-compliant.

N. Proposed Changes to the Regulations Associated with the Ambulance Fee Schedule and the Medicare Ground Ambulance Data Collection System (GADCS)

1. Background on Ambulance Services

Section 1861(s)(7) of the Act establishes an ambulance service as a Medicare Part B service where the use of other methods of transportation is contraindicated by the individual's condition, but only to the extent provided in regulations. Since April 1, 2002, payment for ambulance services has been made under the ambulance fee schedule (AFS), which the Secretary established, as required by section 1834(l) of the Act, in 42 CFR part 414 subpart H. Payment for an ambulance service is made at the lesser of the actual billed amount or the AFS amount, which consists of a base rate for the level of service, a separate payment for mileage to the nearest appropriate facility, a geographic adjustment factor (GAF), and other applicable adjustment factors as set forth at section 1834(l) of the Act and § 414.610 of the regulations. In accordance with section 1834(l)(3) of the Act and § 414.610(f), the AFS rates are adjusted annually based on an inflation factor. The AFS also incorporates two permanent add-on payments in § 414.610(c)(5)(i) and three temporary add-on payments to the base rate and/or mileage rate, which are discussed in the next section of this proposed rule.

Our regulations relating to coverage of and payment for ambulance services are set forth at 42 CFR part 410, subpart B, and 42 CFR part 414, subpart H.

2. Ambulance Extender Provisions

a. Amendment to Section 1834(l)(13) of the Act

Section 146(a) of the Medicare Improvements for Patients and Providers Act of 2008 (Pub. L. 110–275, enacted July 15, 2009) (MIPPA), amended section 1834(l)(13) of the Act to specify that, effective for ground ambulance services furnished on or after July 1, 2008, and before January 1, 2010, the ambulance fee schedule amounts for ground ambulance services shall be increased as follows:

- For covered ground ambulance transports that originate in a rural area or in a rural census tract of a metropolitan statistical area, the fee schedule amounts shall be increased by 3 percent.

- For covered ground ambulance transports that do not originate in a rural area or in a rural census tract of a metropolitan statistical area, the fee schedule amounts shall be increased by 2 percent.

The payment add-ons under section 1834(l)(13) of the Act have been extended several times. Most recently, division FF, section 4103 of the CAA, 2023 (Pub. L. 117-328, December 29, 2022) amended section 1834(l)(13) of the Act to extend the payment add-ons through December 31, 2024. Thus, these payment add-ons apply to covered ground ambulance transports furnished before January 1, 2025. We are proposing to revise § 414.610(c)(1)(ii) to conform the regulations to this statutory requirement. (For a discussion of past legislation extending section 1834(l)(13) of the Act, please see the CY 2014 PFS final rule with comment period (78 FR 74438 through 74439), the CY 2015 PFS final rule with comment period (79 FR 67743), the CY 2016 PFS final rule with comment period (80 FR 71071 through 71072) and the CY 2019 PFS final rule with comment period (83 FR 59681 through 59682)).

This statutory requirement is self-implementing. A plain reading of the statute requires only a ministerial application of the mandated rate increase, and does not require any substantive exercise of discretion on the part of the Secretary.

b. Amendment to Section 1834(l)(12) of the Act

Section 414(c) of the Medicare Prescription Drug, Improvement and Modernization Act of 2003 (MMA) (Pub. L. 108-173, December 8, 2003) added section 1834(l)(12) to the Act, which specified that, in the case of ground ambulance services furnished on or after July 1, 2004, and before January 1, 2010, for which transportation originates in a qualified rural area (as described in the statute), the Secretary shall provide for a percent increase in the base rate of the fee schedule for such transports. The statute requires this percent increase to be based on the Secretary's estimate of the average cost per trip for such services (not taking into account mileage) in the lowest quartile of all rural county populations as compared to the average cost per trip for such services (not taking into account mileage) in the highest quartile of rural county populations. Using the methodology specified in the July 1, 2004 interim final rule (69 FR 40288), we determined that this percent increase was equal to 22.6 percent. As required by the MMA, this payment increase was applied to ground ambulance transports that originated in a "qualified rural area," that is, to transports that originated in a rural area comprising the lowest 25th percentile of all rural populations arrayed by population density. For this purpose, rural areas included Goldsmith areas (a type of rural census tract). This rural bonus is sometimes referred to as the "Super Rural Bonus" and the qualified rural areas (also known as "super rural" areas) are identified during the claims process via the use of a data field included in the CMS-supplied ZIP code file.

The Super Rural Bonus under section 1834(l)(12) of the Act has been extended several times. Most recently, division FF, section 4103 of the CAA, 2023 amended section 1834(l)(12)(A) of the Act to extend this rural bonus through December 31, 2024. Therefore, we are continuing to apply the 22.6 percent rural bonus described in this section (in the same manner as in previous years) to ground ambulance services with dates of service before January 1, 2025 where transportation originates in a qualified rural area. Accordingly, we are proposing to revise §414.610(c)(5)(ii) to conform the regulations to this statutory requirement. (For a discussion of

past legislation extending section 1834(l)(12) of the Act, please see the CY 2014 PFS final rule with comment period (78 FR 74439 through 74440), CY 2015 PFS final rule with comment period (79 FR 67743 through 67744), the CY 2016 PFS final rule with comment period (80 FR 71072) and the CY 2019 PFS final rule with comment period (83 FR 59682)).

This statutory provision is self-implementing. It requires an extension of this rural bonus (which was previously established by the Secretary) through December 31, 2024, and does not require any substantive exercise of discretion on the part of the Secretary.

3. Medicare Ground Ambulance Data Collection System

a. Background

Section 50203(b) of the BBA of 2018 added paragraph (17) to section 1834(l) of the Act, which requires ground ambulance providers of services and suppliers (ground ambulance organizations) to submit cost and other information. Specifically, section 1834(l)(17)(A) of the Act requires the Secretary to develop a data collection system (which may include use of a cost survey) to collect cost, revenue, utilization, and other information determined appropriate by the Secretary for providers and suppliers of ground ambulance services. Section 1834(l)(17)(B)(i) of the Act required the Secretary to specify the data collection system by December 31, 2019, and to identify the ground ambulance providers and suppliers that would be required to submit information under the data collection system. Section 1834(l)(17)(D) of the Act required that beginning January 1, 2022, the Secretary apply a 10 percent payment reduction to payments made under section 1834(l) of the Act for the applicable period to a ground ambulance provider or supplier that is required to submit information under the data collection system and does not sufficiently submit such information. The term “applicable period” is defined under section 1834(l)(17)(D)(ii) of the Act to mean, for a ground ambulance provider or supplier, a year specified by the Secretary not more than 2 years after the end of the period for which the Secretary has made a determination that the ground ambulance provider or supplier has failed to

sufficiently submit information under the data collection system. Division P, section 311 of the CAA, 2022 (Pub. L. 117-103) amended section 1834(l)(17)(F)(i) of the Act to delay the deadline for MedPAC to submit its report to Congress on the ground ambulance data collection system study until the second June 15th following the date the Secretary transmits data for the first representative sample of ground ambulance organizations. Section 1834(l)(17)(I) of the Act states that the Paperwork Reduction Act (PRA) (44 USC § 3501 et seq.) does not apply to the collection of information required under section 1834(l)(17) of the Act.

In the CY 2020 PFS final rule (84 FR 62864 through 62897), we implemented section 1834(l)(17) of the Act and codified regulations governing data reporting by ground ambulance organizations at §§ 414.601, 414.605, 414.610(c)(9), and 414.626. We also finalized a data collection system that collects detailed information on ground ambulance provider and supplier characteristics including service areas, service volume, costs, and revenue through a data collection instrument, commonly referred to as the Medicare Ground Ambulance Data Collection Instrument, via a web-based system. We refer the reader to our CY 2020 PFS final rule (84 FR 62864 through 62897) for more specifics on the establishment of the Medicare Ground Ambulance Data Collection System.

In the CY 2022 PFS final rule (86 FR 65306 through 65317), we finalized a number of updates to the Medicare Ground Ambulance Data Collection System, including: (1) a new data collection period beginning between January 1, 2023, and December 31, 2023, and a new data reporting period beginning between January 1, 2024, and December 31, 2024, for selected ground ambulance organizations in Year 3; (2) aligning the timelines for the application of penalties for not reporting data with our new timelines for data collection and reporting and a notice that the data collected will be publicly available beginning in 2024; and (3) revisions to the Medicare Ground Ambulance Data Collection Instrument that include better accounting for labor hours across different categories of personnel and better distinguishing between accrual

and cost basis accounting methodologies. We refer the reader to our CY 2022 PFS final rule (86 FR 65306 through 65317) for more specifics on the revisions to the Medicare Ground Ambulance Data Collection System.

In the CY 2023 PFS final rule (87 FR 70014) we finalized a series of changes to the Medicare Ground Ambulance Data Collection System. First, we finalized our proposal to update our regulations at § 414.626(d)(1) and (e)(2) to provide the necessary flexibility to specify how ground ambulance organizations should submit hardship exemption requests and informal review requests, including to our web-based portal once that portal is operational. Second, we finalized our proposed changes and clarifications to the Medicare Ground Ambulance Data Collection Instrument to reduce burden on respondents, improve data quality, or both. We refer the reader to our CY 2023 PFS final rule (87 FR 70014) for more specifics on the revisions to the Medicare Ground Ambulance Data Collection System.

b. Proposed Revisions to the Medicare Ground Ambulance Data Collection Instrument

As described in the CY 2022 PFS final rule (86 FR 65307) and the CY 2023 PFS Final Rule (87 FR 70014), we made several changes to the instrument instructions and questions to improve clarity and reduce burden for respondents. A printable version of the current instrument instructions and questions is available in English and Spanish on the CMS website at

<https://www.cms.gov/Medicare/Medicare-Fee-for-Service->

[Payment/AmbulanceFeeSchedule/Ground-Ambulance-Services-Data-Collection-System](https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AmbulanceFeeSchedule/Ground-Ambulance-Services-Data-Collection-System).

We continue to receive ad hoc questions and feedback related to the Medicare Ground Ambulance Data Collection System and the Medicare Ground Ambulance Data Collection Instrument via four primary channels. First, we receive email and other written communication from ground ambulance organizations via the CMS Ambulance Data Collection email inbox (*AmbulanceDataCollection@cms.hhs.gov*) and through other channels (for example, inquiries sent by organizations to Medicare Administrative Contractors (MACs) and then forwarded to

CMS). These emails and other communications often include questions seeking clarification of instrument questions and their applicability to specific ground ambulance organization scenarios and context. We continue to update a Medicare Ground Ambulance Data Collection System Frequently Asked Questions (FAQ) document with answers and the GADCS User Guide to commonly asked questions. These documents are available on the CMS website at <https://www.cms.gov/medicare/medicare-fee-for-service-payment/ambulancefeeschedule/ground-ambulance-services-data-collection-system>. Through review of questions and feedback, we identified some instances where a clarification to the instrument language itself will likely be more useful and less burdensome to respondents than having to respond with reference to the FAQ document, the GADCS User Guide, or to other resources. Second, we answer questions live from interested parties during webinars, dedicated question and answer sessions, and other educational sessions. As with the emailed questions described above, live question and answer exchanges sometimes identify opportunities for clarifying instrument language. Third, we have begun analyzing initial data responses submitted via the GADCS portal by selected organizations in Year 1 and Year 2. Findings from this initial analysis, including inconsistent response patterns, unusual combinations of responses across questions, and investigation of outlier results were helpful to identify some additional opportunities for clarification. Fourth, we continue to identify opportunities to clarify instructions and correct a small number of typos through the final development and launch of the web-based GADCS.

Based on information that we received via the four sources described above, we are proposing the following further changes and clarifications to the Medicare Ground Ambulance Data Collection Instrument. The changes and clarifications aim to reduce burden on respondents, improve data quality, or both.

1. Addressing Partial-Year Responses

Ground ambulance organizations selected to participate in the GADCS that are in operation for only part of their continuous, 12-month data collection period are, following the GADCS instructions, still required to collect and report data. However, there is not a field for these organizations to report that they were in operation, and therefore collecting data, for less than a full 12-month period via the GADCS. In these cases, we would not know that the costs, revenue, and utilization reported by these partial-year organizations are comparatively smaller than those reported by similar organizations in operation for an entire 12-month period. As a result, some statistics from analyses of GADCS data, for example total annual expenditures per ground ambulance organization, would be biased downward.

To address this limitation, we are proposing to add a response option to Section 2 (Organizational Characteristics), Question 1 which asks whether the selected national provider identifier (NPI) linked to the organization was used to bill Medicare for ground ambulance services during its data collection period. The current response options are “Yes (1)” and “No (0)”. We propose to split the existing “Yes (1)” response into two separate responses, one reading “Yes, throughout the organization’s continuous, 12-month data collection period (1)” and “Yes, but for only part of the organization’s continuous, 12-month data collection period (2).” The “No (0)” response would not change. Respondents from organizations that billed for ground ambulance services during part of, but not all of, its continuous, 12-month data collection period, would select “Yes, but for only part of the organization’s continuous, 12-month data collection period (2)”. Those that did so would be prompted to enter the date they started and/or stopped operations during the continuous, 12-month data collection period in a pop-up box, followed by an instruction to proceed through the remainder of the GADCS reporting process.

Organizations selecting “Yes, throughout the organization’s continuous, 12-month data collection period (1)” would proceed through the rest of the GADCS reporting process as do respondents answering “Yes (1)” to this question currently. Organizations selecting “No (0)”

would, as is currently the case, be prompted with several follow-up questions which result in either outreach to the GADCS helpdesk for assistance if the listed NPI does not match their organization, or if they answer that none of the scenarios in the follow-up questions apply, or the completion of the organization's data reporting requirement.

This approach allows CMS to understand when reported costs, revenue, and utilization are measured over a period of time less than a full 12 months and, if necessary, to adjust partial-year responses so that they are more comparable to most responses that will cover a continuous full 12-month data collection period. Furthermore, we believe this approach will reduce confusion and burden for organizations in operation for only part of their 12-month data collection periods.

We invite comments on this proposal to address partial-year responses.

2. Programming Logic for Hospitals and Other Medicare Providers of Services

Section 2 of the GADCS printable instrument includes a programming note after Question 9 reading: "For the remainder of the data collection instrument, instructions and items related to fire, police, or other public safety department-based ground ambulance organizations are shown to organizations that answer Section 2, Question 7="a" or "b" OR Question 8 = Yes (1) OR answer Question 9 = Yes (1) to one or both of a and b." The intent of this programming note is to ensure questions in Section 7 (Labor Costs) present instructions and response fields appropriate to organizations with staff having both ground ambulance and fire, police, or other public safety responsibilities. In other words, a for-profit, ground ambulance-only organization should not be asked whether they have ground ambulance staff with fire, police, or other public safety responsibilities, while a fire department-based ground ambulance organization should.

Section 2, Question 8 asks whether organizations reporting to be fire department-based (response "a" in Section 2, Question 7), police or other public safety department-based (response "b" in Section 2, Question 7), or hospital or other Medicare provider of services-based (response

“d” in Section 2, Question 7) share operational costs between ground ambulance and the respective other reported function. A programming note for Section 2, Question 8 states that the question should be asked of organizations responding a, b, or d to Section 2, Question 7. As a result, hospitals and other Medicare provider of services-based organizations responding “d” in Section 2, Question 7 are presented with Section 2, Question 8, and many may respond “Yes” to Section 2, Question 8. As discussed above, answering “Yes” to Section 2, Question 8 triggers the appearance of table columns in Section 7, Question 1 related to fire, police, and other public safety staff (“Section 2, Question 7= “a” or “b” OR Question 8 = Yes (1) OR answer Question 9 = Yes (1) to one or both of a and b.)

As a result of these programming notes, many hospital-based organizations answering “d” to Section 2, Question 7 and “Yes” to Section 2, Question 8, and any options other than “a” or “b” in Section 2, Question 9 will see columns for fire, police, and other public safety staff in Section 7, Question 1, which was not intended. We believe that no ground ambulance organizations with this response pattern will have fire, police, or other public safety staff to report via the GADCS. Furthermore, we are concerned that this will result in confusion for hospital-based organizations.

We are proposing to change the programming note after Section 2, Question 9 to read as follows: “...instructions and items related to fire, police, or other public safety department-based ground ambulance organizations are shown to organizations that: (A) answer Section 2, Question 7= “a” or “b” AND answering Question 8 = Yes (1); OR, (B) answer Question 9 = Yes (1) to one or both of “a” or “b”.” This change to the programming logic will result in provider-based ground ambulance organizations seeing only two columns in Section 7, Question 1, one for paid and the other, if applicable, for volunteer staff, and not columns specific to staff with fire, police, or other public safety responsibilities.

We invite comments on this proposal to change the programming note after Section 2, Question 9 in the GADCS printable instrument.

3. Typos and Technical Corrections

We are proposing to make four corrections to the GADCS printable instrument.

- Section 2, Question 1a.ii is missing the word “period” after “data collection” in the text. Therefore, we are proposing the question to read as: “The NPI was in operation during the data collection period but was not used during the data collection to bill Medicare for ground ambulance services.”

- Section 2, Question 3 in the printable instrument questions “What is the name of your organization? For the remainder of the instrument, the term “organization” refers to the NPI for which we are requesting data. (enter name)” while the web-based GADCS asks “Is [ORGANIZATION NAME] the name of your organization? For the remainder of the instrument, the term ‘organization’ refers to the NPI for which we are requesting data. Yes (1) /No (0).” The web-based GADCS asks the question in this way because organization name is pre-populated in the system and not entered directly. We are proposing to change the language in the printable instrument to match the text in the web-based GADCS for consistency.

- Section 9.1 (Ground Ambulance Vehicle Costs), Question 5 current wording states “Do not report ground ambulance acquisition costs related to an annual depreciation expense for the same ambulance” which does not make sense. We are proposing Question 5 to read as: “Do not report an acquisition cost and an annual depreciation expense for the same ground ambulance.”

- Section 9.2 (Other Vehicle Costs (Non Ambulance)), Question 5 current wording includes the same error as noted above for Section 9.1, Question 5, and also mistakenly refers to ground ambulances rather than non-ambulance vehicles: “Do not report non-ambulance vehicle acquisition costs related to an annual depreciation expense for the same ground ambulance.” We

are proposing to change the question to read as: “Do not report an acquisition cost and an annual depreciation expense for the same ground non-ambulance vehicle.”

We invite comments on these proposals related to GADCS typos and technical corrections.

O. Hospice: Changes to the Hospice Conditions of Participation

1. Background and Statutory Authority

We have broad statutory authority for most provider and supplier types to establish health and safety regulations, which includes the authority to establish health and safety requirements that advance health equity for underserved communities. Certain status explicitly gives CMS the authority to enact regulations that the Secretary finds necessary in the interest of the health and safety of individuals who are furnished services in an institution, while others give CMS the authority to prescribe regulations as may be necessary to carry out the administration of the program. Section 122 of the Tax Equity and Fiscal Responsibility Act of 1982 (Pub. L. 97-248) (TEFRA), added section 1861(dd) to the Act to provide coverage for hospice care to terminally ill Medicare beneficiaries who elect to receive care from a Medicare-participating hospice. Under the authority of section 1861(dd)(2)(G) of the Act, the Secretary has established the Conditions of Participation (CoPs) that a hospice must meet to participate in Medicare and/ or Medicaid, and these conditions are set forth at 42 CFR part 418. The CoPs apply to the hospice as an entity, as well as to the services furnished to each individual under hospice care. Under section 1861(dd), the Secretary is responsible for ensuring that the CoPs and their enforcement, are adequate to protect the health and safety of the individuals under hospice care. To implement this requirement, State survey agencies conduct surveys of hospices to assess their compliance with the CoPs.

The Consolidated Appropriations Act of 2023 (Pub. L. 117-328) (CAA 2023), was signed into law on December 29, 2022. Division FF, section 4121 of the CAA 2023 establishes a

new Medicare benefit category for marriage and family therapist (MFT) services and mental health counselor (MHC) services furnished by and directly billed by MFTs and MHCs, respectively. Section 4121(b)(2) of CAA 2023 specifically adds these services to covered hospice care services under section 1861(dd)(2)(B)(i)(III) of the Act. In order to implement division FF, section 4121 of the CAA 2023, we are proposing to modify the requirements for the hospice CoPs at § 418.56 “Interdisciplinary group, care planning and coordination of service” and §418.114 “Personnel qualifications.” This statutorily-required modification allows MHCs or MFTs to serve as members of the interdisciplinary group (IDG). Specifically, the CAA 2023 revised section 1861(dd) of the Act to state that the hospice interdisciplinary group is required to include at least one social worker, MFT, or MHC. In addition, we are proposing to modify the hospice personnel qualification at § 418.114(c) to also include qualifications for an MFT and an MHC.

2. Provisions of the Proposed Regulations:

a. Updates to the Hospice CoPs to Permit Mental Health Counselors or Marriage and Family Therapists to Serve as Members of the Hospice Interdisciplinary Group (§§ 418.56 and 418.114).

The CAA 2023 established the new Medicare benefit category for MFT services and MHC services furnished by and directly billed by MFTs and MHCs,

In accordance with the statute, we propose to revise § 418.56(a)(1)(iii) to specify that the IDG must include a social worker (SW), an MFT, or an MHC. In addition, we believe that with the introduction of MHC and MFT into the hospice CoPs, it is important to also include these new disciplines into the personnel qualifications at § 418.114. Currently the requirement at § 418.114 establishes the requirements for several disciplines that work in hospices including but not limited to social worker, nurse and the therapist. In this rule, we are proposing to add both MHC and MFT to the provider requirements under 42 CFR subpart B, Medical and Other Health Services at §§ 410.54 and 410.53. Therefore, to avoid duplication and confusion between the

CoP and the Medical and Other Health Services requirements, we are proposing to add both MHC and MFT to the requirements as new standards at § 418.114(c)(3) and (4) and reference the new requirements at §§ 410.54 and 410.53, respectively.

We note that the CAA 2023 specifically modified the statute to require the hospice interdisciplinary team to include at least one SW, MFT or MHC. However, we emphasize that each hospice patient and family are different in their needs and goals. Therefore, it is important for the hospice to assess and determine, along with the input from the patient and family, which care and services best align with the preferences and needs of the patient.

Furthermore, while we believe the role of the SW in hospice is unique and paramount to quality hospice care and services as the patient and their family approach the end of life, we also understand that some patients may benefit from the care and services of an MFT or MHC. However, the role and training of the SW, MFT and MHC vary greatly. As part of the SW role they offer unique support and services to the patient and family such as explaining what hospice care is and the role of the hospice team, assisting the patient and family in navigating the healthcare system, assisting patients and their family in understanding care options as they relate to patient goals and life circumstances, and identifying and working with the patient and their family to connect the patient to other services that may improve the patients quality of life. For example, a SW can make a referral for Meals on Wheels or link the patient to the Veteran's Administration (VA) and other benefits. The hospice SW can also guide the patient and family in applying for financial assistance or resources, such as Medicaid, temporary assistance programs for energy or utilities, or county assistance programs. In addition, hospice SW are educated to assist patients in completing a living will and other advance directives, as well as educating patients about health care choices and assisting the patient and family in understanding the differences between wills and powers of attorney. They assist patients and family in deciding what environment is best for the patient to receive care and coordinate the many requirements for

transferring the patient to the most appropriate care setting. For example, the SW will assist the patient as they transition from a hospital, assisted living facility or nursing home back to their home, or vice versa.

SW, MFTs and MHCs have some similar roles and responsibilities as they relate to counseling. All three of these providers can assist the patient and family with issues related to family dynamics, assessing situations, strengths, and the patient's support network. They can also assist patients and families with navigating the changes and challenges at the end of life including grief counseling and coping strategies to ease day to day emotions. The SW, MFT, or MHC can also provide age-appropriate education and emotional support for children and grandchildren. Some examples of this include providing activities that allow them to express their feelings appropriately, leading support groups, and providing individual, couples, and family counseling. The addition of the MFT and MHC may also be particularly beneficial for individuals living in rural areas who were previously not able to access these types of services.

We acknowledge that there are clear similarities and differences between SWs, MFTs and MHCs, ranging from offered services to experience to scope of practice. While the services SWs, MFTs, and MHCs provide are not interchangeable, each offers unique supports that may be valuable to the patient and family based on the situation. Therefore, the individual hospice patient's needs, preferences, and goals, should guide the determination of which member of the team (SW, MFT or MHC) serves as the member of the IDG for that patient. For example, if the patient's assessed needs relate to VA benefits, the SW may be the most appropriate provider to meet those needs. However, if the patient's assessed needs are related to unresolved issues with their spouse, it may be appropriate to have MHC or MFT provide services to the patient. We believe the ability for hospice patients to receive additional mental health services and supports as part of their hospice care may empower patients and their families in decision making, thus improving the overall health and safety of the patient.

b. Personnel Qualifications (§ 418.114)

As noted above, Division FF, section 4121 of the CAA 2023 requires CMS to permit an MHC or MFT to serve as members of the IDG. As discussed previously, we are proposing to modify the language at § 418.56 regarding the composition of the IDG to include MHCs and MFTs.

P. Request for Information: Histopathology, Cytology, and Clinical Cytogenetics Regulations under the Clinical Laboratory Improvement Amendments (CLIA) of 1988

1. Background

The Clinical Laboratory Improvement Advisory Committee (CLIAC), CMS, interested parties, and State Agency (SA) surveyors have identified areas in the CLIA requirements that may need updating.

a. Histopathology

The Clinical Laboratory Improvement Amendments of 1988 (CLIA) (Pub. L. 100-578, October 31, 1988) regulations related to histopathology have not been updated since 1992. The current Histopathology requirements may not represent new innovations and technology performed in laboratories.

(1) Slide Preparation and Staining

Facilities only collecting or preparing specimens (or both) or only serving as a mailing service but not performing testing are not considered laboratories²⁷⁸. Slide staining and tissue processing have not been subject to the CLIA regulations. However, we received inquiries from interested parties stating that slide staining and tissue processing are an essential part of the testing process for histopathology. Absent these steps, the tissue cannot be prepared, mounted onto a slide, or accurately evaluated by a pathologist to make an assessment for diagnosis.

²⁷⁸ See definition of “laboratory”, <https://www.ecfr.gov/current/title-42/chapter-IV/subchapter-G/part-493#493.2>.

Slide staining in histopathology includes routine Hematoxylin and Eosin (H&E) staining, special stains, and immunohistochemical (IHC) stains. Routine slide staining in histopathology provides simple cellular identification and requires minimal steps with solutions, dyes, and clearing reagents (for example, Hematoxylin & Eosin stains, Giemsa stain). An individual trained under the supervision of a qualified technical supervisor can perform these staining techniques. An independent facility (for example, a processing center, that performs slide staining) is not required to hold a CLIA certificate. IHC stains are complex stains designed to identify specific antigens and targets within the cells. These targets can include ribonucleic acid (RNA) and deoxyribonucleic acid (DNA) specific reactivity. The U.S. Food and Drug Administration (FDA) has categorized instruments that perform automated IHC staining as high complexity. Therefore, individuals that perform IHC staining in a CLIA certified laboratory (for example, histotechnicians, histotechnologists, and pathology assistants) must meet the personnel requirements for facilities carrying out high complexity testing. The facility must also hold a CLIA certificate in the subspecialty of testing performed.

(2) Gross Tissue Examination Review

Testing in histopathology includes both gross tissue examination (macroscopic) and the microscopic evaluation of the stained slide(s) with evaluation and diagnostic interpretations, and the reporting of diagnostic findings by qualified personnel. Gross examination means the manipulation, orientation, and selection of the desired representative pieces of excised tissue from the total specimen received. This includes the physical examination and description, color, weight, measurements, and other characteristics of the tissue. Selected portions of the tissue are placed into a tissue cassette, subjected to a fixative, processed and infiltrated with paraffin wax, placed onto a slide(s), and stained before being reviewed and evaluated by a technical supervisor.

The CLIA State Operations Manual (SOM), Appendix C (“Interpretive Guidelines”)²⁷⁹ for 42 CFR 493.1489(b)(7) state that gross examinations may be performed by individuals qualified under § 493.1489 as delegated by the technical supervisor. The technical supervisor is not required to provide on-site supervision, but is responsible for the review, accuracy, and confirmation of the macroscopic gross examination in the patient report. The documentation of the review of the results of the macroscopic gross examination by the technical supervisor must be included in the signed microscopic examination report, as required at § 493.1273(d). The CLIA regulations do not cover the acceptable timeframe in which the review of the gross tissue examination must be completed. The discussion surrounding the review of the gross tissue examination includes CLIA’s oversight at this phase of the histopathology testing process. CLIA supports an acceptable timeframe to permit a pathologist to review the tissue specimen prepared during the gross examination by a qualified technical supervisor. This review can be delegated by the technical supervisor to a qualified individual. Gross examination is a critical part of the tissue analysis process to ensure subsequent pathology tests are accurate and reliable. The review of the gross tissue is important to protect the patient’s specimen identification during the testing process.

b. Cytology

(1) CLIA Statute and Regulations

CLIA revised section 353 of the Public Health Service Act (42 U.S.C 263a) to authorize the regulation of all clinical laboratories. Section 353(4)(B)(vi) of the Public Health Service Act requires that all cytological screening be done on the premises of a laboratory that is certified under this section.

²⁷⁹ CLIA Interpretive Guidelines: https://www.cms.gov/regulations-and-guidance/legislation/clia/interpretive_guidelines_for_laboratories.

The CLIA regulations for cytology state that cytology slide preparations must be evaluated on the premises of a laboratory certified to conduct testing in the subspecialty of cytology at § 493.1274(a).

(2) Clinical Laboratory Improvement Amendments (CLIA) Guidance for Temporary Testing Sites under the Multiple Site Exception²⁸⁰, CMS Policy Memo (QSO-22-13-CLIA)

The intent of the CLIA program is to ensure that test results provided to individuals and their healthcare providers are accurate, timely, and reliable. During the COVID-19 public health emergency (PHE), we issued memo QSO-22-13-CLIA that informed interested parties that we exercised enforcement discretion to allow pathologists the ability to examine histopathology and cytology slides/images remotely, under the following conditions:

- The primary laboratory's CLIA certificate must include the specialty of pathology with the subspecialties of histopathology and cytology, as appropriate.
- The remote location complies with other applicable Federal laws, including the Health Insurance Portability and Accountability Act of 1996 (HIPAA).
- The primary laboratory's written procedure manuals for tests, assays, and examinations are available to the pathologists at the remote location.
- Retention time for histopathology slides (10 years), specimen blocks (2 years), preserved tissue remnants (until a diagnosis was made), and cytology slides (5 years) were maintained.
- The use of equipment, supplies and reagents, and similar items needed at the remote location are not allowed to be permanently stored on site.

Under the memorandum, QSO-22-13-CLIA, the remote location could allow pathologists the opportunity to examine histopathology and cytology slides for specified intervals of time to

²⁸⁰ QSO-22-13-CLIA:

<https://www.cms.gov/medicareprovider-enrollment-and-certificationsurvey/certificationgeninfo/policy-and-memos-states-and/clinical-laboratory-improvement-amendments-clia-guidance-temporary-testing-sites-under-multiple-site>

include a PHE, medical condition, or a situation where a pathologist has to examine slides away from the primary location.

Pathologists that currently hold a CLIA certificate are exempt from this enforcement discretion. The pathology community has expressed their desire to make this enforcement discretion a permanent provision after the end of the PHE for COVID-19.

c. Clinical cytogenetics

We require any testing facility that meets the CLIA regulatory definition of a “laboratory” (per § 493.2, *Definitions*²⁸¹) to have a CLIA certificate. A laboratory may choose to outsource a test or a portion of their test procedure because it lacks the equipment, personnel with the expertise in the subject, or is considered more cost-efficient. The CLIA regulations at § 493.1242(c) require the laboratory to only refer a test (for example, reflex, confirmatory, or distributive testing) to another laboratory that is CLIA certified or a laboratory meeting equivalent requirements as determined by CMS. Therefore, each laboratory or testing facility that performs clinical testing must have its own CLIA certificate and comply with the regulations for the complexity of the testing it performs.

Clinical cytogenetics testing is generally categorized as a CLIA high complexity test. A cytogenetics test may be conducted at one facility, or involve a testing workflow model in which one facility performs the analytical bench testing activities (for example, sample processing, extraction, chemical reaction, slide preparation, imaging) and another facility conducts the non-bench testing activities (for example, review of images, analysis, interpretation or reporting of the results). When any part of a test is performed by more than one facility, this testing model is considered distributive testing. CLIA defines distributive testing under § 493.2, *Definitions*, as “laboratory testing performed on the same specimen, or an aliquot of it, that requires sharing it between two or more laboratories to obtain all data required to complete an interpretation or

²⁸¹ See definition of “laboratory”, <https://www.ecfr.gov/current/title-42/chapter-IV/subchapter-G/part-493#493.2>.

calculation necessary to provide a final reportable result for the originally ordered test. When such testing occurs at multiple locations with different CLIA certificates, it is considered distributive testing.” Therefore, any facility performing clinical cytogenetics testing activities must be CLIA certified and meet high complexity testing requirements.

During the PHE for COVID-19, we exercised enforcement discretion regarding clinical cytogenetics distributive testing models. Under the enforcement discretion, we allowed clinical cytogenetics personnel the opportunity to examine clinical cytogenetics digital images (that is, non-bench testing activities) at a remote testing location without obtaining a separate CLIA certificate for the remote site under certain conditions. Some interested parties have requested we make this enforcement discretion permanent. Changes to the current CLIA regulations would be necessary to allow the examination of clinical cytogenetics images at a different, remote location from the primary CLIA-certified site without a separate CLIA certificate. Please note that a remote location not associated with or covered by a primary CLIA-certified laboratory would be required to obtain its own CLIA certificate. The primary site laboratory director would be responsible for the overall operation and administration of the laboratory including the employment of personnel who are competent to perform test procedures, record and report test results promptly, accurately, and proficiently; for assuring compliance with applicable regulations in their primary laboratory; and for the supervision of the personnel reviewing digital laboratory data, digital results, and digital images remotely.

2. Solicitation of Public Comments

We are soliciting public input and comment on the following areas of CLIA: Histopathology; Cytology; and Clinical cytogenetics. The topics listed in this RFI are areas that CMS, CDC, interested parties, and SA surveyors have identified that may potentially be used by CMS for future rulemaking.

a. Histopathology

We are seeking public comments on the following:

- Whether, and how, CLIA should provide oversight of histopathology preparation and processing of tissue samples for slide staining, specifically related to guidance for routine histopathology slide staining and complex IHC staining.
- What criteria (for example, training programs, on-the-job training, experience, or academic degree) would interested parties recommend for personnel performing high complexity automated IHC staining?
- How does the categorization of automated staining systems impact personnel who are currently performing this task but do not meet the qualifications for performing high complexity testing?
- What is an acceptable timeframe between the review of the macroscopic gross tissue examination, and the review and confirmation of these tissue findings by a pathologist prior to the microscopic review of slides to protect the integrity of the macroscopic tissue?
- What education and experience or training requirements should be required for individuals to qualify as a general supervisor (GS) for histopathology? If qualified, what is an acceptable timeframe for the GS to review and evaluate gross examinations under the specialty of histopathology?
- What education and professional experience, or training requirements should be required for individuals performing gross tissue examination that have an associate degree from a histotechnician program or a PA who has training from an accredited program and is certified as a PA?

b. Histopathology and Cytology Testing at Remote Locations

We are seeking public comments on the following:

- How should “remote testing location” be defined?

- How should the CLIA regulations be revised to allow pathologists to examine histopathology and cytology slides/images at a remote testing location?
- What conditions (including, location(s)) should apply for a pathologist to examine histopathology or cytology slides/images remotely without obtaining a separate CLIA certification?
- Under what conditions should a primary location cease permitting testing at the remote location?
- How should the remote location be included on the final patient report?
- How should CMS, SAs, or Accreditation Organizations perform onsite surveys at remote locations?

c. Clinical cytogenetics

We are seeking public comments on the following:

- Under what circumstances should CLIA allow remote locations or testing facilities to examine clinical cytogenetics images without obtaining a separate CLIA certification?
- Under what circumstances would the examination of clinical cytogenetics images be unacceptable for the remote location scenario?
- What clinical cytogenetics testing processes should the primary laboratory have in place to ensure the remote site complies with the CLIA requirements?
- What “conditions” or “criteria” would be necessary for the remote location to ensure quality testing for the examination of clinical cytogenetics images?

Q. Changes to the Basic Health Program Regulations

Section 1331 of the Patient Protection and Affordable Care Act (Pub. L. 111-148, enacted March 23, 2010), as amended by the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111-152, enacted March 30, 2010) (collectively referred to as the Affordable Care Act or ACA), provides States with the option to operate a Basic Health Program (BHP). In the States

that elect to operate a BHP, the State’s BHP makes affordable health benefits coverage available for lawfully present individuals under age 65 with household incomes between 133 and 200 percent of the Federal poverty level (or in the case of a lawfully present non-citizen, ineligible for Medicaid or the Children’s Health Insurance Program (CHIP) due to immigration status, whose household income is between zero and 200 percent of the FPL) who are not eligible for Medicaid, CHIP, or other minimum essential coverage. As of the date of this proposed rule, only New York and Minnesota have implemented a BHP.

Federal funding for BHP is based on 95 percent of the value of the premium tax credits (PTC) and cost sharing reduction (CSR) subsidies that BHP enrollees would have received had they instead enrolled in Qualified Health Plans (QHPs) through the Exchange in accordance with section 1331(d)(3)(A)(i) of the ACA. These funds are paid to trusts established by the States and dedicated to the BHP, and the States then administer the payments to BHP standard health plans within the BHP. Under section 1331(d)(2) of the ACA, Federal funding for the BHP can only be used to reduce the premiums and cost-sharing of, or to provide additional benefits for, eligible individuals enrolled in standard health plans within the State.

1. Allowing States to Suspend a BHP

Current regulations require States to operate a BHP under a certified Blueprint approved by CMS, and to operate the BHP as long as their approved certified Blueprint is in place. Under 42 CFR 600.140, a State may terminate its BHP, which requires that the BHP trust fund balance must be refunded to the Federal government. A State has inquired about whether it could “suspend” its program for a portion of time, so that it could shift BHP enrollees to other coverage with comparable benefits and cost sharing, while maintaining its BHP trust fund, which it could use if the State were to resume the BHP.

We see the value in allowing a State currently operating a BHP to experiment with other ways of providing coverage that may increase the number of people covered while not increasing

Federal costs. We propose to give a State the option of temporarily “suspending” its BHP program, while retaining accrued funds in the BHP trust fund for a limited period of time. Should the State decide to resume operating its BHP, the suspension would allow the State to leverage accrued funds and avoid the processes of terminating the program and refunding trust funds, and then later having to submit a new BHP application for approval. For that reason, under the authority of section 1331(c)(4) of the ACA, which requires coordination with other State health programs, we are proposing to amend § 600.140 to add an option at paragraph (b) for a State to suspend its BHP.

We propose at § 600.140(b)(1) that States wishing to suspend their BHP must submit an application to HHS. Under proposed § 600.140(b)(1), States could also seek approval to extend a BHP suspension previously approved by HHS. In § 600.140(b)(1)(vi), we propose that the application must be submitted at least 9 months in advance of the proposed effective date of the suspension or extension. In § 600.140(c), we propose that the State cannot implement the suspension or extension without prior approval by the Secretary. However, for States seeking to suspend a BHP in the first plan year that begins following publication of a final rule adopting this proposal, States must submit an application within 30 days of the publication of such a final rule. HHS will approve or deny such application as expeditiously as possible. We propose in § 600.140(b)(2) that a suspension application would need to be approved prior to the effective date of suspension, except in the case of a State seeking to suspend a BHP in the first plan year that begins following publication of a final rule adopting this proposal.

The proposed substantive requirements for the suspension application are described in § 600.140(b)(1)(i) through (v). During the period of suspension, BHP enrollees should receive comparable coverage that is as comprehensive and affordable as, or more comprehensive and affordable than, BHP coverage during the period of suspension. Therefore, in § 600.140(b)(1)(i) through (iii), we propose to require that the suspension and extension application demonstrates

that the benefits that will be provided to individuals that meet the BHP eligibility criteria are at least equivalent to the benefits offered in the State's BHP. We propose that the cost sharing and premiums that will be charged to such individuals under the new coverage option do not exceed the amounts charged under the BHP to reduce the risk that these individuals are harmed by the transition to other coverage.

We propose at § 600.140(b)(1)(i) to require that benefits provided under the new coverage option must be at least equal to the BHP benefits in the certified Blueprint in effect on the effective day of suspension. This is the same standard that is used in the Medicaid regulations at § 440.330 to determine if a State's alternative benefit package is equivalent to the benchmark benefit package. Additionally, it is similar to the standard that is used by CHIP at § 457.420 to determine if a State's CHIP benefit package is equivalent to the benchmark benefit package, although the CHIP standard allows for some variation if the State is adding additional benefits as required by Title XXI. We note that it would be acceptable to provide additional benefits under the new coverage option, such that individuals receive more or greater benefits under the new coverage option. We considered whether there should be a look back period, such that benefits under the new coverage option would be compared to the BHP benefits provided under the certified Blueprint in effect for a period of time prior to the effective date of the suspension and seek comments on this alternative approach.

In order to determine that the cost sharing required of individuals under the new coverage option does not exceed the BHP cost sharing levels, we propose at § 600.140(b)(1)(ii) to require that the actuarial value of the new coverage option must meet or exceed the actuarial value of the BHP standard health plans in effect immediately prior to the suspension period. This may result in cost sharing for individual benefits differing between the BHP and the new coverage program, provided the actuarial value of the new coverage options meets or exceeds the actuarial value of the BHP standard health plans. If there are multiple health plans being offered under the new

coverage option and/or multiple standard health plans in effect in the State, we propose that the median actuarial value of the health plans offered under the new coverage option must meet or exceed the median actuarial value of the BHP standard health plans. We considered whether to require that cost sharing under the new coverage option instead meet the cost sharing requirements under current regulations at § 600.520(c) and seek comment on whether this alternative approach should be adopted in the final rule.

Similarly, we propose at § 600.140(b)(1)(iii) to require that the premiums charged to individuals under the new coverage option must be comparable to BHP standard health plan premiums in effect immediately prior to the suspension period, beyond reasonable increases due to inflation as measured by the Consumer Price Index (CPI). We considered alternative methods for measuring equivalency in premiums. First, we considered whether to require that premiums under the new coverage option instead meet the premium requirements under § 600.505(a). Second, we considered whether premiums charged to individuals under the new coverage option should instead not exceed the premiums in effect on December 31, 2020, as these premiums levels do not account for any additional premium tax credit subsidies offered under the American Rescue Plan Act or the Inflation Reduction Act. Third, we considered whether premium and cost sharing levels, considered together, under the new coverage option would be considered sufficient, if those levels meet the requirements under a section 1115 demonstration or section 1332 waiver. We also seek comment on whether these alternative approaches should be adopted in the final rule.

We also considered alternatives to the timing of the comparison of benefits and cost sharing in BHP to the new coverage option. Specifically, we considered whether benefits and cost sharing under the new coverage option should be compared to the benefits and cost sharing under the BHP on the date the suspension application is submitted to HHS, or some other date. We also seek comment on the potential adoption of these alternatives in the final rule.

Finally, we believe that the suspension period should not result in individuals losing coverage, solely due to a change in eligibility criteria for the program. Therefore, we are proposing in § 600.140(b)(1)(iv) that a state must demonstrate in its application that the eligibility criteria for coverage during the suspension is not more restrictive than the criteria described in § 600.305.

We believe that the suspension period should be long enough to allow the State to evaluate the alternative coverage provided to BHP eligible individuals, but should not be indefinite. Therefore, we are proposing in § 600.140(b)(1)(v) that a State could request a suspension of up to 5 years in an initial suspension application, after which a State could request an extension of up to 5 additional years. Additional extension periods would not be allowed. When the suspension period, including any extension period, ends, we propose that the State would need to transition the BHP eligible population back to the BHP, or terminate the BHP. We propose at § 600.140(b)(7) that at least 9 months before the end of the suspension period, a State must submit a transition plan to HHS that explains how the State will reinstate its BHP, or terminate the program under § 600.140(a) of the current regulations. The state must also notify the public of this change. Under proposed § 600.140(b)(7), a State also could elect to end a BHP suspension before the end of the initial or extended suspension period by following the same process.

We chose 5 years for the initial approval period because this aligns with the duration of initial waivers and demonstration projects approved under section 1332 of the ACA and section 1115 of the Act. We believe these are the most likely authorities under which States could seek to provide alternative coverage to BHP enrollees. Similarly, we chose 5 years for the extension period because it aligns with the duration of typical extensions or amendment periods under section 1332 waiver and section 1115 demonstration projects. We considered a shorter extension

period of 2 or 3 years, and allowing multiple extension periods given both section 1332 waiver and 1115 demonstrations can be extended. We seek comment on these alternatives.

Under proposed § 600.140(b)(1)(vii), States requesting an extension of a previously-approved BHP suspension also would need to provide an evaluation of the alternative coverage in its application. In the case of alternative coverage provided through a section 1115 demonstration project or section 1332 waiver, the evaluation and application required for such demonstration projects and waivers would satisfy this requirement.

If individuals and/or standard health plans will experience a change in the terms of the coverage, including receiving additional benefits or being charged different cost sharing amounts, in § 600.140(b)(3), we propose to require that the state provide notice to them at least 90 days prior to the effective date of the suspension. The notices would need to include information regarding the State's assessment of their eligibility for all other insurance affordability programs in the State, and meet the accessibility and readability standards at 45 CFR 155.230(b).

In order to calculate a State's BHP payments, the State provides CMS an estimate of the number of BHP enrollees it projects will enroll in the upcoming BHP program quarter each quarter of program operations. We use those estimates to calculate the prospective payment, which is deposited in the State's BHP trust fund. Once the State provides us with actual enrollment data for those periods, the actual enrollment data is used to calculate the final BHP payment amount and make any necessary reconciliation adjustments to the prior quarters' prospective payment amounts due to differences between projected and actual enrollment.

We believe that having an accurate accounting of the balance of the State's trust fund is critical for any State suspending its BHP. Therefore, we propose to require in § 600.140(b)(4) that States that suspend their BHP must submit the data necessary to complete the BHP payment reconciliation process within 12 months of the effective date of the suspension. We believe that

12 months is a reasonable amount of time for a State to submit the actual enrollment data for the periods it was operating a BHP.

One reason it is important for a State to complete the BHP payment reconciliation process is to establish a baseline balance for calculating interest. Currently, States' BHP trust funds can accrue interest, and this interest is retained in the BHP trust fund. However, we believe that interest accrued on the BHP trust fund during any suspension must be remitted to HHS. Since the State is not operating a BHP during the suspension period, suspension should not generate additional funds for the State. We propose in §600.140(b)(6) that while the State is not providing BHP coverage, any accrued interest on the trust fund must be remitted to HHS on an annual basis in the form and manner set out by HHS.

States currently submit the balance of their trust fund and any interest accrued through the BHP annual report described in §600.170. We proposed revisions to §§ 600.140(b) and 600.170(a) to require States that suspend their BHP continue to submit an annual report in order to document the interest earned and to provide assurance that the coverage provided to BHP-eligible individuals meets the standards discussed above. We propose in § 600.140(b)(5) to require States that suspend their BHP continue to submit an annual report during the suspension period. We proposed amendments to § 600.170(a), which describes the requirements for the annual reports, to describe the standards that will apply to States that have suspended their BHP. Specifically, we propose to redesignate the introductory language in paragraph (a) as paragraph (a)(1), to redesignate paragraphs (a)(1) through (a)(4) as paragraphs (a)(1)(i) through (a)(1)(iv), and to add a new paragraph § 600.170(a)(2) to require that States that have suspended their BHP under § 600.140(b) must submit an annual report that includes (1) the balance of the BHP trust fund and any interest accrued on that balance; (2) an assurance that the coverage provided to individuals who would be eligible for a BHP under § 600.305 continues to meet the standards

described in § 600.140(b)(1)(i) through (iii); and (3) any additional information specified by the Secretary at least 120 days prior to the date that the annual report is due.

If a State does not meet the proposed requirements (that is, completing the financial reconciliation process, remitting interest on the trust fund, and submitting the required information in its annual report), we propose in § 600.140(d) that the Secretary can withdraw approval of the suspension. Specifically, we propose that the Secretary can withdraw approval of the suspension if the State ends implementation of the alternative coverage program for any reason, or if the State fails to continue to meet the coverage and cost sharing requirements of the alternative coverage program. If the State seeks an amendment to the alternative coverage program, the State must inform CMS of this proposed change so that CMS may evaluate if the coverage is sufficient. In addition, we propose at paragraph (d) that we could also withdraw approval if we have significant evidence of harm, financial malfeasance, fraud, waste, or abuse consistent with § 600.142. In § 600.140(d)(1) through (4), we propose a process for withdrawing approval, which mirrors the process for withdrawing certification of a BHP Blueprint in § 600.142. Specifically, we propose that the Secretary will withdraw approval only after providing the State with notice of the findings upon which the Secretary is basing the withdrawal, a reasonable period for the State to address the finding, and an opportunity for a hearing before issuing a final finding. We propose that the Secretary shall make every reasonable effort to resolve proposed findings without withdrawing approval of the suspension plan and in the event of a decision to withdraw approval, will accept a request from the State for reconsideration. The effective date of an HHS determination withdrawing approval of the suspension plan would not be earlier than 120 days following issuance of a final finding. Within 30 days following a final finding under paragraph (d)(1) of this paragraph, the State shall submit a transition plan to HHS.

During the transition period from the BHP to other coverage the state may not use funds from the BHP trust fund toward the unwinding of the BHP program and transition to the new

coverage program. Under section 1331(d)(2) of the ACA and current regulations at § 600.705(c), Federal funding for BHP can only be used to reduce the premiums and cost-sharing, or to provide additional benefits, for BHP-eligible individuals enrolled in standard health plans within the State. Therefore, Federal funding is not available for administrative expenses associated with transitioning BHP enrollees to a new coverage program or for costs associated with providing new coverage after the transition has occurred. States cannot use Federal BHP funding to cover premiums and cost sharing (or additional benefits) for individuals that would otherwise be eligible for BHP funding. We solicit comment on these proposals.

We seek comment on the proposed process for suspending a BHP. Specifically, we seek comment on how far in advance of suspension a state must submit a suspension application to CMS and how far in advance of suspension CMS must approve or deny the suspension request. We also seek comment on duration of time a state may suspend their BHP, without terminating the program.

2. Submission and Review of BHP Blueprints

As noted above, under current § 600.110, States must submit to the Secretary and receive certification of a BHP Blueprint describing their operational design choices prior to implementation. Under the current § 600.125(a) a State that seeks to make significant changes to its BHP must submit a revised Blueprint to the Secretary for review and certification; however, the current regulation does not specify any timeframes for the submission and review of revised Blueprints. The current § 600.125(a) also describes a limited number of changes under which submission of a revised Blueprint is required. Most notably, the current regulation does not require the submission of a revised Blueprint in response to changes in Federal law or regulations. Additionally, under current § 600.125(a) and (b), any changes made in a revised Blueprint can be implemented prospective from the date of certification; no changes can be implemented until HHS certifies the revised Blueprint.

We believe that additional parameters are necessary in order to ensure effective and efficient operation of the BHPs and HHS review of a revised Blueprint, consistent with section 1331(a)(1) of the ACA. Therefore, we propose changes to § 600.125 to establish timeframes and procedures for the submission and review of BHP Blueprints, similar to the Medicaid and CHIP State plan amendment (SPA) submission and review processes. We note that these proposed timeframes only apply to the submission and review of revised Blueprints; we are not proposing changes to the timeframes for the submission and review of an initial Blueprint, set forth in current regulations at § 600.120, in the event additional States seek to establish BHPs.

Additionally, we believe States need flexibility to receive approval of a retroactive effective date for changes to their BHP Blueprint, similar to flexibilities allowed under regulations at §§ 430.20(b) and 457.60 for the submission of Medicaid and CHIP SPAs. We note, however, that in the event that a State implements a change to its BHP Blueprint that is ultimately disapproved by HHS, the State could be required to implement a corrective action plan under § 600.715.

Specifically, under existing regulations at § 600.125(a), States must submit a revised Blueprint whenever they seek to make significant change(s) that alter program operations the BHP benefit package, enrollment, disenrollment and verification policies described in its certified BHP Blueprint. Under the proposed revisions to § 600.125(a), we would broaden the circumstances requiring submission of a revised Blueprint to include States' significant changes that alter any core program operations under § 600.145(f). States also would be required to submit a revised Blueprint to HHS whenever necessary to reflect changes in Federal law, regulations, policy interpretations, or court decisions that affect provisions in their certified Blueprint. States would continue to be required to submit a revised Blueprint to make changes to the BHP benefit package or to enrollment, disenrollment, and verification policies described in the certified Blueprint, as currently required under § 600.125(a).

At § 600.125, we also propose to redesignate paragraph (b) as paragraph (d) and to add new paragraph (b) to provide that the effective date of a revised Blueprint may be as early as, but not earlier than, the first day of the quarter in which an approvable revision is submitted to HHS. This policy mirrors the standards for submission of a Medicaid SPA at § 430.20(b). The current regulations do not specify as to when revision is considered received. We believe that it is reasonable to consider a revised Blueprint to be received when HHS receives an electronic copy of a cover letter signed by the Governor or Governor's designee and a copy of the currently approved Blueprint with proposed changes indicated in track changes. In the event a State is unable to submit a revised Blueprint electronically, due to a disaster or other event outside of the State's control, CMS may consider other modes of submission on a case-by-case basis. Under current regulations at § 600.125(b), redesignated at § 600.125(d) in this proposed rule, the State is responsible for continuing to operate under the terms of the existing certified Blueprint until the State adopts a revised Blueprint, the State terminates or suspends the BHP, or the Secretary withdraws certification for the BHP.

We are also proposing to redesignate paragraph (c) as paragraph (g) and to add a new paragraph (c) to create clear timelines for HHS's review, approval, and disapproval of revised Blueprints similar to the timelines currently applicable to CHIP SPAs under § 457.150. Under proposed § 600.125(c)(1), a revised Blueprint will be deemed approved unless HHS, within 90 days after receipt of the revised Blueprint, sends the State written notice of disapproval or written notice of additional information HHS needs in order to make a final determination. If HHS requests additional information, the 90-day review period will be stopped and will resume the day after HHS receives all of the requested additional information from the State. Under proposed paragraph (c)(2), if 90 days from the date a Blueprint revision is received does not fall on a business day, the 90-day review period will end on the next business day. Under proposed paragraph (c)(3), HHS may send written requests for additional information as many times as

needed to obtain all information necessary to certify the revised Blueprint. This mirrors the process used by CHIP, of having one 90-day review period that can start and stop multiple times with a request for additional information and response. It differs from Medicaid, which has a 90-day review period that can be stopped once by a request for additional information, followed by a second 90-day review period when the state responds. At paragraph (c), we propose that HHS may disapprove a Blueprint amendment if the Secretary determines that the Blueprint revision is not consistent with section 1331 of the ACA or the regulations set forth in this part at any time during the review process, including when the 90-day review clock is stopped due to a request for additional information.

Once a Blueprint is approved, current paragraph (b) specifies that the State is responsible for continuing to operate under the terms of the existing certified Blueprint until and unless a revised Blueprint that seeks to make significant change(s) is certified, except during a public health emergency, as described in paragraph (c). We propose to revise paragraph (b), redesignated as paragraph (d) in this proposed rulemaking, to provide that the State must continue to operate under the terms of an existing certified Blueprint until the State adopts a revised Blueprint, terminates the BHP following the procedures described in § 600.140(a), suspends the BHP following the procedures described in § 600.140(b), or the Secretary withdraws certification of the BHP under § 600.142.

Finally, we propose to apply some of the existing parameters for initial Blueprint submissions to Blueprint revisions. In paragraph (e), we propose that a State may withdraw the proposed revised Blueprint during HHS review if the State has not yet implemented the proposed changes and provides written notice to HHS. This proposal mirrors current § 600.130 for initial BHP Blueprints. In paragraph (f), we propose that HHS will accept a State's request for reconsideration of a decision not to certify a revised Blueprint and provide an impartial review

against standards for certification if requested. This proposal mirrors current § 600.135(c) for initial BHP Blueprints.

Under current § 600.135, HHS must act on all initial BHP Blueprint certification and revision requests in a timely matter. Because we are proposing to specify timeframes for the submission and review of revised BHP Blueprints under §600.125, we propose to revise § 600.135 to apply only to the submission of initial BHP Blueprints. Specifically, we propose to revise the title to clearly state that this section is applicable to only initial Blueprints and to remove the reference to BHP Blueprint revisions in paragraph (a).

3. BHP Notices

Under current § 600.330, States must provide written notice to beneficiaries conveying final determination of eligibility or ineligibility. The regulation does not require States to provide those notices in a manner that is accessible to individuals with disabilities or limited English proficiency (LEP). Although HHS Office for Civil Rights regulations at 45 CFR 92.101, which apply to programs such as Medicaid, CHIP and BHP, require States to take reasonable steps to provide meaningful access for individuals with LEP and to ensure effective communication with individuals with disabilities, we believe it is important for these obligations to also be described clearly in the BHP regulations. Therefore, we are proposing to add paragraph (f) to § 600.330 to require that BHP eligibility notices be written in plain language and be provided in a manner which ensures that eligible individuals with LEP are provided with meaningful language access and individuals with disabilities are provided with effective communication.

4. BHP Appeals

Under current § 600.335(b), individuals must be given the opportunity to appeal BHP eligibility determinations through the appeals rules of the State's Medicaid program or the Exchange, as indicated in the State's Blueprint. Current BHP and Exchange regulations do not provide for appeals of health services matters. We believe all BHP enrollees should be afforded

the opportunity to appeal not only eligibility determinations but also decisions about health services matters. The Exchange rules do not include an opportunity to appeal a health services matter, as such appeals are typically handled by State Departments of Insurance, as opposed to by the Exchange itself. Therefore, we propose in paragraph (b) to remove the option for States to conduct their BHP appeals process according to Exchange rules. In paragraph (b)(2), we propose to require States to provide individuals an opportunity to appeal a delay, denial, reduction, suspension, or termination of health services, in whole or in part, including a determination about the type or level of service, after individuals exhaust appeals or grievances through the BHP standard health plans.

Because current BHP regulations do not include provisions related to the appeal of health services matters, these appeals are not currently included in the list of core operations of a BHP in § 600.145. We believe that appeals of health services matter, like appeals of eligibility determinations, are a core function of a BHP. Therefore, in proposed § 600.145(f)(2), we include appeals of health services matters as specified in §600.335 as a core operation of a BHP.

R. Updates to the Definitions of Certified Electronic Health Record Technology

1. Background

The American Recovery and Reinvestment Act of 2009 (Pub. L. 111-5, enacted February 17, 2009) (ARRA), authorized incentive payments to eligible professionals, eligible hospitals and critical access hospitals (CAHs), and Medicare Advantage (MA) organizations to promote the adoption and meaningful use of certified electronic health record (EHR) technology (CEHRT). In 2010, the Office of the National Coordinator for Health Information Technology (ONC) launched the Health IT Certification Program (ONC Health IT Certification Program) to provide for the certification of health information technology (IT), including EHRs. Requirements for certification are based on standards, implementation specifications, and certification criteria adopted by the Secretary pursuant to section 3004 of the Public Health

Service Act. The ONC Health IT Certification Program supports the use of certified health IT under the programs that we administer, including, but not limited to, the Medicare Promoting Interoperability Program (previously known as the Medicare and Medicaid EHR Incentive Programs), the Shared Savings Program, and the Quality Payment Program, which includes the MIPS Promoting Interoperability performance category and the Advanced Alternative Payment Models (Advanced APMs). While these programs continue to require the use of CEHRT, the use of certified health IT has expanded to other government and non-government programs.

For CY 2019 and subsequent years, the definitions of CEHRT for the Promoting Interoperability Programs at 42 CFR 495.4, the Quality Payment Program at 42 CFR 414.1305, and the Shared Savings Program at 42 CFR 425.20 require the use of EHR technology that meets the 2015 Edition Base EHR definition at 45 CFR 170.102 and is certified to 2015 Edition health IT certification criteria under the ONC Health IT Certification Program. In addition, the CEHRT definitions in our regulations for these programs require technology to be certified to certain specific 2015 Edition health IT certification criteria, as specified in each of the definitions, including criteria necessary to be a meaningful EHR user under the Medicare Promoting Interoperability Program, and criteria necessary to report on applicable objectives and measures specified under the MIPS Promoting Interoperability performance category under the Quality Payment Program. Prior Editions of health IT certification criteria were associated with “stages” of the EHR Incentive Programs (now the Medicare Promoting Interoperability Program and the MIPS Promoting Interoperability performance category), which linked new and updated functionality in certified health IT to significant revisions to the objectives and measures in the programs.

In the CY 2021 PFS final rule (85 FR 84815 through 84825), we finalized that the technology used by health care providers to satisfy the definitions of CEHRT at 42 CFR 495.4 and 42 CFR 414.1305 must be certified under the ONC Health IT Certification Program, in

accordance with the updated 2015 Edition certification criteria (2015 Edition Cures Update), as finalized in the ONC 21st Century Cures Act: Interoperability, Information Blocking, and the ONC Health IT Certification Program (Cures Act) final rule (85 FR 25642). We further finalized aligning the transition period during which health care providers participating in the Medicare Promoting Interoperability Program, the MIPS Promoting Interoperability performance category, and the Advanced Alternative Payment Models (Advanced APMs) may use technology certified to either the existing or updated 2015 Edition certification criteria, with the December 31, 2022 date established in the ONC interim final rule, Information Blocking and the ONC Health IT Certification Program: Extension of Compliance Dates and Timeframes in Response to the COVID-19 Public Health Emergency (85 FR 70064), for health IT developers to make updated certified health IT available (85 FR 84815 through 84825). After this date, health care providers were required to use only certified technology updated to the 2015 Edition Cures Update for an EHR reporting period or performance period in CY 2023.

In the ONC “Health Data, Technology, and Interoperability: Certification Program Updates, Algorithm Transparency, and Information Sharing” proposed rule (88 FR 23746 through 23917) (hereafter referred to as “ONC HTI-1 proposed rule”), which appeared in the **Federal Register** on April 18, 2023, ONC has proposed to discontinue the year themed “editions,” which ONC first adopted in 2012, to distinguish between sets of health IT certification criteria finalized in different rules (88 FR 23758). In the proposed rule, ONC noted public comments stating that the continued use and reference to the 2015 Edition inaccurately implies an age and outdatedness to the certification criteria ONC has adopted. Given these concerns, ONC stated that it believes there should be a single set of certification criteria, which will be updated in an incremental fashion in closer alignment to standards development cycles and regular health IT development timelines (88 FR 23750).

ONC further stated its belief that maintaining a single set of “ONC Certification Criteria for Health IT” would create more stability for the ONC Health IT Certification Program and for Federal partners who reference the ONC Health IT Certification Program, as well as make it easier for developers of certified health IT to maintain their product certificates over time (88 FR 23759). ONC stated this proposal to remove “editions” from the ONC Health IT Certification Program would also help users of certified health IT identify which certification criteria are necessary for their participation in programs, such as the Medicare Promoting Interoperability Program, the Shared Savings Program, and the Quality Payment Program’s MIPS Promoting Interoperability performance category and Advanced APMs (88 FR 23760). For example, users would only need to know that their Health IT Module is certified to 45 CFR 170.315(b)(3), electronic prescribing, for successful participation in the MIPS Promoting Interoperability performance category related to electronic prescribing, as compared to the current state, where they must also know if the Health IT Module supports electronic prescribing as part of the 2014 Edition Certification Criteria or the 2015 Edition Certification Criteria, or 2015 Edition Cures Update Certification Criteria. To implement this approach, ONC has proposed to rename all criteria within the ONC Health IT Certification Program simply as “ONC Certification Criteria for Health IT,” proposing associated changes to the regulations at 45 CFR part 170 (88 FR 23759).

Similar to ONC’s proposal to move away from “editions” and toward incremental changes to its certification criteria, we also have focused on implementing incremental changes to individual measures under, but not limited to, the Medicare Promoting Interoperability Program, the Shared Savings Program, and the Quality Payment Program, which includes the MIPS Promoting Interoperability performance category and the Advanced APMs in recent years. We expect to continue to prioritize incremental changes in future years to reduce burden on participants in these programs (including eligible hospitals and CAHs and MIPS eligible

clinicians), and build on the established base of available certified health IT capabilities. We believe our approach is consistent with the strategy discussed in the ONC HTI-1 proposed rule, in which ONC proposes to pursue a framework for the ONC Health IT Certification Program that focuses on incremental updates to a single set of certification criteria.

2. Updates to the Definition of Certified Electronic Health Record Technology in the Medicare Promoting Interoperability Program and the Quality Payment Program

a. Background and Previously Finalized Certification Requirements

In consideration of the updates made to the 2015 Edition certification criteria as described in the CY 2021 PFS final rule (85 FR 84815 through 84828), we finalized that health care providers participating in the Medicare Promoting Interoperability Program and eligible clinicians participating in the Quality Payment Program must use certified health IT that satisfies the definitions of CEHRT at 42 CFR 495.4 and 42 CFR 414.1305, respectively, and is certified under the ONC Health IT Certification Program, in accordance with the 2015 Edition Cures Update certification criteria, as finalized in the ONC 21st Century Cures Act final rule (85 FR 25642). We explained this included technology used to meet the 2015 Edition Base EHR definition at 45 CFR 170.102, technology certified to the criteria necessary to be a meaningful EHR user under the Medicare Promoting Interoperability Program and the MIPS Promoting Interoperability performance category, and technology certified to the criteria necessary to report on applicable objectives and measures. In this proposed rule, we are proposing revisions to the CEHRT definitions in the Medicare Promoting Interoperability Program and the Quality Payment Program (on which the Shared Savings Program’s definition of CEHRT at § 425.20 also relies) to support the proposed transition from the historical state of year themed “editions” to the “edition-less state” in the ONC HTI-1 proposed rule.

We included Table IX.H.-04 in the Hospital Inpatient Prospective Payment System for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Fiscal

Year 2024 Rates proposed rule (88 FR 27170), which includes some, but not all, certification criteria for the Medicare Promoting Interoperability Program’s measures and eQMs for eligible hospitals and CAHs, and Table 48 in section IV.A.4.f.(4)(e)(iv) of this proposed rule, which includes some, but not all, certification criteria for measures under the MIPS Promoting Interoperability performance category. These tables are only applicable for the measures under the Medicare Promoting Interoperability Program and the MIPS Promoting Interoperability performance category, and do not include all of the updated certification criteria included in the CEHRT definition as discussed in the CY 2021 PFS proposed rule (85 FR 50265 through 50270). For further discussion on the complete list of changes to the certification criteria under the CEHRT definition, we refer readers to the ONC 21st Century Cures Act final rule (85 FR 25667), the CY 2021 PFS proposed rule (85 FR 50265), and the CY 2021 PFS final rule (85 FR 84818 through 84825).

b. Proposed revisions to Certified Electronic Health Record Technology Definitions in Regulatory Text

We are proposing to revise the definitions of CEHRT in 42 CFR 495.4 and 42 CFR 414.1305 for the Medicare Promoting Interoperability Program and for the Quality Payment Program so these definitions would be consistent with the “edition-less” approach to health IT certification as proposed in the ONC HT-1 proposed rule, should the ONC proposal be finalized. First, with respect to references to the “2015 Edition Base EHR definition” defined at 45 CFR 170.102, we are proposing to add a reference to the revised name “Base EHR definition,” proposed in the ONC HTI-1 proposed rule, to ensure, if finalized, it is applicable for the CEHRT definitions going forward (88 FR 23759). Next, we are proposing to replace our references to “2015 Edition health IT certification criteria,” with “ONC health IT certification criteria” and to add the regulatory citation for ONC health IT certification criteria in 45 CFR 170.315. By removing the reference to the “2015 Edition,” and pointing to the regulations at 45 CFR 170.315,

we believe this proposal, if finalized, will ensure the CEHRT definitions do not need to be updated to reflect modified terminology unless ONC changes the location of these certification criteria.

While these proposed revisions would allow us to maintain more permanent cross-references to ONC's regulations and terminology, we recognize that ONC has historically updated, and will likely in the future continue to update over time, the underlying certification criteria contained in 45 CFR 170.315.

Previously under the year-themed "editions" construct, we periodically revised the language in our regulatory CEHRT definitions to refer to a new Edition in order to incorporate ONC's updates to health IT certification criteria. Then, in the CY 2021 PFS final rule (85 FR 84818 through 84825), to incorporate ONC's updates to certification criteria in its 2015 Edition Cures Update, which ONC finalized under the ONC 21st Century Cures Act final rule (85 FR 25642 through 25961), we did not revise the language of the CEHRT definitions for the Medicare Promoting Interoperability Program and the Quality Payment Program. Instead, we finalized that technology used to satisfy the CEHRT definitions must be certified under the ONC Health IT Certification Program, in accordance with the 2015 Edition Cures Update certification criteria as finalized in the ONC 21st Century Cures Act final rule.

Consistent with ONC's proposal to move away from year-themed "editions," and in order to further simplify our regulatory approach, we are proposing revisions to our definitions of CEHRT to ensure we would not necessarily be required to update our regulatory text each time ONC proposed or finalized any updates to its definition of Base EHR or certification criteria.

This proposal would establish that any certification criteria adopted or updated in 45 CFR 170.315 would be applicable for the CEHRT definitions in our programs' regulations at 42 CFR 495.4 and 42 CFR 414.1305, if ONC's applicable regulations are referenced directly in our CEHRT definitions. If finalized, this proposal would allow the CEHRT definitions in our

regulations to automatically incorporate ONC's updates to relevant certification criteria without pursuing additional rulemaking.

It is important to note that this proposal, if finalized, would not mean that any update to a certification criterion finalized by ONC would necessarily be immediately required for use in CEHRT for our Medicare Promoting Interoperability Program, Quality Payment Program, and Shared Savings Program. We remind readers that ONC sets timelines through their rulemaking for when health IT developers must ensure their health IT products meet ONC's new or updated certification criteria to maintain certification under the ONC Health IT Certification Program, including time for health IT developers to implement these updates for their customers who may participate in programs that require use of CEHRT (88 FR 23761). We also note that CMS will continue to determine when new or revised versions of measures that require the use of certified health IT would be required for participation under the Medicare Promoting Interoperability Program and the Quality Payment Program. In determining requirements for any potential new or revised measures, we will consider factors such as implementation time and provider readiness to determine when we propose requiring participants to complete measures that require the use of certified health IT.

We believe this approach would provide us with more flexibility to finalize updates and is more consistent with the incremental approach to revising measures and technology requirements described above. Moreover, this additional flexibility would allow eligible hospitals, CAHs, and MIPS eligible clinicians to adopt, implement, and use ONC's updated certification criteria for health IT, including EHRs, as it becomes available from their chosen vendor, without the need to wait for us to first amend the regulations at 42 CFR 495.4 and 42 CFR 414.1305 through separate rulemaking.

In summary, we are proposing to revise the definitions of CEHRT for the Medicare Promoting Interoperability Program at 42 CFR 495.4, and for the Quality Payment Program at 42

CFR 414.1305. Specifically, we are proposing to add a reference to the revised name of “Base EHR definition,” proposed in the ONC HTI-1 proposed rule, to ensure, if finalized, it is applicable for the CEHRT definitions going forward (88 FR 23759). We are also proposing to replace our references to the “2015 Edition health IT certification criteria” with “ONC health IT certification criteria” and add the regulatory citation for ONC health IT certification criteria in 45 CFR 170.315. We also propose to specify that technology meeting the CEHRT definitions must meet ONC’s certification criteria in 45 CFR 170.315 “as adopted and updated by ONC.” We believe that these revisions to the CEHRT definitions, if finalized, would ensure that updates to the definition at 45 CFR 170.102 and updates to applicable health IT certification criteria in 45 CFR 170.315 would be incorporated into the CEHRT definitions, without additional regulatory action by CMS.

Finally, we note that while this proposal is consistent with the approach in ONC’s HTI-1 proposed rule (88 FR 23746 through 23917), we do not believe that ONC must finalize its proposed revisions for us to be able to finalize the changes proposed in this section for our regulatory definitions of CEHRT.

We are inviting public comment on these proposals.

S. A Social Determinants of Health Risk Assessment in the Annual Wellness Visit

Medicare coverage for the Annual Wellness Visit (AWV) under Part B is primarily described in statute at section 1861(hhh) of the Act, and in regulation at 42 CFR 410.15. We propose to exercise our authority in section 1861(hhh)(2)(I) of the Act to add other elements to the AWV by adding a new Social Determinants of Health (SDOH) Risk Assessment as an optional, additional element with an additional payment. The proposed new SDOH Risk Assessment would enhance patient-centered care and support effective administration of an AWV. There are no deductible requirements or Part B coinsurance for the AWV. See §§ 410.160(b)(12) and 410.152(l)(13). Our proposal builds upon our separate proposal described

earlier to establish a stand-alone G code (GXXX5) for SDOH Risk Assessment furnished in conjunction with an Evaluation and Management (E/M) visit (see section II.E. of this proposed rule).

1. Background

The AWP includes the establishment (or update) of the patient’s medical and family history, application of a health risk assessment and the establishment (or update) of a personalized prevention plan. The AWP also includes an optional Advance Care Planning (ACP) service. The AWP is covered for eligible beneficiaries who are no longer within 12 months of the effective date of their first Medicare Part B coverage period and who have not received either an Initial Preventive Physical Examination (IPPE) or AWP within the past 12 months. The goals of AWP are health promotion, disease prevention and detection and include education, counseling, a health risk assessment, referrals for prevention services, and a review of opioid use. Additional information about the AWP is available on the CMS website at <https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNProducts/preventive-services/medicare-wellness-visits.html>.

It is estimated²⁸² that around 50 percent of an individual’s health is directly related to SDOH, which is defined by Healthy People 2030²⁸³ as, “The conditions in the environment where people are born, live, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks.” Healthy People 2030 also defines the broad groups of SDOH as: economic stability, education access and quality, healthcare access and quality, neighborhood and built environment, and social and community context. These parameters include factors like housing, food and nutrition access, and transportation needs.

²⁸² <https://aspe.hhs.gov/sites/default/files/documents/e2b650cd64cf84aae8ff0fae7474af82/SDOH-Evidence-Review.pdf>.

²⁸³ <https://health.gov/healthypeople>.

Given the large impact on health these factors have, the health care system broadly has been working to take these factors into account when providing care and rendering services.

Several Federal agencies, including the CDC, AHRQ, ACL, ACF, SAMHSA, HRSA, and ASPE are developing policies and implementation frameworks to better address the impact SDOH has on patients, in support of HHS's Strategic Approach to Addressing Social Determinants of Health to Advance Health Equity.²⁸⁴ At CMS, addressing SDOH is an essential piece of the CMS Framework for Health Equity,²⁸⁵ and it is tied in heavily with the CMS Strategic Pillar to advance equity. SDOH was also a foundational concept with the CMS Innovation Center Accountable Health Communities (AHC) Model that ended in 2022. Given the importance of and focus surrounding SDOH and enhancing equity, CMS is exploring ways to recognize and quantify practitioner work currently being done in this area, and to provide support to enable practitioners to assess and intervene when SDOH is relevant to the assessment, prevention and treatment plan of a Medicare patient.

CMS tested the AHC Model between 2017 and 2022. One element of the model test was the development and application of the AHC Health-Related Social Needs (HRSN) Screening Tool, which helps providers to identify patients' SDOH related needs, including housing instability, food insecurity, family and community support and mental health. Additional information on the AHC model is available on the CMS website at (<https://innovation.cms.gov/innovation-models/ahcm>).

We have heard from many health care professionals and beneficiary groups that there are barriers to completing the AWW, including, but not limited to, language and communication, differences in cultural perspectives and expectations regarding engagement with the healthcare system. We increasingly understand the importance that SDOH be considered in an assessment

²⁸⁴ <https://aspe.hhs.gov/sites/default/files/documents/aabf48cbd391be21e5186eeae728ccd7/SDOH-Action-Plan-At-a-Glance.pdf>.

²⁸⁵ <https://www.cms.gov/files/document/cms-framework-health-equity-2022.pdf>.

of patient histories, patient risk, and in informing medical decision making, prevention, diagnosis, care and treatment.

In February 2018, Health Affairs published an article titled, “Practices Caring for the Underserved Are Less Likely to Adopt Medicare’s Annual Wellness Visit,” which described findings from a statistical study of Medicare primary care providers and AWW’s from 2011 to 2015. The article points out, “One of our most striking results was that while underserved patients were less likely to receive an annual wellness visit regardless of where they sought care, practices in rural areas and those caring for underserved and sicker populations were less likely to provide such visits to any of their patients--which suggests these practices may face resource constraints or have priorities that compete with adoption of the visit.”²⁸⁶

In August 2022, the Journal of the American Geriatrics Society published an article titled, “Medicare’s annual wellness visit: 10 years of opportunities gained and lost.” The article expresses the concern, “currently AWWs are a ‘one size fits all,’” approach. This uniform approach does not sufficiently take into consideration the medical, psychological, functional, racial, cultural and socio-economic diversity of older adults. Updated AWWs should be tailored to meet the needs and priorities of older adults receiving them.” It goes on to recommend, “Medicare AWWs should include screening and counseling for social determinants of health as a means of mitigating the growing disparities in health and longevity for underserved older adults.”²⁸⁷

2. Statutory and Regulatory Authority

Section 4103 of The Patient Protection and Affordable Care Act (ACA) (Pub. L. 111-148) expanded Medicare coverage by adding the AWW benefit at section 1861(hhh) of the

²⁸⁶ Ganguli I, Souza J, McWilliams JM, Mehrotra A. Practices Caring For The Underserved Are Less Likely To Adopt Medicare's Annual Wellness Visit. *Health Aff (Millwood)*. 2018 Feb;37(2):283-291. doi: 10.1377/hlthaff.2017.1130. PMID: 29401035; PMCID: PMC6080307.

²⁸⁷ Coll PP, Batsis JA, Friedman SM, Flaherty E. Medicare's annual wellness visit: 10 years of opportunities gained and lost. *J Am Geriatr Soc*. 2022 Oct;70(10):2786-2792. doi: 10.1111/jgs.18007. Epub 2022 Aug 17. PMID: 35978538.

Act, effective for services furnished on or after January 1, 2011. We subsequently implemented the AWW in CMS regulations at § 410.15. The AWW is a wellness visit that focuses on identification of certain risk factors, personalized health advice, and referral for additional preventive services and lifestyle interventions (which may or may not be covered by Medicare). The elements included in the AWW differ from comprehensive physical examination protocols with which some providers may be familiar since it is a visit that is specifically designed to provide personalized prevention plan services as defined in the Act. The AWW includes a health risk assessment (HRA) and the AWW takes into account the results of the HRA. The AWW is covered for eligible beneficiaries who are no longer within 12 months of the effective date of their first Medicare Part B coverage period and who have not received either an IPPE or AWW within the past 12 months. Section 1861(hhh)(2) of the Act describes a number of elements included in the AWW and section 1861(hhh)(2)(I) of the Act authorizes the addition of any other element determined appropriate by the Secretary.

We note that § 410.15(a) requires that the first AWW include the following:

- Review (and administration if needed) of a health risk assessment (as defined in § 410.15).
- Establishment of an individual's medical and family history.
- Establishment of a list of current providers and suppliers that are regularly involved in providing medical care to the individual.
- Measurement of an individual's height, weight, body-mass index (or waist circumference, if appropriate), blood pressure, and other routine measurements as deemed appropriate, based on the beneficiary's medical and family history.
- Detection of any cognitive impairment that the individual may have, as that term is defined in § 410.15.

- Review of the individual's potential (risk factors) for depression, including current or past experiences with depression or other mood disorders, based on the use of an appropriate screening instrument for persons without a current diagnosis of depression, which the health professional may select from various available standardized screening tests designed for this purpose and recognized by national medical professional organizations.

- Review of the individual's functional ability and level of safety, based on direct observation or the use of appropriate screening questions or a screening questionnaire, which the health professional as defined in § 410.15 may select from various available screening questions or standardized questionnaires designed for this purpose and recognized by national professional medical organizations.

- Establishment of the following:

- ++ A written screening schedule for the individual such as a checklist for the next 5 to 10 years, as appropriate, based on recommendations of the United States Preventive Services Task Force (USPSTF) and the Advisory Committee on Immunization Practices, and the individual's health risk assessment (as that term is defined in § 410.15), health status, screening history, and age- appropriate preventive services covered by Medicare.

- ++ A list of risk factors and conditions for which primary, secondary or tertiary interventions are recommended or are underway for the individual, including any mental health conditions or any such risk factors or conditions that have been identified through an IPPE (as described under § 410.16), and a list of treatment options and their associated risks and benefits.

- ++ Furnishing of personalized health advice to the individual and a referral, as appropriate, to health education or preventive counseling services or programs aimed at reducing identified risk factors and improving self- management, or community-based lifestyle interventions to reduce health risks and promote self-management and wellness, including weight loss, physical activity, smoking cessation, fall prevention, and nutrition.

++ At the discretion of the beneficiary, furnish advance care planning services to include discussion about future care decisions that may need to be made, how the beneficiary can let others know about care preferences, and explanation of advance directives which may involve the completion of standard forms.

++ Furnishing of a review of any current opioid prescriptions as that term is defined in this section.

++ Screening for potential substance use disorders including a review of the individual's potential risk factors for substance use disorder and referral for treatment as appropriate.

++ Any other element determined appropriate through the national coverage determination process.

We note that § 410.15(a) requires that a subsequent AWVs include the following:

- Review (and administration, if needed) of an updated health risk assessment (as defined in § 410.15).

- An update of the individual's medical and family history.

- An update of the list of current providers and suppliers that are regularly involved in providing medical care to the individual as that list was developed for the first AWV providing personalized prevention plan services or the previous subsequent AWV providing personalized prevention plan services.

- Measurement of an individual's weight (or waist circumference), blood pressure and other routine measurements as deemed appropriate, based on the individual's medical and family history.

- Detection of any cognitive impairment that the individual may have, as that term is defined in § 410.15.

- An update to the following:

++ The written screening schedule for the individual as that schedule is defined in paragraph (a) of § 410.15 for the first AWP providing personalized prevention plan services.

++ The list of risk factors and conditions for which primary, secondary or tertiary interventions are recommended or are underway for the individual as that list was developed at the first AWP providing personalized prevention plan services or the previous subsequent AWP providing personalized prevention plan services.

++ Furnishing of personalized health advice to the individual and a referral, as appropriate, to health education or preventive counseling services or programs as that advice and related services are defined in paragraph (a) of § 410.15.

++ At the discretion of the beneficiary, furnish advance care planning services to include discussion about future care decisions that may need to be made, how the beneficiary can let others know about care preferences, and explanation of advance directives which may involve the completion of standard forms.

++ Furnishing of a review of any current opioid prescriptions as that term is defined in this section.

++ Screening for potential substance use disorders including a review of the individual's potential risk factors for substance use disorder and referral for treatment as appropriate.

++ Any other element determined appropriate through the national coverage determination process.

In the CY 2016 PFS final rule (80 FR 70885), we finalized a proposal to include ACP as an optional element (at beneficiary discretion) within the AWP. We stated in the final rule we are adding ACP as a voluntary, separately payable element of the AWP. We are instructing that when ACP is furnished as an optional element of AWP as part of the same visit with the same date of service, CPT codes 99497 and 99498 should be reported and will be payable in full in addition to payment that is made for the AWP under HCPCS code G0438 or G0439, when the

parameters for billing those CPT codes are separately met, including requirements for the duration of the ACP services. Under these circumstances, ACP should be reported with modifier -33 and there will be no Part B coinsurance or deductible, consistent with the AWV (80 FR 70958). We also added this policy to the regulatory text at § 410.15(a).

3. Proposal

We propose to exercise our authority in section 1861(hhh)(2)(I) of the Act to add elements to the AWV by adding a new SDOH Risk Assessment as an optional, additional element of the AWV with an additional payment. We recognize that, for some patients, identification and consideration of SDOH is critical to furnishing a fully informed health assessment and personalized prevention plan in the AWV. We have heard from interested parties that the current elements of the AWV may not directly or adequately identify those SDOH challenges. We propose that the SDOH Risk Assessment be separately payable with no beneficiary cost sharing when furnished as part of the same visit with the same date of service as the AWV. We propose that the SDOH Risk Assessment service include the administration of a standardized, evidence-based SDOH risk assessment tool, furnished in a manner that all communication with the patient be appropriate for the patient's educational, developmental, and health literacy level, and be culturally and linguistically appropriate. We believe that services that are culturally and linguistically appropriate are critical to providing effective, equitable, understandable, and respectful quality care that are responsive to diverse cultural health beliefs and practices, preferred languages, health literacy, and other communication needs of each patient. We recognize that patients with SDOH risks and challenges may often also experience communication barriers of various kinds when interacting with the health care system. We believe that the SDOH Risk Assessment would only be effective in informing the greater AWV (including the health assessment and personalized prevention plan) when furnished in a manner that is intelligible and appropriate to the individualized characteristics and circumstances of the

patient. Additional information on culturally and linguistically appropriate services in healthcare can be found at (<https://thinkculturalhealth.hhs.gov/clas>). We believe the SDOH Risk Assessment Tool would be most effective and actionable when furnished in a setting with staff-assisted supports in place to ensure follow-up for health-related social needs associated to the visit. We also encourage partnerships with community-based organizations such as Area Agencies on Aging to help address identified social needs. We propose that the SDOH Risk Assessment be furnished as part of the same visit and on the same date of service as the AWV, so as to inform the care the patient is receiving during the visit, including taking a medical and social history, applying health assessments and prevention services education and planning. We believe our proposal will directly reduce barriers, expand access, promote health equity and improve care for populations that have historically been underserved by recognizing the importance that SDOH be considered and assessed, where appropriate, in support of the existing AWV. In addition, we hope that our proposal will help spread general awareness among health professionals about the importance of providing cultural and linguistically appropriate services, which in turn will encourage clinicians to adopt language services and technologies to achieve high quality communication between the practitioner and patient. Our goal is the development of a personalized prevention plan that takes SDOH into account and is truly tailored to the individual patient. We invite public comment on our proposal, including whether a SDOH Risk Assessment would ultimately inform and result in the development of steps to address and integrate SDOH in the patient's AWV health assessment and personalized prevention plan.

We recognize that SDOH risk assessments are an emerging and evolving tool in healthcare and so we do not restrict our proposal to a specific list of approved assessments. In selecting an evidence-based tool, we encourage clinicians to explore the many widely adopted and validated tools available, including the CMS Accountable Health Communities²⁸⁸ tool, the

²⁸⁸ <https://innovation.cms.gov/files/worksheets/ahcm-screeningtool.pdf>.

Protocol for Responding to & Assessing Patients' Assets, Risks & Experiences (PRAPARE) tool²⁸⁹, and instruments identified for Medicare Advantage Special Needs Population Health Risk Assessment.²⁹⁰ We also encourage clinicians, where feasible, to select screening instruments that maximize opportunities to collect and analyze standardized, quantifiable, and actionable data. For instance, clinicians are encouraged to utilize screening instruments where questions and responses are computable and mapped to health IT vocabulary standards (that is, have available LOINC® coding terminology), to ensure that data captured through assessments is interoperable and can be shared, analyzed and evaluated across the care continuum.

Our proposal builds upon our separate proposal described earlier to establish a stand-alone G code (GXXX5) for SDOH Risk Assessment furnished in conjunction with an E/M visit. See section II.E. for additional information on coding, pricing, and additional conditions of payment for the proposed new SDOH Risk Assessment service. Upon finalization of the CY 2024 PFS, CMS will issue public guidance in the Medicare Learning Network, the Medicare & You Handbook, and more formal, in-depth policy and payment instructions in the Medicare Benefit Policy Manual and the Medicare Claims Processing Manual on the CMS website.

Over the past several years, we have worked to develop payment mechanisms under the PFS to improve the accuracy of valuation and payment for the services furnished by physicians and other health care professionals, especially in the context of evolving models of care. Section 1862(a)(1)(A) of the Act generally excludes from coverage services that are not reasonable and necessary for the diagnosis or treatment of illness or injury or to improve the functioning of a malformed body member. Practitioners across specialties have opined and recognized the importance of SDOH on the health care provided to their patients by recommending the

²⁸⁹ <https://www.nachc.org/research-and-data/prapare/>.

²⁹⁰ CMS-10825.

assessment of SDOH through position or discussion papers,^{291,292,293} organizational strategic plans,²⁹⁴ and provider training modules,²⁹⁵ among others. As described earlier in our proposed rule, we have discussed how the practice of medicine currently includes assessment of health-related social needs or SDOH in taking patient histories, assessing patient risk, and informing medical decision making, diagnosis, care and treatment. The taking of a social history is generally performed by physicians and other health professionals in support of patient-centered care to better understand and help address relevant problems that are impacting medically necessary care. Practitioners are expending resources to obtain information from the patient about health-related social needs, and to formulate diagnosis and treatment plans that take these needs into account as part of a person-centered care plan for the treatment of medical problems. This work currently is reported and paid for, in part, under the PFS under E/M visit codes, and we believe as such, is undervalued and not optimized to allow the health professional and patient to benefit from the full value of a dedicated SDOH assessment and have that assessment immediately inform the health assessment and prevention planning services in the AWW.

We propose that Medicare would pay 100 percent of the fee schedule amount for the SDOH Risk Assessment service (beneficiary cost sharing would not be applicable) when this risk assessment is furnished to a Medicare beneficiary as an optional element within an AWW (as part of the same visit with the same date of service as the AWW). Our proposal is analogous to our current approach to the ACP service, which is an optional service for which beneficiary cost sharing is not applicable when furnished as part of the same visit and on the same date of service as the AWW. Beneficiary cost sharing is not applicable to the AWW and, because the SDOH Risk Assessment would be an optional element within the AWW, there would not be any

²⁹¹ <https://www.aafp.org/about/policies/all/social-determinants-health-family-medicine-position-paper.html>.

²⁹² <https://doi.org/10.7326/M17-2441>.

²⁹³ <https://nam.edu/social-determinants-of-health-201-for-health-care-plan-do-study-act/>.

²⁹⁴ <https://www.ama-assn.org/system/files/2021-05/ama-equity-strategic-plan.pdf>.

²⁹⁵ <https://edhub.ama-assn.org/steps-forward/module/2702762>.

beneficiary cost sharing for the SDOH Risk Assessment either. See §§ 410.160(b)(12) and 410.152(l)(13). We note that beneficiary cost sharing would apply to the SDOH Risk Assessment if furnished in conjunction with another service (outside of the AWV) that is subject to beneficiary cost sharing. We are proposing that the SDOH Risk Assessment would be optional for both the health professional and the beneficiary to empower clinicians and patients to employ this assessment only when appropriate and desired.

We propose to add regulatory text at § 410.15 that will include the new SDOH Risk Assessment service as an optional element within the AWV, at the discretion of the health professional and beneficiary. Furthermore, we propose to add regulatory text that the SDOH Risk Assessment be standardized, evidence-based, and furnished in a manner that all communication with the patient be appropriate for the beneficiary's educational, developmental, and health literacy level, and be culturally and linguistically appropriate. We invite public comment on our proposal.

We have also received feedback from interested parties that the AWV may be more effectively furnished if elements were allowed to be completed over multiple visits and days, or prior to the AWV visit. We invite public comment on this issue for consideration in future rulemaking.

4. Summary

In conclusion, we are proposing to add a new Social Determinants of Health (SDOH) Risk Assessment as an optional element within the AWV. We are also proposing the SDOH Risk Assessment be paid at 100 percent of the fee schedule amount of the risk assessment. We are proposing that the new SDOH Risk Assessment be separately payable with no beneficiary cost sharing when furnished as part of the same visit with the same date of service as the AWV. We believe our proposal will directly reduce barriers, expand access, promote health equity and improve care for populations that have historically been underserved by recognizing the

importance that SDOH be considered and assessed, where appropriate, as an additional, optional element in the AWW service.

IV. Updates to the Quality Payment Program

A. CY 2024 Modifications to the Quality Payment Program

1. Executive Summary

a. Overview

This section of the proposed rule sets forth changes to the Quality Payment Program starting January 1, 2024, except as otherwise noted for specific provisions. We continue to move the Quality Payment Program forward, including focusing more on our measurement efforts and refining how clinicians would be able to participate in a more meaningful way, to achieve continuous improvement in the quality of health care services provided to Medicare beneficiaries and other patients through the Quality Payment Program's Merit-based Incentive Payment System (MIPS) and Advanced Alternative Payment Models (APMs) for the CY 2024 performance period/2026 MIPS payment year.

Authorized by the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114-10, April 16, 2015), the Quality Payment Program is a payment incentive program, by which the Medicare program rewards clinicians who provide high-value, high-quality services in a cost-efficient manner. The Quality Payment Program includes two participation tracks for clinicians providing services under the Medicare program: MIPS and Advanced APMs. The statutory requirements for the Quality Payment Program are set forth in section 1848(q) and (r) of the Act for MIPS and section 1833(z) of the Act for Advanced APMs.

For the MIPS participation track, MIPS eligible clinicians (defined in 42 CFR at 414.1305) are subject to a MIPS payment adjustment (positive, negative, or neutral) based on their performance in four performance categories: cost, quality, improvement activities, and Promoting Interoperability. We assess each MIPS eligible clinician's total performance

according to our established performance standards with respect to the applicable measures and activities specified in each of these four performance categories during a performance period to compute a final composite performance score (a “final score” as defined at § 414.1305). In calculating the final score, we must apply different weights for the four performance categories, subject to certain exceptions, as set forth in section 1848(q)(5) of the Act and at § 414.1380. Unless we assign a different scoring weight pursuant to these exceptions, for CY 2024 performance period/2026 MIPS payment year, the scoring weights are as follows: 30 percent for the quality performance category; 30 percent for the cost performance category; 15 percent for the improvement activities performance category; and 25 percent for the Promoting Interoperability performance category.

Once calculated, each MIPS eligible clinician’s final score is compared to the performance threshold we have established in prior rulemaking for that performance period to calculate the MIPS payment adjustment factor as specified in section 1848(q)(6) of the Act, such that the MIPS eligible clinician will receive in the applicable MIPS payment year: (1) a positive adjustment, if their final score exceeds the performance threshold; (2) a neutral adjustment, if their final score meets the performance threshold; or (3) a negative adjustment, if their final score is below the performance threshold. The actual amount paid to the MIPS eligible clinician in MIPS payment year, once the MIPS payment adjustment factor is applied, is subject to further calculations such as application of the scaling factor and budget neutrality requirements, as further specified in section 1848(q)(6) of the Act.

Section 1848(q) of the Act sets forth other requirements applicable to MIPS, including opportunities for feedback and targeted review and public reporting of MIPS eligible clinicians’ performance. Section 1848(r) of the Act sets forth more specific requirements for development of measures for the cost performance category under MIPS.

If an eligible clinician participates in an Advanced APM and achieves Qualifying APM Participant (QP) or Partial QP status, they are excluded from the MIPS reporting requirements and payment adjustment (though eligible clinicians who are Partial QPs may elect to be subject to the MIPS reporting requirements and payment adjustment). Eligible clinicians who are QPs for the 2023 performance year receive a 3.5 percent APM Incentive Payment in the 2025 payment year, and, beginning with the 2024 performance year (payment year 2026), a higher PFS payment rate (calculated using the differentially higher “qualifying APM conversion factor”) than non-QPs. QPs will continue to be excluded from MIPS reporting and payment adjustments for the applicable year.

As we move into the seventh year of the Quality Payment Program, we are proposing the updates set forth in this section of this proposed rule, encouraging continued improvement in clinicians’ performance with each performance year and drive improved quality of health care through payment policy.

In developing and putting forth these proposals, we intend to continue our efforts to align the Quality Payment Program with broader CMS initiatives, such as the establishment of the Universal Foundation (<https://www.nejm.org/doi/full/10.1056/NEJMp2215539>) and the CMS National Quality Strategy (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/Legacy-Quality-Strategy>). These initiatives unify strategic efforts across our programs, including the Quality Payment Program, to adopt measures most critical to providing high quality care and accelerate strategic improvements for quality programs and measures.

The vision for the CMS National Quality Strategy is to shape a resilient, high-value American health care system to achieve high-quality, safe, equitable, and accessible care for all. This strategy aims to promote the highest quality outcomes and safest care for all individuals. It also focuses on a person-centered approach as individuals journey across the continuum of care,

care settings, and across payer types. The goals of this strategy incorporate lessons learned from the COVID-19 public health emergency (PHE) to inform both short and long-term direction for our health care system.

The Universal Foundation moves toward a building-block approach to advance the overall vision of the National Quality Strategy and increase alignment across CMS quality programs by capturing measures that are meaningful, broadly applicable, and capable of being digitally reported and stratified, in order to identify and track disparities over time. The Universal Foundation seeks to improve health outcomes, reduce provider burden, improve standardization of measurement, and promote interoperability by prioritizing measures to transition to interoperable digital data.

The implementation of MIPS Value Pathways (MVPs) aligns with many of the objectives and goals the CMS National Quality Strategy and the Universal Foundation strive to achieve. For example, in an effort to align implementation of the measures in the Universal Foundation across MIPS and APMs, we are proposing updates to consolidate the Promoting Wellness and Managing Chronic Conditions MVPs to align with the adult Universal Foundation measure set. We are also exploring the expansion of the APM Performance Pathway (APP) reported by clinicians in the Shared Savings Program and Advanced APMs to include the primary care universal measure set in the future. In our continued strategy to incentivize improved equity as well as advancing value, in Performance Year 2023 the Shared Savings Program will implement an upside-only adjustment to reward ACOs that provide excellent care for underserved populations (87 FR 69838 through 69857). In our goal to accelerate interoperability, we propose to require Shared Savings Program ACO clinicians to report the measures and objectives required by the MIPS Promoting Interoperability performance category. We are also proposing to modify our CEHRT use criterion for Advanced APMs to promote flexibility in adopting CEHRT that is clinically relevant to participants, emphasizing the importance of interoperability

and health information technology. Moreover, we propose to expand our portfolio of available MVPs for the CY 2024 performance period and remain committed to our goal of ensuring more meaningful participation in the Quality Payment Program through MVPs.

b. Summary of Major Provisions

(1) Transforming the Quality Payment Program

The CMS National Quality Strategy addresses the urgent need for transformative action to advance towards a more equitable, safe, and outcomes-based health care system for all individuals. This vision is supported by the alignment of policies and quality measures in MIPS and APMs within the Quality Payment Program. Priorities for the Quality Payment Program include: achieving more equitable outcomes; utilizing clinically relevant measures for specialty performance that inform clinicians and beneficiaries; enhancing quality, patient safety, and efficiency through use of certified EHR technology (CEHRT); reducing burden and simplifying quality performance reporting; articulating meaningful outcomes, promoting alignment where possible, and moving to all digital reporting.

The Quality Payment Program allows eligible clinicians to engage in patient-centered care via two tracks: the Merit-Based Incentive Program (MIPS) and APMs. We believe the Quality Payment Program should continuously support the measurement and improvement of specialty and primary care. To this end, we are implementing MVPs to allow clinicians to report on measures that are directly relevant to their clinical practice. MVPs provide more clinically relevant performance measurement, engage more specialists in performance measurement, and reduce barriers to APM participation. CMS has recently laid out multiple steps intended to fulfill the potential of APMs. The CMS Innovation Center strategy refresh acknowledges that whole person care requires the depth and scope of services that includes both primary and specialty care and aims to provide ACOs with tools to better engage specialists, test ways to better link primary

and specialty care upstream in the patient journey, and further movement into value-based care.²⁹⁶

(2) Major MIPS Provisions

We are requesting comment on how the Quality Payment Program can facilitate continuous improvement of Medicare beneficiaries' healthcare and best build on existing CMS Innovation Center model policies and Medicare programs, such as the Medicare Shared Savings Program. We are seeking feedback on how we might modify our policies, requirements, and performance standards to encourage clinicians to continuously improve the quality of care, particularly for clinicians with little room for improvement in MIPS.

(a) MIPS Value Pathways Development and Maintenance

In an effort to promote high-quality, safe, and equitable care and to implement the vision outlined in the CMS National Quality Strategy, we are proposing five new MVPs around the topics of: Women's Health; Infectious Disease, Including Hepatitis C and HIV; Mental Health and Substance Use Disorder; Quality Care for Ear, Nose, and Throat (ENT); and Rehabilitative Support for Musculoskeletal Care. In addition, we are proposing MVP maintenance updates to our MVP inventory that are in alignment with the MVP development criteria, and in consideration of the feedback from interested parties we have received through the maintenance process.

(b) Subgroup Reporting

We are proposing to codify previously finalized subgroup policies in the preamble to regulation text. Additionally, we are proposing updates to previously finalized subgroup policies to help guide clinicians and groups to meaningfully participate in MVPs through subgroup reporting. Specifically, we are proposing to update the subgroup policy for reweighting of MVP performance categories, update the facility-based scoring as well as the complex patient bonus

²⁹⁶ CMMI Strategy Refresh. October 20, 2021. <https://innovation.cms.gov/strategic-direction-whitepaper>.

for subgroups under final score calculation, and add subgroups to the targeted review regulation text.

(c) MIPS Performance Category Measures and Activities

(i) Quality Performance Category

We are proposing six modifications to the quality performance category. First, we propose to expand the definition of the collection type to include Medicare Clinical Quality Measures for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQMs). Second, we propose to establish the quality performance category data submission criteria for eCQMs that requires the utilization of CEHRT. Third, we propose to establish the data submission criteria for Medicare CQMs. Fourth, we propose to require the administration of the Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Survey in the Spanish translation. Fifth, we propose to maintain the data completeness criteria threshold to at least 75 percent for the CY 2026 performance period/2028 MIPS payment year, and increase the data completeness criteria threshold to at least 80 percent for the CY 2027 performance period/2029 MIPS payment year. Sixth, we propose to establish the data completeness criteria for Medicare CQMs. Finally, we propose to establish a measure set inventory of 200 MIPS quality measures.

(ii) Cost Performance Category

We are proposing to add five new episode-based measures to the cost performance category beginning with the CY 2024 performance period/2026 MIPS payment year. These five proposed measures are Depression, Emergency Medicine, Heart Failure, Low Back Pain, and Psychoses and Related conditions; several of these have relevance to the CMS Behavioral Health Strategy (<https://www.cms.gov/cms-behavioral-health-strategy>). We are proposing to use a 20-episode case minimum for each of these new measures, and are requesting comments on our clarification of the indented interpretation of the language on the case minimums codified at

§ 414.1350(c). We are also proposing to remove the Simple Pneumonia with Hospitalization episode-based measure beginning with the CY 2024 performance period/2026 MIPS payment year. Finally, we are proposing to update the operational list of care episode and patient condition groups and codes to add all five new measures and remove the Simple Pneumonia with Hospitalization episode-based measure from the operational list of care episode and patient condition groups and codes.

(iii) Improvement Activities Performance Category

We are proposing to add five new, modify one existing, and remove three existing improvement activities from the Inventory. The new and modified activities help fill gaps we have identified in the Inventory as well as seek to ensure that activities reflect current clinical practice across the category. Four of the new activities being proposed relate to CMS Health Equity, Increase All Forms of Accessibility to Health Care Services and Coverage. We are also recommending the removal of three activities, both to align with current clinical guidelines and practice as well as to eliminate duplication, so that the Inventory offers flexibility and choice without potentially causing burden with too many activities to choose from.

(iv) Promoting Interoperability Performance Category

We are proposing five policy modifications for the Promoting Interoperability performance category. Specifically, we propose to: (1) lengthen the performance period for this category from 90 days to 180 days; (2) modify one of the exclusions for the Query of Prescription Drug Monitoring Program (PDMP) measure; (3) provide a technical update to the e-Prescribing measure's description to ensure it clearly reflects our previously finalized policy; (4) modify the Safety Assurance Factors for Electronic Health Record Resilience (SAFER) Guide measure to require MIPS eligible clinicians to affirmatively attest to completion of the self-assessment of their implementation of safety practices; and (5) continue to reweight this performance category at zero percent for clinical social workers for the CY 2024 performance

period/2026 MIPS payment year. In section III.R.2.b. of this proposed rule, we are proposing to revise our regulatory definition of CEHRT for the Promoting Interoperability performance category to be more flexible in reflecting any changes the Office of the National Coordinator for Health Information Technology (ONC) may make to its Base EHR definition, certification criteria, and other standards for health information technology.

(d) MIPS Final Scoring Methodology

(i) Performance Category Scores

We are proposing updates to our scoring flexibilities policy. We are proposing to update the criteria by which we assess the scoring impacts of coding changes and apply our scoring flexibilities. We are also proposing that eCQM measure specifications would be required to include the ability to be truncated to a 9-month performance period.

(ii) Cost Improvement Scoring

We are proposing two modifications to the cost improvement scoring method that was established in the CY 2018 Quality Payment Program final rule. First, we are proposing to change improvement scoring from a measure-level to a category-level method and to remove the statistical significance requirement. Second, we are proposing that the maximum cost improvement score is zero percentage points for the 2020 through 2024 MIPS payment years, and one percentage point beginning with the CY 2023 performance period/2025 MIPS payment year.

(e) MIPS Payment Adjustments

We are proposing to revise our policy for identifying the “prior period” by which we will establish the performance threshold beginning with the CY 2024 performance period/2026 MIPS payment year. Specifically, we are proposing to define the “prior period” by which we establish the performance threshold as three performance periods, instead of a single prior performance period, and codify this policy at § 414.1405(g)(2). To determine the performance threshold for

the CY 2024 performance period/2026 MIPS payment year, we are proposing to use the CY 2017/2019 MIPS payment year through CY 2019 performance period/2021 MIPS payment year as the prior period. Based on the mean final score from that prior period, we are proposing to establish the performance threshold as 82 points for the CY 2024 performance period/2026 MIPS payment year.

(f) MIPS Targeted Review

We are proposing to add virtual groups and subgroups as being eligible to submit a request for targeted review. We are proposing to codify this addition at § 414.1385(a).

We are proposing to amend at § 414.1385(a)(2) with respect to the timeline for MIPS eligible clinicians, groups, virtual groups, subgroups, and APM entities to request a targeted review of our calculation of their MIPS payment adjustment factor(s). Specifically, we are proposing to permit submission of a request for targeted review beginning on the day we make available the MIPS final score and ending 30 days after publication of the MIPS payment adjustment factors for the MIPS payment year. This proposal would modify the current time period to submit a request for targeted review, which is 60 days beginning on the day that CMS makes available the MIPS payment adjustment factors for the MIPS payment year.

We also are proposing to amend § 414.1385(a)(5). Specifically, we are proposing to require that, if CMS requests additional information under the targeted review process, then that additional information must be provided to and received by CMS within 15 days of receipt of such request. This proposal would modify the current timeline to respond to CMS' request set forth at § 414.1385(a)(5), which is within 30 days of receipt of such request.

(g) Third Party Intermediaries

In this proposed rule, in addition to codifying previously finalized policies and proposing to make technical updates for clarity, we propose to: (1) Add requirements for third party intermediaries to obtain documentation of their authority to submit on behalf of a MIPS eligible

clinician; (2) Specify the use of a simplified self-nomination process for existing QCDRs and qualified registries; (3) Add requirements for QCDRs and qualified registries to provide measure numbers and identifiers for performance categories; (4) Add a requirement for QCDRs and qualified registries to attest that the information contained in the qualified posting about them is correct; (5) Modify requirements for QCDRs and qualified registries to support MVP reporting to increase flexibility for measures supported; (6) Specify requirements for a transition plan for QCDRs and qualified registries withdrawing from the program; (7) Specify requirements for data validation audits; (8) Add additional criteria for rejecting QCDR measures; (9) Add a requirement for QCDR measure specifications to be displayed throughout the performance period and data submission period; (10) Eliminate the Health IT vendor category; (11) Add failure to maintain updated contact information as criteria for remedial action; (12) Revise corrective action plan requirements; (13) Specify the process for publicly posting remedial action; and (14) Specify the criteria for audits.

(h) Public Reporting on Compare Tools

In an effort to expand the information available to patients and caregivers when choosing a doctor or clinician, we are proposing to modify the existing policy for public reporting on individual clinician and group profile pages, including proposals to revise:

- The telehealth indicator, such that, we would use the most recent CMS coding policies at the time the information is updated to identify the telehealth services provided on clinician profile pages instead of only using specific Place of Service (POS) and claims modifier codes.
- Utilization data, such that we have additional procedure code grouping flexibility; can address procedure volume limitations and provide a more complete scope of a clinician's experience by adding Medicare Advantage (MA) data to procedure counts; and align the data in the Provider Data Catalog (PDC) with the procedural groupings shown on profile pages.

Additionally, we solicit feedback from interested parties through a request for information on ways to publicly report data submitted on measures under the MIPS cost performance category on the Compare tool.

(3) Major APM Provisions

(a) APM Performance Pathway

In section IV.A.4.e. of this proposed rule, we are proposing to include the Medicare Clinical Quality Measure (Medicare CQM) for Accountable Care Organizations Participating in the Medicare Shared Savings Program collection type in the APM Performance Pathway (APP) measure set.

(b) Overview of the APM Incentive

In section IV.A.4.m. of this proposed rule, we are proposing to end the use of APM Entity-level QP determinations and instead make all QP determinations at the individual eligible clinician level. We are also proposing to modify the “sixth criterion” under the definition of “attribution-eligible beneficiary,” which is listed at § 414.1305.²⁹⁷ Specifically, we are proposing to include any beneficiary who has received a covered professional service furnished by the NPI for the purpose of making QP determinations. We are also proposing to amend § 414.1430 to reflect the statutory QP and Partial QP threshold percentages for both the payment amount and patient count methods under the Medicare Option and the All-Payer Option with respect to payment year 2025 (performance year 2023) in accordance with amendments made by the CAA, 2023. Relatedly, we are proposing to amend § 414.1450 to reflect the statutory APM Incentive

²⁹⁷ Currently, there are six criteria required for a beneficiary to be an “attribution-eligible beneficiary” during the QP Performance Period, which can be found at § 414.1305. The sixth criterion provides that an “attribution-eligible beneficiary” must have “a minimum of one claim for evaluation and management services furnished by an eligible clinician who is in the APM Entity for any period during the QP Performance Period or, for an Advanced APM that does not base attribution on evaluation and management services and for which attributed beneficiaries are not a subset of the attribution-eligible beneficiary population based on the requirement to have at least one claim for evaluation and management services furnished by an eligible clinician who is in the APM Entity for any period during the QP Performance Period, the attribution basis determined by CMS based upon the methodology the Advanced APM uses for attribution, which may include a combination of evaluation and management and/or other services.”

Payment amount for the 2025 payment year (performance year 2023) of 3.5 percent of the eligible clinician’s estimated aggregate payments for covered professional services in accordance with amendments made by the CAA, 2023. In section IV.A.4.j. of this proposed rule, we are proposing to amend § 414.1385 to adjust the Targeted Review period to address operational challenges that have arisen ahead of the required transition beginning for payment year 2026 (performance year 2024) from the APM Incentive Payment to the higher PFS payment rate for QPs (calculated using the differentially higher “qualifying APM conversion factor”).

(c) Advanced APMs

In section IV.A.4.n. of this proposed rule, we are proposing to modify the CEHRT use criterion for Advanced APMs to provide greater flexibility for APMs to tailor CEHRT use requirements to the APM and its participants. We are proposing to amend the CEHRT use criterion for Advanced APMs at § 414.1415(a)(1)(i) effective beginning for CY 2024 to no longer apply the 75 percent CEHRT use minimum, and to instead specify that the APM must require all APM participants to use CEHRT as defined in a proposed revised definition of CEHRT under § 414.1305. We are also proposing to amend the Other-Payer Advanced APM CEHRT use criterion at § 414.1420(b) to conform to the proposed changes at § 414.1415(a)(1)(i).

2. Definitions

At § 414.1305, we are proposing to revise the definitions of the following terms:

- Attribution-eligible beneficiary;
- Certified Electronic Health Record Technology (CEHRT); and
- Collection type.
- Qualified posting

These terms and definitions are discussed in detail in the relevant sections of this proposed rule.

3. Transforming the Quality Payment Program

a. Advancing CMS National Quality Strategy Goals

(1) Increasing Alignment Across Value-Based Programs

The CMS National Quality Strategy²⁹⁸ addresses the urgent need for transformative action to advance towards a more equitable, safe, and outcomes-based health care system for all individuals. One of the CMS National Quality Strategy goals is to improve quality and health outcomes across the health care journey through implementation of a “Universal Foundation” of impactful measures across all CMS quality and value-based programs.²⁹⁹ Adoption of the Universal Foundation^{300,301} will focus clinician attention on specific quality measures, reduce burden, help identify disparities in care, prioritize development of interoperable, digital quality measures, allow for cross-comparisons across programs, and help identify measurement gaps.

We identified adult and pediatric measures for the Universal Foundation to be used across CMS programs and populations, including the Quality Payment Program, to the extent they are applicable. The Quality Payment Program measure inventory already includes quality measures in the adult core set from the Universal Foundation. In addition, we propose in this proposed rule to consolidate the previously finalized Promoting Wellness and Optimizing Chronic Disease Management MVPs into a single consolidated primary care MVP that aligns with the adult Universal Core set of quality measures. We refer readers to section IV.A.4.b. and Appendix 3: MVP Inventory, Table B.11 of this proposed rule for our proposed updates to the Promoting Wellness and Chronic Disease Management MVPs. We will continue to identify

additional measures, which may be included in future MVPs, to capture aspects of specialist quality in the Universal Foundation.³⁰² We also refer readers to section III.G.2.c. of this proposed rule for discussions on expanding the APM Performance Pathway (APP) reported by clinicians in the Shared Savings Program and Advanced APMs to include Medicare Clinical Quality Measure (Medicare CQM) collection types and further alignment with the Universal Foundation.

(2) Advancing Health Equity

We also articulated a detailed strategy to advance health equity and accountability in order to design, implement, and operationalize policies to support health for all people served by our programs, eliminate avoidable differences in health outcomes experienced by people who are disadvantaged or underserved, and provide the care and support that our beneficiaries need to thrive.³⁰³ Specifically, the CMS Office of Minority Health released the *CMS Framework for Health Equity*³⁰⁴, which updates the CMS Equity Plan with an enhanced and more comprehensive 10-year approach to further embed health equity across CMS programs including Medicare, Medicaid, Children’s Health Insurance Program, and the Health Insurance Marketplaces. The CMS Office of Minority Health also released *Paving the Way to Equity: A Progress Report*³⁰⁵ in 2021, which describes the CMS Equity Plan for Medicare and progress from 2015 to 2021.

In accordance with our health equity strategy, both MVPs and APMs share a goal of incentivizing improved equity as well as advancing value (87 FR 70035). For example, beginning in Performance Year 2023 the Shared Savings Program will implement an upside-only Health

Equity Adjustment (HEA) to an ACO's MIPS Quality performance category score to reward ACOs that provide excellent care for underserved populations (87 FR 69838 through 69857).

(3) Accelerating Interoperability

The CMS National Quality Strategy also calls for supporting the transition to a digital and data driven health care system. The CMS National Quality Strategy proposed to achieve this through the development of requirements for sharing, receipt, and use of digital data, including digital quality measures.³⁰⁶ We believe that, as clinicians strive to make improvements in patient care, clinicians should demonstrate increasingly more advanced and innovative uses of health information technology. In section III.G.2.h. of this proposed rule, we propose to require Shared Savings Program ACO clinicians to report the measures in the MIPS Promoting Interoperability performance category. Additionally, in section III.G.2.h.(2) of this proposed rule, we propose to modify our requirements for use of CEHRT for Advanced APMs to promote flexibility in adopting CEHRT that is clinically relevant to participants, emphasizing the importance of interoperability and health information technology. We believe these proposals, in addition to ongoing efforts to build CMS infrastructure and develop technical solutions, are an important step towards evolving our health information technology ecosystem.

b. Quality Payment Program Vision and Goals

(1) Emphasizing the Importance of Value-Based Care

The Quality Payment Program was designed and implemented to improve health outcomes, promote smarter spending, minimize burden of participation, and provide fairness and transparency in operations (81 FR 77010). The Quality Payment Program allows for eligible clinicians to engage in value-based, patient-centered care via two tracks: the Merit-Based Incentive Program (MIPS) and Advanced Alternative Payment Models (APMs). MIPS

³⁰⁶ CMS National Quality Strategy. <https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/value-based-programs/cms-quality-strategy>.

encourages collection and submission of data for evidence-based, specialty-specific quality measures, completion of practice-based improvement activities, consideration of cost measures, and use of certified electronic health record (EHR) technology (CEHRT) to support interoperability (81 FR 77010). APMs are models operating under section 1115A of the Act, the Shared Savings Program under section 1899 of the Act (that is, Accountable Care Organizations), or a demonstration under section 1866C or required by Federal law. In the Advanced APM track of the Quality Payment Program, APM entities and eligible clinicians take responsibility for improving the quality of care, care coordination and health outcomes for a group of beneficiaries through participation in Advanced APMs.³⁰⁷ Advanced APMs can ensure that beneficiaries get the right care at the right time by reducing fragmentation between clinicians, which can reduce unnecessary duplication of services and preventable medical errors.³⁰⁸ Advanced APMs also support our goal that all Traditional Medicare beneficiaries be in a care relationship with clinicians accountable for quality and total cost of care by 2030, as outlined by the CMS Innovation Center strategy refresh.³⁰⁹

CMS recently established, and is implementing, various strategies that are intended to fulfill the potential of Advanced APMs. The CMS Innovation Center strategy refresh acknowledges that whole person care requires the depth and scope of services that includes both primary and specialty care, and aims to provide Accountable Care Organizations (ACOs) with tools to better engage specialists, test ways to better link primary and specialty care upstream in the patient journey, and further movement into value-based care.³¹⁰ Our ongoing alignment of the Shared Savings Program and the Quality Payment Program supports new as well as long

Health Affairs, Jacobs, Fowler, Fleisher, and Seshamani. <https://www.healthaffairs.org/content/forefront/medicare-value-based-care-strategy-alignment-growth-and-equity>.

³⁰⁸ CMS Announces Increase in 2023 in Accountable Care Organizations and Beneficiaries Benefiting from Coordinated Care in Accountable Care Relationship. <https://www.cms.gov/newsroom/press-releases/cms-announces-increase-2023-organizations-and-beneficiaries-benefiting-coordinated-care-accountable>.

³⁰⁹ Innovation Center Strategy Refresh. <https://innovation.cms.gov/strategic-direction-whitepaper>.

³¹⁰ CMMI Strategy Refresh. October 20, 2021. <https://innovation.cms.gov/strategic-direction-whitepaper>.

term participation in ACOs for clinicians choosing to participate in accountable care relationships. In the CY 2021 PFS final rule, we finalized the Alternative Payment Model (APM) Performance Pathway (APP) under MIPS, in part, to reduce reporting burden, and create new scoring opportunities for MIPS eligible clinicians participating in MIPS APMs (85 FR 84720).

(2) MVP Reporting in the Quality Payment Program

We believe the Quality Payment Program should continuously support the measurement and improvement of specialty and primary care practice. To this end, we are implementing MVPs in MIPS to allow for clinicians to report on measures that are directly relevant to their clinical practice. Rather than selecting individual measures and activities from a large inventory to report under each of the siloed MIPS performance categories under traditional MIPS, eligible clinicians who select an MVP (for example, the Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP) can select from a smaller, cohesive set of measures and activities focused on the clinician's performance in rendering care for their specialty or clinical condition.

We also developed MVPs with the intention to support clinicians in their journey of continuous performance improvement and to reduce barriers to APM participation as clinicians and practices prepare to take on, and successfully manage financial risk (84 FR 62946 through 62949).

c. Promoting Continuous Improvement in MIPS

For the MIPS program, we developed policies and methodologies to assess clinicians' performance, and to support performance improvement across four performance categories (quality, cost, improvement activities, and Promoting Interoperability) in accordance with section 1848(q)(1)(A)(i) and (ii) of the Act. We believe we should evaluate our policies, requirements, and standards for MIPS periodically to determine if we need to raise the bar in order to foster the availability of opportunities for continuous performance improvement. We are

considering how we can implement policies to support continuous improvement for clinicians who consistently perform well in MIPS. One challenge we face is that, after a clinician has achieved high performance scores on the same measures and activities year over year, there may be little or no room for the clinician to improve their performance. Another challenge is that some MIPS eligible clinicians choose measures and activities on which that they are already performing well, rather than measures and activities where they would be required to implement changes in their workflow, clinical care, or practices in order to achieve a positive payment adjustment. This selection practice, to repeatedly choose the same measures and activities on which the clinician is confident they will perform well, can mean that the clinician has less incentive to transform the way that care is delivered and continuously improve quality of the care they provide. For these reasons, we are considering modifying our policies to encourage clinicians who have consistently been high performers in MIPS to continuously improve various areas of their clinical practice, including implementing more rigorous standards under MIPS and supporting participation in an APM.

We are interested in feedback on approaches to modifying our policies, requirements, and standards under MIPS, while remaining cognizant of the burden any changes may place on MIPS eligible clinicians. Section 1848(q)(1)(A) and (5)(A) of the Act requires the Secretary to develop a methodology for assessing the total performance of each MIPS eligible clinician according to performance standards for applicable measures and activities in each performance category applicable to the MIPS eligible clinician for a performance period. We are particularly interested in how we can balance the impact of any policy changes on MIPS eligible clinicians who have become accustomed to our current program requirements with the benefit of potential modifications that foster clinicians' continuous improvement. For example, we could increase reporting requirements in traditional MIPS and MVPs, or we could require that specific measures

be reported, instead of allowing choice of measures, once MVPs are mandatory to encourage improvement for clinicians with continuously perform well under MIPS.

d. Request for Feedback

We are seeking comment on how we can modify our policies under the Quality Payment Program to foster clinicians' continuous performance improvement and positively impact care outcomes for Medicare beneficiaries. Such modifications for MIPS may include requiring more rigorous performance standards, emphasizing year-to-year improvement in the performance categories, or requiring that MIPS eligible clinicians report on different measures or activities once they have demonstrated consistently high performance on certain measures and activities.

In accordance with implementing regulations of the Paperwork Reduction Act of 1995 (PRA), specifically 5 CFR 1320.3(h)(4), this general solicitation request for information is exempt from the PRA.

We request public comment on specifically the following questions:

- What potential policies in the MIPS program would provide opportunities for clinicians to continuously improve care?
- Should we consider, in future rulemaking, changes in policies to assess performance to ensure ongoing opportunities for continuous performance improvement?
- Should we consider, for example, increasing the reporting requirements or requiring that specific measures are reported once MVPs are mandatory?
- Should we consider creating additional incentives to join APMs in order to foster continuous improvement, and if so, what should these incentives be?
- What changes to policies should CMS consider to assess continuous performance improvement and clinicians interested in transitioning from MIPS to APMs?

- We acknowledge the potential increase in burden associated with increasing measure reporting or performance standards. How should we balance consideration of reporting burden with creating continuous opportunities for performance improvement?

- While we are aware of potential benefits of establishing more rigorous policies, requirements, and performance standards, such as developing an approach for some clinicians to demonstrate improvement, we are also mindful that this will result in an increasing challenge for some clinicians to meet the performance threshold. Are there ways to mitigate any unintended consequences of implementing such policies, requirements, and performance standards?

4. MVP Development, Maintenance, and Scoring

a. Development of New MIPS Value Pathways (MVPs)

In the in the CY 2023 PFS final rule (87 FR 70035 and 70037), we finalized modifications to our MVP development process to include feedback from the general public before the notice and comment rulemaking process. We will evaluate a submitted candidate MVP through the MVP development process, and if we determine it is “ready” for feedback, we would post a draft version of the submitted candidate MVP on the Quality Payment Program (QPP) website (<https://qpp.cms.gov>) and solicit feedback for a 30-day period. The general public would have the opportunity to submit feedback on the candidate MVP for CMS’s consideration through an email inbox. We stated that we would review the feedback received, and determine if any changes should be made to the candidate MVP prior to potentially including the MVP in a notice of proposed rulemaking. If we determine changes should be made to the candidate MVP, we would not notify the interested parties who originally submitted the candidate MVP for CMS consideration in advance of the rulemaking process. We refer readers to the MVP Candidate Feedback Process webpage, available on the Quality Payment Program website, to review the public feedback we received for each candidate MVP (<https://qpp.cms.gov/mips/candidate-feedback>).

Through our development processes for new MVPs (*see* 85 FR 84849 through 84856, 87 FR 70035 through 70037), we aim to gradually develop new MVPs that are relevant and meaningful for all clinicians who participate in MIPS. In this proposed rule, we are proposing the inclusion of five new MVPs:

- Focusing on Women’s Health;
- Prevention and Treatment of Infectious Disease Including Hepatitis C and HIV;
- Quality Care in Mental Health and Substance Use Disorder;
- Quality Care for Ear, Nose, and Throat (ENT); and
- Rehabilitative Support for Musculoskeletal Care

We continue to develop MVPs based on needs and priorities, as described in the MVP Needs and Priorities document at [https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1803/MIPS%20Value%20Pathways%20\(MVPs\)%20Development%20Resources.zip](https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1803/MIPS%20Value%20Pathways%20(MVPs)%20Development%20Resources.zip). We refer readers to Appendix 3: MVP Inventory, in this proposed rule for discussion of each proposed new MVP.

b. MVP Maintenance on Previously Finalized MVPs

In the CY 2023 PFS final rule (87 FR 70037), we finalized a modification to the annual maintenance process for MVPs that were previously adopted through notice and comment rulemaking (86 FR 65410). Interested parties and the general public may submit their recommendations for potential revisions to established MVPs on a rolling basis throughout the year. We would then review the submitted recommendations and determine whether any are potentially feasible and appropriate. We stated that if we identify any submitted recommendations that are potentially feasible and appropriate, we would host a public facing webinar, open to interested parties and the general public through which they may offer their feedback on the potential revisions we have identified. We would publish details related to the timing and registration process for the webinar through our Quality Payment Program Listserv.

We held our first MVP maintenance webinar in February 2023 (<https://youtu.be/4cuZGUr88SA>), to discuss any feedback we received from interested parties regarding previously finalized MVPs.

In the CY 2022 PFS final rule (86 FR 65998 through 66031), we finalized seven MVPs that are available for reporting beginning with the CY 2023 performance period/2025 MIPS payment year:

- Advancing Rheumatology Patient Care;
- Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes;
- Advancing Care for Heart Disease;
- Optimizing Chronic Disease Management;
- Adopting Best Practices and Promoting Patient Safety within Emergency Medicine;
- Improving Care for Lower Extremity Joint Repair; and
- Patient Safety and Support of Positive Experiences with Anesthesia.

In addition, in the CY 2023 PFS final rule (87 FR 70037), we finalized five additional MVPs that are available for reporting beginning with the CY 2023 performance period/2025 MIPS payment year:

- Advancing Cancer Care;
- Optimal Care for Kidney Health;
- Optimal Care for Neurological Conditions;
- Supportive Care for Cognitive-Based Neurological Conditions; and
- Promoting Wellness.

In this proposed rule, we are proposing modifications to these twelve MVPs to propose the addition and removal of measures and improvement activities based on the MVP development criteria (85 FR 84849 through 84854), feedback received through the MVP maintenance process, and based off the proposed removals of certain improvement activities

from the improvement activities inventory and the proposed addition of other relevant existing quality measures for MVP participants to select from. In addition, through the MVP maintenance process, we are proposing to consolidate the previously finalized Promoting Wellness and Optimizing Chronic Disease Management MVPs into a single consolidated primary care MVP titled Value in Primary Care MVP, that aligns with the Adult Universal Core Set, as described in the journal article, “*Aligning Quality Measures across CMS- The Universal Foundation*” (<https://www.nejm.org/doi/full/10.1056/NEJMp2215539>). (<https://www.nejm.org/doi/full/10.1056/NEJMp2215539>). We refer readers to Appendix 3: MVP Inventory of this final rule for the proposed modifications to the established MVPs.

c. Scoring MVP Performance

In the CY 2022 PFS final rule, we finalized policies for MVP scoring that take effect beginning with the CY 2023 performance period/2025 MIPS payment year. We refer readers to 86 FR 65419 through 65427 for the details of those finalized policies. We previously finalized at § 414.1365(d)(2) that, unless otherwise indicated in § 414.1365(d), the performance standards described at § 414.1380(a)(1)(i) through (iv) apply to the measures and activities included in the MVP (86 FR 65419 through 65421). We noted that in general, we intend to adopt scoring policies from traditional MIPS for MVP participants unless there is a compelling reason to adopt a different policy to further the goals of the MVP framework (86 FR 65419).

We refer readers to section IV.A.4.g.(1)(c)(i) of this proposed rule for proposed policies on MIPS scoring flexibilities in the quality performance category scoring; section IV.A.4.g.(1)(d)(i) in this proposed rule for the proposed change to scoring improvement in the cost performance category; section IV.A.4.f.(3)(b) and Appendix 2: Improvement Activities, of this proposal rule for the proposed improvement activity “IA_MVP, Practice-wide quality improvement in the MIPS Value Pathway Program (MVP)” in the improvement activities performance category; section IV.A.4.f.(4) in this proposed rule for the proposed policies for the

Promoting Interoperability performance category, including modifications of the SAFER Guide Measure's requirements and the Query of Prescription Drug Monitoring Program (PDMP) measure's exclusion, a technical update to the e-Prescribing measure, an increase in the length of the performance period from 90 continuous days to 180 continuous day, and continuation of our reweighting policy of the performance category for clinical social workers.

In addition, we refer readers to section IV.A.4.d. of this proposed rule for proposed policies regarding subgroups, including reweighting proposals, addition of subgroups to our Targeted Review policies, and a clarification regarding the scoring of facility-based clinicians at the subgroup level.

We refer readers to section IV.A.4.j. of this proposed rule for proposed policies regarding Targeted Review process, including the addition of virtual groups to our Targeted Review policies.

d. Subgroup Reporting

(1) Background

In the CY 2022 PFS final rule, we finalized the option for clinicians to participate as subgroups for reporting MIPS value pathways (MVPs) beginning in the CY 2023 performance period/2025 MIPS payment year (86 FR 65392 through 65394). We refer readers to Title 42 of the Code of Federal Regulations (CFR) at §§ 414.1318 and 414.1365, the CY 2022 PFS final rule (86 FR 65398 through 65405), and the CY 2023 PFS final rule (87 FR 70038 through 70045) for additional details on previously finalized subgroup policies.

In this section, we are proposing to: (1) update the subgroup policy for reweighting of MVP performance categories at § 414.1365(e)(2); (2) update the facility-based scoring and complex patient bonus for subgroups under final score calculation at § 414.1365(e)(3) and (4); (3) update the targeted review policy for subgroups at § 414.1385; and (4) codify in our regulations the subgroup policies finalized in previous years' rules.

(2) Subgroup Reweighting

In the CY 2022 PFS final rule (86 FR 65425 through 65426), we finalized at § 414.1365(e)(2)(ii) that for an MVP Participant that is a subgroup, any reweighting applied to its affiliated group will also be applied to the subgroup. Additionally, we finalized that if reweighting is not applied to an affiliated group, then the subgroup may receive reweighting under the circumstances described at §§ 414.1365(e)(2)(ii)(A) and (B). In establishing this policy, we noted our concern about extreme and uncontrollable circumstances (EUC) that would impact only the subgroup (fire or natural disaster at a specific practice location) and does not affect the entire affiliated group. We also finalized that if a subgroup submits data for a performance category which was reweighted, the subgroup data submission will void the reweighting applied to the performance category.

Upon further consideration of the previously finalized policy, we identified technical constraints that affect our ability to implement the policy. Specifically, we are concerned that the time necessary to adjudicate reconsideration requests for both a subgroup and its affiliated group may deprive the subgroup of knowledge of its reweighting status during a significant portion of the relevant performance period and undermine its ability to plan data submission needs accordingly.

There may be instances when a subgroup and its affiliated group have separate reasons to submit reweighting applications. Those separate applications may request the reweighting of different performance categories. Under § 414.1380(c)(2), clinicians, groups, and APM Entities submit reweighting applications annually on a rolling basis throughout the performance period, or a date specified by CMS. However, the requirement in § 414.1365(e)(2)(ii) that any reweighting applied to a subgroup's affiliated group is also applied to the subgroup means that when a subgroup and its affiliated group both submit reweighting applications, the subgroup will not know its reweighting status until CMS makes a determination regarding the group's

reweighting application. Depending on when the group submitted its reweighting request, this may not happen until after the close of the performance period for which the reweighting application was made.

We believe the uncertainty created for a subgroup by not knowing its reweighting status until later in the performance period would disrupt its ability to best plan for the measures and activities on which it will be scored. We recognize that there may be instances when only the subgroup is affected by an extreme and uncontrollable circumstance (natural disaster, fire, hurricane, etc.) and would want to request its own reweighting, independent of the affiliated group. However, we believe that the need for a subgroup to know of its data submission requirements outweighs the benefit of being able to request its own reweighting independent of the affiliated group.

Separately, there are certain special status designations (non-patient facing, small practice, etc.) that automatically qualify a group for reweighting of the Promoting Interoperability performance category. A subgroup can learn about its affiliated group's special status designation as described in the second paragraph under the definition of MIPS determination period at § 414.1305. Given that subgroup eligibility and special status determinations are made at the group level, we believe that applying an affiliated group's reweighting to a subgroup, and removing the ability of a subgroup to submit a separate reweighting application, would enable subgroups to receive their reweighting status and identify their data submission obligations in a timely manner. We are therefore proposing to revise § 414.1365(e)(2)(ii) to limit the reweighting applied to a subgroup to that which is also applied to its affiliated group beginning with the CY 2024 performance period/2026 MIPS payment year.

In order to operationalize the previously established policy, we intend to implement a manual process for reviewing subgroup reweighting applications for the CY 2023 performance period/2025 MIPS payment year. We considered also using the manual process for reviewing

subgroup reweighting applications in future performance periods. However, we are concerned that manually reconciling the reweighting requests would delay the approval of the reweighting requests received from a subgroup. Additionally, we are concerned that it may create confusion for a subgroup to determine whether a performance category has been reweighted and its potential impact on subgroup data submission, specifically in instances when both the subgroup and its affiliated group submit a reweighting application for one or more of the MVP performance categories. For the above reasons, we would use the manual process only for the CY 2023 performance period/2025 MIPS payment year.

We acknowledge that there may be instances when an extreme and uncontrollable circumstance impacts only a subgroup and not the entire affiliated group (for example, fire or natural disaster at the subgroup's practice location). Because subgroup reporting is not mandatory at this time, we believe that in these instances, when a registered subgroup is unable to participate in MVP reporting as a subgroup, the eligible clinicians in the registered subgroup would participate in MIPS via another available reporting option. These clinicians could either participate as individuals or as a group, if its affiliated group chooses to participate in traditional MIPS, or in MVP reporting. Additionally, we established the policy in § 414.1318(b)(1) to not assign a score for a registered subgroup that did not submit data for the applicable performance period (87 FR 70045). In the scenario that the registered subgroup did not submit data, we would assign the highest of the available final scores associated with the clinician's TIN/NPI for the eligible clinicians in the subgroup (86 FR 65536 and 65537). We refer readers to the CY 2023 PFS proposed rule (87 FR 46272 through 46275) for examples that illustrate how the final score is applied for a clinician who is part of a group TIN where only some of the clinicians under that TIN choose to participate in MIPS through subgroups. We will continue to monitor subgroup participation trends and will revisit this policy in the future, as needed.

For the above reasons, we are proposing to revise § 414.1365(e)(2)(ii) to state that an MVP Participant that is a subgroup will receive the same reweighting that is applied to its affiliated group, but that for the CY 2023 performance period/2025 MIPS payment year, if reweighting is not applied to the affiliated group, the subgroup may receive reweighting in the circumstances independent of the affiliated group as described in § 414.1365(e)(2)(ii)(A) and (B).

We request comments on this proposal.

(3) Subgroup Scoring Policies

(a) Facility-based Score for Subgroups

We established policies for facility-based measurement and scoring for MIPS eligible individual clinicians and groups at § 414.1380(e). Under these standards, we calculate a MIPS eligible clinician's final facility-based score using the clinician's performance in another value-based purchasing program (83 FR 59866 through 59867). In the CY 2022 PFS final rule (86 FR 65425), we finalized at § 414.1365(e)(3) that if an MVP Participant that is not an APM Entity is eligible for facility-based scoring, a facility-based score will also be calculated in accordance with § 414.1380(e). We recognize that we inadvertently overlooked excluding MVP Participants that are subgroups from facility-based scoring. We note that it was not our intent to calculate a facility-based score at the subgroup level.

In the course of implementing MVPs, we have offered clinicians and groups the opportunity to elect to report via MVPs and via traditional MIPS. If a facility-based MIPS eligible clinician participates in MVP reporting as an individual or as part of a group, we will calculate a final score for the MIPS eligible clinician based on the MVP reporting. We would not use the facility-based scores to calculate the clinician's final scores under the MVP because we currently do not have an MVP specifically focused on facility-based measurement. We believe eligible clinicians would choose to participate in MVP reporting with the intent to report on

measures applicable to the scope of care provided and therefore, it would be appropriate for facility-based clinicians participating in MVP reporting to receive a score based on the data submitted for the measures and activities in an MVP. We would also calculate a score for traditional MIPS for this clinician or group and assign the higher of the scores. If a facility-based clinician chooses to participate in MVP for a MIPS performance period, a facility-based score would be calculated as part of traditional MIPS and not as part of MVP reporting. Subgroup reporting is limited to MVPs, and subgroup reporting is not available for clinicians reporting on measures in traditional MIPS. Therefore, we are proposing to modify the text at § 414.1365(e)(3) to state that if an MVP Participant, that is not an APM Entity or a subgroup, is eligible for facility-based scoring a facility-based score will also be calculated in accordance with § 414.1380(e).

We are requesting comments on this proposal.

(b) Complex Patient Bonus for Subgroups

In the CY 2018 Quality Payment Program final rule (82 FR 53776), we finalized at § 414.1380(c)(3)(i) that we will add a complex patient bonus to the final score of certain MIPS eligible clinicians that submit data on at least one performance category during the applicable performance period. We finalized that this complex patient bonus would be calculated on the basis of the average Hierarchical Condition Category (HCC) risk score and the dual eligible ratio for beneficiaries seen by clinicians and groups. In the CY 2022 PFS final rule (86 FR 65425), we finalized at § 414.1365(e)(4) that a complex patient bonus will be added to the final score for an MVP Participant in accordance with § 414.1380(c)(3). We also revised § 414.1380(c)(3) to permit subgroups to receive the complex patient bonus as, in the case of subgroups, we intended to apply the bonus based on the patient population of the subgroup.

Since then, however, we have identified issues with using claims data associated with the clinicians in a subgroup that prevents us from calculating the complex patient bonus at the

subgroup level. Specifically, we are unable to identify the beneficiaries seen by the clinicians in a subgroup, and therefore we cannot calculate the average HCC score and dual eligible ratio scores. At the time the relevant claims data is retrieved, the composition of the subgroup may not be known, making it impossible to calculate the required data elements for the complex patient bonus (for example, clinicians, beneficiaries that received care, etc.) at the subgroup level. Additionally, the group may have subgroups that do not collectively represent the entire group, restricting our ability to gather the beneficiary data necessary to calculate the complex patient bonus score at the subgroup level.
